ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

SINGLE FILL OF SHALLOW REMNANT OF pit [132480]. THE FILL WAS COMPACT BUT SLIGHTLY PLASTIC IN CONSISTENCY. AND CAME ABOUT AS A RESULT OF SILTING UP IN A VERY SANDY + COARSE GRAVEL SURROUNDINGS. SUBSEQUENTLY THE FILL IS SANDIER & CONTAINS MORE GRAVEL TOWARDS THE BASE.

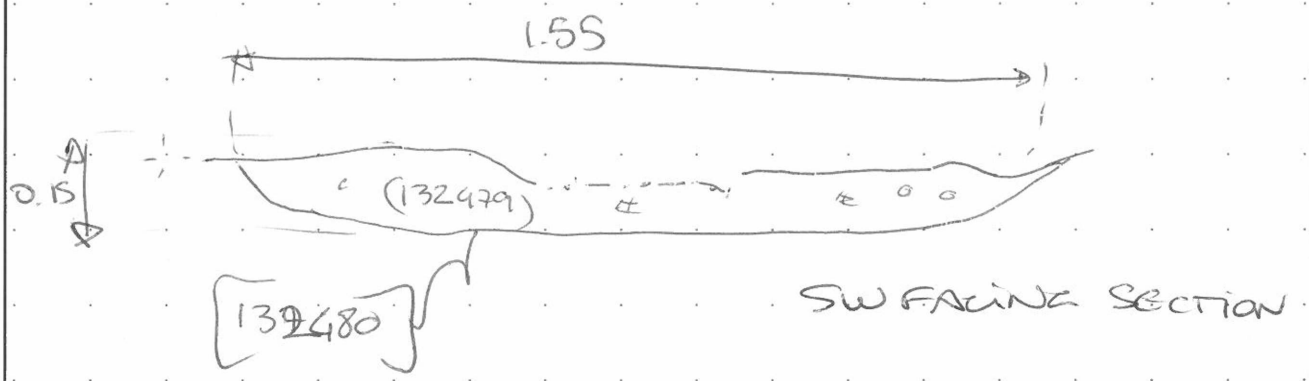

THE DEPOSIT HAD A FEW CHARCOAL FLECKS EVENLY SCATTERED AND CONTAINS OCC. ROUNDED PEBBLE OF A MAXIMUM Z OF 0.07m. THERE WERE NO SURVIVING TRACES AS TO THE FUNCTION OF THIS pit OTHER THAN IT'S LOCATION AS PART OF THE pit ALIGNMENT RUNNING THROUGH THE SITE.

1 VERY SMALL DEBITAGE FLINT WAS RETRIEVED FROM THE FEATURE.

Refer to context 132480

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

OVAL/EGG SHAPED CUT. VERY SHALLOW SURVIVING REMNANTS. THE MAXIMUM DEPTH DOESN'T EXCEED 0.15m THE EDGES ARE REASONABLY REGULAR & WELL DEFINED. THE BASE AS IT IS CUT INTO SAND & COARSE GRAVEL HAS A TENDENCY TO BE ON THE FINITISH SIDE.

THE PIT IS LOCATED ALONG THE SOUTHERN EDGE OF pit & DITCH-INTERSECTION [13207]/[32073]/[32100].

