THIS IS THE/A TOP MID-GREYISH BROWN, SILTY-CLAY DELIBERATE BACKFILL/RUBBISH DEPOSIT OF A PIT (POSSIBLY SAXON) [107001].

INDICATIONS OF SAXON DATE INCLUDE LOOM WEIGHTS OF SAXON IDENTITY, PROBABLY SOIL FROM NGAEBT ~~SEE~~ ACTIVITY GRÜBCHENHOUSEN ACTIVITIES. ALSO A NUMBER OF POT SHEDS, ALL OF SAXON PERIOD.

THE FILL ALSO HAD LARGE QUANTITIES OF ANIMAL BONE AND CHARCOAL INDICATIVE OF DWELLING OR INDUSTRY WASTE.

THE TWO LOOM WEIGHTS RECOVERED HAVE BEEN SMALL FOUND AND SURVEYED 10224 + 10227

Refer to context (107005) [107001]

Fill of ditch terminus

Moderately light orange brown sandy clay. Moderate stone inclusions, with manganese & occasional chert. No fossils.

The fill seems quite similar to the surrounding natural; so much so that it was difficult to distinguish at first. This is the terminus to the small ditch running ~~SW/NE~~ SW/NE across site

Refer to context [107003]

Cut of ditch terminus

Moderately steep sided ditch with concave base.

This is the terminus of a ditch that starts/ends here & then continues NE across site.

Unknown use. Possibly a shallow ditch delineating enclosures within a larger structure. No finds.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS A RAW CLAY CLOD / LENS SITUATED WITHIN (107005) A DARK, ALMOST BLACK INDUSTRIAL / OCCUPATION WASTE BACKFILL OF PIT [107001].

THIS CLOD WAS GIVEN IT'S OWN CONTEXT AND SURVEYED AS IT WAS SEEN AS BEING POTENTIALLY SIGNIFICANT (INITIALLY), ALONG WITH A LOOM F.10236 AND SAXON POTTERY AS POTENTIAL EVIDENCE OF THE PIT [107001] POSSIBLY BEING A SFB (GRÜBENHOLZEN). ~~IT IS~~ ~~THAT~~ WE HAVE SINCE WAIVERED ON THIS THEORY ALTHOUGH NOT COMPLETELY.

THE PARTICULAR RELEVANCE OF THE RAW CLAY WITHIN THE SFB ~~SE~~ SCENARIO IS AS TO EVIDENCE OF HOUSEHOLD PATTERNS SEEN IN THE ARCHAEOLOGICAL RECORD RELATING TO GRÜBENHOLZEN THROUGHOUT THE REGION.

Refer to context (107000) (107005) [107001]

FILL (107008) THIS FILL IS A VERY SIMILAR TO
CONTEXT (107007) BUT IS A LITTLE LIGHTER
WITH SMALLER AMOUNT OF SMALL STONES AND
IS A LITTLE BIT MORE SILTY BECAUSE OF HIGHER
HUMIDITY. THE FILL PROBABLY WAS FORMED AS A
RESULT OF NATURAL INFILLING.

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

An E-W running ditch likely to be associated with an enclosure to the North of the slot. In plan, ditch [107011] runs for 10-15 m. west and then seems to turn to the North. Due to its depth it may well have been used as a field boundary.

Ditch [107018], an NE-SW running ditch, is being cut by [107011], possibly destroying its terminus, although it might continue to the SW. (see [106013] for plan).

Pottery suggests that it may be Iron-Age in date.

Shape of cut: The southern edge seems to have a much more gentle incline the northern, possibly due to an increased amount of erosion and weathering. Base ~~is of an earthenware~~ has a very similar profile within the excavated area. (Flat and slightly uneven in places).

Refer to context (106013)-plan

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context including items marked * overleaf)

Fill of ditch [107011] which covers the base and which seems to have accumulated through erosion of the north bank. Lighter in colour than other fills and more clayey.

A fair amount of medium sized flint inclusions near the base.

Not represented clearly in the west facing section, so likely to be a fairly minor event.

Refer to context [107011]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Silting event of ditch [107011]. Likely to have accumulated from the South basin. Shown in both the west and east facing sections.

Possibly occurred during a major storm event.

Stage 0 inclusion could show a tip-line.

~~Some~~ ^A prolonged period of bad weather conditions could have washed in a fair amount of debris and resulted in this accumulation of silt.

- Sits on top of (107013)

- Is stratigraphically covered by (107015)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

NE-SW ^{running} ditch which either curves southward after being truncated by [107011] or terminates within the truncated area.

South bank is not intact due to the E-W running ditch intersecting it giving it a possible relative date of Iron Age or earlier due to the obvious cut line in the west fac. section, representing the relationship.

Base slightly overlying whilst exploring the material which changed to a clean, bluish-grey clay.

Refer to context [107011] - see section and matrix
[107013] - see plan

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

First silting event which covers the base of the ditch and reaches the brim on the North bank. Seemingly a very large amount of erosion would have had to occur to put it out of use so soon after its construction.

Some small stone inclusions line the bottom of the fill. No archaeological material.

Refer to context (107011) - see section and motif (107013) - see plan

(any further details that may be important for understanding the context, including items marked * overleaf)

THE FILL IS A SUBSOIL (AFTER MACHINE OPERATIONS SUBSOIL IS NOT TOTALLY STRIP AND IS PRESENT IN THIS PART OF AREA; INTACT IS DIFFICULT TO SEE FEATURES)

THE SOIL IS CHARACTERISED BY SAND AND GRAVELS, OFTEN STONES IN A HIGH PERCENTAGE. IT IS MID BROWN - ORANGEISH COLOUR AND VERY COMPACT.

FRAGMENTS OF BONE, ROTTERY AND CBM ARE OCCASIONAL.

CHARCOAL IS MODERATE PRESENT IN THE GROUND AND CHALK IS OCCASIONAL.

Refer to context [107021]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

THE FILL IS COMPACT AND IS CHARACTERISED BY MID-BROWN-YELLOWISH COLOUR.

THE COMPOSITION IS VERY GRAVEL WITH CHALK (HIGH PERCENTAGE OF SMALL DIMENSION CONCENTRATED FROM MID PORTION TOP/~~SW~~ SW CORNER OF SECTION) AND SANDY.

IN THE TOP OF THE SECTION, THERE IS A LAYER OF SANDY SILT (10-20% SAND) WHICH IS THE NATURAL OCCURRING COMPOSITION.

Refer to context (107033)(107032)

CUT OF ROMAN DEFENSIVE DITCH.

RE-CUTTING OF ORIGINAL ROMAN DEFENSIVE DITCH WHICH HAD BEEN NEGLECTED FOR QUITE SOME TIME. THIS RECUT MAY HAVE BEEN A HASTY REACTION TO A SERIOUS THREAT. THE FILL PRIOR TO THIS CUT (107038) CONTAINED SIGNIFICANT AMOUNTS OF OCCUPATIONAL WASTE MATERIAL INDICATING THAT THE ORIGINAL DEFENSIVE DITCH HAD NOT ONLY BEEN NEGLECTED BUT ALSO THAT THE NEED FOR IT WAS THOUGHT TO HAVE BEEN REDUCED. THIS RECUT IS SIGNIFICANTLY SHALLOWER THAN THE ORIGINAL (0.6m TO THE 1m OF [106596]) SO IT MAY HAVE BEEN THAT THE REINSTATEMENT OF THE DITCH WAS SEEN AS SECONDARY TO THE REINSTATEMENT OF THE BANK WHICH PRESUMABLY WOULD STILL HAVE LARGELY BEEN EXTANT AT THE TIME OF RE-CUTTING OR THE DITCH WAS ~~DOG~~ RE-CUT UNDER TIME PRESSURES AND WAS

Refer to context 106596

This fill is a deposit that was identified when the location of the current feature started. It is very heterogeneous, moderately compact, dark grey, clay sandy, silt composition with mineral inclusions of occasional pieces of stones, moderate organic inclusions of charcoal and plant remains, and finally occasional presence of pots and are small find counted in a necklace brown done with blue glass material.

It is a very mixed and heterogeneous soil that rather seems to be a fruit of an accumulation of soil in contact with the topsoil or with being weathered over time. It was not spread out in a logical reasonable way or shape and it was a group of archaeological contexts that could be identified as a pit and part of a particular feature that was interpreted as a pit/technic or fire structure that was constructed on a ditch.

This fill is covering the cut [107046]. Although the interpretation of this fill is not accurate, it seems to be an accumulation of CBN on what was interpreted as being a fire structure. It could have been ~~part of~~ structural part of the feature as it was in the center of what we could see as being the outline of it.

In order to distinguish it and isolate it as part of one of many fills that are within the structure, it was opted to give a cut number.

~~This~~ The fill is the same as the fill (107045). The existence of different context numbers is due to the methodology applied ~~to~~ during the excavation of the feature: it was set a grid of 8 squares. 4 of them were dug single context and had all plans and sections recorded, whereas the other 4 were 100% excavated and the ~~regular~~ recorded of the 4 first squares / slots were finished being, on the 4 squares left, just surveyed the cuts identified. Those cuts were identified on the process of 100%ing the feature were registered with individual cut numbers that will be represented on the sketches.

1007-d1 squares

This is the cut [107044] filled by (107043) and same as [107046], ~~1007-d1~~ and [107764] and [107765] on the 1007-d1 squares

It has a sub-rectangular shape, elongated on a NW-SE direction, with very gentle sides, concave base and with 0.40m length, 0.20m width and 0.05m depth.

As explained on the (107043)'s context sheet, this cut was given in order to individualize the presence of what it seems to be a reman of a structural element of a fire structure composed by an accumulation of CBM (107043).

As the feature was dug in a grid of 8 squares of which 4 were ~~on~~ dug single context and properly recorded (plan and section) and the other 4 were 1007-d1 being, on them, just surveyed the cuts identified (although with different individual #), this cut is the same as [107046] on the ~~other~~ square dug single contexts and same as [107764] and [107765] identified

Refer to context ~~SEE CONTEXT~~ while 1007-d1 the feature. SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

DELIBERATE BACKFILL OR POSSIBLE NATURAL INFILLING OF PIT / MAYBE
WATCHING HOLE. THIS IS THE TOP FILL OF 2 FINE FILLS OF
PIT [107052], A FEATURE CUTTING AN EARLIER PIT AND A ROMAN ENCLOSURE
DITCH CORNER. THIS FILL AT ITS UPPER EXTREMITY / HORIZONS SPREADS
TO COVER ALL THREE FEATURES, WAY BEYOND THE BOUNDS OF THE
CUT OF [107050] IN WHICH IT FILLS.

THIS IS A FAIRLY HOMOGENEOUS MID - GREYISH BROWN SILTY CLAY,
WITH OCCASIONAL RESIDUAL SMALL STONE, ~~CHALK~~ CHALK AND CHARCOAL FLICKS
THROUGHOUT - GIVING THE ~~PROPER~~ CHARACTERISATION OF A NATURAL INFILLING
OF WHICH IT COULD BE. A NUMBER OF PITS IN THE NEARBY
SURROUNDINGS INCLUDING THE ONE THIS CUTS [107052], ALL ~~THE~~ SEEMINGLY
PART OF A SIMILAR PERIOD / FUNCTION, THE OTHERS ~~BE~~ ALSO
SEEMINGLY DELIBERATELY BACKFILLED.

SOME A-BONE DISCOVERED, INCLUDING ~~COW~~ BOVINE BONE + TEETH SUGGESTING
POSSIBLE ~~BE~~ RUBBISH DUMPING.

- CUT OF PIT / POSSIBLE WATERING HOLE, CUTTING AN EARLIER PIT [107052] AS WELL AS A SECTION OF DITCH [107054].
- THIS IS ^{ONE OF} A NUMBER OF PIT FEATURES ~~STILL~~ SITUATED IN A RELATIVELY LOCAL AREA. NOT TO SAY THE PITS ARE SIMILAR IN FUNCTION OR DATE.
- THIS PIT HOWEVER SEEM TO BE A POSSIBLE WATERING HOLE, & TWO EDGE EROSION DEPOSITS (107063) + (107048) POSSIBLE INDICATORS OF ~~AN~~ WATER BODY GROUNDING THE EDGES.
- THIS PIT IS CUT INTO THE NORTH WEST CORNER OF A ROMAN RECTANGULAR ENCLOSURE DITCH. INITIAL THOUGHTS WERE THAT THE PIT WAS ~~BEING~~ FUNCTIONALLY RELATED. HOWEVER IT DOES HOWEVER SEEM ~~AND~~ THAT ACTUALLY THIS ^{PIT} ~~DITCH~~ WAS ~~DUG~~ CONSTRUCTED AFTER THIS DITCH AND THE LATER PIT [107054] WERE FILLED IN.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF PIT, CUTTING THE CORNER OF THE NORTH WEST CORNER OF ROMAN RECTANGULAR ENCLOSURE DITCH ~~THE~~ [107054]. THIS PIT IN TURN IS CUT BY A LATER PIT [107050].

FROM THE SHAPE ~~OF~~ AND DEPTH OF THE PIT, IT SEEMS TO BE MAYBE STORAGE IN FUNCTION, POSSIBLY A WATERING HOLE. PERHAPS A CHANGE IN WATER TABLE MAY HAVE RESULTED IN THE ~~OF~~ PIT FALLING ^{OUT} ~~AS~~ OF USE, BACKFILLED AND ULTIMATELY REPLACED BY ~~AT~~ A NEW PIT [107050].

~~AT~~ THIS PIT WAS NOT IDENTIFIED UNTIL ALMOST FULLY EXCAVATED, ~~MEANING~~ THE OPPORTUNITY OF A HALF SECTION WAS LOST, AND ~~THE~~ THUS A FULL/DETAILED RECORDING OF DISUSE. ALTHOUGH IT DOES LOOK AS THOUGH AFTER IT WAS FULLY INFILLED PIT [107050] WAS CUT INTO ^{THE} ~~THE~~ SOUTHERN EXTENT OF [107052] REMOVING MUCH OF ITS BACKFILL MATERIAL MEANING THE TOP FILLS OF [107050] ENDED UP FILLING THE ~~THE~~ VOID OF [107052]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

- NATURAL INFILLING / SILTING UP OF THE NORTH WEST CORNER OF ROMAN ENCLOSURE DITCH [107054].
- THIS IS A VERY HOMOGENEOUS ~~CLAY~~ GREENISH-BROWN CLAYEY-SILT, WITH VERY FEW INCLUSIONS, OCCASIONAL RESIDUAL SMALL STONE, CHARCOAL AND ^{ORANGE} SANDY SEDIMENT FROM EDGE EROSION.
- THIS FILL AND THE CUT OF THE DITCH IS CUT BY TWO ~~CUTS~~ PITS, FIRST [107052] AND A LATER PIT [107050] WHICH ALSO CUTS THE FORMER PIT.
- NO FINDS RECOVERED.

Cut [107064] of posthole with a steep sloping NE side and moderate sloping SW side. This posthole is in a SE area of slot, ~~which possibly was the~~ inside a building which is possibly a SFB of the Saxon period. The fill inside did not contain any piece of pottery but the shape and the presence of the posthole can help to interpret this building as a SFB. Furthermore it seems that a ditch [107182] has been cut by this building [107182].

CUT OF ENCLOSURE DITCH THAT FORMS PART OF WHAT APPEARS TO BE A LADDER ENCLOSURE. IT IS ~~NOT~~ ONLY POSSIBLE TO SEE THIS ON SITE PLANS, AS THE L.O.E FOR TEA10 A IS DIRECTLY TO THE EAST OF THIS SLOT. THE ENCLOSURE CONTINUES UNDER THIS AND REAPPEARS WITHIN TEA10 B.

THE EDGES OF THE DITCH ARE MODERATELY SLOPING AND IT HAS A FLAT BASE.

THE DITCH ONLY CONTAINS ONE FILL, SUGGESTIVE OF A SHORT PERIOD OF INFILLING OR SUDDEN EVENT AFTER THE DITCH WENT OUT OF USE.

Refer to context (107067)

THIS IS THE SOLE FILL OF DITCH [107066] IT CONSISTS OF A DARK BROWNISH GREY CLAYEY SILT. IT CONTAINS OCCASIONAL SMALL ANGULAR STONES AND MODERATELY SIZED ANGULAR FLINT. THE ~~THE~~ HERMOGENOUS NATURE OF THE INFILL SUGGEST THAT THIS OCCURRED RELATIVELY RAPIDLY. THE CLAYEY SILT COMPOSITION (WHICH IS VERY DIFFERENT TO THE SURROUNDING NATURAL) SUGGESTS THAT THE INFILL HAS OCCURED AS A NATURAL BUILD UP POSSIBLY FOLLOWING A SINGULAR EVENT LIKE A FLOOD, OR SLIGHTLY SLOWER NATURAL SILTING IN DAMP CONDITIONS.

ONLY A SINGLE SMALL FRAGMENT OF BONE WAS RECOVERED, AND OCCASIONAL CHARCOAL PRESENT WHICH DOES NOT SUGGEST DELIBERATE BACKFILL, HOWEVER IT IS SUGGESTIVE OF HUMAN ACTIVITY WITHIN THE WIDER VICINITY.

(any further details that may be important for understanding the context, including items marked *overleaf)

CUT OF LINEAR DITCH [107068], NORTH WEST FACING, WITH MODERATE SLOPING SIDES, TAPERING INTO STEEP SLOPING SIDES. SHAPE OF THE BASE IS UNKNOWN AS [107068] IS CUT BY [107070]. HOWEVER THE BASE IS LIKELY TO BE THE SAME SHAPE (CONCAVE) AS [107090] AS THEY SEEM TO BE THE SAME DITCH. THE EXTENT OF THE DITCH BY [107068] IS UNKNOWN DUE TO FEATURES BEING "INVISIBLE" DUE TO SEVERE UNDER MACHINING IN THE GENERAL. HOWEVER, DEADLINES MEANT THE FULL EXTENT OF THE DITCH COULD NOT BE DETERMINED. ONE END OF THE DITCH (A TERMINUS) WAS DISCOVERED WITHIN [106817]. DITCH WAS ALSO NOT VISIBLE WITHIN SOUTH EAST FACING SECTION OF RELATIONSHIP SLOT, ∴ IT IS LIKELY TO HAVE BEEN TRUNCATED BY [107072]

UNABLE TO DATE FEATURE DUE TO LACK OF DATEABLE FINDS WITHIN [107069].

Cut of a pit or post-hole.
Within a possibly Iron Age enclosure and is adjacent to a number of pits, two other post-holes and a possible cremation.

- Size of the feature is shallow, only 0.17 m in depth with little evidence of a packing layer for a post-hole.

- However, it seems likely to be part of a structure as there is an obvious concentration of activity within the immediate area.

- Possible pyrotechnic activity to the SW (Area still under excavation).

Refer to context (107081) - SEE PLAN SKETCH

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the feature, including items marked * overleaf)

Fill may either be a packing deposit for a post, or the infilling of a small pit.

Some ceramics were found on the surface of the feature, however not directly related.

A noticeable amount of flint inclusions were retrieved from the base, however they seem more likely to be part of the natural geology which the feature was cut into.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of small post hole or pit.

Within a larger enclosure and adjacent to a number of other pits/postholes

Possibly Iron Age in date due to it's context.

- Seems very shallow for a post-hole, but within the immediate area of the lively structure and associate pyrotechnic activities.

- No obvious alignment as of yet, however area is still under excavation.

Refer to context (107081) - SEE PLAN

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Dark charcoally fill of [107080]

If feature is a 'post-hole' then fill can be considered a packing deposit mixed in with the remains of the post.
If it is a pit, then it may be a dumped layer...

Refer to context [107080] - see section sketch

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

ORIGINALLY BELIEVED TO BE A SMALL PIT, THE FEATURE WAS EXCAVATED ONLY TO FIND OUT IT IS POSSIBLY OF NATURAL ORIGIN. THE CUT [107082] IS VERY SHALLOW AND DOESN'T SEEM TO HAVE A SHAPE SUGGESTING A PROPER DESIGN, SUGGESTING ITS INTERPRETATION AS A NATURAL DEPRESSION WITH SOME NATURAL MATERIAL INFILLING IT.

CUT OF DITCH [107088]. NW FACING WITH MODERATELY SLOPING SIDES & A CONCAVE BASE. SHAPE DUE TO DESIGN & MATERIAL CUT INTO [107088] CUTS [107090], [107084] & [107086]. IS THE LATEST OF THE DITCHES. IT IS POSSIBLE THAT [107088] TERMINATES AS THE CUT RISES IN THE SW/SE FACING SECTION OF THE RELATIONSHIP SLOT. HOWEVER, THIS WAS NOT CONFIRMED AS A CERTAINTY AS THIS AREA OF THE SITE WAS SEVERELY UNDER MACHINED, MAKING FEATURES INVISIBLE. MOREOVER DUE TO DEADLINE) ADDITIONAL SLOTS WERE NOT OPENED TO CONFIRM THE TERMINAL.

DATE 1200 ACE DUE TO POT IN @ (107089).

Refer to context [107084]

CUT OF POST-HOLE [107099] WITH MODERATELY SLOPING SLOPING AND ASYMMETRIC SIDES. SLOPE ON W SIDE OF FEATURE IS STEEPER THAN THE E SIDE.

CONCAVE BASE WITH SMALL STONES FOUND IN BASE, PROBABLY RESULT OF BIOTURBATION RATHER THAN PACKING REMAINS.

POST-HOLE IS VERY NARROW AND SHALLOW. DEPTH OF FEATURE MAY BE RESULTING OF MACHINE STRIPPING RATHER THAN THE RESULT OF ORIGINAL CREATION OF HOLE SINCE IT IS TOO SHALLOW TO SUPPORT POST.

NARROWNESS COULD BE RESULT OF BIOTURBATION, IN PARTICULAR, SLUMPING. THE GENTLE SLOPE OF THE E SIDE IN COMPARISON WITH STEEPNESS OF W SIDE AND THE UNEVENNESS OF E SIDE SLOPE SUGGESTS THAT THIS WAS UNLIKELY TO BE THE RESULT OF HUMAN ACTIVITY AND INSTEAD OCCURRED AFTER ABANDONMENT OF FEATURE.

POST-HOLE LOCATED NEXT TO A COLLECTION OF OTHER POST-HOLES AND ENCLOSED BY TRACKWAY AND 2 DITCHES ON N + W SIDES. POST-HOLES ARE TOO SCATTERED TO SUGGEST BUILDING STRUCTURE HERE BUT THE FACT THAT

IT IS ENCLOSED COULD SUGGEST THIS WAS USED TO TIE ANIMALS UP WITHIN ENCLOSURE. SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

FILL (107100) OF POST-HOLE [107099]. FILL IS LOOSE AND IS COMPOSED OF SANDY CLAY. FILL IS A DARK BROWN COLOUR IN CONTRAST TO ORANGEY BROWN OF NATURAL SOIL.

FILL HAS STONE AND CHARCOAL INCLUSIONS, THOUGH CHARCOAL PIECES ARE SMALL AND VERY INFREQUENT. STONE PIECES ALSO INCLUDED SOME SMALL PIECES OF UNWORKED FLINT.

THE MIX AND INFREQUENCY OF THESE INCLUSIONS SUGGESTS THAT THE FILL IS THE RESULT OF NATURAL INFILLING, ~~PROBABLY~~ AFTER THE POST-HOLE WAS ABANDONED, AND BIOTURBATION.

NO POST-PIPE SO ~~THE~~ POST PROBABLY TOOK UP WHOLE HOLE LEAVING VERY LITTLE ROOM FOR PACKING. NO EVIDENCE OF PACKING.

POSSIBLE INTERPRETATION: POST-HOLE WAS DUG TO FIT POST EXACTLY, PERHAPS FOR ANIMAL USE. WHEN THE POST-HOLE WAS ABANDONED (NO EVIDENCE FOR WHETHER THE POST WAS LEFT IN HOLE OR REMOVED) AND ~~AS~~ NATURAL PROCESSES RESULTED IN SLIGHT SLUMPING AND MIXING OF EARTH IN HOLE AS A RESULT OF BIOTURBATION.

Refer to context: 107099

cut of pit, [107102]

Steep sides but shallow creating an oval bowl shape.

