Cut [604000] of ditch with fill (104999)

Cut is E-W with dimensions: 0.47m length, 1m width, 0.11m depth.

The shape of the cut [604000] is curvilinear with steep sloping sides and concave base.

This cut is most likely the result of design in a construction basic process.

Fill (604002) of roundhouse gully [604001]

Fill consists of a moderate compaction of mid brownish grey silty clay.

This fill has ~~frequent~~ inclusions of frequent charcoal and occasional gravel.

Fill has a thickness of 0.18m.

This fill is most likely the result of natural infilling of the gully in its disuse.

Refer to context [604001]

Fill (604004) in pit/well in the roundhouse [604005]

Fill consists of a moderate compaction of mid orangeish brown silty clay with inclusions of occasional medium angular stones and gravel. This fill has inclusions of moderate charcoal. The thickness is 1.02 m.

This fill is most likely the result of natural infilling of the pit/well in its disuse.

Refer to context [604005]

THIS MID-GREYISH BROWN NATURAL INFILLING IS MODERATELY COMPACT. [604008] AND HAS A SILTY CLAY COMPOSITION.

IT BELONGS TO THE ROUND-HOUSE GULLY.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES MIX WITH GRAVEL AND PEBBLES.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF CHARCOAL
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES ON THE EDGES
- OCCASIONAL PRESENCE OF MARINE SHELL AND SAND FOSSILS.

WE DIDN'T SAMPLE THE FILL OF THIS SLOT WHEN WAS DUG AT ONE HUNDRED PERCENT

Refer to context:

CUT OF MODERATELY SIZED SUB-CIRCULAR PIT

THIS PIT HAS ~~A MODERATELY~~ ^{STEEP} SLOPING SIDES APPROX 60-70° WITH A CONCAVE BASE.

THE PIT CONTAINS 2 FILLS (604013) AND (604014)

THE PIT IS SET IN A LATE IRON AGE TO EARLY ROMAN BRITISH TRANSITIONAL LANDSCAPE AND FINDS WITHIN FILL (604014) SUGGEST THAT THIS PIT DATES TO THIS PERIOD, MOST LIKELY ~~EARLY~~ ~~IRON~~ LATE IRON AGE PERIOD.

IT IS LIKELY TO HAVE HAD A STORAGE PURPOSE ALTHOUGH NEITHER FILL IS RELATED TO ITS USE.

Refer to context 604013

FILL (604013) IS THE LOWEST FILL OF PIT [604012] ~~BE~~ COVERING A LARGE PORTION OF THE CUT ON THE WESTERN SIDE OF THE PIT.

THIS FILL IS A ORANGEISH BROWN SILTY SAND THAT IS VERY SIMILAR TO THE SURROUNDING NATURAL

THE FORMATION OF THIS FILL IS LIKELY TO HAVE OCCURRED DUE TO EDGE COLLAPSE ON THE WESTERN SIDE OF THE PIT FOLLOWING IT FALLING INTO DISUSE.

NO FINDS RECOVERED FROM THIS FILL.

THIS MID BROWNISH GREY NATURAL INFILLING (604015) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS NATURAL INFILLING BELONGS TO THE POST-HOLE [604016] AND IT'S ITS ONLY FILL.

THIS FILL WAS SAMPLED WITH 20 L (50%) S10483, IT MEANS THAT WAS SAMPLING ALL THE HALF PART OF THE FEATURE DUG.

THIS FILL (604015) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES ^{SMALL} MIXED WITH PEBBLES.

- OCCASIONAL PRESENCE OF CHALK FLAKES AND MARINE SHELLS.

- MODERATE PRESENCE OF CHARCOAL THAT GIVES TO THE FILL ITS PARTICULAR COLOUR.

- OCCASIONAL PRESENCE OF FIRED CLAY AS WE CAN SEE IN THE NE FACING RECORDED SECTION ON D#63124. WE DIDN'T FIND ANY DATABLE REMAIN IN THIS FEATURE TO SPEAK ABOUT A CHRONOLOGY.

Refer to context [604016]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604017) in ditch cut [604019]

Fill consists of a moderate compaction of dark brownish grey silty clay with inclusions of occasional fired clay, inclusions of moderate chalk, pottery and animal bone.

There are some inclusions of frequent charcoal and also frequently inclusions of snails.