[132480] IS A pit LOCATED 0.05m NORTH OF THIS CONTEXT

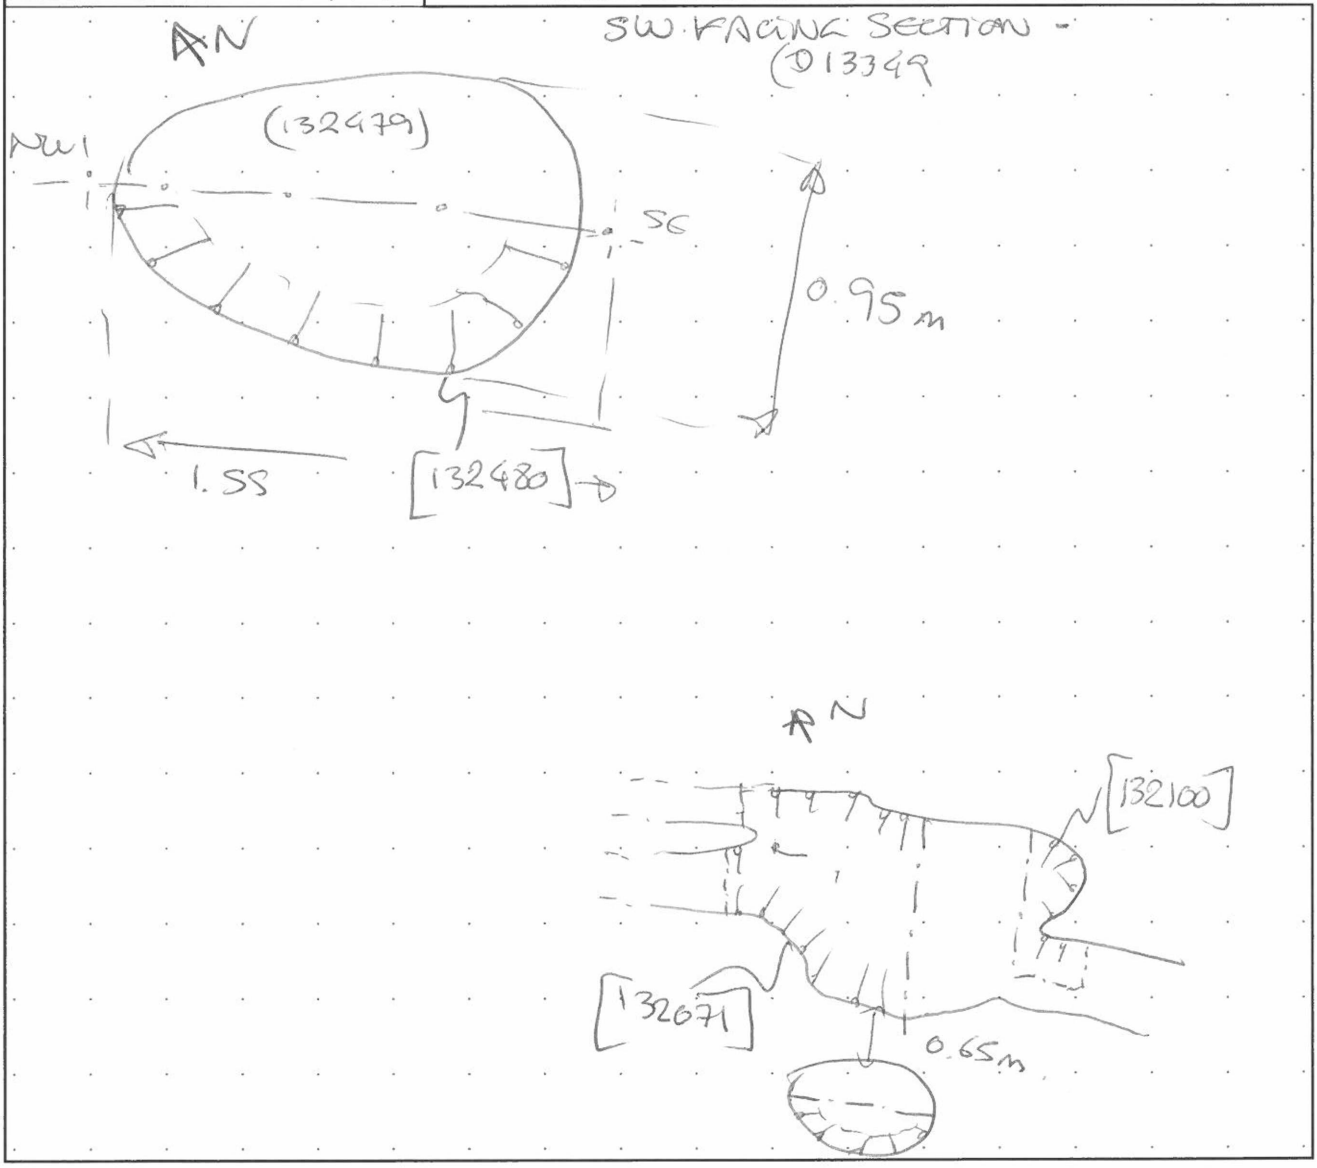

THE RELATIONSHIP BETWEEN THE 2 PITS IS UNCLEAR.

pit [132480] APPEARS TO BE PART OF A POTENTIALLY NEOLITHIC ALIGNMENT - SAMPLING RESULTS OF [13207] MIGHT CLARIFY THE ISSUE.

Refer to context 132479.

Fill (132481) of Pit [132484]. This is the upper fill of the pit and is the same fill than (132335).
It is a silty clay fill with a few animal bones. Probably it was the result of an alluvial process of deposition once the pit fell into disuse.

Refer to context [132484] FOR PLAN ~~(132340) FOR SECT. PLAN~~

Fill (132482) of Pit [132484]. This is the second fill of that pit (in its west side) and is between fills (132481) and (132483). It is on the W side of the pit. It's a sandy clay with gravels and chalks, it has no finds.
It could be a natural deposition of the soil that is around the pit and water sediments once the pit fell into disuse.

Refer to context

Fill (132483) of Pit [132484]. This is the earliest fill in this cut of the pit. It's the same fill than (132187) of cut [132188] of this pit and the same than fill (132337) of the cut [132340] of this same pit.
It is composed by a grey clay ~~to~~ with gravels and chalk and had a few bones.
It could be a natural process of infilling formed by waste and flood depositions.

Cut [132484] of Pit. This cut is filled by three fills: (132481), (132482) and (132483). This cut belong to the same pit than cuts [132188] and [132340]. At this point it's cutting the fill (132485) of an small pit [132487].
This pit is in an intercutting sequence of pits.
Its function is unknown. This pit could have been made during the Iron Age.