Approximately ~2m from an unfinished ditch slot possibly a fire pit

- definitely some form of burning event.

Does not cut any other features & is not cut by any.

Refer to context (107101)

(any further details that may be important for understanding the context, including items marked * overleaf)

DELIBERATE BACKFILL OF POSTHOLE SITUATED AT THE SIDE OF PIT [107132] AND CUT INTO THE FILL OF PIT [107132]. SPECIFICALLY THE POSTHOLE IS CUT INTO A LAYER OF REDEPOSITED NATURAL ⁽¹⁰⁷¹²⁹⁾ COVERING / INFILLING [107132].

THIS FILL SEEMS TO BE THE REDEPOSITED PACKING FILL OF THE ORIGINAL POSTHOLE. REDEPOSITED AFTER THE POST HAS EXTRACTED. THE FILL PROFILES VERY MUCH THE NATURAL REDDISH SAND AND YELLOW SILTY GRAVEL. WITH THE MAJOR COMPONENT OF THE FILL BEING A MID-GRAYISH BROWN SILTY CLAY PROBABLY AN AGRICULTURAL ~~SOIL~~ 9 SPOIL. THE FILL HAS OCCASIONAL CHARCOAL + STONE INCLUSIONS. THE DEPOSITION EVENT SEEMS TO HAVE BEEN A SINGULAR DUMPING / BACKFILL EVENT, NO EVIDENCE OF ^{RESIDUAL} ~~RESIDUAL~~ SEDIMENT HORIZONS. NO FINDS RECOVERED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF POSTHOLE SITUATED ON THE EDGE OF FT [10700] AND CUT INTO THE ^A ~~ADDITIONAL~~ RE-DEPOSITED NATURAL LAYER, INFILLING A EARLIER PIT/WATERING HOLE [107138].

THIS IS A FAIRLY SUBSTANTIAL POSTHOLE, WITH EVIDENCE ON THE ~~EDGE~~ EDGE OF FT [10700] THAT THE POST WOULD HAVE BUTTED AGAINST THE WEST EDGE.

THIS POST MAY BE ~~CONTEMPORARY~~ TEMPORALLY AND FUNCTIONALLY CONTEMPORARY WITH ~~THE~~ FT [10700] OR POSSIBLY WITH AN EARLIER DITCH CORNER [107133] NOW WIRED OUT BY THE CUT OF [10700]. ~~THE~~ THERE IS ANOTHER POSTHOLE NEARBY [107] AGAIN CUT INTO THE EDGE OF THE DITCH, OR AGAIN THE DITCH. THE DITCHES FORM A ROMANO-BRITISH RECTANGULAR AND LADING ENCLOSURE SYSTEM. THE NORTHERN ENCLOSURE MAY HAVE HELD DWELLINGS OR LIGHT INDUSTRY ACTIVITIES.

Shallow silt of post hole [107112]. The silt is brown silt differing from the surrounding sandy natural. The only inclusions noted in the silt were a small amount of small stones. No girds were recovered from the silt.

The silt is likely to be a natural accumulation within the cut of the post-hole, as no evidence of human activity was recovered.

Cut of post hole containing a sdo sill (107111). The post hole is steep sided with a very slight concave base. Due to the base being nearly flat, it is likely to be the remains of a post hole, however a stake-hole is also a possibility.

The northern edge of the feature is slightly more sloped than vertical, possibly created when the post-hole was removed.

No signs of evidence of human activity was recovered from the sill to date the feature, implying that it is likely to have been installed naturally.

The stakehole is 4.30m north of another posthole [107114], however it is not known whether they are part of the same structure.

Fill of posthole [107114]. The fill comprises of loose dark grey silt with charcoal and stone inclusions. The distribution of charcoal towards the centre of the fill may imply in-situ burning of the post after it had gone out of use, however the lack of human activity such as finds ~~may~~ indicate that this charcoal may have been mixed in with naturally infilled material.

Post-hole containing a side sill (107113). The sill contained no finds however did contain charcoal, possibly showing that the post was burnt in-situ, or it had been installed near to an area of occupation.
There is little evidence for the junction of the posthole, a single posthole is located 4.30m north of [107114], however it is unknown whether they were part of the same ~~section~~ structure.
No girbs were recovered to date the post-hole.

CUT OF POST-HOLE [107115], SUB-CIRCULAR FEATURE WITH STEEP SIDES AND FLAT BASE SIDES ARE VERY ~~SYMMETRICAL~~ SYMMETRICAL AND CREATE A FLAT-BOTTOMED V-SHAPE IN SECTION.

VERY LITTLE TO NO EVIDENCE OF SLUMPING SUGGESTING ~~THIS FEATURE~~ ~~HAS~~ ~~LITTLE~~ LITTLE BIOTURBATION HAS TAKEN PLACE.

SHAPE OF POST-HOLE SUGGESTS POST WAS PLACED UPRIGHT BUT IT IS AS YET UNCLEAR WHAT THE PURPOSE OF THIS POST MAY HAVE BEEN.

POST-HOLE WAS FOUND WITHIN A COLLECTION OF POST-HOLES WHICH ARE ALL ENCLOSED BETWEEN TWO DITCHES (ONE RUNNING E-W AND THE OTHER N-S) AND TRACKWAY. COULD SUGGEST THAT INSTEAD OF BEING USED AS STRUCTURAL SUPPORT THESE POST-HOLES WERE WITHIN AN ENCLOSURE OF SOME SORT POSSIBLY USED FOR TYING ANIMALS

FILL (107116) OF POST-HOLE CUT [107115]: MODERATELY COMPACT FILL WITH AN ORANGEY-BROWN COLOUR AND COMPOSED OF SANDY SILT. CONTAINS STONE AND CHARCOAL INCLUSIONS.

HIGH CONTENT OF CHARCOAL IN FILL NECESSITATED TAKING A SAMPLE AND COULD BE SUGGESTIVE OF DELIBERATE BACKFILLING. THIS IS BECAUSE THERE IS ~~NOT~~ NO CHARCOAL IN THE SURROUNDING NATURAL FILL AND SHAPE OF CUT SUGGESTS LITTLE BIOTURBATION HAS TAKEN PLACE, NO EVIDENCE OF IN SITU BURNING SO THIS CHARCOAL HAS BEEN TAKEN FROM ANOTHER PLACE. ~~WHETHER THE POST-HOLE WAS~~ STONE INCLUSIONS COULD BE EVIDENCE OF SMALL AMOUNT OF BIOTURBATION TAKEN PLACE BUT COULD EQUALLY HAVE BEEN PART OF THE BACKFILL. WHETHER THIS BACKFILL WAS THE RESULT OF RUBBISH DUMPING OR A DELIBERATE ATTEMPT TO INFILL FEATURE IS UNCERTAIN.

POST

Fills stake hole [107118]. The fill comprises of brown silt with occasional stone inclusions. Charcoal is also present within the fill, however it occurs rarely, and only in small amounts. A single small bone fragment was recovered from the fill, however as it was recovered from the top of the fill it may be intrusive. The fill is likely to represent natural infilling of a stake hole, after it had gone out of use.

Post

Cut of shallow ~~stone~~-hole. The stakehole contains a sole sill (107117) of naturally infilled material. The sill contained one shell, a small fragment of bone, however no evidence to provide a date for the feature.

The Northern edge of the feature is deeper than the southern, possibly due to the removal of the ~~stone~~ post.

The stakehole is 0.95m from another stakehole [107127], implying that they may have been part of the same structure.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a N-S running gully which is being truncated by the large FW running boundary ditch [107121]. Further investigation is needed to determine where the gully continues to the North, if at all. It either may curve to the NW, or it turns into the ditch present in the West facing section of [107011] + [107018], D 62441, 62442. However the depth ~~can~~ difference between the two slots is rather large.

Profile Character

The west edge of the gully is noticeably sharper than its counterpart, perhaps due to erosion of the east edge. The base is uneven & and gravelly. This feature seems more like a gully than ditch-line, for the above reasons.

No dating evidence at present.

Refer to context
107121 - section
107123 - plan

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Silty layer, filling the base of the gully. Perhaps associated with the apparent-erosion of the east edge, possibly occurring during a period of bad weather.

Finds & Inclusions

No inclusions of any significance.

No archaeological material which means only a relative date can be established as the likely Iron Age ditch truncates it.

Stratigraphy

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of the E-W running ditch which has been previously recorded in the profile slot D 62440-1-2, 62453.

Current relationship slot shows that the E-W ditch truncates the N-S gully/ditch [107119] (see sketch below).

Character

Edges of the ditch remain consistent with those of the slot to be shown in the slot to the East. The south edge shows some signs of minor erosion maintaining a moderately steep side.

As mentioned in the interpretation of [107011], the ditch is quite likely to be Iron Age in date, due to the small amount of pottery retrieved, and may have served as a field boundary due to its significant size.

Refer to context (107123) - general plan sketch

* Lowest fill of the slot. No obvious correspondence to a fill within [107011]

Finds

A small amount of ceramics similar to those in the fill above. Likely to be Iron-Age. Some faint indications of linear decorations.

Inclusions

Some charcoal flecks can be seen in-section. No other significant inclusions.

Stratigraphy

Within the excavated area of [107121], this is the first fill above the cut and is then capped by (107123)

Refer to context 107121-section
107123-plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Top silting layer of ditch [107121] which can be seen in the East facing section of D 62440 and covers the entire of the ditch. Can be characterised as the final, major silting phase which puts the feature out of use.

Finds

A small amount of the pottery was found in the lower part of the fill. Possibly Iron-Age in date.

Inclusions

A few angular flints can be seen in the sections along with a few flecks of charcoal.

Stratigraphy

Overlies (107122). Capped by the sub-soil (100002)

Refer to context [107121]

see [107119] for plant on a ^{larger} ~~smaller~~ scale.

POST

Side fill of shallow ~~state~~ hole [107127]. The fill comprises of clayey silt, with inclusions of small stones. No ~~stms~~ were recovered however small amounts of charcoal was present, implying human presence nearby during the infilling process. The silt is likely to have infilled naturally after the stakehole was out of use.

Cut of shallow stake-hole. The stake-hole contains a
side sill of naturally infilled material with small amounts of charcoal
(107126). However no finds were recovered to date the feature.
The stake-hole is 0.95m away from another stake-hole of
a similar shape and depth [107117], showing that they may have
originally have been a part of the same structure. The structure that
these would have formed is unknown, however they are closely
located to, and parallel to, ditch [107066] showing they may
have been associated to this feature.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

- CUT OF POSSIBLY SAXON PIT.

- ~~THE~~ IS NO SURTY AS THIS PIT IS CUT INTO WHAT WOULD HAVE BEEN A DISUSED AND BACKFILLED ROMANO-BRITISH RECTANGULAR ENCLOSURE DITCH [107133] AND IS LATER CUT BY ANOTHER SAXON BIT [107001]. THIS WOULD GIVE A LIKELY DATE FOR BEING EARLY MED (POST-ROMAN OR SAXON) HOWEVER ~~IF~~ ^{NO} DATABLE FINDS WERE RECOVERED FOR MORE RELIABLE DATING EVIDENCE.

- THERE IS NO SURTY AS TO THE PIT'S ORIGINAL PURPOSE, EDGE EROSION DEPOSIT (107151) OF WHICH HAS GIVEN THE PIT IRREGULAR ~~AND~~ SLOPING SIDES GOING FROM STEEP INTO A BELL UNDERCUT. PIT WAS CERTAINLY IN ITS DISUSE ~~BE~~ RE-PURPOSED FOR REFUGE, BEING BACKFILLED WITH OCCUPATIONAL WASTE (107130).

Refer to context (107130)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF A E-W EXTENT OF A ROMANO-BRITISH ENCLOSURE DITCH. THIS EXTENT OF THE DITCH IS ONLY SEEN IN A FRAGMENTARY STATE, AND EVEN MORE SO HARDLY SEEN IN SECTION, JUST A SMALL REMNANT OF THE SURFACE REMAINING, ~~WAS~~ AND NOT TRUNCATED BY THE TWO SAXON PITS [107131] + [107001]. THIS DITCH IS PRIMARILY EVIDENT IN THE GEOPHYSICS COUPLED WITH SLOTS PUT INTO THE ROOF OF THE ENCLOSURE EXTENT SUCH AS [106990] ON THE N-S EXTENT OF AN ENCLOSURE IN WHICH [107133] WOULD FORM THE E-W SOUTHERN BOUNDARY; AND ALSO SLOT [107135] AGAIN A N-S DITCH FOR WHICH [107133] WOULD JOIN TO THE NORTH WEST CORNER TO A SOUTHERN ENCLOSURE.

Refer to context [106990]
[107135]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS THE CUT OF N-S EXTENT OF A ROMAN
BRITISH ENCLOSURE DITCH, RECORDED AND SEEN IN
HALF SECTION OF A ~~REBAT~~ SLOT SHOWING THE
RELATIONSHIP OF THIS DITCH CORNER, AN EARLIER
(POSSIBLY IRON AGE) WATERING HOLE ^[107133] A LATER CUTTING
SAXON PIT ^[107001]

THIS CONTEXT IS THE SAME AS ^[106990] A
SLOT REPRESENTING THE FULL PROFILE/SECTION OF
THE DITCH. THIS CONTEXT ALSO RELATES TO
THE E-W DITCH ^[107133] FOR WHICH HAD ^[107001]
SAXON PIT NOT TRUNCATED; WOULD HAVE FORMED A
CORNER, ~~AT~~ THE ~~A~~ SOUTH WESTERN CORNER TO A
NORTHERN ENCLOSURE AND A NORTH WESTERN CORNER TO
A SOUTHER CONJOINING ENCLOSURE; BOTH PROBABLY CONTEMPORARY,
FORMING THE ROMAN LANDER ENCLOSURE SYSTEM.

Refer to context ⁽¹⁰⁷¹³⁴⁾

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF ~~WATER~~ LARGE PIT / WATERING HOLE FEATURE. POSSIBLY IRON AGE OR VERY EARLY ROMAN IN DATE. WE KNOW FOR SURE THAT THIS FEATURE IS OUT OF USE AND COMPLETELY BACKFILLED ^{IN THE} ROMAN PERIOD AS A ROMANO BRITISH ENCLOSURE DITCH CORNER ^{[107133] [107135]} IS CONSTRUCTED OVER IT. ~~EARLY~~ THE LATER ON A SAXON PIT / SFB IS AGAIN ~~CON~~ CONSTRUCTED ABOVE IN THE STRATIGRAPHIC MATRIX.

THE SIDES OF THIS FEATURE ARE STEPPED, & ~~THE~~ DOWN TOWARDS AS AN ~~ONE~~ UNLINED SHAFT. ~~FROM~~ SHAPE AND PROFILE CHARACTERISTIC OF WATERING HOLES OF THE IRON AGE / ROMANO BRITISH PERIODS.

THIS FEATURE HAS NOT BEEN FULLY EXCAVATED DUE TO EXCESS DEPTH 1.8M+ NEEDS MACHINING.

Cut of very shallow remnants of stakehole. The stakehole contained a odd silt clayey silt with occasional charred inclusions. The silt would have to have likely to have been accumulated after the stakehole was out of use.

No finds were recovered from the silt to date the feature. The stakehole is close to two other stakeholes [107118] & [107127] which it is only 2mets away from. This indicates that it may have been part of the same structure. The three stakeholes form a parallel line to ditch [107066], possibly indicating that the stake structure was linked to the ditch, however without further dating evidence this cannot be confirmed. The northern edge of the feature is badly weathered, causing the exact northern edge to be uncertain due to it crumbling under excavation.

CUT OF DITCH (ALREADY IDENTIFIED IN TEA10 B), PART OF WHICH CONTINUES IN TEA10 A WITH A ~~SEE~~ SE-NW ORIENTATION, THEN CURVING TOWARDS W.

THE SLOT WAS EXCAVATED CLOSE TO THE LIMIT OF EXCAVATION, AND SHOWED THAT DITCH [107141] WAS LATER CUT BY A SECOND, SHALLOWER ONE. THE DITCH HAS MODERATE SLOPING SIDES CURVING INTO A NARROW, CONCAVE BASE (OVERALL, GIVING THE ~~SLOT~~ DITCH A "V" SHAPED APPEARANCE), WHICH BECOMES WIDER TOWARDS N, WHILE ALSO BECOMING DEEPER.

THE ~~THE~~ OF THE CUT ~~AND~~ THE ~~THE~~ OVERALL SHAPE OF THE DITCH, IT IS POSSIBLE THAT THIS WAS A BOUNDARY DITCH, ~~WHOSE~~ WHOSE PURPOSE WAS TO DEFINE AND SEPARATE FIELDS.

Refer to context (107145) FOR SECTION

THICK FILL OF [107141] MADE OF DARK, GREY CLAY MIXED WITH SILT. WHILE SOME CONCENTRATION OF GRAVEL OR CHARCOAL WERE PRESENT INTO THE FILL CREATING DIFFERENCES HERE AND THEN, THE ~~MAIN~~ MAIN TEXTURE AND ~~COMPOSITION~~ OF THE LAYER WAS HOMOGENEOUS ENOUGH ~~TO BE CONSIDERED~~ TAKE IT POSSIBLE TO CONSIDER IT JUST ONE FILL. ~~CONSIDERED AS~~ GIVEN ITS COMPOSITIONS AND INCLUSIONS THE FILL CAN BE INTERPRETED AS A LAYER OF DUMPING OF MATERIAL, INCLUDING CHARCOAL, ASH, BROKEN POTS AND FRAGMENTS OF ANIMAL BONES. IN THE UPPER PART OF THE FILL, VISIBLE ON THE SURFACE AND PARTLY BROKEN ~~IS~~ DUE TO THE MACHINING OF THE AREA, THE LOWER PART OF A LARGE VASE WAS FOUND WITH TINY FRAGMENTS OF BONES INTO IT. AT FIRST BELIEVED TO BE A POSSIBLE CRATATION, THE EXCAVATION PROVED IT WAS PART OF THE DUMP - WORKING SHOTS WERE TAKEN BEFOREHAND.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIN LAYER OF FILLING LAYING OVER THE FLAT BASE OF CUT [107144]. THE SOIL APPEARS TO BE A MIXTURE BETWEEN THE UPPER FILL (107145), SILTY CLAY, GREY IN COLOUR, AND THE YELLOW SAND TYPICAL OF CUT GEOLOGY, GIVING THE LAYER A MOTTLED COLOUR. TINY FRAGMENTS OF QUITE DEGRADED POTTERY WERE FOUND. ALL THE ABOVE SUGGESTS THAT (107146) IS THE PRIMARY FILL OF CUT [107144].

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

The fill was moderately compact, mid grey color, clayey silt composition, with moderate inclusions of stones and charcoal and fills to the cut [107164]

It was cut by [107064] and covered directly the fill (107155).

It had about 0.19m depth / thickness and had no materials on it. It is possible to say that is the same as (107153) ^{on site} and (107154) ^{on site} as the methodology ^{used} although it ~~had~~ involved a grid of 8 squares, the 4 squares or under investigation were dug single context being, therefore possible to know it. However this ~~is~~ match of fills, for a question of protocol of the company, cannot be added ~~on~~ on the front page of this sheet.

In terms of its interpretation, this fill seemed to be a dumped layer ~~being~~, being also quite possible to be a natural infilling. However as this seems to be a fire structure and this fill is on top of what seems to be a remaining preparation with CSR of the base of a structure that holds fire on it, ~~and~~ (107155) and (107159) - and covered by [107044] that was interpreted as possible structural element, makes that it is more likely to be a dumped layer.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a fill that was covered ~~from~~ far (107152) and ~~away~~ (107159) although the last fill seemed to be part of the same movement.

It had a very small extension ^{gully} and spotted on top of the negative shape of the cut [107164]. As the excavation methodology was set in grid, the numbers ^{on} of the squares dug single context are differed although they belong to the same stratigraphic reality. Therefore it was possible to understand that this fill is the same as (107156) or even to (107161) although they had no physical contact. It was possible to see that they had the same characteristics although spotted all over the cut alternated with what seems to be burned inside - black fill - (107159) in this context ^{square} and (107157) and (107158) on the contiguous diagonal square (B) disposed alternated with one another. It resembled to a ~~kind~~ of base preparation to receive fire activity being spreaded on the cut not only on the base but as well on the sides.

This form is incomplete if fields marked with * are empty PTO for additional information (and describing all items marked with *) and sketches

This fill (107159) is covered for (107155) - although seemed to be from the same momenta of deposition - and covered directly the cut [107166]. It is loose, black dark colour and a sandy composition. It was ~~not~~ composed by charcoal and looked to be result of an initial burning. It was disposed in a spotted way & on the cut. As explained on (107155) ~~however~~ although without direct physical contact seemed to be the same as (107160) and (107157) ~~and~~ on the contiguous diagonal square ¹⁰ and with (107158) ¹⁰ on the third square square of the 8 squares grid of which 4 were dug with single context methodology.

It held no materials and was sitting on the base and sides of the cut. As ~~is~~ explained on (107155), ~~the~~ this context and (107155) look to be a preparation of a "cut" - negative structure - made to hold & activity involving fire - maybe a kind of a oven?

This cut is sub-circular shape (oval) - moderate sloping sides, concave base; of ~~approx~~ 0.80m of length*, ~~approx~~ width** and 0.15m depth. However, on the first part of this context sheet the measurements are different because it has the total measurements of the whole feature, whereas this context is correspondent to the cut of one of the squares of the 4 dug with single contexts on a 8 squares grid. this cut is the same as [107165] and [107166] on the 2 following squares - placed further east (see sketch). It holds fill that, as explained on (107155) and (107159) seemed to be used as a fore structure. However, a more accurate information was compromised by its truncation on the third square of the grid (corresponds to [107166] from a pit [107645] that doesn't allow to know its whole shape and extension.

see description on [107164].

same as [107164] square (A), [107165] square (B).

As in this square (E), it is possible to observe that this feature was truncated by [603018], a pit that destroyed the relationship of this feature with the [107653] of ditch function is not possible to determine. This truncation marks the end of the extension of the fire structure not being possible to observe the final edge.

As it was gridded, only squares (A) (B) (C) (D) were dug single context, the other (E) were 100% being ascribed to these new cut #. Therefore this is also same as [107766] and [107767].

*This form is incomplete if fields marked with are empty. PTO for additional information (and describing all items marked with *) and sketches.*

~~SEE~~ This is the cut of what was interpreted as a gully filled by (107167). However it seems to be straightly related with the fore structure as it is between the cuts that compose it, in this case cut by [107165] and cuts [107643].

It is linear, running on a NW-SE direction almost parallel to the ditch and fore structure orientation, with only 0.30m depth and ~~very~~ gentle sides and concave base.

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

The fill is ~~the~~ loose with light brownish yellow colour, clayey silt composition and occasional inclusion of stones and charcoal.

It's interpretation is hard to determine ~~the~~ but looks to be straightly related with the cut [107164]. If it's true that the mentioned cut was ~~the~~ the functional part of the fire structure - like oven? - this fill could be a preparation of the structure or a result of many re-utilization of this structure being possible a dumped layer of the desuse of [107642] ~~or~~ or a preparation for the cut [107164] - it is covering a possible in situ burning (107275) with ~~the~~ ^{which confirms the hypothesis provided}

As the feature was dug by setting a 8 square's grid of which 4 were single context dug, each square has its own individual contexts, but it was possible to determine that there was the same fill spread out on the cut being the same ~~as~~ (107267) and (107268) on square ~~(C)~~ ^{on square (B)}

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of key hole shaped pit [107171]. The fill consisted of silty clay with occasional stone inclusions. The fill also contained charcoal, however only in small amounts. No finds were recovered to date the fill.

The fill is likely to have accumulated naturally, with little evidence of human activity in the fill being seen.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf).

Cut of pit showing a key hole shape (see plan). The unusual shape implied that it may have been a mixture of two features, however as there was no visible difference in the plan or in the fill of the pit, the pit may have been a single feature or two distinct features infilled at the same time.

The fill contained no finds to date the feature, however charcoal was present in very small amounts, indicating that the fill occurred in an area of human activity.

Little evidence for the pit's position is known, however it is located near to stakehole [107171] and south just south of a further three stakeholes, possibly indicating that it may have been part of the structure that the stakehole aligned formed.