We took samples from this fill (sample n° is 10484)

The pottery is most likely from The Iron Age and it's ~~very rare~~ been recording in bulk finds as ~~also~~ animal bone (most likely from cow or sheep)

The fill is probably is the result of natural infilling of the ditch in its disuse.

Refer to context [604019]

Fill (604018) in ditch cut [604019]

Fill consists of a moderate compaction of mid brownish grey silty ~~and~~ clay with ~~also~~ inclusions of occasional small angular stones and chalk.

There ~~some~~ are some inclusions of moderate fired clay, pottery and ~~some~~ inclusions of frequent animal bone (from cows and cheeps)

We have no samples from this fill.

The pottery is most likely from The Iron Age.

The fill probably is the result of natural infilling of the ditch in its disuse.

Refer to context [604019]

Cut [604019] of ditch with two fills (604017) (604018)

This cut is orientated SE-NW with dimensions 0.83m x 1m x 0.33m depth

The shape of the ditch's cut [604019] is curvilinear with moderate sloping sides and a concave base

This shape is most likely a result of design in a construction basic process

Refer to context

(604017)
(604018)

Mixed silty clay silt of curvilinear gully [604021]. The silt contains inclusions of stone, seen the gravelly material, and charcoal, however charcoal was not common.

The silt is very similar to the surrounding natural in colour however the surrounding natural is more gravelly and sandy. Due to this, it is likely that the silt accumulated naturally through natural infilling. This may have been a mix of the natural material and silty organic material to give it the silt its mixed composition. This may have occurred near to human occupation, due to the small amounts of charcoal recovered from the silt.

No ribs were recovered from the silt.

Refer to context [604021] for plan

Cut of gully containing a sole fill (400 604020).
 The gully is curvilinear, however this section is aligned E-W, the gully soon turns and curves N-S, forming a circular shape. The section of the gully is unknown due to the gully's shape, it may have been a gully for a round house, or a enclosure however the gully gets truncated in its Northern & Eastern extent, so no possible entrance way is visible.

The gully's sole fill is composed of naturally infilled material, no structures showing it was this section of the gully was left open after it was not a major use to naturally infill.
 No finds were recovered to date the feature.

PIT CUT WITH 2 FILLS (604022) AND (604023), BIPOLAR/DUAL SHAPE, MODERATE SLOPING SIDES, CONCAVE BASE.

IT'S A PIT WITH 2 FILLS, THE TOP ONE VERY DARK AND WITH MANY PHARMACEUTICALS WHO BEHINDS ~~THE~~ ONE OF THE KILN / FINE PIT FILL NEARBY [104923] or [104920], THE BOTTOM FILL IS COMPLETELY DIFFERENT, BROWN COLOUR AND IS GRAVELLY AND WITHOUT ANY PHARMACEUTICALS INSIDE. IT PUTS THE GULLY [604027] EXACTLY IN THE CORNER, THE TOP FILL LOOKS ~~DIFFERENT~~ SPREADING OR CONTAMINATING IN BOTH SIDE THE GULLY FILL. THIS RELATION IS NOT VISIBLE IN BOTH SPOT SECTIONS BUT LOOKS CLEAR FROM THE PLAN AND THE ~~CONCAVE~~ BASE SHAPE.

CONSIDERING THE FINDS INSIDE, IT COULD BE A POTENTIAL PIT USED FOR DISCARDING OF FOOD WASTE OR/AND KILN WASTE.

Fill of ring gully [604029]. The gill is mixed in composition, with inclusions of small to medium sized stones. Charcoal was also present in the gill, however it was very rare. No finds were recovered to date the gill.

Due to the lack of human activity sand in the gill, and its similarity to the surrounding natural, the gill is likely to represent natural infilling of the feature, after it had gone out of use. The only evidence of human activity comes in the form of charcoal, indicating that a human presence may have been nearby, however not involved in the accumulation of the gill.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut as dry gully containing a silt sill (604028). The gully is shallow and curvilinear in orientation, creating an almost full circle before being truncated by a ditch to the North and East.

The function of the gully is unknown due to this structure, however due to roundhouse being found elsewhere, this may be a possibility, however it is likely to have been used as a gully for a small enclosure also.

After going out of use, the gully was infilled naturally by (604028). No finds were recovered from the sill to date the feature.

fill of [604032]. Stratified above [604032] & below (604034).
 Contained occasional stones & moderate charcoal flecks,
 also contained occasional pot.