Refer to context (132481) FOR SECTION ~~[132340] FOR GEN. PLAN~~

Fill (132485) of Pit [132484]. This is the most recent fill of that pit and is being cut by pit [132484].
It is a silty-clay soil matrix no finds in it.
It could be a natural infilling formed by water depositions as it is in an area ~~easily flo~~ which floods easily.

Refer to context

Fill (132486) of Pit [132487]. This is the older fill of that pit, it's below fill (132485). It's a clayey sand with gravels and chalk, but it has no finds.
As (132485), this fill would be a natural infilling formed by a process of water depositions, once the pit fell into disuse.

Refer to context

Cut [132487] of pit. This pit is filled by ~~the~~ these contexts: (132485) and (132486). This pit is earlier than the pit [132484] and is cutting ditch [132489].
The south part of this pit is the one excavated and has a steep slope that ends in a concave base.
The function of this pit, related with the intercutting sequence of pits, is not known.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill (132488) of Ditch [132489]. This is the only fill of that ditch. It is being cut by pit [132487]. It is composed by a silty clay with gravels and chalks.
This would be a natural ~~infilling~~ infilling caused by flood deposi-tions.

Refer to context

Cut [132489] of Ditch. This ditch is filled by the context (132488). This is the same ditch than [132098] and [132071], which is part of the boundary field system, probably from Iron Age.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF AN OVAL PIT THAT IS CUTTING ~~ANOTHER~~ OLDER PIT, WHICH BELONGS TO A PIT ALIGNMENT THAT RUNS E-W ALL ACROSS TEA 13.
THE WESTERN ~~EDGE~~ AND EASTERN SIDES OF THIS PIT SEEM TO HAVE BEEN THE RESULT OF THE SLIDING OF ITS FILL OVER THE SURFACE. IN DEED, IN ITS WESTERN SIDE THE FILL CONTINUES AND JOINS WITH THE FILL OF THE NEXT PIT, LOCATED LESS THAN ONE METRE WESTWARDS.
MY OPINION IS THAT THE ACTION OF WATER SLIDED THE FILL OF ~~EACH~~ THIS ALIGNED PITS OVER THE SURFACE AND JOINING THEM BY A SORT OF GULLY.
THE PIT IS CUT INTO THE NATURAL IN ITS SOUTHERN PART WHICH IS COMPOSED BY GRAVELLY SANDS.

Refer to context (13249) FOR ~~EACH~~ SECTION

FILL OF PIT. THIS GREY FILL (132503) HAS A CARGE HUMIDITY AND IS VERY SILTY. FILL CONTAINS ONLY AN AVERAGE AMOUNT OF MEDIUM AND SMALL ANGULAR STONES. THE STONES ARE GENERALLY IN THE LOWER PART OF THIS FILL, WHICH CLEARLY DISTINGUISHES FROM THE YELLOWISH ORANGE NATURAL LAYES. FILL DID NOT INCLUDE ANY DATING FINDS.