Refer to context (107170) for plan section and notes

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of stakehole [107173]. The stake-hole fill comprises of brown silty clay with rare inclusions of small stones. The stake-hole fill also contained charcoal, but only in small amounts. Finds recovered from the fill included a single lump of slag and animal bone. Unfortunately due to the small size and fragile nature of the animal bone, it could not be recovered. The fill is likely to have accumulated naturally, near an area of human activity, due to the presence of charcoal and dumped waste (slag and animal bone).

Refer to context (107173) → section plan.

CUT OF PIT [107148] WITH ~~VERY~~ STEEP SIDES ESPECIALLY TOWARDS NORTH, CURVING INTO AN ALMOST ~~FLAT~~ FLAT BASE. IT IS VERY EVIDENT ^{BY ITS SHAPE} THE WAY THE EDGE WAS EXCAVATED, CUTTING EFFICIENTLY THROUGH THE CLAY OF THE LOCAL GEOLOGY, REACHING THE SANDY CLAY UNDERNEATH IT. [106574] [106545] [107356]

FGF

THE PIT IS LOCATED IN AN AREA WHERE SIMILAR PITS WERE FOUND. THEY HAVE DIFFERENT SIZES ~~AND~~ BUT MOST OF THEM HAVE SIMILAR STEEP, ALMOST VERTICAL SIDES. SOME OF THEM ~~HAD~~ HAD A LARGE QUANTITY OF ANIMAL BONES, ~~AND~~ AND POTTERY FRAGMENTS. THIS SEEMS TO ~~INDICATE~~ ~~INDICATE~~ INDICATE THAT THE AREA HAD AN INTENSE HUMAN ACTIVITY, ALTHOUGH IT IS NOT POSSIBLE AT THE MOMENT TO UNDERSTAND THE ORIGINAL FUNCTION OF THESE FEATURES AND HOW THEY ARE RELATED TO THE CLOSE BY DITCH RUNNING ROUGHLY NE-SW - SEE [107144] AND [107147] FOR REFERENCE.

ON THE E SIDE, THERE WAS AN INTERFERENCE CUTTING ~~THROUGH~~ THE EDGE, POSSIBLY DUE TO ^{THE} VIBRATING OF THE AREA BEFORE EXCAVATION

Refer to context

PRIMARY FILL OF PIT [107175] MADE OF CLAY MIXED WITH SOME SAND, LIGHT BROWN WITH YELLOW UNDERTONE. THE COMPOSITION OF THE FILL, WHERE THE MATERIAL FROM CUT GEOLOGY MIXED WITH CLAY FROM THE SURROUNDING AREA SUPPORTS THE INTERPRETATION OF THE LATE AS THE PRIMARY FILL OF THE UNUSED FEATURE. RIGHT OVER THE EDGE A LARGE FRAGMENT OF ROMAN POT WAS FOUND, WHILE OTHER DEGRADED FRAGMENTS WERE FOUND CLOSER TO THE BOTTOM. FROM THE S CORNER A SMALL BONE OF A YOUNG ANIMAL (MAY BE A LAMB, FROM THE FOOT) ~~WAS~~ WAS RETRIEVED.

(any further details that may be important for understanding the context, including items marked * overleaf)

- PIT CUT WITH 4 FILLS (107183) - (107184) - (107185) - (107186), CIRCULAR SHAPE, UNDERCUTTING SIDE; ~~THE~~ I STOPPED THE WORK AT 1.32 M. DEEP, BUT THE PIT SHOULD BE ~~WIDE~~ THE 1.5 M. DEEP, CONSIDERING THE DEPOSITE SCOT [107001]; SO THIS BOTTOM IS NOT THE BASE CASE BUT IT SHOULD BE CONCAVE AS ^{IN} THE OTHER SCOT.
- IT SHOULD BE A SAND ON SFB, CONSIDERING THE SHAPE, THE FILL DEPOSITION AND THE FINDS (POSSIBLE SAKIN POT) AND A POSSIBLE ON LEFT SIDE [107064]; IT SHOULD BE THE SAME AS OF [107001] INVESTIGATED IN THE OTHER QUARTER OF THE PIT WHEN HAS A BIGGER POSTHOLE IN THE HEDGE [107104].
- THE SFB CUTS AN OTHER PIT [107138], POSSIBLE A WATERHOLE EVEN IF THERE IS NO BASE INFORMATION FOR THIS FUNCTION; IT IS VISIBLE ONLY BELOW THE SFB CUT IN THE SECTION; THIS CUT IS MORE VISIBLE IN THE OTHER SCOT, [107138]. BOTH CUT THE DITCH IN N AND S SIDE.
- THIS ~~WHOLE PIT~~ ^{WHOLE PIT} WAS INVESTIGATED IN 2 OPPOSITE QUARTER WITH HALF DITCH INCLUDED IN THE ~~SCOT~~ ^{SCOT} THE ~~POSSIBLE~~ ^{POSSIBLE} ~~WATERHOLE~~ ^{WATERHOLE} IS A VERY DEEP, BUT THE BEST WILL BE ~~DO~~ BY THE MACHINE FOR SAFETY REASONS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

- PIT CUT WITH ONLY ONE FULL IDENTIFIED (107188), CLAPULAR SHAPE, STEEP SLOPING SIDE IT WAS IDENTIFIED JUST AT THE BOTTOM OF THE SECTION SLOT FOR FEW CENTIMETRES, BUT IT SURELY CONTINUES FOR OTHER HALF METER (AT LEAST AS IT'S VISIBLE IN THE OPPOSITE INVESTIGATED SLOT [107138]).
- IT ~~PROBABLY WAS~~ CUT BY POSSIBLE SFB CUT [107101] BUT IT'S STILL VISIBLE AT BOTTOM BELOW SFB CUT AND ON THE TOP SURFACE IN THE OPPOSITE SLOT.
- IT COULD BE AN ^{EAR} WATER HOLE BUT IT HAIN'T AN ^{EAR} PREPARATION FOR THAT FUNCTION.
- IT CUT AN OLDER DITCH ON SOUTH SIDE [107132].
- ^{THE WHOLE} ~~WHERE~~ THE PIT WAS INVESTIGATED IN 2 OPPOSITE ~~EAR~~ QUARTER SLOT WITH HOLE DITCH INCLUDED IT'S VERY DEEP PIT AND FOR SAFETY REASON WE STOPPED THE INVESTIGATIONS, THE RES WILL BE DONE BY THE MACHINE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

- DITCH CUT WITH 2 FILLS (107190) - (107191), LINEAR SHAPE, N-S ORIENTATION, STEEP SLOPING SIDE, FLAT BASE.
- THE DITCH IS ~~THE SAME AS THE ONE EXCAVATED IN THE WHOLE~~ ~~AREA~~ CUT BY THE POSTHOLE [107264] AND THE PIT [107187] ~~AREA~~. IT'S THE CONTINUOUS OF THE DITCH CUT INVESTIGATE IN THE SOUTH PART [107266].
- THE WHOLE SITE INCLUDE ^{ALSO} A POSSIBLE SFB CUT, A POSSIBLE WATER HOLE CUT, A POSTHOLE BETWEEN THE SFB AND THE DITCH. THE DITCH WAS EXCAVATED IN HALF SECTION UNTIL THE BOTTOM INSIDE ~~THE~~ BOTH PITS ~~WERE~~ ^{WERE} NOT EXCAVATED COMPLETELY FOR SAFETY REASON (MORE THAN THE ~~DEPTH~~ ^{DEPTH} PERMITTED); THE REST WILL BE DONE BY THE MACHINE IN THE NEXT FUTURE.

CUT OF DITCH THAT MAY BE TERMINATING JUST FURTHER WEST OF THIS SLOT BUT MAY ALSO BE CONTINUING INTO A SEPARATE DITCH. THIS DITCH IS ALSO ASSUMED TO BE THE RESULT [106682] INTO [106694]. HOWEVER [106694] AS NEARLY AS ASSUMED TO BE [107079] WHICH CUTS [107075]. BUT WITHIN THIS SLOT THE ~~THIS DITCH HAS FOUR FILLS~~ DEPTH OF THE DITCH CHANGES BY 30cm. THUS THERE IS POTENTIAL THAT THERE MAY BE TWO FEATURES BUT DUE TO DEAD LINES MORE EXPLORATION WAS NOT POSSIBLE. THIS IS TRUNCATED BY [107079].

FOUR FILLS WITHIN THIS DITCH WITH IRON AGE POT FOUND IN THE BOTTOM FILL.

USE OF DITCH IS MOST LIKELY A BOUNDARY DITCH.

A SLOT WAS OPENED FURTHER WEST TO EXSEE IF ~~THE~~ [107079] & [107075] EXTEND BUT ONLY ONE WAS IDENTIFIED [107079]

Refer to context [107079] PLAN (107082)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS THE PRIMARY NATURAL INFILLING OF ^{LINCOLN} DITCH (~~107225~~) [107226]

THIS FILL IS VERY SIMILAR TO (~~107227~~) ABOVE BUT THERE IS A SLIGHT COLOUR DIFFERENCE. (107228)

THIS ~~FILL~~ FILL COVERS A VERY IRREGULAR BASE AND CHANGES DEPTH -0.83m - 1.15m. THE METHOD OF INFILLING IS NOT CLEAR OR AS TO WHY THE DEPTH CHANGES.

THIS FILL IS VERY SIMILAR TO THE NATURAL, A YELLOWISH BROWN SILTY SAND. IT WAS ~~THOUGHT~~ THOUGHT WHILST DIGGING THAT THIS FILL WAS NATURAL BUT SHARDS OF POT, ~~AND~~ BONE AND CHARCOAL WERE FOUND DEEPER INTO THE DITCH.

THE POT WAS IRON AGE, THEREFORE THE DITCH DATES TO AT LEAST THAT PERIOD.

Refer to context

CUT OF LINEAR E-W DITCH ~~[107075]~~ THAT TRUNCATES ~~[107075]~~ [107226]
THE ~~PHYSICAL~~ PHYSICAL TRUNCATION IS ACTUALLY SEEN WITHIN THE SW,
THIS DITCH IS ~~AS~~ PRESUMED TO BE THE SAME AS C107010
HOWEVER ~~FROM~~ [107010] WAS OPENED FURTHER WEST TO
SEE IF THESE TWO DITCHES CONTINUE BUT ONLY ONE
WAS FOUND. [106694] A SWOT WAS EXCAVED FURTHER EAST WHERE
[107079] WAS SEEN TO CONTINUE BUT IT APPEARED WITH
A RE-CUT WHICH DUE TO LACK OF 'VISIBLE' ARCHAEOLOGY
IT IS PRESUMED TO BE ~~THE~~ [107075] [107226]

THIS DITCH HAS THREE FILLS, WITH FINDS INCLUDING LITHICS, POTENTIAL
IRON AGE POT, BONE, CPM AND CHARCOAL.

USE OF THIS DITCH IS MOST LIKELY AN ABOUNDARY DITCH.

[107226] (107233)

Fill of pit [107235]. The silt is dark silt, with charcoal and stone inclusions. The silt also contained pottery. The pottery is very brittle and thick, implying a prehistoric date for the feature. The presence of charcoal and grogged pottery in the silt implies that a human activity was occurring during the formation of the silt. Furthermore a sloping alignment of stone towards the southern end of the pit, may have been caused by the silt being tipped against this edge, creating the slope of stone, possibly indicating that the silt represents deliberate backfilling of the pit.

Refer to context [107235] for plan.

Cut of pit containing a sole sill of (107234). The comprised of dark silt, with charcoal inclusions. The silt also contained pottery which was thick, coarse and brittle, implying a prehistoric date for the feature. There is little evidence for the function of the pit, however there are no similar features in the surrounding area, showing that its use was for something which occurred away from an area of occupation. The pit may have been backfilled deliberately after use, due to its high levels of human activity in the silt, and a possible hip line in the southern corner.

The pit cuts through post-hole [107237], implying it was dug and backfilled after the post-hole, however no pottery evidence was recovered from the post-hole.

Fill of post hole [107237]. The fill comprises of clayey silt, which is very sterile with inclusions, with only a ~~few~~ few stones being present, implying that the fill accumulated naturally. The fill is cut by pit [107235]. This shows that the fill ~~was~~ had accumulated before the construction of the pit which is believed to have been prehistoric.

Refer to context [107237] for plan.

Cut of post-hole containing a sole gl (107236). The U. was very stable with little inclusions, implying that the post-hole was ~~cut~~ naturally after going out of use.

The post-hole contained no finds to date the feature, however it is cut by pit [107235], implying that the post-hole was constructed and infilled before pit [107235] was cut. Pit [107235] is dated to the pre-historic period, as pottery evidence, showing that the post-hole is also pre-historic also.

The junction of the post-hole is unknown as there are only a few other features nearby. Two post-holes cutting into a pit related to the site, however while they are fully excavated, it is not known whether they are contemporary.

(any further details that may be important for understanding the context, including items marked * overleaf)

Upper fill of post hole

Mud greyish brown silty clay. Compaction is largely due to weather conditions as it was very sunny & the area was very dried out.

Refer to context [107242]

Cut at post hole

Steep sided with a flat base.

Much deeper than expected because off the surface. This could be due to the post having been forced into the ground after being placed.

Refer to context (107240)(107241) FOR SECTION

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

~~INITIAL FILL OF PIT [107258] VERY DARK DUE TO A LARGE AMOUNT OF ORGANIC MATERIAL. SOME FRAGMENTS OF POT WERE RECOVERED, POINTING TO A LATE IRON AGE PHASE.~~

CUT OF PIT, CAVED INTO A PREVIOUS FEATURE [107292], INTERPRETED AS THE TERMINUS OF A DITCH. THE PIT HAS VERY STEEP EDGES WHEN COMPARED TO NEARBY PITS - [107383], [107356], [107181], [107178] - , WHICH MAY STABLISH A DIFFERENCE IN TERMS OF PHASE / FUNCTION, ~~AND~~ ALTHOUGH IN THIS CASE ITS BEEN DUG INTO FILL, INSTEAD OF AGAINST NAT. SOIL, MAKING IT EASIER TO GO DEEPER THE FACT THAT IS TRUNCATING THE POSSIBLE TERMINUS [107292] MAKES IT ONE OF THE MOST RECENT FEATURES AROUND, GIVEN THE OTHER RELATIONS ALREADY STABLISHED, IN WHICH [107292] TRUNCATES EVERY FEATURE IN ITS WAY. ↳ DITCH

CUT OF LINEAR DITCH WITH ONE FILL. THIS MAY BEEN TRUNCATED BY A N/S DITCH, ~~TRANSVERSE~~ DUE TO BAD WEATHER CONDITIONS AND POTENTIAL UNDER MACHINING IT IS HARD TO UNDERSTAND THE EXTENT OF THIS DITCH.

THIS ~~IS~~ IS A SHALLOW DITCH WITH A FLAT BASE, ~~AND~~ HOWEVER IT PRODUCED A LOT OF MATERIAL (BONE + POT). THE POT IS OF 1ST ROMAN AGE & ROMAN SO THE DATE OF THE DITCH IS MOST LIKELY DURING TRANSITION.

Refer to context: [107260]

THIS IS A NATURAL INFILLING OF AN E-W LINEAR DITCH [107258]
 THIS IS THE ONLY FILL IN THIS QUITE SHALLOW DITCH.
 DUE TO WEATHER CONDITIONS THE FILL WAS VERY
 DRY AND COMPACT ON TOP BUT LESS COMPACT DEEPER DOWN.
 THE FILL IS MADE OF CLAY WITH SILT AND SANDSTONE
 IS MOSTLY HOMOGENEOUS WITH A MODERATE AMOUNT
 OF CHARCOAL, BONE (TOO DEGRADED TO KEEP) AND A FREQUENT
 AMOUNT OF POTTS FROM THE IRONAGE & ROMAN.

Refer to context [107258] [109260]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

West half cut of ~~rectangular~~ pit [107264]

Unusual rectangular feature. Calling it a pit as it does not connect to any of the nearby ditches nor seem to relate to them, it also has a flat base & is shallow. It does have a similarity to the grave cuts nearby, however. It is on a similar angle - SW/NE -, it has very steep-vertical sides & a flat base. It also has the remains of at least 3 different juvenile animals buried within it. Does it have some kind of funerary significance?

The shape of the east side differs somewhat to the west but will be discussed in [107266].

Fill (107265) for eastern 1/2 of [107266] rectangular pit.

Same as (107263) in terms of colour & composition.

A bit darker right up against the eastern edge.

No small finds.

Some Roman pot.

Some bone.

Some cbm.

No samples taken.

Cut by [107294] (107293), so not much left in this 1/2.

Refer to context (107263)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

East half of rectangular pit [07266]

This half is the same as the west half in terms of shape & size. This half, however, has a posthole/small pit in the base while the west half has not.

This half also has vertical sides & a flat base.

This half had the buried juvenile horse & sheep remains.

This form is incomplete if fields marked with / are empty. PTO for additional information (and describing all items marked with *) and sketches.

This fill (107275) is a loose, dark black color, silt composition with occasional inclusion of stones and frequent charcoal inclusions. with only 0.04m thickness.

It is covered by (107169) and is laying on top of (107678) and ~~that~~ by its composition, it looks like a in situ burning ~~that~~ that is explained on the (107169) it ended up being derused and covered by (107169). For the sequence of in ~~in situ~~ burning fills alternated with likely dumped layers led us to think about the high chance of being a result of many reutilizations of the structure through out time.

As explained at (107155) on the ~~square~~ squares of 8 squares grid, this fill was as well identified and registered as being (107276) and (107158) on the ~~square~~ square (C)

FILL OF PIT [107278]. FILL IS STIFF REQUIRING SOME STRENGTH WITH A TROWEL TO DIG AND COMPOSED OF A SILTY CLAY SOIL OF A DARK BROWN COLOUR. VERY GRAVELLY FILL.

THESE CHARACTERISTICS QUITE DIFFERENT FROM SURROUNDING NATURAL BUT IT IS STILL LIKELY TO BE THE RESULT OF NATURAL INFILLING. VERY OCCASIONAL PIECES OF CHARCOAL BUT MORE LIKELY TO BE THE RESULT OF BIOTURBATION RATHER THAN IN SITU BURNING.

NO EVIDENCE OF SLUMPING, BUT VERY ~~FEW~~ LITTLE REMAINS OF THE FEATURE SO IT CANNOT BE A DECISIVE CONCLUSION.

NO FINDS IN FILL AND NO OTHER SUGGESTIONS OF HUMAN ACTIVITY OTHER THAN THE CHARCOAL - AS A RESULT IT IS PROBABLY NATURAL INFILLING AS CONCLUDED ABOVE.

Refer to context 107278 FOR PLAN

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF POST-HOLE [107286] ON THE SURFACE EDGE OF THIS POST-HOLE WAS ENOUGH CLEAR. THIS FEATURE HAS A LITTLE SHORTER DIAMETER AND IS LITTLE BIT DEEPER THEN SIMILAR POST-HOLE [107284] BUT POSSIBLY BOTH FEATURES WERE PARTS OF THE SAME CONSTRUCTION. BOTH POST-HOLES ARE 1.28M AT DISTANCE FROM EACH OTHER, ON AN N-S AXIS AND THEY CUT THE PIT [107289] IS POSSIBLE THAT ALL THESE FEATURES ARE REMAINS OF ONE PITHOUSE.

CUT OF PIT [107283] THIS PIT PROBABLY HAS A CIRCULAR OR SUB-CIRCULAR SHAPE ON THE SURFACE (HALF OF THIS FEATURE IS BEHIND THE LIMIT OF EXCAVATION). PIT IS ENOUGH SHALLOW (CONTAINS TWO SHALLOW FILLS) AND IS CUT BY TWO POST-HOLES (FIRST CUTS THE EDGE OF PIT AND SECOND ONE IS IN ITS CENTER. PROBABLY WE ARE DEALING HERE WITH SUNKEN FEATURED BUILDING. UNFORTUNATELY WE HAVE NO DATING FINDS, EXCEPT OF ONE SMALL FRAGMENT OF POTTERY FROM POST-HOLE [107284], WHICH MAY BE DIFFICULT TO IDENTIFY.

CUT OF TERMINUS, BEING A LONG SHALLOW DITCH CHARACTERIZED ON
SLOT [107144], RUNNING NW-SE IN PARALLEL TO [107141] AND
CURVING TOWARDS W ON ITS NORTHERN EDGE, WHERE IT
TERMINATES.

THIS DITCH SEEMS TO BE THE LAST ENCLOSING ACTION WHEN IT
COMES TO THIS AREA, IN WHICH REALLY LONG ENCLOSURES
MEET THE IRON AGE INTENSE SPACE.

Fill from horse burial (107265)

Some charcoal present.

Roman pot & coin found.

One very small flint flake was present.

Bone troughout. — Juvenile complete horse skeleton, & juvenile sheep/goat mandible & maxilla & a few other elements that may or may not be related.

Small find was a round, flatish iron piece.

Sample was taken from the soil, in/around & under horse remains. — Look for bones & any other organics.

Fill more brown than fill from rectangular pit (107265)

Refer to context

Cut for horse burial [1072694]

Moderately sided cut into fill ~~(107265)~~ (107265) in rectangular feature at [107266] - East half.

Takes up 90% of the area in this half.

Does not seem to cut into the sides or base of [107266]. Therefore follows orientation - SW/NE - of rectangular pit.

Was not visible from the surface.

Refer to context (107265)
[107266]
(107332)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FIRST FILL OF TERMINUS [107292], IT'S CONSIDERABLY LIGHTER IN COLOUR THAN THE FOLLOWINGS - (107291) AND (107290) - , SHOWING A PROCESS OF INFILLING IN WHICH ORGANIC MATERIALS ARE NOT AS PRESENT, BEING A RESULT OF ACTIVE USE OF THE DITCH PLUS SOME MAINTENANCE

ONE ROLLED FRAGMENT OF POT WAS RECOVERED, IRON AGE

Refer to context

[107296] GRAVE CUT.

This was ^{sub}square in EASTERN END (HEAD END) AND GRADUALLY TURNED OVOID IN WESTERN END.

• SEE SKETCH FOR DIMENSIONS.

• MAXIMUM 0.10m DEEP. SHALLOW. BASED ON CONDITION OF SK(107297) IT HAS BEEN TRUNCATED BY MACHINE UNFORTUNATELY.

• THE CONDITION OF CUT AT TIME EXCAVATION WAS GRADUAL ~~AND~~ AND UNEVEN BASE AND SLIGHT SLOPE TOWARDS WESTERN SIDE WITH BODY IMPRESSION DUE COMPACTION + NATURAL PROCESSES.

• ASSOCIATED NUMBERS ARE (107297) THE SKELETON AND BACKFILL (107298). 100% SAMPLED.

- LOCATION EASTERN PERIPHERY HALL ROAD, WITHIN BUSY AREA SMALL + LARGER GRAVE SHAPED PITS [106982]

+ [106984] PRIME EXAMPLES AND ANOTHER INHUMATION DUE SE OF IT.

Refer to context 107297
107298.

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

DIMENTIONAL SKETCH (NOT SCALE).

• LOCATION INTERESTING AS PITS WITH animal bone + CREMATED BONE WITHIN BACKFILLS WITH POTTERY FRAGMENTS + AT LEAST TWO PITS WITH GRAVE SHAPE TYPOLOGY. FUNERAL CONNATIONS WITHIN AREA. WITH OCCUPATIONAL AREA MORE NORTH. PERHAPS CEMETARY?

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(107297) Context Given To HUMAN SKELETON.