It is likely that this fill formed through deliberate
 bankfill. This is suggested by its extremely dark colouration.

Refer to context [604213]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of IA/RB pit, poss' ritual activity associated to earlier. ~~use of~~ ~~pit~~ pit which has a deposit of animal (ow) bones in it.

The pit truncates ~~an~~ earlier pit cluster.

Pit seems to be too small to be an extraction pit, it also doesn't seem to have enough rubbish within it.

Pit is likely to be related to a similar pit located 2 m to the east which is also cut into the larger pit.

It is likely that the original use of [604032] will remain a mystery until the larger pit is 100% ed and any other possible related pits are found.

Cut of pyrotechnic installation. Cut by the rakeout/stokenole. A gully runs very close by to the Northern edge of this fire pit. This was originally thought to be a kiln, but the absence of pottery and a lining made this interpretation more open to interpretation. There was definitely a burning event, with some of the charcoal fill necked out on top of into [604055] and [604059]. The pit is a slightly squashed oval shape. It is cut by the stokenole [604055]/[604059] - ~~one~~ once these features were 100% dug 100%, the extent of the pyrotechnic installation could be seen, extending under the rakeout pit.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of pyrotechnic installation ~~lots~~ ^{large amounts} of charcoal -
indicating some kind of burning event - even
if its not a ruin. One piece of burnt clay
found in this section - and one piece of animal
bone found in the other quadrant (604054) -
possibly some kind of cooking pit? - due to the large
amount of animal bone found in the razeout area.
A few moderately sized stones in this fill.

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

THIS MID GREYISH BROWN NATURAL INFILLING (604037) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE ENCLOSURE [604039] AND IT'S ITS NEWEST FILL. IT IS SO SIMILAR TO THE OTHER FILL OF THIS FEATURE (604038) BUT ARE SLIGHTLY DIFFERENT IN COMPACTION, TONALITY AND COMPOSITION.

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- ~~OCCASIONAL~~ ^{MODERATE} PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES
- MODERATE PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF CHARCOAL, ROOT DISTURBANCES AND ~~MAKING~~ ^{MAKING} MARLINE SHELLS.
- OCCASIONAL PRESENCE OF BONE FRAGMENTS FROM A MEDIUM SIZE ANIMAL. WE DIDN'T FIND ANY POTTERY REMAINS.

THIS DARK GREYISH BROWN NATURAL INFILLING (604038) IS COMPACT AND HAS A GRAVELLY CLAY COMPOSITION. THIS FILL BELONGS TO THE ENCLOSURE [604039] AND IT'S ITS OLDER FILL (PRIMARY FILL). IT IS SO SIMILAR TO THE OTHER FILL OF THIS FEATURE (604037) BUT THIS ONE IS MORE COMPACT, DARKER AND SLIGHTLY MORE GRAVELLY THAN (604037).

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS.

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH PEBBLES FROM THE BOTTOM OF THE FEATURE.
- OCCASIONAL PRESENCE OF CHALK FLAKES AND CHARCOAL
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES
- OCCASIONAL PRESENCE OF MARINE SHELLS & SQUID FOSSILS.
- WE DIDN'T FOUND ANY POTTERY OR ANOTHER REMAIN THAT COULD DATE THIS FEATURE.

THIS N-S RUNNING ENCLOSURE [604039] HAS A LINEAR SHAPE STEEP SLOPING SIDES (~~AS WE~~ WITH A BIG DIFF DISTINCTION LEVELS (AS WE HAVE RECORDED IN THE PLAN SKETCH) AND A CONCAVE BASE.

THIS FEATURE WAS RECORDED IN A 1'38 x 0'98 m SLOT WITH FOUR SECTIONS (N, E, S & W FACING).

THIS POSSIBLE ENCLOSURE IS FILLED BY TWO NATURAL INFILLINGS (604037) AND (604038).

THIS FEATURE [604039] IS CUTTING THE GULLY [604041] AS WE CAN SEE IN THE S FACING RECORDED SECTION (D# 63129; PHOTO 6101540) WHERE THE DIFFERENT OF COLOUR AND COMPOSITION ARE CLEARLY VISIBLE.

THE SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

WE DIDN'T FOUND ANY DATABLE REMAIN IN THIS FEATURE. WE INTERPRETATED THIS FEATURE AS A PART OF THE ENCLOSURE BUT WE ARE IN A PART OF THE AREA WITH A BLOB SHAPE DIFFICULT TO INTERPRET AT THE MOMENT.