Refer to context

ADDITIONAL INFORMATION
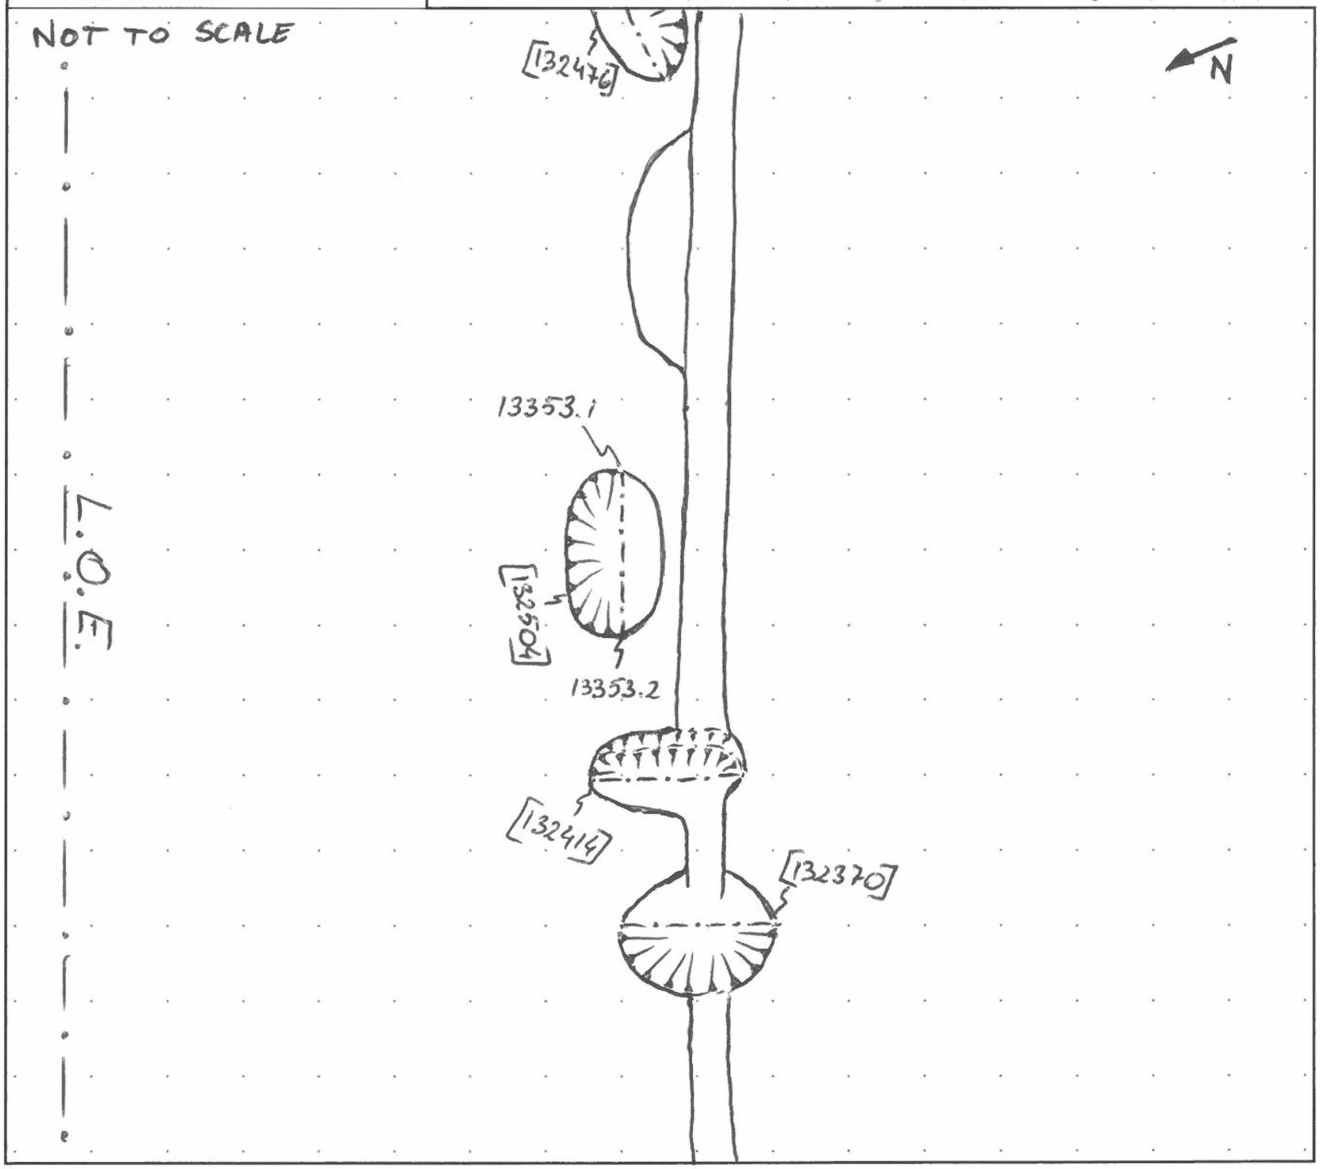

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a section into an Iron Age roundhouse drip-gully. Here, the cut becomes somewhat shallower, likely due to the higher level of natural sand deposits at this point.

The same two types and stratigraphic deposits of fills are present here as within similar areas of the feature gravelly (132508) and dark clayey silt (132509).

Refer to context [132415] Map.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This lower fill of roundhouse drip gully [132507] is ~~unit~~ the same as discovered in other slots into this feature. It is a gravelly orange/greyish silt fill likely formed by the slumping of a bank of the gully. Likely from the southern edge of the feature due to the slight angle to the deposition of the fill.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf.)

This is the upper fill to slot [132507] within an Iron Age roundhouse drip gully. Consistent with other slots, this fill was a dark greyish silty clay with charcoal, small stones, and the majority of finds - both ceramics and bones. Some bones (likely animal) were too degraded to recover.

This fill likely accumulated while the feature was being utilised as a drip-gully and then silted up when it fell into disuse. Some rubbish (such as broken ceramics) may also have been deposited here by inhabitants.

*(any further details that may be important for understanding the context, including items marked * overleaf)*

ONLY FILL OF A PIT WITHIN A PIT ALIGNMENT THAT RUNS E/W DIRECTION ALL ACROSS TEA 13.
ITS FILL IS COMPOSED BY HEAVY GREYISH CLAYS THAT TURN DARKER WHEN APPROACHING ITS BASE.
THE FILL HAVE BEEN SAMPLED (S13272) BECAUSE THIS HEAVY CLAYS COULD HAVE TRAPPED INTERESTING ORGANIC MATERIAL FOR ENVIRONMENTAL ANALYSIS.
WITHIN THIS FILL HAVE BEEN RECOVERED ~~ONE~~ POSSIBLE SMALL FRAGMENTS OF CBM, ~~AND~~ A TINY PIECE OF POTTERY NOT VERY WELL-PRESERVED BUT THAT LOOKS POTENTIALLY TO HAVE AN IRON AGE DATE.