- VERY POOR CONDITION HEAVILY AFFECTED FIRST BY COMPACTION AND STONES WITHIN (107298) BACKFILL THEN BY MACHINE. 50%; RIGHT SIDE OF SKELETON IS MISSING OR DESTROYED NOT EVIDENT (MORE MAY SHOW IN SAMPLES).
- FIRST IMPRESSION IS THAT LAYING IN FOLKUS POSITION CROUCHED. HOWEVER NO LOWER EXTREMITIES PRESENT. BUT BASED ON POSITION EXTREMELY CRUSHED PELVIS AND ARMS IN GRAVE. IT IS AN VALID INTERPRETATION AS VERY LITTLE SPACE FOR OUTSTRETCHED LEGS. UNLESS INDIVIDUAL WAS BURIED DISMEMBERED. THESE ARE MOST LIKELY EXPLANATIONS. THE PREVIOUS MORE SO AS ONE ARM (RIGHT SEEM TO CROSS TO KNEE AREA) LEFT RESTED BY ^{SUSPECTED} FRONTAL AREA). POSITIONED LOOKING TOWARDS SOUTH BASED ON MAXILLA POSITION. RIB CAGE + VERTEBRATE TWISTED CRUSHED BUT SUPPORT CROUCHED POSITION. RIGHT SIDE RIBS MOSTLY MISSING POSSIBLE STERNAL ENDS BAGGED BUT IMPOSSIBLE TO RECOVER THIS AREA WITHOUT DAMAGING RIBS.

Refer to context 107296
107298

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

• ALSO NOTE ONE 'PIG' TOOTH FOUND BESIDE RIB CAGE IN N SIDE GRAVE. ONE UNSURE FRAGMENT POSSIBLE LONG BONE OR SCAPULA BY OCCIPITAL ~~AREA~~ AREA. POSSIBLY ANIMAL. IX FRAGMENT POSSIBLE PREHISTORIC POT. SE OF CRANIUM.

SKETCH (NOT SCALE)

• BASED ON CONDITION DIFFICULT TO IDENTIFY NUMBER VERTEBRAE, RIBS, BLOCK LEFTED AND BAGGED SAME CRANIUM. LEFT SIDE MANDIBLE UNDERNEATH MAXILLIA. BROKE INTO PIECES ONCE REMOVED. NO SEX STATUS EVIDENT BUT ~~its~~ dentition shows it definitely ADULT + CAN BE USED TO AGE.

• MOVEMENT DENTITION + PHALANGES SOME BAGGED SEPARATELY. ~~AS~~ WERE RECOVERED AT INITIAL CLEANING WHEN IT WAS UNCLEAR IF FEATURE WAS REAL.

- ALL SAMPLES TAKEN WITH (107298) AS CONTEXT 100%.

BOTH HANDS BAGGED WITH SOIL BUT NOT GIVEN SAMPLE NUMBERS. BEST TO KEEP WITH REST OF 107297. PLUS POTTERY + ANIMAL BONE ALL IN ONE BOX.

Fills of ring ditch / gully [107311]. The silt represented grey silt material with occasional stone inclusions. No finds were recovered however only a small amount of the feature survives due to it being cut by the deeper ring ditch [106944]. (This relationship is only visible in plan, and not visible in section due to truncation from a later garrow).

The silt is likely to represent a deliberate backfilling of the feature, due to the stark contrast between the silt and the surrounding naturally implying that the feature was quickly filled before and natural anything occurred.

Refer to context [107311] for plan.

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of shallow ring-ditch/gully containing a sole fill (107310). No finds were recovered from the fill to date the feature. The sole feature does however get cut by the deeper ring ditch [106914]. This relationship is only visible in plan due to a later furrow also cutting the features. The earlier ring ditch/gully [107311] appears to follow the same alignment of the later ring ditch, implying that it may be an earlier phase of the same ring ditch.

Refer to context (107310)

Fill of ring-ditch / gully [107313]. The fill consists of greyish silt with a few stone inclusions. No finds were recovered to date the fill.

The fill contrasts to the surrounding natural which implies that it was not formed by the natural material filling the feature. Instead, it may have been accumulated through deliberate backfilling as there is little evidence for the surrounding natural material being present in the fill.

Cut of ring ditch/gully, containing a single sill (C10732). The sill contained no finds to date the feature. Due to the large differences between the material and the sill, the gill feature may have been deliberately back-filled after going out of use.

This section of the ring ditch appears to form a semi-circular southern end. This may be a terminus for an entrance way to the enclosure, however, due to the shallow nature of the feature and the large amounts of truncation seen a nearby gully, it may not be a terminus and the rest of the feature may have been stripped away.

Although there is no dating evidence for the feature, the feature does get cut by the main deeper section of the ring ditch (C106914), implying that it represents an earlier phase of the feature.

[107315]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of shallow, truncated section of ring ditch/gully. The silt contained only a few inclusions of small stones. No silt_{stones} were recovered so date the silt.

The silt is very similar in composition to the silt of another section of the shallow portion of the ring ditch (107312) at (107311).

Due to the silt's difference to the surrounding natural, it is likely that the silt represents deliberate backfilling of the section.

Cut of very shallow and highly truncated feature. Due to the feature's position, and similarity in fills, it is likely to represent a small, surviving segment of the shallower earlier phased gully. However, the possibility of a stake-hole may also be made, however due to long marks of disturbance due to a garrow nearby the feature it cannot be said for certain. The full extent of the feature is unknown.

The feature contained a sole sill of deliberately backfilled material, however no finds were recovered to date the feature.

This is the cut of the grave negative structure where the body (107389) was inhumated and ~~the~~ covered by fill (107323). It was identified in a first moment, as being a pit. Only during the process of excavation it was identified as being a grave/burial cut. see further explanation on (107389).

The structure has a rectangular shape of 2,10 on the west side, 2,04m on the East side, 1,60m on the North edge and 0,95m on the opposite edge. It has a ~~a~~ traditional flat base, although it "sinks" a bit deeper on the center where the body was placed, creating a bit of a concave "bed" for the skeleton, more evident on the skull/shoulders area.

It was dug into the natural although not very deep - at least from the level achieved during the stripping process - roughly around 0,25m depth. As said, it has rectangular shape on a ~~more or less~~ N-S orientation * and has stable but steep sloping sides almost creating a 90° between the "walls" and the ground/base.

More detailed information is the fact that from the South edge until the area where the base is a bit deeper and concave - as if it was a preparation for the skull - thor SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Refer to context *

are 0,45m. Also, the rectangular shape is not designed with perfect sizes and the "corners" are rather rounded than angular.

S10716/10L → UNDER LEGS

This context is the fill of the grave with the inhumated skeleton (107389) and the grave structure [107322]. Therefore it was a deposit deliberately put on top of the body as funerary ritual of this grave, not being suitable any of the options provided ^{part of} for its interpretation on the front part of this context sheet. The fill was very compact as it was mainly composed by clay. Had a dark grayish brown color with some inclusions of stones of medium/small size, (0.5 - 0.100m) and some occasional inclusions of manganese. The organic inclusions were only the presence of small flocks of charcoal and a moderate quantity of faunal bones. Those that were roughly well preserved, it was possible to distinguish sheep and dog bones. More details, it was possible to recover a mandible of a sheep ~~to~~ placed between the legs and the belly and the dog remains were only from part of the its mandible - with some teeth - placed on top of the ~~base of~~ Right foot of the skeleton. ~~As it will be better explained on (107389),~~ although these bones were treated as "organic inclusions" of this fill, it's not certain if they could have been what's left of a funerary offer, therefore part of the "funerary trousseau" (as in offers). In terms of finds, it was possible to detect very badly preserved ceramic shards, some better preserved shards such as a rim and a shard of the body of SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Refer to context.

#

quest. Finally, it was identified ~~the~~ a specific find, consisting in a touch lithic placed on top of the hands, the F 10797.

It is important to remark that all the fill was sampled with the sample # 10701, 10707, 10703, 10704 and 10705. However it was decided to address ~~it~~ specific sample # to the samples taken from the skull area - S10707 -, from the hands and arms - S10709 - and from the belly - S10708 -, as well from the base undressed skull and torso - S10715 - and undressed the legs - S10716. On one hand this can provide a more accurate lab study and organic sampling from to better interpretate the grave, as well as it allows to recover bones that may not have been possible to recover during the proper process of lifting the body.

See ~~an~~ interpretation and more detailed information on (107389)

FILL (107331) OF DITCH [107330]. MODERATELY COMPACT MID YELLOWISH BROWN SILTY CLAY WITH OCCASIONAL INCLUSION OF CHARCOAL & LTD FINDS. FILL IS LIKELY TO NATURAL INFILLING DUE TO LACK OF FINDS & INCLUSIONS. UNABLE TO DATE FEATURE DUE TO LACK OF IMMEDIATELY DATABLE FINDS. HOWEVER, FILL [107329] OF DITCH [107328] CONTAINED IRON AGE POT. [107328] IS LATER THAN [107330] ∴ ~~[107331]~~ (107331) IS LIKELY TO DATE FROM IRON AGE OR EARLIER.

Refer to context [107326]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Skeleton of juvenile horse.
Complete & in situ.
Undisturbed.

Photogrammetry completed.

Bones were very fragile.
Juvenile as the teeth were deciduous & joints (all)
were un-fused. As well as overall size being very small.
- Had a zoologist on site.

This image shows a full page of dot grid paper. It features a uniform grid of small dots across the entire surface. A solid vertical line runs down the left side, creating a margin. A solid horizontal line runs across the top, creating a header space. The rest of the page is covered by the dot pattern. There are some minor scanning artifacts visible as small dark specks.

FILL OF PIT. THIS IS A NATURAL INFILLING ~~AND~~ WITH
 SILTY CLAY COMPOSITION THIS CONTEXT HAS OCCASIONAL
 FREQUENCY OF CHARCOAL AND CBM BUT DURING THE
 EXCAVATION I FOUND CLOSE TO THE BASE A
 STONE ~~SEEM~~ THAT'S SEEMS TO BE WORKED BUT
 BECAUSE IT WAS IN THE SECTION, THEREFORE
 ONLY PART OF IT VISIBLE I COULDN'T HAVE
 BEEN COLLECTED AS THE ROAD WAS CONSTRUCTED
 ON TOP OF THE SLOTT THERE WAS NOT
 OPPORTUNITY TO TAKE IT.
 WE CAN SEE IT IN THE DRAWING AND IN
 THE PHOTOS.

CUT OF PIT. THIS CONTEXT CUTS CONTEXT (107347) IN THE WEST SIDE AND THE NATURAL (100003) IN THE EAST SIDE. IT HAS MODERATE SLOPING SIDES WITH A CONCAVE BASE. IN THE BASE (OR CLOSE IT) THERE IS A BIG STONE PROBABLY WORKED. ~~RO~~ THE LENGTH IS 0,66m, THE WIDTH IS 0,33m AND THE DEPTH THAT WE COULD TO SEE (BECAUSE THE STONE ~~LOOK~~ DRAWING AND PHOTO) IS 0,11m. THE SHAPE IS SUB-CIRCULAR AND WE COULD TO SEE BETTER THIS CUT IN THE SECTION THAN IN THE SURFACE.

FILL OF PIT. THIS NATURAL INFILLING IS CUT BY CONTEXT [107346]. THIS CONTEXT HAS GRAVELLY CLAY COMPOSITION AND A BROWNISH GREY COLOUR. THE ~~0,10 m~~ MAX DEPTH IS 0,10 m BUT THE SHAPE OF THE CUT IS IRREGULAR, ~~EXACTLY~~ ESPECIALLY THE BASE. WE FOUND OCCASIONAL FREQUENCY OF CBM AND SOME PIECE OF ANIMALS BONES. THIS FILL IS ENOUGH DIFFERENT THAN THE OTHER FILL (107345) OF THE SAME FEATURE, SO IT WAS POSSIBLE TO SEE THE CUT. FOR SKETCH OF SECTION REFER TO CONTEXT [107348].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of shallow gully [107352]. The fill is comprised of clay silty clay. The gill is very sterile, with only a small amount of stone inclusions being present. No finds were recovered to date the gill.

Due to the lack of human activity within gill, it is likely that the gill was formed naturally after going out use.

Refer to context [107352] → section.

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

This form is incomplete if fields marked with ▽ are empty. PTO for additional information (and describing all items marked with *) and sketches.

Cut of shallow SW → NE running gully. The gully contained a sole sill (107351) of naturally incised material, accumulated after the gully had gone out of use. No finds were recovered to date the feature.

There is little evidence for the features function, with only few features related located nearby. It is therefore likely that the feature may have represented a boundary e.g. a field boundary, rather than relating to anything structural/occupational.

Refer to context (107351)

Cut of posthole/small pit [107358]

Small pit/posthole. Originally thought to be part of the burial cut but it does not line up right on the west end.

Order of construction sequence between rectangular pit & this one is ambiguous.

- 1) [107358] is constructed, filled, & then [107266/107264] is constructed - fill of [107358] differs to
- 2) [107266/107264] is constructed, filled, then [107358] is cut into its fill/base.
- 3) [107266/107264] is cut & then [107358] is cut into the base at the same time. Then both features fill up.
- 4) [107358] is actually the base of burial cut [107294] but this seems very unlikely.

fills (107265) from the rectangular pit & (107357) from the PH are very similar in colour & composition. The could be the same fill, making option (3) a viable option.

SKETCHES

Refer to context [107266] (107265) [107264]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

There is another posthole to the south which may be connected. There are no other postholes nearby.
→ There is no way to tell whether the other posthole [107] is contemporary with either [107358] or [107266/264]

FILL OF PIT. THIS IS THE SECOND FILL OF A PIT [107365] LOCATED IN THE TOP OF A DITCH (107366) = (THIS FILL IS CHARACTERIZED BY THE FREQUENT INCLUSIONS OF CHARCOAL (S10700). IT'S POSSIBLE TO SEE THE LINE OF THIS FILL IN THE PHOTO AND IN THE DRAWING. IN THIS CONTEXT WE HAVE ~~FOUND~~ FOUND PIECES OF BONES ~~AND~~ (TOOTH OF COW) BUT IN PARTICULAR A ~~THE~~ FRAGMENT OF A BURN BONE. THE THICKNESS OF THIS FILL IS 0,10 m AND IT WAS SIMPLE TO SEE THE DIFFERENCE FROM THE NEXT FILL (107366) PRIMARY FILL OF THE PIT. THIS FILL IS CONCENTRATED ONLY IN THE WEST PART OF THE PIT.

FILL OF PIT THIS IS THE PRIMARY NATURE
INFILLING OF THE PIT [107365].
THIS CONTEXT IS BROWNISH GREY COLOUR AND
WITH SILTY CLAY COMPOSITION.
IT WAS SO DIFFERENT FROM THE LAST FILL
BECAUSE OF CHARCOAL ABSENT IN THIS
CONTEXT. ALSO THE FILL OF THE DITCH
IT WAS MORE YELLOWISH THAN THIS ONE.
THE MAX THICKNESS OF THIS FILL IT WAS
0,14 m.

CUT OF PIT. THIS HAS ~~MODERATE~~ MODERATE SLOPING SIDES WITH A CONCAVE BASE. THE LENGTH IS 0,85m, THE WIDTH 0,70m AND THE DEPTH 0,18m. THIS CUT HAD TWO FILLS THE FIRST COVERED ALL SURFACE OF THE CUT, THE SECOND ONE IS COLOCATION ONLY IN THE WEST PART OF THE PIT. THIS CONTEXT CUTS CONTEXT (107366) THAT IS THE FILL OF THE DITCH [107326]. THE SHAPE OF THIS FEATURE IS CIRCULAR AND IT WAS SIMPLE TO UNDERSTAND THE CUT ~~THANKS~~ THANKS THE COLOUR OF THE FILLS CHARACTERIZED BY CHARCOAL (107363) AND MODERATE FREQUENCY OF CLAY (107364).

CUT OF DITCH RUNNING E-W. IN THIS CUT WE HAVE THREE FILLS. THE ~~TOP~~ ^{PRIMER} IS (107388). (IT'S CUT BY A DITCH, THE PRIMER IS (107402)) AND ~~THE SECOND~~ ^{THE PRIMER} IS (107402) AND BOTH ARE CUT BY THE CUT OF THE PIT [107370]. THE SHAPE IS LINEAR AND IT HAS STEEP SLOPING ~~THE~~ NORTH SIDE IN THE BEGINNING AND CLOSER THE BOTTOM ~~IS~~ IT BECOME A GENTLE SIDE. THE BASE IS ~~THE~~ CONCAVE. THE DITCH IT WAS VERY LARGE. TODAY WE CAN SEE THE WIDTH (2.40 m) AND A DEPTH OF 0.30 m BUT WE CAN'T SAY THE LENGTH BECAUSE OF THE CUT OF THE PIT [107370]. THIS CONTEXT CUTS THE CONTEXT (107386).

Refer to context [107367]

CUT OF DITCH RUNNING E-W. IT HAS MODERATE SLOPING SIDES WITH A CONCAVE BASE. THE LENGTH IS 2.40 m AND WE CAN SEE IT IN THE NORTH FAC. SECTION OF THE SOT. THE WIDTH IS 0.66 m AND IT IS CLEAR IN THE WEST FACING SECTION OF THE SOT. THE DEPTH IS 0.24 m AND THIS CONTEXT CUTS THE DITCH'S FILL (107389) AND THE PIT'S FILL (107384). THIS IS THE LAST ACTION IN THE SOT. IT HAS ONLY ONE FILL (107387) * (FGF 31/10/12) → HAS A STRONG POTENTIAL IN BEING THE SAME AS [106822], FURTHER WEST, ALTHOUGH THERE IS SLIGHTLY "DEEPER" SHAPE AND FILLS LOOK QUITE SIMILAR. SEEMS TO BE A VERY LATE DITCH, TRUNCATING EVERYTHING IN ITS WAY

ADDRESS TO FILL (107323)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the context of the skeleton from the burial (107323) and set of grave [107322]. Before jumping into the descriptive and interpretative approach it is important to contextualise the circumstances of the excavation process and how it affected the methodology applied. This grave was first identified as being a pit. It was located on the East corridor of the site that had urgency to be signed off for the construction of a road, ^{having} being the excavation, ^{very} tight deadline. During the stripping of that area, the surface of the grave was partially affected, having damaged the ^{the} bones located higher up. What was identified of this structure was a ~~shallow~~ relatively shallow negative structure, with well defined edges, of which only the fill (107323) was yet visible. The process of excavation started as being ^{the} normal procedure applied for pits - half section - but during this process it was discovered ~~the~~ anatomic articulation of human bones. The methodology was then changed and adopted to the grave: excavation of the whole feature. It was done the drawing of the first plan - DWG#62531 - and the fill was excavated. Nothing was identified beforehand as an element of identification of the grave eg. tomb stones. The fill - see description on (107323) - looked across the normal period looks pot sherds and a lot of animal bones, while the skeleton was exposed ~~when~~ it was possible to collect ^{SKETCHES} more information about the morphology of the grave. The skeleton was placed in the center of the rectangular negative structure [107322] although slightly closer to the East edge, in a N-S orientation. Being the ~~the~~ head on the North edge, the deceased was placed facing East/Southeast. The body was placed in "fetal" position - ^{crunched} - head looking slightly up; ~~laying~~ on top of his right side; both arms flexed together with the hands closed and almost underneath the skull (right in front of the mouth); legs flexed both to the same side (East) however with the right leg slightly more flexed up towards the elbows while the other (left one) was a bit more stretched; the right foot was laying right underneath the left tibia and perone of the left leg! ^{the}

Refer to context

In terms of its preservation, although the long bones, as ^{the} limbs and the skull were fairly well preserved, the torso - ribs, spine and pelvis - were very damaged. The fact that the fill was ~~only~~ a compact clay didn't help to its good exhumation. ^{This} was magnified by the short and limited time available to excavate it. ~~Also~~ Also, some of the arm bones, pelvis and leg were slightly damaged by the machine, while stripping. It was possible to identify the lack of one of the ^{of} molar teeth (probably before his death). The spine, however, was ~~at~~ "out of place" but seemed to have been due to a post depositional factor. The individual seems to be young adult/adult as the cranial sutures and the epiphyseal lines of the long bones were too evident. When it comes to gender evaluation, as the pelvis was in an odd position and not well preserved, it ~~is~~ ^{is} hard to ascertain. However by the prominence of the ^{occipital} part of the skull and from the chin/mandibula (very angular) and from the angle of the frontal bone on the supra orbital area that was fairly straight.

The hands and feet were not that well preserved either. However the hands were better, - the feet were quite clunky although seems to be due to the passage of time.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

The skeleton ~~had~~ in locus measures 1,37m long and it was placed on the center of the negative structure. Only and mainly the skull seemed to be more protected by a slightly deeper part of the base as explained on [107322] and visible on the sketch.

On top of the left ankle it was found a part of a dog mandibular with teeth remaining. Between the right knee and the left elbow it was found a mandibular of a sheep ~~brange~~ spreaded bits identified on the north edge of the grave. Although ~~is~~ we can't ascertain it, it is possible that they could have been part of offerings considering that they were only part of skulls/heads and that they were either placed in front of the belly - sheep - or on top of the individual - the dog. On the other hand, both are domestic animals, being the dog also a pet. However, it could have been as well a result of an uncarefull funerary ritual materialized "in dumping a very mixed earth/spoil to fill the grave. Therefore, although those animal remains were observed they were address as organic inclusions of the fill.

In terms of finds there was, as said, some pots collected, but ^{not} directly associated with the body. The only find that could be related is the retouched lithic - F10297 - that was placed on top of the left hand. As it was not directly with physical contact with the hand or in between both hands it was as well opted to

Refer to context

to address it to the fill (107323) instead of as part of the funerary treasure or personal object.

When it comes to the evaluation of the skeleton itself, it was hard to understand if there were any pathologies apart from a missing molar tooth that seemed to be from before its death.

It's important to remark that the skeleton was placed on the center of the grave structure, as visible on the sketch drawn on [107322]. While digging it there was some "strategic" samples taken from the head area - S 10707 -, from the belly - S 10708 -, from the arms area - S 10709 - and, once the skeleton was lifted, it was taken two samples from the fill left in the bottom that had some bones remaining (fragments): one from under the torso and skull - S 10715 - and another from underneath the legs S 10716.

The recording process was affected by the strict time left, therefore there was no time to make a drawing of the skeleton, being opted to proceed to photography as an alternative - Photo # 610139, DWG # 62564-. The skeleton was lifted separating the left limbs from the right and then the torso (pelvis, vertebrae) and the skull. They were kept in independent sample buckets with the mentioned order: - ~~bag~~ bag for

LEFT	RIGHT	TORSO	
- lower legs - 1 bag	- lower leg - 1 bag	- about scapulae	- skull
- upper legs - 1 bag	- upper legs - 1 bag	- pelvis	- indetermined bones -
- foot - 1 bag	- foot - 1 bag	- sp vertebrae + external	2 bags.
- lower arm - 1 bag	- lower arm - 1 bag		
- upper arm + clavicle - 1 bag	- upper arm + clavicle - 1 bag

Cut of pit [107390] which truncates through ditch [107394]. Shows a possible re-use of the underlying feature as a dump of various materials. Fills (107393) and () were sampled due to a high amount of charcoal content. Also there was a small amount of burnt animal bone throughout the feature.

Characterisation

Both edges of the the pit are fairly similar to each other although the southern is cut at a slightly steeper angle. The base is typically concaved.

Finds

A fair amount of well-made Roman pottery is present in all the top fill, possibly with a small amount of Sileware within the assemblage. The burnt animal bone might suggest that this was all deposited at in a short space of time, after a feasting activities or something similar.

Refer to context: section [107394]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of the earliest feature in the relationship slot D62550. The profile of this ditch has been interrupted by a number of natural processes and two truncations by other ~~extra~~ features, pit [107394] and ditch [107400].

The south end of the slot was boxed-off due to an inefficient amount of time to find the full extent of the feature. Another possible issue is that that the slot itself may have been placed in a way that ~~dit~~ doesn't show the true orientation of the ditch. No definitive association with other features can be seen.

Finds

A decent amount of archaeological material was found throughout the feature. Pottery from (107396) gave us a date ~~some~~ of either late Iron Age or Roman. This was accompanied by a fair amount of animal bone.

Stratigraphy

Cuts through the natural (100003) and is capped by (107395)

Refer to context plan [107390]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FILL (107394) OF POSSIBLE DITCH [107394]. MID MOTTLED GREYISH BROWN SANDY CLAY WITH MODERATE INCLUSIONS OF CHARCOAL & MODERATE FINDS OF POT & ANIMAL BONE.

COLOUR OF FILL DUE TO INCLUSIONS OF CHARCOAL. FILL IS LIKELY TO BE SAME ~~PIT~~ FILL AS [107398] WHICH WAS THEN TRUNCATED BY THE LATER PIT [107390].