THIS MODERATELY COMPACT NATURAL INFILLING (604040) IS MID BROWNISH GREY ~~AT ITS~~ AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE GULLY [604041] AND IT'S ITS ONLY FILL.

WE CAN CHECK THE FEATURES OF THIS FILL IN THE SOUTH AND WEST FACING RECORDED SECTIONS (D#63129; PHOTOS: 6101540 AND 6101541).

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL SIZE.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE EDGE ^{SOUTH}
- OCCASIONAL PRESENCE OF MARLINE SHELLS.
- OCCASIONAL PRESENCE OF ANIMAL BONES FRAGMENTS (NBs)
- OCCASIONAL PRESENCE OF TRANSITIONAL POTTERY FRAGMENTS OF ~~AR~~ LATE IRON AGE - EARLY ROMAN CHRONOLOGY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS E-W RUNNING GULLY [604041] HAS A LINEAR SHAPE, STEEP SLOPING SIDES AND A CONCAVE BASE. THIS FEATURE WAS RECORDED IN A 1'38 x 0'98 m SLOT, WITH 9 FOUR SECTIONS (N, E, S & W FACING). THIS GULLY IS FILLED BY ONE NATURAL INFILLING (604040) WHERE WE HAVE RECORDED SOME POTTERY FRAGMENTS FROM A TRANSITIONAL PERIOD BETWEEN LATE IRON AGE AND AN EARLY ROMAN CHRONOLOGY. THIS FEATURE [604041] IS CUT BY THE ENCLOSURE [604039] AS WE CAN SEE IN THE S FACING RECORDED SECTION (D# 63129; PHOTO 6101540) WHERE THE DIFFERENT OF COLOUR AND COMPOSITION ARE CLEARLY VISIBLE. THE SHAPE OF THIS FEATURE [604041] IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. THE GULLY [604041] IS CUTTING THE NATURAL (100003). THE TOTAL WIDTH SHOULD BE AROUND 0'44m.

Fill of ring gully [604044]. The silt comprises of grey silt, with occasional (however rare) inclusions of small stones. The silt also contains charcoal, not in large quantities however more common than in more Easterly / Southerly sections through the ring gully [604021] and [604029] implying that more human activity was present near the northern and western areas than others.

A few sherds of pottery were found in the silt, which were often thin walled pieces believed to be Romano-British in date, however a few coarser pieces were found indicating a possible late Iron Age date also.

The silt is likely to have accumulated naturally, with pottery being used as debris in the silt. Although the silt is siltier than in the more S Easterly sections of the silt, it is overlying an earlier phase of the pit, so the natural silt may not have mixed as much with the underlying natural, giving it a more silty composition.

Refer to context [604044]

Cut of curvilinear ring gully [604044]. The gully contains a sole fill of silty material with occasional stone and charcoal inclusions. The material is believed to have been deposited naturally. Pottery from the fill is believed to date the feature to the Romano-British period.

The gully overlies a former or deeper gully which appears to be a stone alignment [604046]. This gully is deeper, however does not extend as far as the later gully. The ring shows that [604044] had an earlier phase of use, before being expanded. The function of the gully is unknown, however due to the area of ditches and individual activity in the area, it may have been used to make a small enclosure. The cut overlies a earthen pit of unknown function and date, however it was cut and backfilled before the creation of the gully.

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ^{pit} gully [604046]. The fill comprises of brown silty clay with stone and chalk inclusions, presumably from the surrounding gravelly/chalk natural. No finds were recovered to date the fill, however it does get cut by [604044], which is believed to date to the Romano-British period, therefore the must have accumulated by this date. No evidence for human activity was recovered from the fill, therefore it is likely that it is natural.

Refer to context [604046] → see plan.

Cut of pit containing a sole fill of naturally infilled material (604045). The pit appears in the section of gully E1049 [604094], however as it is cut by the gully its full extent is not known.

No dating evidence was recovered from the pit, however gully [604046] is dated to the Romano-British period indicating that it was cut and naturally infilled before this date. Due to the truncation of the pit, its function is not known.