~~THIS COULD BE PART OF THE GULLY~~

THIS MIGHT BE PART OF THE GULLY THAT HAVE BEEN ~~IDENTIFIED~~ DOCUMENTATED IN [132192]; [132524] [132526]; [132528]; [132543]; [132545]; [132542]. IT HAS THE LINEAR GULLY COULD BE AN ENCLOSURE. IT LOOKS LIKE ~~HAVE~~ ~~IDENTIFIED~~ SOME TERMINUS [132524]; [132528]; [132543] BUT IT IS VERY ~~HAS~~ DIFFICULT TO BE SURE OF THAT BECAUSE THEY MIGHT BE THE RESULT OF MACHINE TRUNCATION. THE GENERAL CONDITION ~~OF~~ OF THE GULLY IS VERY POOR AND ESPECIALLY FOR [132524] [132526] [132528] ONLY THE VERY LAST INTERFACE OF THE FILL BEFORE THE NATURAL HAS BEEN FOUND. THE GULLY ~~AGGLOMERATE~~ IS CUT BY A MODERN DITCH [132539] AND THAT GIVES AN USEFUL INDICATION FOR THE DATE OF THE GULLY.

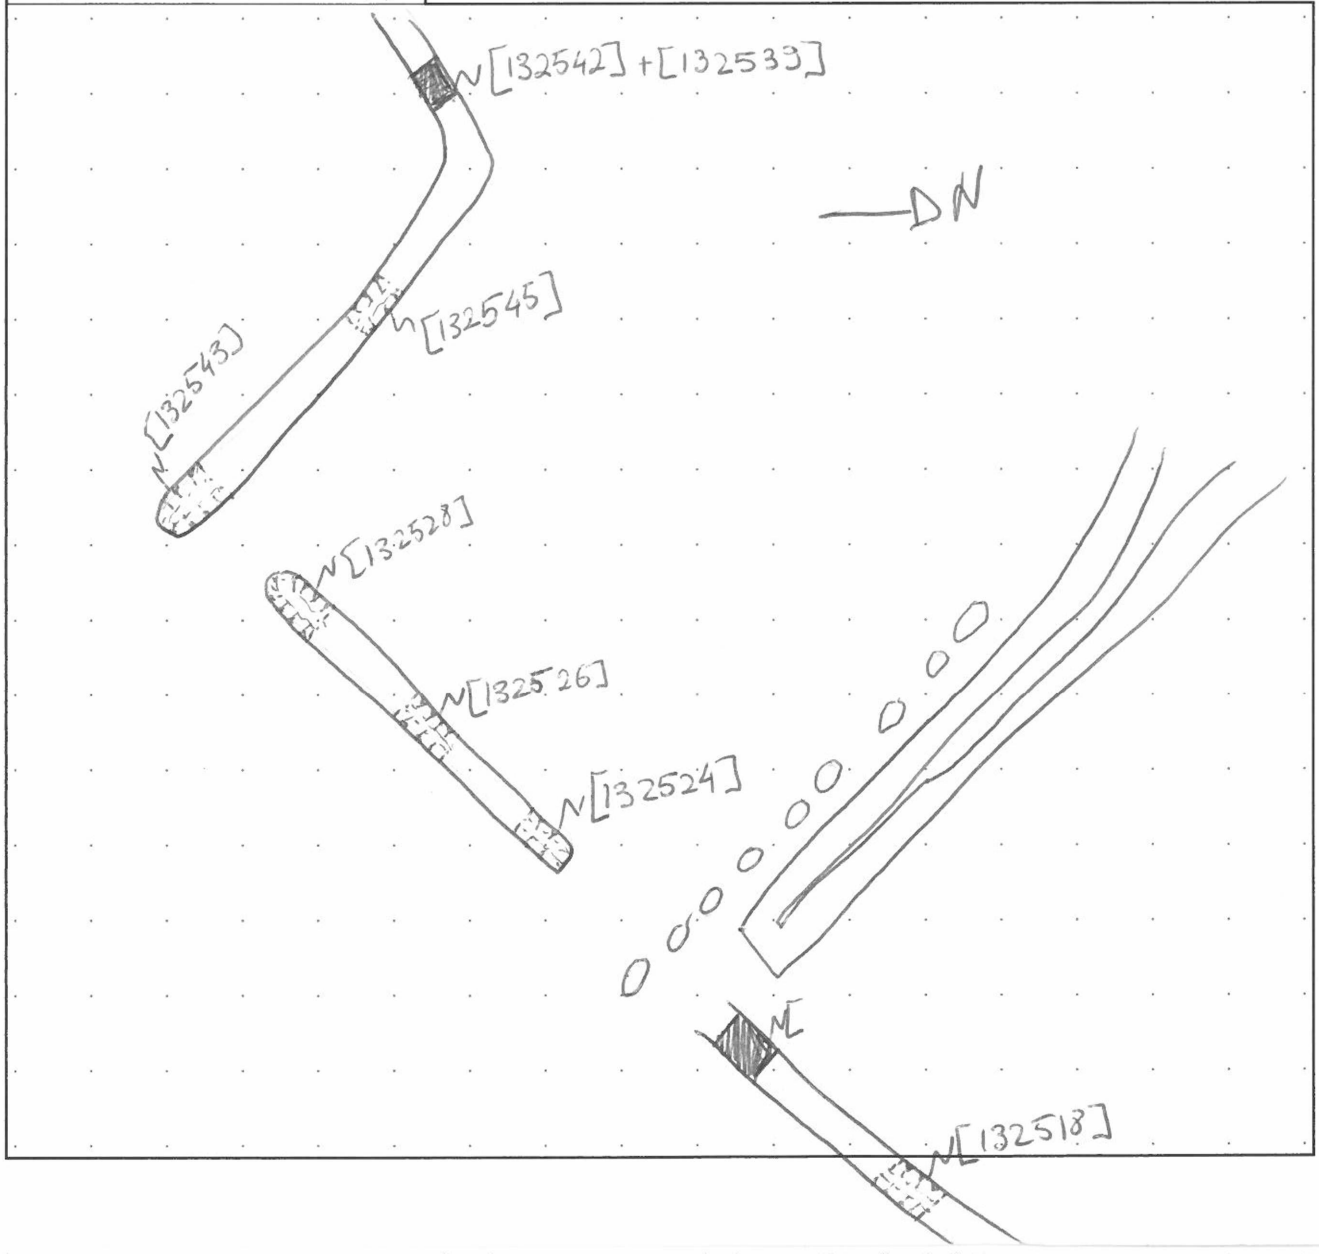

THE CUTS ~~HAVE~~ BEEN ALL ~~RELATED~~ BUT IT IS JUST AN HYPOTHESIS.

[132192]

Refer to context [132524]; [132526]; [132528]; [132543]; [132545]

THIS LOOKS LIKE A TERMINUS, BUT IT IS VERY DIFFICULT TO TELL BECAUSE IT MIGHT BE AN ALTERATION OF THE SOIL DUE TO MACHINE TRUNCATION. FOR MORE DETAILS REFER TO CS [132517].
THE PRESERVATION OF THE GULLY IN THIS PART IS VERY POOR. IT ~~FOUND [132525], [132526], [132528]~~ (132525) (132527) (132529) APPEAR TO BE ALL THE SAME GULLY. IT IS POSSIBLE THAT THEY ARE THE SAME THING AS ~~[132517]~~ (132518) and (132544) and (132546) EVEN IF THE FINAL LAYERS LOOK DIFFERENT.