FILL IS LIKELY TO BE DELIBERATE BACKFILL DUE TO FREQUENCY OF INCLUSIONS & FINDS. LIKELY TO DATE FROM LATE IRON AGE OR EARLY ROMAN PERIOD DUE TO STYLE OF POTTERY RECOVERED

Refer to context [107394]

THIS THE FIRST NATURAL INTERFACING OF DITCH:
 IT HAS SANDY CLAY COMPOSITION AND A
 MID GREY COLOUR. THIS FILL IS
 DARKER THAN THE SECOND FILL AND WITH
 MORE SANDY COMPOSITION. ~~NO BONES~~
~~NO POT~~ SO IT WAS SIMPLE ~~FOR~~
 TO SEE THE DIFFERENCE.
 ALSO IN THIS CONTEXT WE DIDN'T FIND
 ANY POT. ~~NO BONES~~ OR BONES. NO
 FINDS SO WE HAVEN'T DATA ELEMENTS FOR
 THIS DITCH.

First fill of pit [107390]. Due to the high concentration of finds and charcoal content it ~~seems to be~~ seems to be more likely to be a dumped layer rather than natural infilling.

Character

The fill was very easy to remove, ~~soft and with~~ and slightly spongy. The charcoal was mainly concentrated ~~and~~ at the very bottom of the ~~5~~ near the initial cut of the feature.

Finds

Roman Pottery: Some degraded coarse-ware.

Iron-Age: Fragmented, ~~she~~ small sherds.

Stratigraphy

Lies the bottom of the pit, roughly filling 1/3 of the feature.

Capped by a slumping event (107391) and a silty fill (107392)

IT'S THE WT [107406] of a post-hole that, for it's proximity, seems to belong to a small group of post-holes and stake-hole - [107408] [107410] [107415] [107412]. Together, they create a circular shape. IN TERMS of their INTERPRETATION, IT IS IMPORTANT TO DETERMINE IT'S FUNCTION: WHERE THESE 5 features part of one structure? WHERE THESE features a structural part of another nearby feature? OR THIS LOCATION IS ACCIDENTAL?

Refer to context 107407

THE Fill [107407] of pit hole was BROWN and loose. HAD MANY STONES (Big size) and gravel mixed with sand.

There was, in fact, a big agglomeration of those INCLUSIONS mainly on the base of the WT.

INSIDE were different traces of charcoal and Weed, flecks of pot/CBM and bone (Animal).

Location sketch

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked "overleaf")

THIS MID GREYISH ORANGEISH BROWN NATURAL INFILLING (107416)
IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION
THIS FILL BELONGS TO THE POST-HOLE [107417] AND IS ITS ONLY FILL.
THIS FEATURE WAS DUG IN A HAF TO RECORD THE NORTH FACING SECTION (DWG 62555) AND WAS SAMPLING WITH THE NUMBER S10723 100% AT THE MOMENT THE WE ^{HAVE} TOOK 2 BUCKETS BUT AFTER THE RECORDING WILL BE EXCAVATED 100%
THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS!
- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES.
- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF CHARCOAL IN THE TOP OF THE FILL.
- ^{OCCASIONAL} ROOT DISTURBANCES ON THE EDGES
WE DIDN'T FOUND FIND ANY POTTERY TO DATE THE POST-HOLE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS POST-HOLE [107417] HAS STEEP SLOPING SIDES AND A CONCAVE BASE.

THIS FEATURE HAS ONLY ONE FILL, THE NATURAL INFILLING (107416) AND IS CUTTING THE NATURAL (100003)

IT WAS DUG ONE HALF TO RECORD THE NORTH FACING SECTION AND AFTER THAT ^{RECORDING} IT WILL BE FULL EXCAVATED. (DWC 62555)

ITS FILL ~~(100003)~~ (107416) WAS SAMPLING WITH THE NUMBER S10723 AND WE DIDN'T FIND ANY DATABLE REMAIN* TO DATE THIS FEATURE.

THE SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THIS POST-HOLE HAS IS THE DEEPER OF THE THREE THAT WE HAVE DUG TOGETHER IN THE SAME AREA BUT HAS THE SMALLER DIAMETER IF WE COMPARE WITH THE OTHER TWO. [107419] AND [107421].

WE DIDN'T IDENTIFY ANY POST-PIPE INSS THIS FEATURE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS LIGHT ORANGEISH BROWN NATURAL INFILLING (107418) IS MODERATELY COMPACT AND HAS A SANDY SILT COMPOSITION. THIS FILL BELONGS TO THE POST-HOLE [107419] AND IS ITS ONLY FILL.

THIS FEATURE WAS DUG IN A HURRY TO RECORD THE NORTH FACING SECTION (DWG 62556) AND WAS SAMPLING WITH THE NUMBER S10724. AT THE MOMENT WE ^{HAVE} TAKEN 2 BUCKETS BUT AFTER THE RECORDING WILL BE FULL EXCAVATED.

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL SIZE.
- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL ROOT DISTURBANCES ON THE LEFT SIDE OF THE RECORDED SECTION.

WE DIDN'T FIND ANY POTTERY OR ANOTHER DATABLE REMAIN TO DATE THE POST-HOLE.

Refer to context [107419]

Fill (107423) of ditch slot [107423]. A moderately compact, mid brown fill with a maximum thickness of 0.51m. It is composed of sandy clay, with moderate small-medium stones, moderate charcoaled, occasional chalk and occasional CBM/fired clay inclusions. A sample of 4x10L was taken (8#10726), and bulk finds of pottery, bones and CBM/fired clay were excavated. It is the result of deliberate backfill as the ditch came into disuse.

Refer to context [107423] for plan sketch

Cut at Ditch slot [107423]. A linear ditch running NW-SE. It has moderately sloped sides and a concave base. It is 1.02m long, 1.31m wide and has a maximum depth of 0.51m. The shape is the result of design and construction.

Ditch contains one Pill (107422), and may have been used for drainage and/or to mark a boundary. A clearer interpretation can be made when more features in the ~~area~~ area have been excavated.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Fill of post hole

Mud greyish brown silty sand

Pale fill but definitely darker than the surrounding natural. Occasional stones & some trace CBM. When dumped back in due to its similarity to the surrounding natural, bear colour

Refer to context [107425]

Cut of a large field ditch running SE-NW. Truncated by enclosure ditch [107436] and Sorrow [107477]

Character This turned out to be a very deep feature. Excavations ended at 1.35m. after the N and E facing sections had been stepped. The final depth may be slightly deeper. The exposed East endge was fairly well preserved. Various layers of natural can be seen. At the bottom and base there was a dragey sand which rose up to meet a cleaner, plain sand. At the very top there was a reddish, silty gravel. All of which were established to be non-archaeological. Some minor over-cutting occurred near the north facing section. Context The ditch was excavated at another point to the SE [107011], where it's ~~own~~ full profile was established. There is definitive evidence now, that this ditch turns northward and perhaps runs parallel to the enclosure ditch [107436] to the NW. The modern Sorrow [107477] running E-W truncates it through the middle of the slot. Date The ceramics found in [107430] and [107433] suggest that it is IA in date which is consistent with the Bindings Sorrow [107011]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

A large silty ^{clayey} layer covering the base of ditch [107429] probably occurring soon after its construction. Due to its thickness ~~it seems~~ and the finds it produced, it's likely that it is the result of multiple storm events and some possible human deposition as there was charcoal, pottery and bone.

Finds/Inclusions

Small amount of late IA/Roman pottery sherds.

Animal-bone, (possibly sheep).

Flecks of charcoal near the base on the north end of the slot.

Stratigraphy

Infills the base of the ditch.

Capped by (107431)

date

Late IA / Roman.

Refer to context

[107429]

Small Sill sitting on-top of (107430)

Deposition/Composition Seems to have infilled in a localised area of the ditch. It is represented in the South facing section, but not in the NW facing one. This is likely to mean that it was a single slumping event, possibly some water undercutting the natural of the bank and eroding it.

Finds / Inclusion

A significant amount of chalk and gravel can be seen, mainly in the bottom of the Northern-side of the slot, with a number of flint inclusions lining the top of the fill, possibly representing ^{the} a naturally occurring tip-line of the fill's slumping event. No archaeological material present.

Stratigraphy

Caps a portion of (107430) physically, capped by (107432).

Large silting layer occurring after (107431) inditch (107429)

Deposition/Composition

Unlike (107431) this fill has the characteristics of a silting event. It has sewer inclusions, lime charcoal and chalk. Although some quite large nodules of flint can be seen in-section. A small amount of iron-staining near the bottom of the fill indicates that some standing water was at this level at some point, likely just before this major silting event.

Finds/Inclusions

Only noteworthy inclusions are some large, angular flint nodules evenly spread throughout the fill. No archaeological material present.

Stratigraphy

Sits on top of (107431) and is covered by (107433).

Pocket of ~~of~~ chalky gravel near the top of [107429].

Deposition and composition

Seems to be a very localised deposit of gravel, as when the NE facing section was stepped out by 0.50m it revealed the fill, in plan and it only extended for another 20cm into the original section. Most likely to be re-deposited natural.

Finds/Inclusions

Find N/A

Primarily made of gravel, similar to the top of the natural in addition to a large amount of chalk.

Stratigraphy

Sits on top of (107433). Cut by the Medieval furnace [107477] and stratigraphically cut by [107436], but not physically.

Refer to context

Cut of enclosure ditch associated with the IA activity to North which has evidence of pyrotechnic activity. Truncates [107429].
 Character The excavated area seems to be encapsuring the bend in the enclosure which is clearly represented in the South facing section where it rises up westward and finishes in the corner of the NE facing section. The full profile of the ditch has yet to be established. but the exposed south edge is evidently quite steep so it may be of a significant depth.

Date. No positive finding, although there was a SP102A1, a copper alloy scrap present but may be associated with FURROW [107477].

Further investigation.

In order to establish how the enclosure ditch [107436] and the ditch [107429] relate to each other further North a characterising slot is needed. This is ~~to be~~ in the process of happening. One theory is that the two features are quite close in date and that the enclosure is re-cutting the N-S ditch.

Deposition/Character

First visible infilling of enclosure [107436] likely to have occurred soon after construction as it ^{starts} is close to the top of the south edge but then shoots down underneath the two silting events (107438) + (107439). Is not represented in the SW facing section which means that it's likely to be a localised slumping event of the ^{south} bank. The reason why it is unlike the redeposited natural found in ~~the~~ ditch [107429] is that it has been physically cut into (107433) + (107432), two of the top fills of the earlier feature resulting in a slumping of the silting layers.

Find/Inclusions

No archaeological material present

Some chalk flecks in section close to the natural.

Stratigraphy

Occurs after cut [107436] covered by (107438).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Deposition/Composition

A large silty fill, which quite likely extends northwards past the section. The significant amount of stone inclusion could suggest that it was deposited during a period of bad weather which washed the debris into our ditch.

Finds/Inclusions

No archaeological material present.

Noticeable amount of stone/flint inclusion possibly forming a tip-line from the west.

A significant amount of chalk inclusions throughout the fill.

Stratigraphy

Sits on top of (107437). Capped by (107439).

Refer to context

*This form is incomplete if fields marked with ▽ are empty. Please turn over for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Deposition / Composition

Very similar to (107438) Maybe even part of the same event. However, it seems to be slightly more silty, lacking in its clay content. Would have likely occurred during bad weather which ultimately put the enclosure out of use.

Finds / Inclusions

The most significant find from this slot is the Copper alloy fragment (107429) which this fill produced. This does not necessarily give us any clear dating for the beginning of the feature's life but with further diagnosis of the small find we might be able to estimate when it went out of use. As a preliminary guess, it may be part of a argument as it is quite delicate and has indications of two holes along the top edge.

Stratigraphy

Caps of the enclosure and puts it out of use.

CUT OF SUB-CIRCULAR POST-HOLE.

NOT RELATED TO OTHER POST-HOLES OR FEATURES; QUITE ISOLATED BUT WITHIN A POSSIBLE ENCLOSURE.

IT'S QUITE SHALLOW (0.06 DEPTH).

AT ITS NORTHERN SIDE IT'S CUT INTO THE NATURAL PEDDISH STONY/CLAYEY SAND; AND IN ITS ~~NORTHERN~~ SOUTHERN HALF IT'S CUTTING THE REMNANTS OF A MODERN FURROW AND INTO THE NATURAL, UNDERNEATH IT.

SO THIS POST-HOLE CAN BE MODERN.

Cut of $\frac{1}{2}$ section of Ditch Terminus. ~~A line~~ [107444].

~~A~~ ~~ter~~ The terminus of a linear ditch, running NW-SE across the site. It has moderately sloping sides and a concave base. The cut is 0.90m long, 0.63m wide ^{OF THE SLIT} and has a maximum depth of 0.51m. The shape is the result of design and construction. The cut contains one P.I. (107445).

Ditch may have been used for drainage ~~and~~ and/or to mark a boundary. Fill shows that it was deliberately backfilled.

Fill (107445) of Ditch Terminus [107444]. A moderately compact, dark grayish-brown fill, with a maximum thickness of 0.51m. It is composed of silty clay, with moderate small stones, moderate charcoal, occasional chalk and occasional CBM fired clay inclusions. Bulk finds of pottery, bone and CBM were excavated, and a sample of 4x10L (S10729) was taken. The RH is the result of deliberate half-filling the ditch care into disuse.

Refer to context [107444] for plan sketch.

Cut of pit.

First thought to be a post-hole, then a cremation due to the "burnt bone & charcoal found, so ~~confirmed~~ ^{ascertained} to 100% this feature. Further investigation proved otherwise & was thought to be the ditch to this feature's immediate right/west. as a slot to the North has almost identical pottery & composition in the fill. Proceeded to put in a small test slot to prove/disprove this theory.

The material was found on all sides & the process of digging the slot made the feature square-shaped: therefore, losing the true shape of the feature, leaving behind what you see below.

(any further details ^{POST-HOLE} may be important for understanding the context, including items marked * overleaf.)

ADDITIONAL INFORMATION

THE FILL (107449) OF THE PIT [107448] WAS MODERATELY COMPACT AND FULL OF STONES (BIG, MEDIUM, SMALL SIZES), OF CHARCOAL AND BONES AS WELL.

THE FAUNE PRESENTS ^{CREATES} ~~MAKES~~ IRREGULAR AND UNEVEN PROFILE OF THE BASE. MORE STONES ON THE BOTTOM AND NUMEROUS IN THE CENTRAL AREA. ~~MAKES~~ TWO SEPARATE "ENVIRONMENTS" FOR THIS REASON THERE WERE TWO DIFFERENT FILLS. THE FILL (107449) ^{HAS} ~~PRESENT~~ BIG STONES ON THE BOTTOM, MORE CHARCOAL IN THE MIDDLE AND ~~MAKES~~ BONES ON THE TOP.

ON THE LEFT (SE DIRECTION) A ROW OF STONES SPLITS THE FRAMLE. THE DIFFERENT FILL (107450) STANDS OUT FOR ITS COMPOSITION, BUT FILLS THE SAME CUT [107448].

FOR THIS PECULIARITY IT SEEMS TO BE A DELIBERATE FILL. IS A POST HOLE?

However it was hard to see ^{stratigraphic} relationship between the fills as they seem to belong to the same moment, the (107449) seems to cover the (107450).

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

THIS CUT [107451] BELONGS TO IRREGULAR POST HOLE.
ITS BASE WAS CONCAVE; ITS SIDES WERE STEEP AND
ITS DEPTH WAS SHALLOW! ITS DIAMETER WAS 0,50M - 1,20M
THIS FEATURE IS ADJACENT TO ANOTHER POSTHOLE [107448]
AND THEY TOGETHER ARE IN FRONT TO OTHER POSTHOLE
[107903].

THESE ARE INSERTED INSIDE THE DITCH'S SLOT (SEE
CONTEXT SHEET (107902). BEHIND THIS GROUP OF
PITS APPEAR ANOTHER COUPLE OF PITS.
THEIR POSITION COULD BE INTENTIONAL.

ARE WE IN FRONT OF A COVERED CORRIDOR?

ARE THEY IN FACT, POST HOLES? WE'LL CAN SEE IF THERE
IS A RELATION BETWEEN THESE INSIDE THE "ENCLOSURE".

IS IMPORTANT TO SEE THAT MANY OF THESE POSTHOLES HAVE
A GENTLY SLOPING SHALLOW SIDE, WHICH DEEPENS CLOSER
TO THE CENTER OF THE FRAME. CREATING A SPACE IN WHICH
IT GIVE THE APPEARANCE OF HAVING TWO HOLES.

Refer to context [107452]

SEE SECTION AND PLAN SKETCH (consideration of the detailed plan showing the relation with the section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

THE FILL (107452) of the WT [107451] WAS MODERATELY COMPACT. ITS COLOR WAS DARK BROWNISH BLACK AND ITS COMPOSITION WAS CLAYEY-SAND.

INSIDE WERE MORE CHARCOAL, STONE AND ANIMAL'S BONES.

THE BONES WERE ON THE TOP. THE STONES (MEDIUM SIZE) OCCUPIED SPECIALLY THE MIDDLE ZONE, THE BOTTOM AND THE NW PART. FOR THIS REASON, THE POSITION OF THE STONES DOES NOT SEEM CASUAL BUT INTENTIONAL. THEIR CONCENTRATION DIVIDES THE FEATURE INTO TWO AMBIENTS. THESE AMBIENTS CONTAINED COAL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

* PROBABLE STAIN WITHIN FILL (107583) OF DITCH [107581]. CIRCULAR SHAPE MADE IT A POSSIBILITY OF BEING A POST-HOLE WITHIN THE DITCH, EXCAVATED AS SUCH FOR SAKE OF CAUTION. 0.18 x 0.17m TO A DEPTH OF 0.05m.

OTHER FAIRLY CIRCULAR DARKER CHARCOALY PATCHES FOUND AROUND IN THE SAME FILL, SO MOST LIKELY JUST A DARKER CHARCOAL PATCH RATHER THAN A POST-HOLE.

ALTHOUGH IN THE BEGINNING IT WAS THOUGHT AS BEING A POST-HOLE, IT WAS PROVED AFTERWARDS THAT IT WAS JUST A VARIATION OF THE FILL'S FEATURE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF POST-HOLE [107459] SECTION ON SE-NW ORIENTATION WITH MODERATELY SLOPING, YET COMPLEX SIDES, AND AN UNEVEN BASE. SE SIDE OF CUT FAR GENTLER THAN NW SIDE OF CUT WHICH IS ALMOST VERTICAL. UNEVEN BASE IS ALMOST LIKE A ZIG-ZAG IN SHAPE AND COULD POSSIBLY SUGGEST THAT THE POST WAS WIGGLED OUT OF THE GROUND AFTER USE. DIFFERENCE IN ANGLE OF SIDES COULD POSSIBLY SUGGEST THAT THE POST WAS ORIGINALLY PLACED AT AN ANGLE TO FORM AN A-FRAME WITH ONE OF THE OTHER SURROUNDING POST-HOLES. INHUMATION WAS LOCATED CLOSE BY TO THE EAST AND BURIAL OF AN INFANT HORSE LOCATED TO THE WEST. PROXIMITY TO THESE BURIALS COULD MEAN THAT THERE IS A RELATIONSHIP BETWEEN BURIALS AND POST-HOLE. POSSIBLY POST-HOLE WAS PART OF A BUILDING STRUCTURE THAT HAD A FUNERARY USE.

107460] FILL (107460] OF FEATURE (107459] LOOSE FILL OF A YELLOWISH BROWN COLOUR AND CLAYEY SILT COMPOSITION. VERY GRAVELLY FILL WITH SEVERAL LARGER STONES PRESENT AND 1 VERY LARGE STONE. MODERATE AMOUNT OF CHARCOAL DISPERSED THROUGHOUT FILL AND PRESENCE OF SINGLE ANIMAL TOOTH, WHICH COMES FROM EITHER SHEEP OR GOAT.

LARGE STONE COULD BE REMAINDER OF PACKING AND GRAVELLY BASE OF FEATURE COULD BE TABLET FOR POSTHOLE TO STAND UPON.

NO EVIDENCE OF BURNING EITHER IN SITU OR NEARBY AND CHARCOAL TO DISPERSED TO SUGGEST POST ROTTED IN SITU - PROBABLY NATURAL INFILLING.

BIOTURBATION MAY ALSO EXPLAIN PRESENCE OF JUST A SINGLE TOOTH IN FILL RATHER THAN A COMPLETE SKELETON OR MULTIPLE DISARTICULATED BONES.

POSSIBLE INTERPRETATION: POST-HOLE WAS USED AS PART OF A BUILDING, PERHAPS WITH A FUNERARY USE. AFTER DISUSE POST MAY HAVE BEEN REMOVED AND LEFT TO FILL IN NATURALLY. AS THE HOLE FILLED IN BIOTURBATION CAUSED THE PRESENCE OF CHARCOAL + ANIMAL TOOTH.

Cut of Ditch Terminus [107461]. The terminus of a linear ditch running NW-SE across the site. It has moderately sloping sides and a concave base. It is 0.95m long, 1.36m wide and has a maximum depth of 0.52m. The shape is the result of design and construction.

It contains one fill (107462), and which appears to be deliberate backfill. The ditch may have been used for drainage or to mark a boundary.

Refer to context (107462) for section sketch + matrix

Fill (107462) of Ditch Terminus [107461]. A moderately compact, dark greyish-brown fill with a maximum thickness of 0.52m. It is composed of silty clay, with moderate small stones and occasional large, burnt stones, moderate charcoal (small flecks as well as large chunks), occasional chalk and occasional CBM/fined clay inclusions. No sample of this half of the terminus was taken, and bulk finds of pottery, bone and CBM were excavated. The fill is the result of deliberate backfill as the ditch came into disuse.

Refer to context [107461] for plan sketch.

SEE [107119] FOR FURTHER DESCRIPTION

One of the quadrants which make up the profile of the N-S running gully.

Character Very similar to the cut shown in [107119], however the eastern edge has a more gentle decline in comparison to the western. The base is consistently flat and slightly uneven at points.

Date.

The gully's relation to E-W ditch [107011], which truncates it. It is likely to be late IA in date, due to the ceramics found in [107011].

Refer to context (107120) - see section sketch

[107119] - see general plan sketch

SKETCHES

(consider location, plan, section, plan showing relationships, section showing fills/deposits as appropriate)

Further Investigation.

- The extent of the gully has not yet been determined and it is not obvious in-plan.
- To the north it could either be terminating within the truncated area, or it could carry on northwards

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

SEE (107120) FOR FURTHER DETAILS.

A silty layer filling the base of the gully, perhaps associated with the erosion of the east edge during bad weather.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS FILL IS MODERATELY COMPACT, YELLOWISH GREY LIGHT COLOUR, WITH CLAYEY SILT COMPOSITION AND OCCASIONAL INCLUSIONS OF STONE AND MODERATE INCLUSIONS OF CHARCOAL.

THERE'S VERY FEW INFORMATION POSSIBLE TO EXTRACT FROM THIS FILL AS IT HAD NO MATERIALS OR ANY USEFUL INFORMATION.

IT IS COVERED BY AN INSITU BURNING (107275) THAT MAY BELONG TO A FIRE STRUCTURE THEREFORE, IT COULD BE PART OF A BASE PREPARATION TO HOLD FIRE ACTIVITY.

IT WAS ALSO IDENTIFIED IN THE CONTIGUOUS SQUARES OF THE GRID AS BEING (107479) AND (107480)

SAME AS (107479) of square (B) and [107480] of square (C)

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

This is the cut [107481] of a ditch truncated by a fire structure [107642].

It runs on a NW-SE direction, with steep sloping sides, ~~flat~~ traditionally flat base and with sub linear shape that seems to be slightly curving towards SE where it is truncated by another ditch E - investigated on a relationship plot where it was recorded by [10603007].

It has within this square (A) (first dug placed on the western edge of the grid - being (B), (C), (D) the ~~contiguous~~ squares dug single context ~~the~~ towards East -) 2,50m length although its total length within the grid was about 6,58 m and total depth 1,50 within this square being about 1,60 / 1,70m registered on the contiguous ~~at~~ squares.