Refer to context (604045)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604048) of gully cut [604047] loose fill which can easily be dug with a trowel. Fill is a dark greyish brown with no inclusions other than the occasional stone which is most likely from surrounding natural - might show presence of possible bioturbation

No finds

Fill is similar to that found in [104995] because it is a slot from the same feature but [104995] has a more reddish shade of soil.

Probably result of natural infilling due to presence of possible bioturbation and similarity to surrounding soil and the fill of slot [104995] which has also been interpreted to be the result of infilling naturally.

Possible interpretation: gully was dug for an, as yet unknown purpose (probably to control the flow of water). After the gully fell into disuse gully was left to infill naturally

Refer to context [604047]

Fill of ring gully [604050]. The silt comprises of grey silt with occasional stone and charcoal inclusions. A single sherd of pottery was recovered from the silt. The pottery was coarse and dark in color, which fits with other pottery from the ring gully, dating the feature to the Romano-British period.

Due to the lack of human activity within the silt, the silt is likely to have accumulated naturally, through a natural insilling process.

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

Its early Romano-British date makes it contemporary with some of the other ditches/gullies/trenches in the area, indicating that it may have been a small enclosure linked with the nearby industrial activity.

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

thought

Partial Animal deposit, ~~located~~ ^{thought} to be deliberate, placed upon stones of irregular size and shape ^{size} c 0.60m x c 0.30m in the ~~base~~ Eastern side of the pit. The bones appear to be cow-goat/sheep + puss horse. Some of the bones were articulated but my feeling ^{are} ~~were~~ that the parts of animal were placed in the pit and left open, where animals scavenged ~~of~~ the bones. Some bones appear to have been butchered but marks may have ~~come~~ occurred during excavation. ~~Not~~ Not visible in section, but probably contained in (604081) the occupational fill (604081). CTN. 02.01.18

- One piece of animal bone found in this fill - unlike the burnt clay found in the other quadrant - but possibly suggesting this was a cooking pit? Some medium/large stones in this fill too - but none of them were burnt - so not present when the burning happened - or too far from the fire to be scorched.

Cut of rakeout/stakehole of pyrotechnic installation. Burial cut into this cut, after it had gone out of use. Several fills in this cut, showing the different phases of use. This cut is a slight 'ben' shape - it flares out on the SE side slightly more than it does on the SW side, ~~but~~ and narrows towards the fire pit/pyrotechnic installation. ~~The rest of the fire pit~~

Stakehole fill. No finds. The Some of the fill of [604035]/[604053] had been raked out into ~~this~~ the stakehole, maybe to get rid of some of the fill to make space + left in this fill. Large amount of charcoal in this fill- in the photographs, it can be seen as a line that extends from the cut of [604055] and dips down to the 'base' (Where the first spit went down to).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of [604055]. Lots of animal bone, some burnt - possibly burnt in the pyrotechnic installation + then put into the fill that filled up this pit feature. Two small probably worked flints found in this fill. Small pieces of poor quality pottery (possibly Iron Age) also found. The main amount of finds came from this fill. * Some small to medium stones in this fill, and small flecks of charcoal within fill too, probably from the fire pit to the North.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(604062) IS A NATURAL INFILLING OF DITCH [604065]
IT WAS INVESTIGATED IN A RELATIONSHIP SLOT
MEASURING: 2.90 x 5.30 M.

FREQUENT SMALL STONES MIXED WITH CHALK AND
OCCASIONAL CHARCOAL. IT IS A SMALL FILL, ONLY
0.12M THICK, WHICH MIGHT BE EASILY CONFUSED WITH
TOPSOIL. THE PRESENCE OF POTTERY OF ROMAN TYPE SUGGESTS
THAT THE FILL WAS ORIGINATED THEN. HOWEVER, THE
DITCH ~~WAS~~ THAT (604062) BELONGS TO IS SUS
PECTED TO BE OLDER, POSSIBLY BRONZE AGE.
IT MAY BE EXPLAINED BY BEING CUT BY ROMAN DITCH [604068]

SEVERAL ANIMAL BONES FOUND, POSSIBLY OF MEDIUM
SIZED ANIMALS

(604062) IS CUT BY DITCH [604068]

Refer to context

[604065] (66) (67)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[604065] is a linear cut of a curvilinear feature running NE-SW. It was investigated in a relationship slot measuring: 2.90m x 5.30m.