Refer to context [132517]

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS A VERY SHALLOW LAYER ONLY 5 cm.
IT IS THE VERY LAST INTERFACE OF THE LAST LAYER OF A GULLY THAT HAS BEEN TRUNCATED BY MACHINE WORKS.
EVEN IF THE PRESERVATION CONDITIONS ARE VERY POOR THE FILL LOOK THE SAME AS (132527) AND (132529).

Refer to context [13257]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS IS A FILL (132532) OF PIT [132530]. IT IS CONCENTRATED OVER THE BOTTOM OF PIT. IT PROBABLY DUG BY HUMAN; CONTAINS NO MUCH STONES AND SOME CHARCOAL AS IN THE SECOND FILL (132532) SO THIS INCLUSING COULD BE INTERPRETATED AS A TABLE LOOSE OF THE ORIGINAL PIT. IT IS CONCENTRATED OVER THE BOTTOM OF PIT.

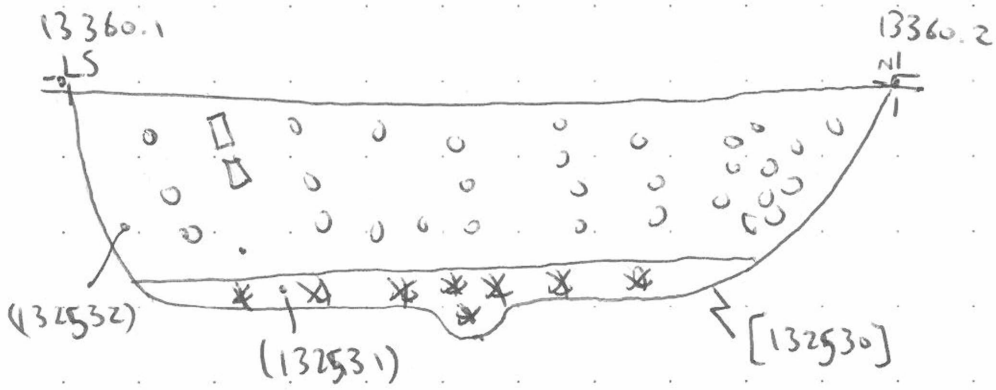

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

NOT TO SCALE

SPACING SECTION OF PIT.

Top/Final fill of MODERN/POST MED BOUNDARY DITCH (visible-in use on 19th C OS MAPS).

THE fill is a rich Brown & FAIRLY COMPACT BUT SOFT IN CONSISTENCY. IT CONTAINED OCC TO MODERATE STONES ON THE SURFACE & SCATTERED FRAGMENTS OF ANIMAL BONES (NOT RETRIEVED)

THIS DEPOSIT WAS only EXPOSED IN plan + SLIGHTLY IN SECTION FOR THE PURPOSE OF ESTABLISHING A STRATIGRAPHICAL RELATIONSHIP WITH ANOTHER FEATURE. only 0.20m THICK(MAX) EXPOSED ALSO.