~~Accepted~~ On the ~~the~~ eastern edge of this feature was the EVAL Trench that was not properly dug; the information taken from it it was as being a pit. During the process of 100% the grid it was discovered that it was a ditch that ~~contiguous~~ ~~location plan, revised plan showing relationships, section showing fills/deposits as appropriate~~ ~~Therefore it was not~~ ~~SKETCHES~~

Refer to context

SEE PERPENDICULAR SECT. SKETCH (107159)
SEE ALL CUT SKETCH (107448)

to extend its excavation further to EAST in order to obtain a full section of this feature, registered as [107955].

This feature was identified on the contiguous squares as being the same as [107482] [107483] and [107612] and being same as the * [107840] * [107841] * [107842] and * [107843] on the 100% squares. There were some features around it that may have been related to it like [107608] with is a terminus of a ditch parallel to this ditch with same size and shape, could have been the same ditch truncated by another on on the east side - the ring ditch [107436].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

The description and interpretation on [107481] as it is the equivalent cut on square (A).
 The cut of ditch is same as [107481] square (A) [107482] square (B), [107617] square (C) and [107955] of the extension excavation of the slot further SE. It's as well same as [107840], [107841], [107842], [107843] dug during the process of looking at the feature and new numbers added in order to survey it.

Refer to context

Cut [107486] of ditch. A linear ditch ~~with~~ running NE-SW across site. It has moderately sloped sides and a concave base. The slot has a length of 1.0m, a width of 1.38m and a maximum depth of 0.41m. The shape is the result of design and construction.

The ditch contains one fill (107487), which is deliberate backfill. The ditch may have been used for drainage or acted as a boundary around an enclosure.

Refer to context (107487) for section sketch + matrix

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Fill (107487) of Ditch slot [107486]. A moderately compact, mid greyish-brown fill, with a maximum thickness of 0.41m. It is composed of silty clay, with frequent small-medium stones, moderate pottery, moderate bone, occasional CBM/fired clay, occasional charcoal, and occasional chalk inclusions. Bulk finds of pottery, bone, and CBM were excavated. A 1x10L sample was taken (SH10739). The fill is the result of the deliberate half-fill as the ditch came to the end of its use.

Refer to context [107486] for plan sketch

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a ~~second~~^{third} fill from the ditch [107481].
It was truncated by [107642] and covers (107553).

It is moderately compact light yellow colour gravelly silt composition and with mineral inclusions of moderate presence of stones, occasional chalk, organic inclusions of occasional charcoal and marine shells.

It covers (107553) with is the ~~same~~ the main fill of the ditch.

It corresponds to the fills (107490), (107491)*, (107613)* and (107651)* dug on the contiguous squares of the dig site context on the 8 parcels grid used to investigate the feature.

* the fills ~~are~~ are the same although during the process of excavation it was thought to be different and later it was understood that they were the same, which justifies the presence of a different context number.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

See description ~~of~~ and interpretation of the fill at the context sheet (107489) as this fill is its continuation from square (A) to (B) as it was ~~we~~ created a 8 squares grid of width 4 were dug single context methodology - from A to D. Some of the fills and cuts were the same although each square has ~~separate~~ individual set of context #.

It is same as (107489) on square (A) (107491) and (107613) on square (C) and (107651) on square (D) and (107952) on the extension excavation of the slot.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

see description and interpretation on (107489) as it is the equivalent fill identified on the square (A).
~~see description~~ It is the fill of ditch [107483] and during the process of excavation of the square (C) as the fill was partially affected by pit [603018] it was thought that the fill was different from the one placed on the east part of the pit and for that given a different context (107613). However, during the further excavation it was possible to prove it to be the same ((107491) and (107613)) although with different #.
 The fill of square (107489) square (A) (107490) square (B), (107651) square (D) and finally (107952) in the extension of excavation further SE in order to have a full section from the ditch.

THIS MID GREYISH ORANGEISH BROWN NATURAL INFILLING (107494) IS COMPACT AND HAS A CLAYEY SILT COMPOSITION. THIS FILL BELONGS TO THE DITCH [107499], IS ITS NEWEST FILL AND WAS RECORDED IN A 2'6 x 2 m SLOT. WE CAN IDENTIFY TWO PARTS IN THIS FILL WITH DIFFERENT COLOURS BUT WITH THE SAME COMPACTION AND COMPOSITION: ONE ON THE TOP MORE GREYISH AND OTHER IN THE BOTTOM MORE ORANGEISH. THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL SIZE.
- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES CLOSE TO THE EDGES AND IN THE CENTER OF THE RECORDED SECTION.
- OCCASIONAL PRESENCE OF CHARCOAL AND MARINE SHELLS.
- MODERATE PRESENCE OF FRAGMENTS OF SMALL AND MEDIUM ANIMAL BONES
- MODERATE PRESENCE OF POTTERY FRAGMENTS THAT ARE FROM AN ~~FROM~~ EARLY ROMAN CHRONOLOGY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID GREYISH BROWN NATURAL INFILLING (107496) IS MODERATELY COMPACT AND HAS A CLAYEY SILT COMPOSITION. THIS FILL BELONGS TO THE DITCH [107499], IS IN THE MIDDLE OF ALL THE FILLS OF THIS FEATURE AND WAS RECORDED IN A 2'6 x 2m SLOT. THIS NATURAL INFILLING ^{STARTS} ~~ARRIVES~~ FROM BOTH EDGES AND ITS COMPOSITION IS MORE SIMILAR TO THE NEWEST FILLS (107494) AND (107495) THAN THE OLDER: (107497) AND (107498). THIS FILL HAS THE FOLLOWING INCLUSIONS:

- MODERATE PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES
- OCCASIONAL PRESENCE OF CHARCOAL.
- OCCASIONAL PRESENCE OF BONES FRAGMENTS OF SMALL AND MEDIUM ANIMALS.
- OCCASIONAL PRESENCE OF POTTERY FRAGMENTS OF OF A LATE IRON AGE - EARLY ROMAN CHRONOLOGY.

IN THE BOTTOM OF THIS FILL WE HAVE A CONCENTRATION OF PEBBLES AND GRAVEL.

THIS MID ORANGEISH BROWN NATURAL INFILLING (107497) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE DITCH [107499] AND IS ONE OF THE OLDEST FILLS OF THIS FEATURE. IT WAS RECORDED IN A 2'6 x 2 m SLOT.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH SOME PEBBLES AND GRAVEL.
- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF CHARCOAL, ALMOST ALL OF THEM IN THE RIGHT SIDE OF THE RECORDED SECTION (D#62585) (NW FACING SECTION)
- OCCASIONAL PRESENCE OF BONES FRAGMENTS OF SMALL AND MEDIUM ANIMALS.
- OCCASIONAL PRESENCE OF POTTERY FRAGMENTS THAT LOOK LIKE FROM A LATE IRON AGE CHRONOLOGY. IN THE OLDEST FILL (107498) WE DIDN'T FIND ANY DATABLE REMAIN.

THIS MID BROWNISH GREY NATURAL INFILLING (107498) IS
MODERATELY COMPACT AND HAS A CLAY COMPOSITION.
THIS FILL BELONGS TO THE DITCH [107499] IS IT AND ^{IS} ITS
OLDEST FILL, ITS PRIMARY FILL.
THIS FEATURE WAS DUG DOWN IN A 2 ¹ / ₈ x 2 m SLOT.
THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:
- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL
AND MEDIUM SIZES MIXED WITH PEBBLES IN THE BOTTOM.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF MARINE SHELLS AND SQUID
FOSSILS.
- OCCASIONAL PRESENCE OF BONES FRAGMENTS OF SMALL
AND MEDIUM ANIMALS.
WE DIDN'T FOUND ANY DATABLE REMAIN, LIKE POTTERY, TO
GIVE A CHRONOLOGY OF THIS PRIMARY FILL OF THE DITCH
[107499].

THIS NW-SE RUNNING DITCH [107499] HAS A LINEAR SHAPE, STEEP SLOPING Sides AND A CONCAVE BASE. IT WAS RECORDED IN A 2.6 x 2 m SLOT. THIS DITCH [107499] IS CUTTING THE NATURAL (100003) AND IS FILLED BY 5 NATURAL INFILLINGS: (107494) AND (107495) THAT ARE FROM AN EARLY ROMAN CHRONOLOGY AS WE CAN SEE IN THE ~~REPORTED~~ FRAGMENTS FOUND. AND (107496) (107497) AND (107498) THAT LOOK LIKE FROM A LATE ROMAN AGE CHRONOLOGY. THIS DITCH AND ITS 5 FILLS ARE TELLING US THAT IS A TRANSITIONAL PERIOD. THE SHAPE OF THIS FEATURE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. CLOSE TO THIS SLOT THAT WE HAVE RECORDED THE FEATURE [107499] THE DITCH IS TURNING LEFT TO AS/SW ORIENTATION. THIS FEATURE IS SAME AS [107505]. [107502] ALL THE FILLS ARE DEPOSITED IN THE WAY DUE TO THE INCLINATION OF THE EDGES THAT MAKE THE DEPOSITION IN THIS WAY.

WITH THIS DISPOSITION.

cut of ditch [107502]. Filled by (107503), (107504), (107505), (107506), (107507) & (107508).

The ditch appears to have undergone several phases of infilling, the first occurring shortly after it was dug, with loose sediment falling back into it from either side, fills (107503) & (107504). This was followed by a slower infilling whilst the ditch still signified a boundary, with (107505) forming as a very silty context with ~~rather~~ a few stones but containing chunks of charcoal & animal bone. This was followed by the formation of (107506), which contained gravel & no material culture. It may well represent purposeful infilling using plough soil, though a later Roman ditch respects this one, making it unlikely it was purposefully backfilled prior to nat. ⁽¹⁰⁷⁵⁰⁷⁾ ~~(107506)~~ which represents further natural infilling. Finally (107508) formed including a great deal of Iron age pottery & animal bone, implying heavy activity or possibly dumping in the ditch at the end of its life.

Refer to context (107509)

(any further details that may be important for understanding the context, including items marked * overleaf)

Contained occasional small stones. There were no fossils in this fill.

It is ~~likely~~ likely that this fill represents ~~the~~ loose falling bank into the ditch ~~forming~~ shortly after it was dug.

There is also a possibility that these fills (107503) & (107504) could be evidence for the clearing of the ditch & therefore represent remnants of fills which were removed in order ~~to~~ to re-establish the ditch.

Fill of ditch [107502]. Stratified above (107504) & below (107506). Contained occasional large stones & charcoal flecks & chunks. The only find in this fill was a the cranium of a dog.

This fill was extremely silty compared to all other fills of this ditch. It is also notable for being one of ~~the~~ only 2 of 6 which contained any finds.

It is likely that this fill formed naturally, although there was clearly human activity occurring nearby at the time. Given that the only fills below it likely represent side shippage it is fair to assume that this fill formed whilst the boundary ditch was still in active use.

Fill of ditch [107502] stratified above (107503) & below (107507).
contained frequent stones & occasional chalk and charcoal flecks.
There were no finds present in the fill of this ditch.

It is likely given the lack of material culture in this
fill that it formed through natural ~~or~~ infilling. This fill was
very gravelly, which is similar to surrounding natural, this further
supports the interpretation that it was formed through natural
infilling.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [107502]. Stratified above (107506) & below (107508). Contained
 frequent stones, & moderate ~~stone~~ chalk. There were no finds present in
 this fill.

It is likely that this fill formed through natural infilling, perhaps
 being material washed in by heavy rain.

Refer to context: [107502]
 (107508)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

A large rectangular area filled with a grid of small dots, intended for drawing sketches related to the archaeological context.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Final fill of ditch [107502]. Stratified above (107503). Contained occasional small stones & charcoal flecks. Also contained moderate pottery & animal bone. For found in this fill was of Iron age or Roman date.

It is likely that this fill formed through natural infilling, perhaps with some material being ploughed in from surrounding areas.

It is also interesting to note that this is the only fill of this ditch which yielded pottery. The frequency of this pottery could suggest dumping in the ditch towards the end of it's life.

Refer to context [107502]

This fill is covered by a layer/fill of ashes, very dark and clearly exposed to fire activity ~~between~~ the (107776) and covers (107479). It's loose, salmon greyish colour, silt composition, 0.08m thickness and very few inclusions of small stones.

It's related with the cut [107643] that was formed by the "gully" # [107168]. As said in that context sheet, it seems to be rather a structural part of the fire structure as it was stratigraphically articulated with it. This context in evaluation, (107513), in plan "designed" a kind of an extension of the "gully" towards south being only visible in the "longitudinal section" D# 62646. Therefore it could, the gully [107168] be an access to the structure like a "corridor" to clean it or to retrieve debris. Consequently this fill seems to be a result of the use and misuse of that access.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of small ditch

Light orangey grey silty sand

Due to the colour, this is most likely natural
infilling, with some leeching from above which ~~can~~
~~also~~ explains the chevrons in the surface

Refer to context [107516]

Cut of small ditch

Steep sided ditch with V shaped base.

Same as terminus [107458] + slot [107469]. Possibly a drip gully, but needs more investigation.

Cut" OF TREE BOWL OF SUB CIRCULAR SHAPE.

Cut IS VERY IRREGULAR. IN THE LEFT SIDE OF THE LOT
EDGE IS MODERATELY SLOPED, INSTEAD IN THE OTHER IS
GENTLE.

LIKELY THIS CUT IS RESULT OF NATURAL PROCESS.

UNEVEN BASE SEEMS TO BE PRODUCED BY ROOTS OF
PLANT/TREE.

Refer to context (107518)

SINGLE PIN OR CUT [107517] RESULT OF NATURAL INFILLING.

FILL HAS MODERATE PRESENCE OF CHARCOAL AND BURNED WOODS, WHICH HAS BEEN SAMPLED.

DUE PRESENCE OF THIS KIND OF INCLUSIONS AND IRREGULAR SHAPE OF THE FEATURE, IT LOOKS LIKE WE HAVE A TREE BOWL. INTEGRITY OF THE WOODS SUGGESTS IT HAS BEEN

PRODUCED QUITE RECENTLY BUT WE CAN'T DISCARD IT TO BE EVIDENCE OF LAND CLEARANCE, CONTEMPORARY TO OTHER FEATURES OF THE ARCHAEOLOGICAL LANDSCAPE (MOSTLY LATE IRON/ROMAN).

Refer to context

THIS MID GREYISH BROWN NATURAL INFILLING (107519) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION. THIS FILL BELONGS TO THE TERMINUS OF A GULLY [107520] AND IS ITS ONLY FILL. IT'S SO SIMILAR TO THE NEWEST FILL (107426) THAT BELONGS TO THE FEATURE [107428] OF THE SAME GULLY. THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL SIZE MIXED WITH PEBBLES AND GRAVEL FROM THE BOTTOM.
- OCCASIONAL PRESENCE OF CHARCOAL AND CHALK FLAKES
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE EDGES OF THE TERMINUS.
- OCCASIONAL PRESENCE OF MARINE SHELL AND BONES FRAGMENTS FROM A MEDIUM SIZE ANIMAL.
- OCCASIONAL PRESENCE OF PIECES LIKE A BASE OF A POTTERY OF A LATE IRON AGE CHRONOLOGY.

Refer to context [107520]

THIS NE-SW RUNNING TERMINUS OF A GULLY [107520] HAS A SUB-CIRCULAR AND LINEAR SHAPE, MODERATE SLOPING SIDES AND A CONCAVE BASE.

^{FIRST} IT WAS DIGGING IN ONE HALF TO RECORD IT LONGITUDINALLY WITH A SECTION DRAWN (D#62592). THEN WAS COMPLETELY DUG, TO RECORD THE SHAPE OF THE BASE (D#62593).

THIS FEATURE WAS RECORDING IN A 1m x 0.70m SLOT. ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS IT HAS ONLY ONE FILL (107519) THAT CONTAINS PIECES OF LATE IRON AGE CHRONOLOGY. THIS FEATURE [107520] IS SAME AS [107428] AND [107509] DUE TO ALL OF THESE FEATURES BELONGS TO THE SAME GULLY.

CLOSE TO THIS TERMINUS THERE IS A POST-HOLE [107511] THAT IS CUTTING THE NEAR DITCH ~~WHERE~~ WE HAVE EXCAVATED THE FEATURE [107499]. THIS DISPOSITION ~~IT~~ SEEMS THAT THERE IS A GATE BETWEEN THE DITCH AND THE TERMINUS [107520] TO MAKE A LATE IRON AGE ENCLOSURE

CUT OF PIT, [107523]

ITS SHAPE WAS SUB-CIRCULAR WITH A VERTICAL SIDE AND CONCAVE BASE.

IT WAS NEAR OTHER PITS: [107525] AT WEST, [107527] AND [107529] AT NORTH.

AT SOUTH THERE WAS OTHER THREE PITS [107531] [107535] [107537] AND A POST-HOLE [107533] PLUS A COMPLEX STRUCTURE THAT COULD BE A FURNACE OR ANYTHING ~~RELATED~~ ~~TO THE PRODUCTION~~ ~~ACTIVITY~~ ~~WITH THE LINE OF FIRE.~~

SO ITS POSITION MIGHT MAKE THINK TO IT ~~WAS~~ AS PART OF THAT ^{FIRE} STRUCTURE ~~TO DO THE PRODUCTION ACTIVITY.~~

Refer to context 107521

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

fill of clayey silty soil, of dark greyish brown colour and moderately compact. It has a maximum thickness of 0.16 m in the NE part of the slot. There are occasional inclusions of small stones (2/3 cm), chalk and charcoal.

It is the most modern fill of the ditch [107541], and only appears in the E of the slot. The greatest thickness is in its N part, and in its S part only 5 cm left.

Occasional animal bones and moderate early Roman pottery found.

LP * FGF 13/11/17 THE DARKNESS OF THE SILT & THE AMOUNT OF POT THAT CAN BE SEEN IN SURFACE SEEMS TO INDICATE A FAST INFILLING, WITH LARGE AMOUNTS OF ORGANIC WASTE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of sandy silt soil, of mid brownish orange colour and moderately compact. It has a maximum thickness of 0.24 m in the SE part of this slot, in the NE only a ~~small~~ small part remains. There are occasional inclusions of small stones (2/3 cm), chalk and charcoal.

It is the second natural infilling of the ditch [107541], and only appears in the E of this slot. It has been affected by roots.

Occasional animal bones and one fragment of early Roman pottery found.

Fill of clayey silt soil, of black colour and moderately compact. It has a maximum thickness of 0.18 m. There are occasional inclusions of stones (4/5 cm) and chalk. It has frequent charcoal.

It is the oldest natural infilling of the ditch [107541] and only appears in the W part of this ditch, where it has the greatest thickness, and in the E of the ditch it's disappearing.

Occasional ~~late~~ late Iron/Early Roman pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut with linear shape, with ~~steep~~ ^{moderate} sloping sides and concave base. It has a length of 2 m, a width of 1'62 m and a depth of 0'38 m in this slot. The orientation is N-S.

This cut is a ditch whose natural infillings are (107538), (107539) and (107540). This ditch appears in the E part of the slot, in the superior part, and it's the most modern feature of this slot. It's cutting the ditch [107547] in the E, in its superior part.

In its gills late Iron / Early Roman pottery found.

* FGF 13/11/17 THIS CUT SEEMS TO REPRESENT A NEW PHASE IN THE ENCLOSURE, BY WHICH THE ORIGINAL ACCESS (ONLY A FEW METERS TOWARDS THE NW) IS BLOCKED BY THIS NEW CUT

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clayey silt soil, of mid orangeish brown colour and moderately compact. It has moderate inclusions of small stones (3/3 cm). There are occasional chalk and charcoal. The maximum thickness is 0'20 m.

It is the second most modern fill of the ditch [107547] and it appears in all the ditch in this slot. In the E part, in the top, it's cut by the ditch [107541].

No materials found, but the superior fill has Late Iron / Early Roman pottery, and the next fill has Late Iron pottery.

This fill was truncated in the NW part by roots.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clayey silt soil, of dark brownish grey colour and moderately compact. It has a maximum thickness of 0.16 m. There are occasional stones (2/3 cm) and chalk. It has frequent charcoal.

It is one of the natural infillings of the ditch [107547] and it appears in all the ditch in this slot. This fill has a lot of burned animal bones, so they are very bad conserved. Due to the large amount of charcoal, samples have been taken. The most accumulation of charcoal is in the W part.

Occasional CBM and Late Iron pottery found, and 4 small fragments of iron.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with linear shape, with steep sloping sides and concave base. It has a length of 2m, a width of 3.24m and a depth of 1.22m in this slot. The orientation is N-S.

It is a ditch whose natural infillings are (107542), (107543), (107544), (107545), and (107546). In its fills, late Iron and Early Roman pottery found. After, this ditch was cut by the ditch [107541] in its E and superior part.

Also, it was affected by roots in NW part.

FGF 13/11/17

* THIS IS THE ORIGINAL RING DITCH DEFINING THE ENCLOSURE, MOST LIKELY IRON AGE. THE RELATION WITH OTHER "S" WILL BE INVESTIGATED, BUT THIS ONE WAS CLEARLY ~~BE~~ MODIFIED BY [107541], AS CAN BE SEEN IN THAT CTK SHEET.

SINGLE NATURAL INFILLING OF A DITCH TERMINUS.

GREENISH/YELLOWISH MID BROWN CLAYEY SAND WITH A LOT OF SMALL STONE INCLUSIONS, MOST OF THEM VERY ANGULAR. AS WELL SOME (OCCASIONAL) MIDDLE SIZED - STONES. THE HALF OF THESE STONES WERE FLINT, BUT WE COULDN'T FIND WORKED FLINT.

A SMALL ANIMAL JAW HAS BEEN FOUND AT AN INTERMEDIATE DEPTH, TWO SMALL BITS OF CBN, ONE VERY SMALL POT SHERD WITH A COARSE BLACK FABRIC AND CHALKY/SHELLY INCLUSIONS, A POSSIBLE PIECE OF SLAB (IF NOT AN IRON STONE) AND A GRANITE STONE WITH A FATTENED FACE THAT WE HAVE KEPT FOR CHECKING BY AN SPECIALIST IN CASE IS A FRAGMENT OF RUBBING STONE OR ANOTHER POSSIBLE TOOL. THIS FILL IS QUITE HOMOGENEOUS AND COULD BE CONSIDERED AS WELL A BACKFILL WITH NATURAL SOIL.

Upper fill of small ditch terminus

Dark orangish black silty sand

The opposite terminus to [107458]. Moderate stones, frequent charcoal, Occasional CBM but very degraded, as was the bone. All of the bone found in this feature has been teeth. No long bones or any other kind.

Which leads to ~~the~~ interpretation that this was deliberately backfilled.

Refer to context [107552]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of small ditch terminus

light greyish orange silty sand

Due to the similar colour of this fill & the surrounding natural; as well as the way the fill has settled within the cut, this is most likely a natural infill.

Charcoal likely leached from the layer above (107550)

Refer to context (107552)

Cut of small ditch terminus

Steep sided with a concave base.

Fined slot of small curvilinear ditch. Current interpretation is that this is a drip gully but further clearing is required as only this feature is currently visible. Will update later.

Update:

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is a secondary fill of the ditch [107481]. It is moderately compact, mid grey colour, silty clay composition 0.60m thickness and mineral inclusions of moderate stones, occasional chalk, organic inclusions of moderate charcoal and frequent bones and frequent pots of dates from Iron Age and occasional fired clay / CB.

SAME AS (107554) on square (B) (107282) on square (C), (107555) on square (D) and (107752) on a small relationship slot on the non-excavated square - only 100% at between (B), (C) and (D).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS FILL IS A SECONDARY FILL OF DITCH [107612].
 IT IS MODERATELY COMPACT, MID GREY COLOUR, FINE CLAY
 COMPOSITION AND MINERAL INCLUSION OF MODERATE STONES,
 OCCASIONAL CHALK; ORGANIC INCLUSION OF MODERATE CHARCOAL
 AND FREQUENT BONES AND FREQUENT ~~ROTS~~ ROTTS DATED
 FROM IRON AGE AND OCCASIONAL FIRED CLAY/CBN.
 same as (107553) on square (A) (107554) on square (B)
 and (107282) on square (C) and finally (107953) on
 the extended excavation of this slot.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THE FILL (107556) BELONGS TO THE DITCH [107557]. IT WAS A RICH FILL. INSIDE WERE MANY ANIMAL BONES, charcoal and many POTTERY. THE POTTERY IS DATEABLE TO THE Roman age. With one special find Δ 10301 has been found; IT IS probably a metal part of a Belt. During the removal of this fill, in the S2 part on the top, I found on the feature # [107903] it corresponds at one double post hole. S22 context sheet n° [107903] for more information.