The reason of its size lies on the fact that a circular event was observed on plan. It was seen where [604065] and [604068] met. It was thought to be a pit, but there are no signs of it. What can be seen though is how [604068] cuts [604065] which would establish that the former is more modern than the latter. * [604065] is the same as [104797] [104811] [104708]

Refer to context

(604062), (66) (67)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

[604066] IS A NATURAL INFILLING OF [604068]
 IT IS THE MAIN FILL OF DITCH [604068]
 IT IS AFFECTED BY ROOTING ON ITS EAST FACING
 SIDE.
 PRESENCE OF BIG ANIMAL BONES, POSSIBLY FROM CATTLE
 ALSO ROMAN POTTERY WAS FOUND BUT LESS ABUN-
 DANTLY THAN IN PREVIOUS SCOT, SITUATED TO
 THE WEST [SEE 104944]
 SILTY CLAY FILL THAT IS QUITE SIMILAR TO OTHERS
 (SEE [104944; 104787])
 BIG SUB-ANGULAR TO ROUNDED STONES FOUND (> 0.10M)
 A MIXED OF ROMAN AND BRONZE AGE POTTERY FOUND
 SPECIALLY WHERE [604065] AND [604068] MEET, SUGGESTING THAT
 WHEN [604065] WAS CUT, PART OF ITS FILL MATERIAL
 WENT AT THE BOTTOM OF [604066] INTO THE MOST
 MODERN DITCH.

PRIMARY FILL OF DITCH [604068] FORMED AS A RESULT OF A NATURAL INFILLING ~~PROCESS~~ INVESTIGATED IN A 2.90 X 5.30 M SLOT

SEVERAL ANIMAL BONES FOUND, INCLUDING SOME BELONGING TO ~~BIG~~ ANIMALS. POTTERY FOUND* IS OF ROMAN TYPE BUT NOT FOUND IN BIG QUANTITIES AS WE DID WHEN WE OPENED SLOT TO THE WEST (SEE [104944]). ON ITS WEST FACING SIDE THERE IS PRESENCE OF GRAVEL (STRONG) A CONTAMINATION THAT HAPPENED WHEN [604065] WAS LIFT BY [604068]. STONES B. 604068 THAN 0.10 M MOSTLY ANGULAR / SUB-ANGULAR FOUND.

Refer to context 604062, 65, 66

[604068] IS A LINEAR PORTION OF A MUCH LARGER LINEAR FEATURE THAT RUNS E-W. IT IS ROUGHLY V-SHAPED WITH VERTICAL TO STEEP EDGES AND A V-SHAPED/CONCAVE BASE. THE DIFFERENCE IN SHAPE LIES IN THE EROSION SUFFERED BY THE PITCH OVER MILLINIA.

THE MATERIAL (POTTERY) FOUND IN [604068] CAN BE IDENTIFIED AS ROMAN, HENCE ESTABLISHING ITS CHRONOLOGY

[604068] WHEN IT WAS DIG CUT A CURVILINEAR FEATURE [604065] AS SEEN ON ITS WEST FACING SIDE (SEE (604062))

THEREFORE [604068] BELONGS TO A ROMAN FEATURE THAT RUNS ACROSS SITE FROM E-W. * SAME AS [104787] [104944]

BULLY PUT WITH ONE FILL (604069), LINEAR SHAPE, NE-SW
 ORIENTATION, STEEP SLOPING SIDES, FLAT BASE.
 IT WAS OPENED A RELATIONSHIP SCOT BETWEEN 3 FEATURES, IT WAS ALREADY
 CLEAR FROM THE PLAN, AFTER A GOOD CLEAN, THE ONLY [604070] AND THE PIT
 [604074] ~~WAS~~ PUT THE BULLY [604072], AND BOTH PILLS (604069) AND
 (604073) ARE VERY STRIKINGLY SIMILAR, MARK WITH CHARACTERS AND APPARENTLY WITH
 SAME INSCRIPTIONS (SEEING ALSO (604922) THE SAME PILL IN THE SLOTT MUSEUM).
 * ACCORDING WITH FINDER, THE BULLY [604070] SHOULD BE A DRAIN PIPER AND
 POSSIBLE ALSO THE PIT [604074]; THE BULLY [604072] IS SURELY EARLIER
 FEATURES, BUT ~~REALLY THE BULLY~~ IT'S STILL NOT CLEAR WHAT PIPER SHOULD BE.