Refer to context 132537.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

THIS DEPOSIT WAS only GLIMPSED AT WHEN ESTABLISHING A RELATIONSHIP BETWEEN THE DITCH THIS DEPOSIT FILLS & ANOTHER FEATURE, & CONSEQUENTLY THE FILL (132538) WAS NOT FULLY EXCAVATED & ALL MEASUREMENTS WOULD BE MISLEADING. -

DEPOSIT (132538) WAS FAR MORE COMPACT THAN (132537) AND CONTAINED A SUBSTANTIAL AMOUNT OF CHALK-CHIPS & SMALL NODULES FROM THE SURROUNDING NATURAL WHICH SEEM TO SUGGEST THAT (132538) ACCUMULATED FROM USE AND SOMEWHAT LATER DISUSE OF THE BOUNDARY DITCH (NOTICEABLE ON THE 19TH C. OS. MAPS)

Refer to context [132539]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*(any further details that may be important for understanding the context, including items marked * overleaf)*

NARROW CURVING DITCH/GULLY RUNNING E-W THEN CURVES N-S "INTO" BOUNDARY DITCH.

THE CUT IN SLOT [132542] IS DEEPER THAN EXPECTED. THE SIDES ARE STEP & REGULAR & REASONABLY WELL DEFINED THE BASE IS NARROW & ROUNDED -

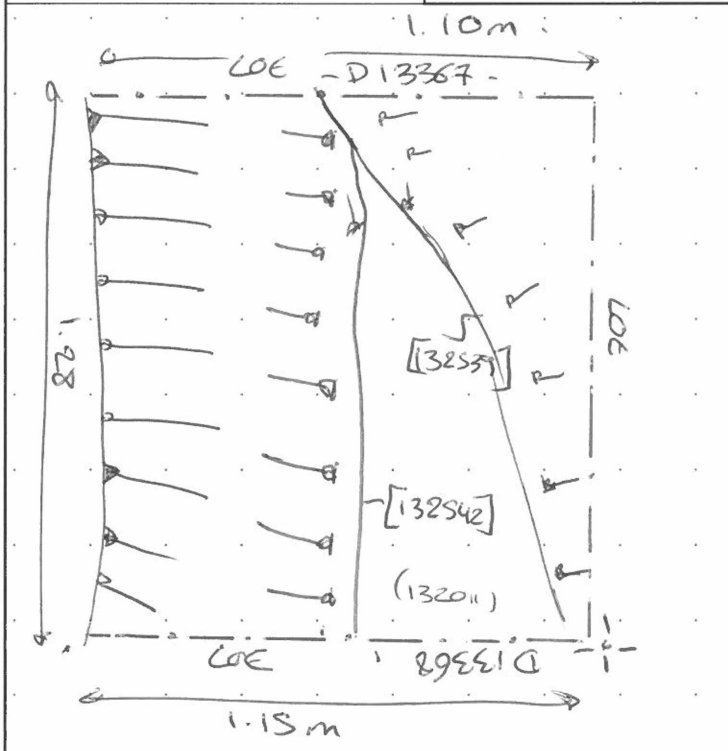

THE WESTERN EDGE AT SOUTH OF SLOT IS TRUNCATED BY A POST-MED FIELD BOUNDARY -

DITCH/GULLY [132542], (SLOTS [132545] AND [132543]) MAY WELL BE RELATED TO A SSW - NNE RUNNING GULLY WHICH SEEMS TO CONTINUE THROUGH THE PIT ALIGNMENT & INTO THE BAULK AT NORTH.

Fill (132547) of Ditch [132548]. This is the only fill of that cut and it is the same than the fill (132629)* of the cut [132630]* which is the same ditch than [132548]. This fill hasn't got finds; it only has some chalks as inclusions.
This ~~fill~~ fill would be the result of an alluvial process of infilling after the 17th–18th centuries.

Refer to context [132548] For Plan

Cut [132548] of Ditch. This ditch is filled by only one context (132547). This ditch is the same than [132630] and [132756]. At this point it is cutting an Iron Age ditch [132550] and a pit [132552].
It has been excavated only one side of this ditch and it is stepped, with 2 steps and a flat base.
This ditch would be a modern boundary cut.

DITCH APPEARS ON 1870 OS MAP

Cut [132550] of ditch. This cut is filled by only one context (132549).
This ditch is going from NW to SE and is the same than [132071] and [132127]. At this point it is being cut by the modern ditch [132548].
It has been dig only one side, which has a moderate slope and ends in a concave base.
This ditch could have been made in the Iron Age as part of a boundary field system.

Fill (132551) of pit [132552]. This is the only fill of the pit and is being cut by modern ditch [132547]. This fill is composed by a dark grey clay with no finds. Probably the fill is the result of an alluvial process of deposition once the pit fell into disuse, but we don't know the Age.