Refer to context [107557]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THE CUT [107557] RUNS IN NW-SE DIRECTION UNTIL THE SLOT WITH CUTNUMBER [107884]. Probably it is a Roman NEWT filled up from (107556) on the top and (107902) on the bottom. The proof of this newt, its DEMONSTRATED by the different Orientation from the ~~slot~~ ^{slot} cut [107899] and from the different Sides. Another proof of the existence of those 2 CUTS is the fact that, the NE-part of the slot the Sides are sloping corresponding to the [107899], WHEREAS THE OPPOSITE - SW has stepped Sides belonging to the CUT [107557] (more visible in the S2 Fac. SECTION)

* AS THERE WAS A POSTHOLE ON THE NW SIDE OF THE DITCH ON ITS ~~WEST~~ ^{ITS} WEST SIDE, THE PH [107903], THAT WAS TRUNCATED BY THE DITCH BUT ~~FOR~~ REGISTER WAS INDEPENDENT, THE [107557] IS SAME AS [107775]

Cut of gully [107558] filled by (107559) & (107560). Cut by [107561] & [107562]. This gully makes up part of a group of intersecting gullies, this one being the ^{oldest} lowest in the matrix.

There were no fossils in the fills of this gully, which both formed through normal infilling.

The gully can be seen to align with others in the immediate area, ~~perhaps~~ forming a small ^{square} enclosure. This could perhaps represent an animal pen or drainage gully gullies surrounding a small building or out house.

Refer to context (107560)

Piney fill of gully [107558]. Stratified above [107558] & below (107560).
Contained occasional small stones & charcoal flecks. There were
no finds in this fill.

It is likely that this fill formed through natural rifling of
the gully. This is supported by the lack of cultural material
found in this fill.

Refer to context

Fill of gully [107561]. Stratified above [107561] & below [107579]. cut by [107579]. contained occasional small stones & charcoal flecks. Also contained moderate chalk flecks. There were no finds in this fill.

It is likely that this fill formed through natural infilling. This is supported by the lack of cultural material in this fill. ~~the fill of this cut~~ between the difference between this fill & the fills of [107558] could only be discerned from the differences in the density of chalk between these fills. As such, there is a possibility that the differentiation is subjective. It is important then, to consider the possibility that ~~both~~ ^{both} of these gullies were open at the same time, both making up part of the ~~to~~ some small enclosure.

Refer to context [107561]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf.)

Upper fill of small pit.

Mid greyish brown silty sand. Occasional stones & frequent charcoal.

likely a dumped fill due to the large iron stones within the fill. Possibly fire-related but the ironstone is an unusual stone to use.

Refer to context (107568)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of small pit

Dark black silty clay. ~~Charcoal~~ Almost entirely charcoal.

Possibly related directly to (107566) as both contain charcoal but this layer was so distinct it needed its own number.

Likely from fire-related activity & then dumped here. The natural underneath is sand-based & doesn't show any signs of in-situ burning.

Refer to context [107568]

FOR PLAN

Cut of pit

Steep sided with a flat base

Current interpretation is that this is a dump of fire-related material. Both hills were charcoal rich but the pit itself & the various stones found within it did not show any evidence of charring or burning. Suspect they were dumped ^{last} ~~after~~ as they were near the top of the hill.

Refer to context (107566)+(107567) FOR SECTION

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Cut [107569] of pit probably post-hole. This feature inside a ditch's slot and precisely in the middle of the east side of the slot. When the slot has been opened for investigation the ditch this feature [107569] was not visible after the first fill [107688] of the ditch [107687] has been removed. This feature [107569] was visible and it cut the second fill [107689]. For this reason, this feature [107569] was not immediately recognized and part of the southern side has been removed making the fill [107689].

50.

fill (107570) 8808484y post-hole. The composition of this fill (107570) is similar to the second fill (107689) of the ditch except for a major concentration of charcoal's especially in the bottom that made the color of the fill very dark. Almost black. In addition this fill (107570) contained a moderate frequency of very small flint stones, chert, some bits of animal bone and a little pottery.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch part of origin, orientated NS. ~~THE DITCH WAS~~

Scot has been opened in order to investigate relationship between Annex and bigger ditch (see plan sketch on context [107571])

Excavation revealed that this cut is contemporary with cut [107571]

~~Other cuts [107572] and [107571] have been truncated by cut [107571].~~

Cut [107572] ^{truncated} cut even part of the FUS already present (107574) and (107578)

It means it happened after the abandonment of ditch + Annex [107571] [107573]

Refer to context (107574) (107578)

cut of gully [107579]. Filled by (107580). Cuts gullies [107558] & [107561] & fills (107559), (107560) & (107562). This gully is one of three which intersect in this area, this one being the latest, cutting both previous gullies.

The gullies in this area are all along Roman alignments. The fill (107580) of this gully being the only one to yield any finds, which also support a Roman date for this feature.

It is possible that gullies [107558] & [107561] were open contemporaneously, both making part of the same small enclosure, which may have been an animal pen or ~~small building~~ ^{drainage} surrounding a small building. If this is so, this gully could represent a partial re-enstatement or re-modelling of this enclosure.

Refer to context (107580)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of gully [107579]. * Contained occasional small stones & chalk flecks. Also contained moderate charcoal flecks, occasional animal bone & pot of Roman date.

It is likely that this fill formed through purposeful dumping of household waste into this gully. This is supported by the colour of the fill & the amount of cultural material present.

This fill was the only one in this slot to have yielded any datable evidence, which was of Roman date. This would support the date offered from the alignment & shape of the gullies.

Refer to context [107579]

FILL (107585) IN DITCH CUT [07581]. FILL CONSISTS OF A MODERATELY COMPACT DARK BROWNISH-GREY SANDY CLAY, WITH INCLUSIONS OF FREQUENT CHARCOAL FLECKS AND CLUMPS, MODERATE AMOUNTS OF CHALK FLECKS AND SMALL TO MEDIUM STONES, AS WELL AS SOME OCCASIONAL PIECES OF MARINE SHELL.

FINDS INCLUDE SEVERAL PIECES OF LARGE ANIMAL BONES, INCLUDING SEVERAL LONG BONES, EITHER FROM A COW OR HORSE. A ~~FLINT~~ FLINT FLAKE ALSO UNCOVERED, WHICH APPEARS TO BE FROM A PREPARED CORE. GREATEST AMOUNTS OF ANIMAL BONE FOUND FROM THIS FILL.

FILL IS 0.32m IN THICKNESS, AND IS MOST LIKELY THE RESULT OF NATURAL INFILLING OF THE DITCH IN ITS DISUSE. THIS FILL MAY REPRESENT A TIME WHEN THE DITCH MAY HAVE BEEN USED AS A CONVENIENT DUMP TO THROW AWAY BONES AND OTHER RUBBISH, SUCH AS ASH FROM FIRES.

FILL (107586) IN DITCH CUT [107581]. FILL CONSISTS OF A MODERATELY COMPACT MID REDDISH BROWN CLAYEY SAND, WITH INCLUSIONS OF FREQUENT CHALK FLECK, MODERATE AMOUNTS OF CHARCOAL FLECKS AND SMALL TO MEDIUM STONES, AS WELL AS OCCASIONAL MARINE SHELL. FINDS INCLUDE SOME PIECES OF ANIMAL BONE. THICKNESS OF FILL 0.19m, AND IS MOST LIKELY DUE TO NATURAL INFILLING.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill at tree base

Mottled brown/orange silty sand

Due to the colour of this fill & its similar texture to the natural, this is likely natural infilling after a tree was present

Refer to context [107588]

(107589). Primary Fill of [107597].

WESTERN EDGE OF base of feature. A likely natural infill from erosion of edge of feature during use.

Minimum of stones flecks of charcoal evident very diffused with natural that showed signs minor leaching from the more clayey fills (107596), (107594) or just bioturbation. The natural base is very distinct from sides so is variable. The base ~~was~~ very orange/yellow, white sand, fine gradules, slightly gravelly. Patches. ~~8~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

(107591) PRIMARY Fill of [107592]
 - This contained frequent GRAVELLY inclusions
 varying in size and morphology, natural flint,
 more river washed stones, pebbles, chalk inclusions
 appeared rounded and affected by water action.
 laggly stones varying in sizes no larger 0.10m.
 occasional moderate sizes charcoal throughout.
 It was very moist, sticky at points but also
 friable once rolled into ball.
 abundant finds, animal bones, pottery all
 fragments red or black were possibly iron-AGE to
 possibly Roman as few well made.

(107595) A SECONDARY FILL OF A FEATURE [107597]. *PIT
This very diffused with UPPER (107593) but is more
distinctly SANDY, AND ORANGE, LIKELY A RESULT FROM
NATURAL INFILLING FROM EROSION, WIND + RAIN SWEEPED
AFTER DISUSE OF [107597].

Bulk find ONE FRAGMENT OF PROXIMAL END ANIMAL
BONE POSSIBLY TIBIA. EVIDENT IN SECTION.

(107596) is a SECONDARY fill of (107597).

Like (107594) it is very clayey, but richer deeper blueish grey. occasional charcoal, occasional chunks of chalk ~~smaller~~ between ~~0.5~~ 1cm - no larger than in size, been processed by water. mixture natural stones, occasional larger stones.

- very sticky, moist also ~~supports~~ correlating with natural processes of rain infill? at time of disuse; or at least possibly collection of water within feature. could also mean feature could have been used as water hole?

- Bulk finds, pottery mixed fabrics, black + red, animal bone also bagged fragment w soil block of possible wood/organic material

Fill of clayey silt soil, of dark brownish grey colour and moderately compact. It has a maximum thickness of 0.14 m. There are occasional inclusions of small stones (2 cm), chalk, manganese and charcoal.

This is the natural infilling of the ditch [107601]. It's the most modern fill of this slot.

Only one animal bone found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of clayey silt soil, of mid brownish orange colour and moderately compact. There are frequent small stones (2/3 cm), specially in the SF of the slot, It has occasional chalk and charcoal. The maximum thickness is 0.18 m. This fill only appears in the southern half of this slot.

It is the most modern natural infilling of the ditch [107607], and in its superior part is cut by the ditch [107601]. It was affected by roots. It is the same fill that (107542), natural infilling of the ditch [107547], located in the S of this slot.

Only occasional bones found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of clayey silt soil, of mid greyish brown colour and moderately compact. There are moderate inclusions of chalk. It has frequent ~~small~~ stones, in general small stones (2/3 cm), although there is some bigger (6/8 cm). It has occasional chalk. The maximum thickness is 0.26 m.

This fill is the second most modern ~~fill~~ ~~of~~ natural infilling of the ditch [107607], and it's the same fill that [107543], natural infilling of the ditch [107547], located in the S of this slot.

Occasional animal bones and late Iron pottery found.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of clayey silt soil, moderately compact. The colour is black, although as it moves towards the north it is mixed with the brown. The maximum thickness is 0.22 m.

There are moderate inclusions of small stones (2/3 cm) and chalk. It has frequent charcoal, specially in the S. of the slot.

It is one of the natural infillings of the ditch [107607], and it's the same fill that [107544], natural infilling of the ditch [107547]. This fill has frequent burned animal bones, but they were very bad conserved.

Only one small fragment of late Iron pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Cut with linear shape, with steep ~~slo~~ sloping sides and concave base. The orientation is N-S. The length is 1'66 m, the width 1'16 m and the depth 0'92 m in this slot. It is a ditch whose natural infillings are (107602), (107603), (107604), (107605) and (107606), and it's the oldest feature of this slot. It's the same ditch that [107547], located in the S of this slot. Both cuts belong to an enclosure, and this cut [107607] is one of the terminus of this enclosure, having opposite, in the N, the other terminus, so it could be an entry. Agree, this terminus was cut, in the E, by the ditch [107601]. Occasional late Iron pottery found in its natural infillings.

Ditch Terminus [107608]. This is the terminus of a linear ditch feature. It has steeply sloped sides and a flat base, and runs E-W. The dimensions of the cut are: 1.05m long, 1.36m wide, and has a maximum depth of 0.82m. The shape is the result of design and construction.

This feature is found near the south edge of a larger ditch enclosure. The purpose of this feature is not known at this point, but will be investigated with further excavation.

Refer to context (107609) - section & sketch

Fill (107609) of Ditch Terminus [107608]. A moderately compact, dark grayish-brown fill, with a maximum thickness of 0.82m. It is composed of silty clay, with frequent charcoal, moderate stone, moderate pottery, occasional bone and occasional CBM inclusions. The fill is the result of deliberate backfill, as which occurred at the end of the use life of the ditch.

Refer to context [107608] for plan sketch

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Cut OF TREE BOWL RESULT OF NATURAL PROCESS.

SLOT WAS OPENED IN ORDER TO INVESTIGATE RELATIONSHIP BETWEEN THIS FEATURE AND THE DITCH ON THE WEST SIDE.

ON THE TOP SURFACE WAS NOT POSSIBLE TO SEE AS EDGES WERE EXTENDED. (AS THE SURFACE FILL WAS WASHED AND OBSCURING THE RELATIONSHIP)

EXCAVATION REVEALED THAT THESE TWO FEATURES HAD NOT POINTS OF CONTACTS.

FOR THIS REASON SLOT WAS NOT EXTENDED THROUGH THE WEST DITCH AND IT WAS INVESTIGATED THE SHORT AXIS OF THE CUT [107610] INSTEAD OF THE LONGER.

Refer to context (107611) SECTION

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

INTERPRETED AS A TREE BOWL

SINGULAR OF CUT [107610] REPUT OF NATURAL INFLUENCE
IT WAS COMPOSED BY CLAY OF MID GREY-BROWNISH COLOUR

IT CONTAINED FEW ANIMAL BONES, CHARCOAL AND FEW
TRACES OF CBH

DUE PRESENCE OF CHARCOAL ~~20%~~ ABOUT 20% OF THE FILL
HAS BEEN SAMPLED

Refer to context [107610] PLAN SECTION

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill ~~was considered~~ of cut [107653]. It is moderately compact, mid grey colour, clayey silt composition, 0.45m thickens with moderate inclusions of stones, occasional chalk, charcoal and bones. ^{see pit hole [107641]}

It is cut by pit [603018] and it is filling cut [107653]. It is the same as (107652) identified on the square ① of the grid of 8 squares of which 4 were single context excavated.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary fill of ditch [107617], doesn't extend all the way through the slot, making this section difficult to read. It was initially believed that [107620] cut this ditch* at this point, but this was later revised as it can be explained by the ~~section~~ ^{section} being dug at an oblique angle.

* Due to the presence of gravel which ends abruptly, this is simply because the fill doesn't extend all the way across the slot.

Frequent small subangular stones / gravel polished, probably Roman + Iron Age, disarticulated animal bone.

Refer to context **[107617] [107620] PLAN**

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of SE-NW running ditch, eroded by ditch C1076203
 sloping at the intersection of the two ditches, but the
 angle at which this slot goes through is oblique - giving an apparent
 strange nature of the fills in section.

The slot is also quite overcut, due to a change in material where it
 is very gravelly and fine loose* (not appearing at all in the opposite
 facing part of the section, due to the ditch C1076203 cutting it)
 excavated as it was thought to be fill, lying beneath is a very
 sandy material.

Function may have been as a boundary ditch, possibly agriculture/
 livestock related

Refer to context C1076203
 C107618)

Secondary fill of curvilinear ditch [107620]
Disarticulated animal bones in slightly higher quantity than
upper fill. Includes horse mandible. 1 piece of what is believed
to be furrier found.

Moderate small subangular & subrounded stone. There is also a
presence of gravel which is particularly concentrated in the ^{SW-NE} ~~SE~~
section on the NE side, but less is visible in the NW-SE section.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of curvilinear ditch, stop dug at intersection between this and ditch [107617] and at a sharp turn of this ditch 'Elbow turn'. Pottery appears remain some possibly Iron Age. Piton related animal bone in secondary fill, including horse mandible.

Base is only partially seen, is continuing down past the SW-NE section, while in the NW-SE section it is rising down to it being the edge.

Probably functioned as a boundary ditch, purpose not known but possibly livestock related?

Truncates ditch [107617] which runs NW-SE

Cut of gully very shallow, result of erosion.

This cut has very similar shape and dimension of cut [107642].

~~However~~ due different orientation, it seems they compose a radial shape of an hypothetical building.

At the moment these two features appear quite isolated.

27.11.17

UPDATE: maybe some post-holes some metres away to their west can be related with these gullies [107646][107648][107670][107677], opening the possibility that all of them were related to remnants of structures that were ploughed away. In these case these gullies could have been slots for beams or timber planks. Y.T.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of gully [107630] filled by (107631), (107632), (107633) & (107634).

This slot was dug into the terminus of this gully. Fills in this gully yielded no finds, though elsewhere along its length there was pottery of Roman date found.

This gully makes up part of an enclosure, ~~cut~~ with this specific terminus ~~representing~~ representing the entrance way to this enclosure.

It is likely that this feature filled quite slowly, until it was purposefully backfilled at the end of its life. Fills (107631) & (107632) are characteristic of natural infilling, whereas fills (107633) & (107634) have hallmarks of having been purposefully dumped into the gully.

Refer to context (107634)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of gully [107630]. Stratified above (107631) & below (107633). Contained occasional small stones & charcoal flecks. There were no finds in this fill.

It is likely that this fill formed through natural infilling. Given its clayey nature & its colour, it appears that this fill formed under wet conditions, perhaps during heavy heavy rain. This fill is the most clayey of all fills present in this terminus.

Given that there were no finds present in this fill, it is not possible to offer a date for it. However, finds from fills elsewhere along the length of this gully were of Roman date.

Refer to context [107630]

This fill ~~is~~ holds ~~some~~ a close resemblance ~~between~~ to the natural into which the gully was dug. For this reason, it is likely that this fill represents redeposited natural. It could be bank material or spoil from digging elsewhere nearby.

Alternatively, this fill could represent a deliberate effort to ~~to~~ fill the gully, perhaps at the end of its useful life. This would pair it with the fill (07634), as part of the final phase of purposeful refilling of the gully.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Fill of clayey silt soil, of dark brownish grey colour and moderately compact. It has a maximum thickness of 0.46 m. There are moderate inclusions of stones (4/5 cm) and charcoal. It has occasional chalk.

It is one of the oldest natural infillings of the ditch (107638) and it's the gill with the greater thickness of the ditch. It has remains of roofs. It's appear in all the slot, and the greater accumulation of stones is in the bottom of the gill. Occasional animal bones and late Iron pottery found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Cut with curvilinear shape, with steep sloping sides and concave base. The orientation is N-S. It has a maximum depth of 1.05 m and a diameter of 2.65 m.

It is a ditch whose natural fillings are (107755), (107756), (107757), (107637) and (107879). This ditch is an enclosure and, in this slot, is ~~the terminus~~ one of the terminus of that enclosure. This ditch is a recut of the ditch [107759], and is cutting all of its fills, so it's probably that [107759] was the original terminus, after it was filled, and the terminus came back to be excavated with this ditch [107638].

Late Iron / Early Roman pottery, a little iron plaque, fragments of slag, and fragments of burned wood and burned animal bones found in its fills.

Probably, when [107638] was made, it was made a little longer than [107759], and by that reason, [107759] doesn't appear in the S side, only in the bottom (drawing 62633).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of sandy silt soil, of mid brownish grey colour and moderately compact. The maximum thickness is 0.34 m. There are moderate inclusions of small stones (2/3 cm). It has occasional chalk and charcoal.

It is the ^{oldest} natural infilling of the gully [107640] and it's cut in its E part by the ditch [107638].

No materials found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with linear shape, with moderate sloping sides and concave base. It has a width of 0.70 m and a depth of 0.34 m. The orientation is N-S.

It is a gully whose natural fillings are (107639) and (107881). This gully is cut by the Terminus [107638] in its SE part and by the Terminus [107640] in its NE part. In plan only the fill (107639) could see well, because (107881) was very similar to natural, so at the beginning it was digged as a pit cut by the Terminus. After, during the excavation process, it was seen that (107881) was a gill, and the feature wasn't a pit, but a possible gully. It's the oldest feature of this slot.

Iron pottery found in its fills.

* F6F * THIS FEATURE ~~C~~ COULDN'T BE PROPERLY CHARACTERISED DUE TO POOR STRIPPING, UNACCURATE PRE-EX PLANS AND LACK OF TIME.

The ~~fill~~ cut is filled by (107478) ~~and the two more~~ recent fills (107735) and (107169). It has a sub-circular shape, on a NW-SE direction, steep sloping sides and concave base, with 3,30m length, 1,00m width and 0,40m depth.

The fills are diverse between them. The older one is (107478) looks like a kind of preparation to support the following ones that seem to be from fire activity. It has clay inclusions and the fill that covers it (107735) was clearly exposed to fire as it's mainly composed by ashes.

As this feature was excavated using a grid of 8 squares of which only 4 were stratigraphically dug it was ~~given~~ given different set of context although they were the continuations of the fills. Therefore, this cut is same as [107643] and [107645] on those squares ~~single~~ context and same as [107807] [107808] [107809] on the

Refer to context

100%... it is important to mention that was truncated by the pt. ~~107804~~ [107804] (same as)

SEE LONGITUDINAL SECTION: [107152]

This is the cut # [107653] filled by one only fill the (107615).

It is linear, running on NW-SE direction (same orientation of ditch that it truncates), ~~context~~ steep sides, concave base and with 0,80m length and 0,78m width within this square (D) although it is extended until square (E) and where the eval trench was excavated - between square (C) and (D). As it was interpreted as being a pit on the eval trench excavation and considering that during this excavation it was possible to ~~conclude~~ that the ditch [107483] truncated by this context continued further SE, that the pit was not actually ~~a~~ pit but the edge of this feature now ^{being described} ~~evaluation~~ However, the fact that it was truncated by the pit [603018] separating the possible physical contact with the pit structure [107166] and [107645] together with the fact that there was nothing special found, it is impossible to ~~adscribe~~ ^{sketch} a proper interpretation or function or even ~~advent~~ that could be related with ~~the~~ ^{the} structure.

Refer to context:

- see longitudinal section sketch (107152)
- see perpendicular section sketch (107159)
- see plan sketch [107642]
- see location sketch + equivalence context ^{is} graphic [107046]

THIS MID ORANGEISH BROWN NATURAL INFILLING (107656) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE CUT [107659] AND ~~IS~~ IT'S ITS NEWEST FILL.

WE CAN SEE THIS NATURAL INFILLING IN THE RECORDED SECTIONS ^{EAST} SOUTH AND NORTHWEST FACING.

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES.

- OCCASIONAL PRESENCE OF CHALK FLAKES

- OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE SURFACE

- OCCASIONAL PRESENCE OF FRAGMENTS OF MEDIUM SIZE ANIMAL BONES.

- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY THAT COULD DATE THIS FILL IN THIS CHRONOLOGY.

Refer to context [107659]

THIS E-W RUNNING DITCH [107659] HAS A LINEAR SHAPE, STEEP SLOPING SIDES (WE ONLY HAVE DUG ONE OF THE EDGES) AND A IRREGULAR BASE, MID FLAT AND CONCAVE. THIS FEATURE WAS RECORDED IN A 0'54 x 2'6 x 2'7 x 0'6 m SLOT.

ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THIS DITCH [107659] IS FILLED BY THREE NATURAL IN FILLINGS: (107656), (107657) AND (107659).

THIS DITCH IS CUTTING THE DITCH [107662] AS WE CAN SEE IN THE NW FACING RECORDED SECTION WITH THE DRAWING NUMBER D62637 (AND THE PHOTO 1003584).

LOOKS LIKE THAT THIS DITCH [107659] IS TURNING TO THE NORTH ^{EAST} AS WE WILL BE ABLE TO SEE IN THE ^{OPPOSITE} NEXT SLOT THAT WILL BE DUG TO RECORD THIS RELATION.

