ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

this is the oldest fill of the initial cut (410039). It was so compact for that reason we thought it was the bottom of the ditch until we found some pottery pieces and some animal bones fragments. Thanks of the pottery we can say it was early roman.

this mid gray and clayed fill has many little stones into it (small ones, no more than 0.05mm) some chalk and even, a small pieces of charcoal.

We thought it was formed for natural infilling after the use of it.
