fill of the post-hole [105993]: it consists of a dark greyish brown silt which is loose. Inclusions: moderate stones (1 to 4cm), moderate charcoals (0.1 to 3cm), occasional fired clay (0.1 to 0.5cm) and moderate animal bones. This context is probably a natural infilling, but might be as well a dumped layer or a deliberate backfill, because there is no trace of a post-pipe which suggests that the post had been removed to be reused before the hole was filled, the aspect of the layer and its inclusions suggest as well a deliberate backfill.

There is a noticeable amount of animal bones scattered throughout the upper and middle part of this ~~fill~~ fill.