THE DATEABLE REMAINS ARE FROM AN EARLY ROMAN CHRONOLGY

WE CAN SEE THIS NATURAL INFILLING IN THE NW FACING
SECTION RECORDED WITH THE DRAWING, NUMBER D 62637.
THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL SUB-ANGULAR STONES
MIX WITH PEBBLES.

- OCCASIONAL PRESENCE OF CHALK FLAKES.

- OCCASIONAL PRESENCE OF ANIMAL BONE FRAGMENTS
OF MEDIUM AND SMALL ANIMALS.

- OCCASIONAL PRESENCE OF LATE IRON AGE / THAT CAN

DATE THIS FEATURE IN A TRANSITION PERIOD BETWEEN
THE LATE IRON AGE AND THE EARLY ROMAN PERIOD.

THIS NE-SW RUNNING DITCH ~~HAS A LINE~~ [107662] HAS A LINEAR SHAPE, STEEP SLOPING SIDES (WE ONLY HAVE DUG ONE OF THE EDGES) AND A CONCAVE, BUT IRREGULAR BASE.

THIS FEATURE WAS RECORDED IN A 0'54x2'6x2'7x0'6m SLOT AND ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THIS DITCH [107662] IS FILLED BY TWO NATURAL INFILLINGS: (107660) AND (107661). A

THIS DITCH [107662] IS CUT BY THE DITCH [107659] AS WE HAVE RECORDED ^{SEEN} IN THE NW FACING RECORDED SECTION WITH THE DRAWING NUMBER D 62637 (AND THE PHOTO 1003584)

THE DATEABLE REMAINS FOUND SPEAKS US ABOUT A TRANSITIONAL PERIOD BETWEEN THE LATE IRON AGE TO EARLY ROMAN PERIOD.

Fill of post hole

Mud greyish brown sandy silt. Occasional charcoal.

Likely deliberate backfill due to the colour. Possibly related to [107669] as the upper fill of it (107667) is quite similar.

Refer to context [107664]

Fill of post hole

Mud greyish brown sandy silt

Upper fill, similar to (107663) in composition. There is a dashed line in the drawing because there was a large stone in the centre of the fill which left a sizable hole in the section. likely deliberate backfill.

Refer to context [107669]

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut of gully [107672]. Filled by (107673), (107674) & (107675).

This gully forms part of a small enclosure, dug along the Roman alignment on the site, & incorporating right angle turns often.

This slot was dug into the gully along a ~~the~~ straight length & did not intend to investigate any relationships

It is likely that this gully was mostly filled by natural infilling, although (107674) appears to have been formed through the collapse of an edge or redeposition of natural ~~base~~ through some anthropogenic means.

Though there were no finds present in this slot, finds from elsewhere along the length of this gully were of Roman date. This, compiled with the alignment along which it was dug suggests a Roman date for the feature as a whole.

Refer to context (107675)

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

Primary fill of gully [107672]. Stratified above [107672] & below (107674). Contained occasional small bones, chalk & charcoal flecks. There were no finds in this fill.

It is likely that this fill formed through natural infilling, this is suggested by the lack of material culture & the colour & consistency of the fill. The thickness & shape of the fill is suggestive of sediments forming in the presence of water, such as during heavy rain or flooding. It could also represent a period of stabilisation of the ditch following its construction.

Given that there were no finds present in this fill, it is difficult to offer a date for it. Although, finds elsewhere in the gully & the alignment it is constructed along suggest a Roman date for the feature as a whole.

Refer to context [107672]

Fill of gully [107672]. Stratified stone (107673) & below (107675).
Contained occasional small stones & charcoal flecks. There were no finds
in this fill.

This fill closely resembles natural sediment & had no material
culture & only a handful of charcoal flecks present within.
For this reason it is assumed that this fill represents ~~not~~ redeposited
natural, either from edge shippage or ~~from~~ from the purposeful
movement of natural, perhaps from the digging of features elsewhere.
~~Unfortunately~~ Unfortunately there were no finds present in this fill
& therefore it is difficult to offer a date for its formation.

final fill of gully [107672]. Stratified above (107674) & below topsoil (100002). Contained occasional small stones, chalk & charcoal flecks. There were no finds present in this fill.

It is likely that this fill formed through natural infilling. This is supported by the lack of finds & the colour of the fill. It is possible that this fill formed after the end of the use-life of this gully.

Given that there were no finds, it is difficult to offer a date for this fill. BUT, GENERALLY, OTHER SLOTS OPENED NEARBY IN THIS SAME LINEAR FEATURE HAVE AN UPPER FILL WITH ROMAN POTTERY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL (107683) IN DITCH CUT [107685]. FILL CONSISTS OF A MODERATELY COMPACT DARK BROWNISH GREY SILTY CLAY; 0.42m IN THICKNESS AT ITS GREATEST THICKNESS. ~~FILL~~ INCLUSIONS OF MODERATE AMOUNTS OF SMALL TO MEDIUM STONES, INCLUDING BETWEEN 8-10 MEDIUM TO LARGE STONES THAT SHOWED EVIDENCE OF BURNING. FREQUENT CHARCOAL FLECKS AND PATCHES FOUND THROUGHOUT THE FILL AS WELL AS MODERATE AMOUNTS OF ~~VAR~~ SMALL TO LARGE ANIMAL BONES AND PIECES OF IRON AGE POTTERY. LITHIC DEBRIS UNCOVERED AS WELL AS A FLINT SCRAPER.

THE FREQUENT AMOUNTS OF CHARCOAL, COUPLED WITH THE FIRE AFFECTED STONES SUGGESTS A DUMPED LAYER ASSOCIATED WITH BURNING. THE LARGE AMOUNTS OF ANIMAL BONE AND POTTERY ALSO SUPPORTS THE THEORY OF A DUMPED LAYER. THE MATERIALS - POTS - FOUND WERE EXACTLY THE SAME TYPE AS OF THOSE FOUND IN FILL (1079001) - FILL CUT [107899] ON A SLOPE PLACED FURTHER NORTH.

Refer to context [107679] (107680)

CUT [107685] FOR DITCH FEATURE. LINEAR FEATURE, E-W ORIENTATION WITH STEEP SLOPING SIDES AND V-SHAPED BASE. 3.70m $\times$ 2.40m

CUTS EARLIER DITCH [107826]. THE DITCH SEEMS TO ARRIVE FROM NORTH CHANGING, IN THIS SLOT, DIRECTION TOWARDS EAST, THEREFORE HAVING A N-S DIRECTION CHANGING ABRUPTLY TO A NE-SE DIRECTION.

FOR THE FILL AND SHAPE SEEMS TO BE THE SAME AS INVESTIGATED IN A SLOT PLACED FURTHER NORTH - [107899] AS POSSIBLE TO SEE ON THE GENERAL MAP SKETCH ON CONTEXT SHEET [107679].

IT IS ALSO TRUNCATING AN EARLIER DITCH THAT "ARRIVES" FROM WEST BEING, MAINLY / ONLY VISIBLE ON THE EAST FACING SECTION OF THIS SLOT.

THE ODD SHAPE AND POSITION OF THE SLOT IS DUE TO THE FACT THAT IN PLAN THE FEATURE VISIBLE IT WAS THE TERMINUS OF [107679] AND THE RING DITCH [107685] - AS THOUGHT IN THE BEGINNING THE SHARP CURVE OF IT AND THE PRESENCE OF THE [107826] WERE NOT EXPECTED AND IT WAS ORDERED

TO MAINTAIN THE SLOT DIGGING IT INSTEAD WITH A STRONG CONTROL OF THE STRATIGRAPHY SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FIRST FILL REMAINING ON TOP OF THE LINING (107714) OF THE FURNACE (107666) VERY SIMILAR TO THE BASE ^{FILL} OF THE STOVE HOLE (107750) AND (107794), SURELY FROM THE SAME MOMENT, IF NOT EXACTLY THE SAME FILL - THE FILL INSIDE THE FUE, NOT REMOVED, IS PART OF THIS, CONNECTING BOTH.

IT'S BASICALLY THE ASHES OF THE OUGGING KILN USE, REMAINING AT THE BOTTOM OF THE KILN AFTER EACH USE.

2 PARTS OF 2 DIFFERENT BRONZE BROOCHES WERE RECOVERED (SF 10307 AND #0310), CONTEMPORANEOUS TO THE MOMENT OF USE OF THE KILN, AND SEVERAL FRAGMENTS OF POTTERY, MAINLY TABLEWARE, OF DIFFERENT VESSELS; NOT ENOUGH, THOUGH, TO CLAIM THAT THE KILN SERVED FOR POTTERY MAKING. MORE CRM AND SOME ^{SMALL} FRAGMENTS OF BURNED ROPE WERE ALSO RECOVERED.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Cut [107687] of ditch with a N side separate
sloping and the S side steeper. The ditch can be found
into the fills ~~is~~ inside the ditch can be found
the Roman and late Iron Age. Some of these
fill possibly are a Roman layer (107689) and
possibly in a certain amount of the Roman Age
the area has been converted and the ditch
has been filled in a different moments.

ADDITIONAL INFORMATION

Most recent fill (102688) of ditch 102687 with silt/clay composition in some parts sandy. Ditch fill (102688) contained occasional flint stones of small size and moderate frequency of manganese sometimes of medium size. This fill contained also few small pieces of animal bones and pottery (probably of Roman period). Probably this fill (102688) is a deliberate backfill that has been thrown into the ditch in the Roman period for finish to fill the ditch similarly the little quantity of bones and pottery does not excludes the possibility that this fill (102688) was a natural infilling.

CUT OF A TREE BOWL WITH CURVED SCORING FLIES AND VERY UNEVEN BASE, AS RESULT OF NATURAL PROCESS.

THIS CUT IS VERY SHALLOW AND IRREGULAR.

SLIT WAS OPENED IN ORDER TO INVESTIGATE THIS FEATURE.

THIS CUT IS IN CLOSE PROXIMITY WITH ANOTHER TREE BOWL CUT [107610].

Top fill (107696) of [107699]

Very gravelly layer.
~~Lots~~ Some bone found - all animal.
 Some pot found - Kan age (late/transition)
 Lots of charcoal throughout.
 Vitrified glass found at base of this layer. - 40 L sample
 A lot of pyrotechnics in the upper area
 → Possibly related & used to dump pyrotechnic waste.

Bottom fill (107698) of	[107699]
Very dark/black burning.	
In situ burning.	
Burnt the fill beneath.	
Bone - Animal. Some is very heavily burnt.	
Pot - Late Iron age? - Some has evidence of burnt.	
No L sample taken. S# 10796	
Heaviest areas of burning were on the 'curved'	
NW edged & then the SE edge just further along.	
Lots of burnt stone.

→ * FGF 20/12/17 SECONDARY FILL

AFTER REMOVING (107700) IT BECAME CLEAR THERE WAS A UNDERLYING CIRCULAR FEATURE TRUNCATING ~~CH~~ CHARCOAL FILL (107705). CIRCULAR IN PLAN SEE SKETCH. BUT THIS FILL IS VERY SIMILAR TO (107703) BUT SLIGHTLY MORE BLUEISH LESS GRAVELLY BUT IN SECTION BOTH LOOK SAME. SO POSSIBLY CONTEMPORARY BACK FILL OF DITCH [107706] AND PIT [107702]. SUGGESTION OF CUT IN SECTION IN ~~SECTION~~ dispersion of gravels.

(107701) gravelly but more silty clay mottled with occasional chalk, shell and charcoal.

Few Pottery fragments in bulk finds to poor condition to
• BONE IN BULK FINDS 1x BAG.
- orange degraded mush.

Bulk Find.

(107708) PRIMARY Fill of Ditch [107706].

CONTAINED frequent small gravelly lenses
SANDY, silt. few animal bones within it.

Likely from natural infill collapse
of when ditch was in use.

Refer to context

107701
107703
107700

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(107709) SECONDARY FILL OF PIT [107711].

DISTINCT IN PLAN, AS DARKER THAN (107710) the PRIMARY FILL. (107709) CONTAINED moderate amount of charcoal throughout enough to WARRANT SAMPLING. THE COMPOSITION FELT SUANT MATERIAL, ~~WAS~~ CONTAINED ALSO OCCASIONAL POSSIBLE CLAY MATERIAL, SMALL STONES, gravel sized AND few larger ROUNDED PEBBLES. THAT COULD HAVE BEEN UTILIZED IN COOKING/ FIRE PIT.

CONCENTRATED EASTERN AREA OF PIT OVERLAYING (107710) GRADUALLY TOWARDS WESTERN SIDE OF PIT. SUGGESTS IT WAS DEPOSITED FROM NE DIRECTION, CREATING A GRADUAL PROGRESSIVE EBB OF CHARCOAL FLAKES.

THERE IS MODERATE INTRUSION OF SURFACE BY ROOTING INCREASING TRANSFUSMENT FILLS; BLENDING EXTENTS OF FILLS.

Refer to context

(107710) PRIMARY FILL OF PIT [107711].

VERY DISTINT FROM OVERLAYING FILL (107709). in colour AND INCLUSIONS. ITS ALSO MORE CONCENTRATED WITHIN THE WESTERN SIDE OF PIT. RESEMBLES NATURAL build UP MATERIAL. BUT CANT RULE OUT BACKFILL.

CONTAINED moderate amount SMALL GRAVELLY inclusions ALSO OCCASIONAL DAUB LIKE MATERIAL CONCENTRATED AROUND boundary LINE WITH (107709).

INTRUSION by Rooting WHICH HAS DISRUPTED COMPOSITION.

- ONE FRAGMENT of bone in SAMPLE tub (SAMPLE TAKEN ~~from 107711~~ because it is PRIMARY, HAS DAUB, AND FOR FINDS.)

1 Bulk FIND POTTERY, POOR QUALITY than POTTERY FROM (107709). STILL Probably belonging IRON AGE but earlier.

[10771] CUT OF PIT, LOCATED EASTERN SIDE OF SITE. PRIMARY FILL (107710) SECONDARY FILL (107709).

IN PLAN IT CLEARLY ONE PIT, WITH TWO FILLS. THE EASTERN SIDE IS VERY SQUARE WITH ROUNDED EDGES ELONGATED TOWARDS AN NARROWER, ROUNDED WESTERN EXTENT.

FAIRLY SHALLOW EAST + WEST GRADUAL CONCAVE BREAK TO BASE WHICH IS UNEVEN DUE STONEY INCLUSIONS OF NATURAL. WHILE NORTH SIDE IS VERY VERTICAL WITH SLIGHT CURVE BREAK. OVERALL MODERATE SLOPISH.

IN TERMS OF TYPOLOGY IT IS SIMILAR TO OTHER FEATURES LOCATED DUE SOUTH. THAT SHARE ~~THE~~ QUALITY OF A GRAVE SHAPE, EGG SHAPED.

FUNCTION, UNCERTAIN IT SEEMS TO HAVE BEEN DUG FOR SPECIFIC PURPOSE THEN NATURALLY INFILLED THEN USED AS FOR WASTE DISPOSAL. POSSIBLY EXTRACTION OF GRAVEL OR SAND COULD BE ORIGINAL PURPOSE. SKETCHES

Section of a terminus of a ditch oriented NW-SE.

It runs on a NW-SE direction and it has a linear slope, steep sloping sides and concave base. H.A. 1,00m length excavated, 0,55m width and 0,25m depth. It is a terminus of a small gully perpendicular of the ditch [107481] and [107481].

Refer to context (107713)

			Checked by CC	

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

LINING OF THE KILN, COMPOSED BY A FIRED RED COLOURED CLAY, AND IT PRESENTS DIFFERENT PARTS:

1. FLOWE THAT COLLECTS THE FURNACE AND THE STOVE HOLE,
2. BASE THAT HAS BEEN MAINTAINED, SHOWING AS A RESULT SEVERAL PATCHES ONE ON TOP OF THE PREVIOUS PATCH, RESULTING IN A SUPERPOSITION OF "FLAKES"
3. WALLS OF THE FURNACE, BUILT AFTER THE FLOWE, ~~FOR~~ WHICH WAS COVERED BY A REDEPOSITION OF NATURAL SOIL (107802), SO THE WALL ON TOP OF THE FLOWE COULD BE BUILT AGAINST IT - SEE SKETCH ON CTXT. SHEET (107802) -

THE WALLS OF THE FURNACE SHOW HOLES - ONE OF THEM COVERED ON SHELL, MAYBE TO HOLD A GRILL, SINCE NO SIGN OF CENTRAL PILLAR HAS BEEN SPOTTED. ALSO, ON THE TOP AT THE NORTHERN SIDE OF THE EDGE TWO HOLES MAY INDICATE WHERE THE AIR WAS BLOWN. NO SIGNS OF DOOR WERE REMAINING, MAYBE IT WAS COVERED - - -

WITH VEGETAL ELEMENTS DURING EVERY USE

cut of gully [107718] filled by (107719), (107720). Cut by [107721]. This gully forms part of a system of gullies which create a series of enclosures, likely animal pens.

This gully ~~was~~ likely filled slowly after the formation of (107719). Then, once the gully had formed to the depth of (107720), at which point [107721] was constructed to this depth. Following this action, both gullies were filled contemporarily with (107722).

Though there were no finds present in this slot, it is difficult to offer a date for this feature. However, finds from slots elsewhere along the length of this system of gullies were of Roman date. This is therefore the date offered for this feature as a whole.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked "overleaf")

Fill of gully [107718]. Stratified above [107718] & below (107720). Contained occasional small stones & ^{charcoal} ~~chert~~ ~~chert~~ flecks, also contained moderate chalk flecks. There were no finds present in this fill.

It is likely that this fill formed through natural infilling. Here this appears to be in the form of slippage from the edges of the gully. This is suggested by the presence of ~~chert~~ so much chalk & the consistency of the fill, which is similar to surrounding materials.

Given that there were no finds in this fill, it is difficult to offer a date for this fill. However, finds from elsewhere along the length of this system of gullies ^{were} of Roman date, and this is ~~the~~ the date which has been given for this feature as a whole.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of gully [107718]. Stratified above (107719) & below [107721]. Contained occasional small stones & charcoal flecks. There were no finds present in this fill.

It is likely that this fill formed through natural infilling during the use life of this gully. This is suggested by the colour of the fill and the presence of charcoal.

This fill is the final fill of [107718] prior to the digging of [107721], which did not necessarily cut this fill, though it has been described as such in the matrix & stratigraphy for understanding.

Given that there were no finds in this fill, it is difficult to offer a date for it; however, find from fills elsewhere along the length of this system of gullies are of Roman date & this is the date given to this feature as a whole.

cut of gully [107721] filled by (107722), cuts (107718) & (107720).

This gully is a later annex to gully [107718]. It appears to have been constructed some time after [107718] began to infill in order to create a new enclosure or amend an earlier one.

This was discerned from the fact that ⁽¹⁰⁷⁷²²⁾ appears to overlay all fills of [107718], extending outside of the boundaries of the star on all sides. For this reason, it is surmised that (107722) is in fact a fill of both gullies, though it has been made separate for stratigraphic sense. The interpretation here offered is to suggest that following a period of infilling in [107718], [107721] was dug, after which, both gullies then filled contemporarily with (107722).

There were no finds in this gully, although finds elsewhere in this system of enclosure gullies are of Roman date & this is the date offered for this feature as a whole.

fill of gully [107721], stratified above [107721], below (100002). Contained moderate charcoal & occasional small stones. There were no finds present in this fill.

It is likely that this fill formed through natural infilling ~~filling~~ during the use-life of this gully. This is suggested by the colour & presence of charcoal in the fill, which could represent activity in the area during this fill's formation.

This fill is also likely the fill of [107718], though it has been kept as the fill of [107721] for stratigraphic purposes. It appears that [107718] was dug first & then following a period of infilling, [107721] was then dug to the remaining depth of [107718], after which [107722] formed to fill both contemporarily.

Given that there were no finds in this fill, it is difficult to offer a date for this fill. However, other slots in this system of gullies is of Roman date, therefore, this is offered as a date for this feature as a whole.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of posthole*, possibly from Age in lake, due to the pottery found. very clear horizon of fill + cut of small pit, not very near another similar feature ~~and~~ that would make it structural.

Refer to context

C107723

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THE WT [107725] of post-hole is situated into the big feature [107481]; which is under investigation; ITS BASE WAS UN EVEN ITS SIDES WERE MODERATELY SLOPE AND ITS DIAMETER WAS 0,60M. GIVEN ITS position, we made a relationship slot between the post-hole and bigger fire feature [107481] FOR THIS REASON IT'S ALSO NEEDED TO UNDERSTAND ITS RELATIONSHIP WITH THE OTHER post holes located around THE FRANGE * [107730] ITS PROXIMITY to other pits and post holes around the bigger feature [107481] [107840] [107842] [107612] [107843] SUGGESTS THAT they may BE PART of ONE OR MORE STRUCTURES THIS STRUCTURES had to be close and Roofed ???

(107727) SECONDARY Fill of Pit [107729]

This was pliable, moulded into ball but fell apart easily. Colour is very deep diffused dark bluish Grey with frequent charcoal and reddish orange fired clay degraded fragments throughout. (in samples). moderate stones mostly small pebbles < 0.05m. one large rounded pebble. occasional pottery and animal bone throughout. AT 0.30m Depth the primary fill became to appear being distinctly more mottled. AND SANDIER.

Sampling Strategy - 40l from 1st Spit. not including initial cleaning of surface + remnant subsoil. NOT including edges. Then 20l every spit AFTER FROM CENTRE PIT. (WEST SIDE)

Deliberate backfill.

Refer to context 107728
107729.

- [107729] CUT OF A PIT.
- FILLS! PRIMARY IS (107728), Secondary (107727).
 - LOCATED NORTHERN EASTERN AREA SITE DUE SOUTH OF [107702] + [107706] (See Sketch).
 - VERY CIRCULAR, minor roosting evident AROUND EAST EDGE ON SURFACE.
 - VERY STEEP SIDES slight curve to base which slightly curvey but irregular due Natural So described as uneven.
 - CLEAR INITIAL natural infill from use then Charcoal rich deposit with POTTERY + Animal bone AND fragments fired clay/Daub Possibly so Original Function could HAVE BEEN A STORAGE PIT THEN THERE HA USED AS RUBBISH PIT. NO EVIDENCE INSITU BURNING So COOKING is unlikely. SIMILAR FEATURES WITHIN AREA; [107702] [107778] is a POSTHOLE
 - OR COULD BEEN USED IN SMOKING FOOD OR ?

[107732] is a Posthole 0.10m in Diameter. It is situated at the NW side of ditch [107481] and might be related to the ditch and to various other postholes in its vicinity, especially C10. The posthole is 0.10m deep and is filled with greyish brown clayey silt mottled with light spots. Occasional stones and charcoal are included.

Refer to context (107733)

A large posthole that is located within an even larger circular area of fine, sandy material that is notably different from the surrounding clayey and gravelly natural soil. Possibly a large pit or foundation/construction pit of the posthole. The filling is rich in charcoal and ^{especially in center} and yielded a small flake of flint and very small bone fragments.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of tree bowl as result of natural process.

Cut has moderate sloping sides (quite irregular on each side) and very uneven base.

This tree bowl turbed original shape of gully terminus [102710] which is still present on the southeast side of the feature.

Refer to context

Upper fill of ditch

Dark greyish black Sandy silt. Occasional stones, frequent charcoal, animal bone & pottery & occasional CBM.

likely a deliberate backfill due to the colour & all the pottery in the fill. Named a 'terminus' but only in the context of a feature ending rather than just petering out. But this is also cut by a furrow, so it ends due to a combination of the two.

The fill doesn't completely match the edge of the cut, but it is thought that the varying depths of the fill is a result of haphazard backfilling.

ONE SCRAPER WAS FOUND (SF 10311)

Refer to context [107746]

Cut of ditch

Moderately sloping sides with unconfirmed ~~average~~ V-shaped base. (Extrapolated from surrounding ditch slots.)

This slot was put in to investigate the dark upper fill as it looked to be ending just before the furrow to the North but could have been cut by the furrow (answer is a combination of the two) which is why it will not be extended to a full slot as we have the answers we need.

The ditch itself ~~is~~ has two termini & does not actually connect to the much larger ditch to the North. Suspected ditch for corral purposes, be it human or animal.

Refer to context
