ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

When excavating (104630), a significant number of both animal remains & shell (snail?) remains were identified. However, situated in the SE corner of the slot, several bone fragments were identified as ~~being~~ ^{being} human, along with almost half of an Iron Age cup (small pottery vessel), and ~~some~~ some animal remains. These were grouped together & identified as a separate deposit, as no burial cut had been identified. The remains included the frontal & nasal, parietal & partial maxilla of an adult individual, the remains of a cow humerus & the remains of a cow Maxilla. A level was then after these ~~remains~~ remains had been removed (11.361 m above sea-level), and a working shot was taken prior to lifting the remains (#6101091). The surrounding fill was also sampled (20L) - #10432.

Refer to context (104630) - section sketch
(104631) - matrix
(104632) - plan sketch (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)