~~Fill [13254?]~~

Cut [132552] of a pit. This pit is filled by only one context (132551), which is being cut by ditch [132547] just in the point where it is cutting the ditch [132550] as well. The part of the pit that has been excavated (less than a half) has a moderate slope which ends in a concave base.

Refer to context

(any further details that may be important for understanding the context, including items marked * overleaf)

VERY MIXED SOIL INFILLING A SMALL DITCH THAT CREATES A COMPOUND IN A "LADDER"-LIKE SYSTEM OF ENCLOSURE. IT HAS CLAYEY SANDS (LIGHT GREY CLAYS AND YELLOWISH SANDS) WITH A LOT OF STONE INCLUSIONS.
JUST A FEW BONES WERE RECOVERED AND SOME OF THESE FRAGMENTS MIGHT HAVE BUTCHERY MARKS.
THE FILL SEEMS TO BE CREATED AFTER A SLOW PROCESS OF NATURAL INFILLING.

Refer to context 132553 FOR GENERAL PLAN

GULLY RUNNING IN PARALLEL TO A SMALL DITCH CREATING A COMPOUND IN A "LADDER"-LIKE ~~SYSTEM OF~~ ENCLOSING SYSTEM.
IT IS NOT SURE IF ITS A TERMINUS OR THIS IS A FAKE IMPRESSION AND ITS THE RESULT OF HAVING BEEN TRUNCATED BY THE MACHINE WHEN STRIPPING THE SUBSOIL.
THIS GULLY COULD HAVE BEEN CREATED WHEN THE SMALL ~~GULLY~~ DITCH PARALLEL TO IT WASN'T ENOUGHT FOR WATER DRAINAGE. AND THIS CAN HAVE BEEN DONE BY NATURAL PROCESSES OR BY ANTROPIC.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

layer of very withered and clean sand with gravel located in central and „S" part of pit [13258 5]
From the top was truncated by pit [13257 7] in the middle part overlied lower fill (13258 2).
Fill was probably a result of natural infilling by wind and weather. Pit was standing open for very long time.

Refer to context For section (13276)
For plan [13291]

(any further details that may be important for understanding the context, including items marked * overleaf)

Lowest fill in the seq of fills in pit [132585] Was located in central part of pit and probably was result of settling and natural accumulating during the use of the pit.
Was overlained by upper fills (132582) but overlied fills (132586) (132587) of older pit [132591] and (132592) of older pit [132595] located on „N" side.

Refer to context Section (132576) For plan [132571]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

One of the lowest fills in pit [13261 8], was located in SW part of pit between fills (13261 3) above and (13261 5) below.

Fill was probably a result of backfilling and natural silting.

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS IS A VERY SHALLOW FEATURE THAT SEEMS TO BE RELATED TO THE CIRCULAR GULLY IDENTIFIED IN [132356]; [132392]; [132390]. IT HAS BEEN IMPOSSIBLE TO TAKE MORE THAN A SLOT BECAUSE IT IS VERY BADLY PRESERVED. BUT FROM [132625] IT LOOKS LIKE THAT IS POSSIBLE TO SAY THAT IS ALL PART OF THE SAME CIRCULAR GULLY SYSTEM.

THE REST OF GULLY IS VISIBLE IN GHOST FORM

Refer to context [132356]; [132392]; [132390]

Fill (132629) of Ditch [132630]. This is the only fill of that ditch. It is the same than fill (132547) of ditch [132548]. It has some shells and a piece of Iron that could be a horseshoe. This would be a modern fill deposited due to an alluvial process.

Refer to context [132548] FOR PLAN

Cut [13 2630] of Ditch. This cut is filled by only one fill (132629). It is the some ditch than ~~[1325]~~ [132548] and [132556], which runs from NE to SW and is cutting the Iron Age ditch (132633) at this point.
In this part of its trajectory one of its sides has a moderate slope and the base is flat. As it is a relationship slot the other side has not been excavated.
It would be part of a modern (ss XVII - XVIII) boundary field system.
In its base there are some stake-holes (see photo 1302399 and plan in context [132548]) that would help to rise the boundary fence.

DITCH APPEARS ON 1870 OS MAP

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (132631) of Ditch [132633]. This is the upper fill of that ditch, we have another one (132632). This ditch hasn't got any finds, but it has a small chalks.
This fill is cut by ditch [132630].
It is a natural infilling made due to an alluvial process when the ditch fell into disuse, probably during the Iron Age.

POSS IRON AGE / PREHISTORIC DATE

FILL (132632) of Ditch [132633]. This fill is under fill (132631) and as that one. This has no finds; however it has more chalks than (132631). This fill (132632) is a grey clay that is deposited at the bottom of the ditch [132633]. It would be the result of an alluvial process of ~~infill~~ deposition, produced once the ditch was in disuse.

Cut [132633] of Ditch. This ditch is filled by contexts (132631) and (132632) and it's the same than ~~but~~ cuts [132073] and [132129]. It runs from NW to SE and at this point it is cut by ditch [132630], which is modern. The only side excavated of this cut is has a steep slope and ends in a flat base.
It could be part of an Iron Age boundary System.

Refer to context