CUT OF SHALLOW DITCH TERMINUS [604075]

THIS TERMINUS HAS A NORTH SOUTH ORIENTATION AND CONTINUES UNDER THE NORTHERN SITE LIMIT OF EXCAVATION. THERE ARE ONLY AROUND 2M OF THE FEATURE VISIBLE BEFORE IT DISAPPEARS UNDER L.O.E THEREFORE IT IS POSSIBLE THAT THIS IS A PIT AND NOT A DITCH TERMINUS.

THE SIDES HAVE A STEEP SLOPE AROUND 75-80° AND THE BASE OF THE FEATURE IS FLAT

THE CUT CONTAINS ONLY ONE FILL (604076)

Refer to context

ONLY ALL OF DITCH TERMINUS [604075]

IT CONSISTS OF MID BROWNISH GREY SANDY SILT WITH OCCASIONAL CHALK, STONE AND CHARCOAL INCLUSIONS.

IT APPEARS TO HAVE ACCUMULATED NATURALLY IN THE VICINITY OF HUMAN ACTIVITY.

SOME SMALL SHERDS OF POTTERY WERE LOCATED IN THIS FILL WHICH APPEAR TO BE ROMAN IN DATE. THERE IS ONE PIECE WHICH IS THICKER AND HAS GROOVES IN IT AND IT IS POSSIBLE THAT THIS MAY BE PRE-HISTORIC POSSIBLE BRONZE AGE BUT THE PIECE IS SMALL AND WORN AND MAY BE RESIDUAL. THERE WERE ALSO SOME SMALL PIECES OF BONE

Fill of ring gully [604078]. The gully's fill comprises grey silt with occasional stone and charcoal inclusions. Finds from the fill included animal bone, mostly fragments of large mammal sized bones, and pottery. Although programmed the pottery is believed to date to the late Iron Age - Romano-British period.

The silt is likely to have infilled naturally with no signs of deliberate dumping or silt being deposited. However due to the presence of charcoal and pottery, it is likely that this process occurred & nearby to human activity.

The gill is very similar in composition to the silt of linear gully [604080], (604079), indicating that the gills may have accumulated at a similar time, following a similar process of infilling.

Refer to context

[604078] 585 dm.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut or curvilinear ring-gully. The gully contains a lot of greyish silt with Occasional charcoal inclusions & (604077). The silt also contained animal bone and pottery, dating the feature to the Late Iron Age - Romano-British periods. The silt is likely to have accumulated naturally near to an area of occupation.

The ring gully runs close by to a linear gully [604080] in this section. However in this section a thin strip of natural divides them, causing no relationship to be available between the two. It may be possible that this was done deliberately, to avoid the other gully implying that they may have been in use at the same time. This is backed up by the pottery which is very similar out of both gills.

The ring gully is likely to have been a small enclosure, possibly contemporary with a number of the other enclosures outlined by other gullies in the area.

The gully runs parallel to a ring gully [604080]. The slot was originally excavated to show the relationship between the two, however a small patch of natural barely separates the two, as both gullies seem to follow a slightly more E-W aligned path. This may indicate that the gullies were contemporaneous with one another, and there was a deliberate act to avoid cutting the other gully, however a relationship. This is backed up by the pottery, which recovered from the two gills, which are very similar, indicating a similar date. The gully may have been used for an small enclosure, next to the enclosure that [604080] was enclosing.

SEE (604082) for full descrip

Natural infilling of a quarry pit [604087]

It's covered by an probable made ground / deposit

(604088) and it's on top of an some earlier

occupational fills. It's marking a possible disuse

of the area. Probably iron-age dating. Same as

(604216) excavated in a nearby slot.

[604207]

Refer to context 604213
604032

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Fill of [604087]. Stratified above (604086) & below (604082).
 Contained frequent stones. ~~there were no finds present in the~~
 fill.
 It is likely that this fill formed through natural infilling. Acc.
 pot, probably late as iron age dating.

Refer to context [604213]
 [604032]

[604207]

(??, 74)

~~the~~ There is a possibility a number of small pits were cut into a larger pit which appeared to have a ritual function indicated by deposit of animal bone. Small pits may commemorate earlier use etc.

L.E. These depts are no connection (physical or stratigraphical) to the bone deposit. This is might been ~~an~~ part of a ~~roman~~ shed / timber on thatch roman building associated with the pit / ~~pot~~ posthole [604032] and the later fills' (604030) = (604221) of an shallow pit [604033]. ~~Could we have~~ Ix'e don't exclude the poss. that they might have been refuse pits.

Refer to context (604207)

(604094) is a natural infilling of Gully [604095]. It is a very shallow fill, with no archaeological remains in it. The shallowness of the fill might be explained by the general overmachining of the area.

Moderate stones found, bigger than 0.07m, one specially big, > 0.10m, subangular, broken on one side.

(604094) was investigated in a slot measuring 1.2m x 0.45m.

Refer to context 604095

CUT OF SHALLOW DITCH TERMINUS [604096]

THIS DITCH TERMINUS HAS MODERATELY SLOPING SIDES AND A CONCAVE BASE.

APPROX 15M SOUTH EAST OF THE TERMINUS THE DITCH TURNS IN A SOUTHERLY DIRECTION AND THEN INTERSECTS WITH A RING GULLY [604050] [604046] [604029] [604021]. THE INTERSECTION BETWEEN THIS DITCH AND THE RING GULLY ARE YET TO BE EXCAVATED.

THE DITCH CUT [604096] CONTAINS ONLY ONE FILL [604097]

FINDS SUGGEST THAT THIS DITCH TERMINUS DATES TO THE LATE IRON AGE PERIOD, POSSIBLY STILL BEING IN USE DURING THE ROMAN PERIOD.

Refer to context (604097) PLAN

SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

SINGLE FILL OF DITCH TERMINUS [604096]

IT CONSISTS OF DARK BROWNISH GREY CLAYEY SILT WITH OCCASIONAL SMALL STONE INCLUSIONS AND A MODERATE AMOUNT OF CHARCOAL INCLUSIONS.

THE ~~NAT~~ HOMOGENEOUS NATURE OF THIS FILL IS SUGGESTIVE OF A DELIBERATE INFILLING. THIS HAS BEEN CHARACTERISED AS USE DISUSE AS THE FUNCTION OF DITCH (PROBABLE ENCLOSURE) HAS ENDED AND THE DITCH HAS BEEN FILLED IN, IN DOING THIS WASTE MATERIALS HAVE BEEN DISPOSED REPURPOSING THE DITCH FOR DISPOSAL OF WASTE

FINDS RECOVERED - SOME ANIMAL BONE

- CLAY - WASTE FROM POTTERY PRODUCTION
- POTTERY SOME SHERDS OF IRON AGE
SOME SMALLER DECORATED SHERDS THAT APPEAR ROMAN.

Refer to context [604096]

THIS PIT CUTS THE POSSIBLE TERMINUS OF THE COLLY [604102] ALREADY INVESTIGATED IN THE OPPOSITE SIDE OF IT [604070]. THE FILL IS VERY DARK, WITH A LOT OF ORGANIC MATERIAL INSIDE, CHARCOALS AND CBM. IT WAS FOUND SMALL PIECES OF ANIMAL BONES AND SOME PIECES OF POTTERY, MOST OF THEM HELD BY ~~APPROX~~ THE TOP PART OF ONE BOWL (PROBABLY ROMAN), ALMOST ALL DESTRUCTURED, IT LOOKED LIKE BROKEN ~~WATERPIPES~~ VOLUNTARILY, WITH THE PIECES ONE ON THE OTHER ONES, AND DISPERSED. IT COULD BE A PIT ~~WHICH~~ USED FOR DISPOSING INDUSTRIAL WASTE, CONSIDERING ALSO THE STRONG PRESENCE OF FIREPIIT AND KILN IN THE AREA [104923] - [104370]

ROLLY CUT WITH 2 FILLS (604100) - (604101), LINEAR SHAPE LONGER THAN 5 M., NE-SW ORIENTATION, STEEP SLOPING SIDES, FLAT BASE

THIS COULD BE THE POSSIBLE ROLLY TERMINUS CUT BY THE AIF [604089]. TH IT WAS INVESTIGATED IN THE OPPOSITE SIDE [604070] BUT THE FILL INSIDE (604069) LOOKS DIFFERENT FROM THE ONE HERE (604100), LESS DARK AND DIFFERENT INCLUSIONS. THE POTTERY FOUND INSIDE THE PREVIOUS SCOP WAS PROBABLY ROMAN, HERE IT WAS FOUND JUST ONE PIECE OF POT, ALSO PROBABLY ^{FROM} ROMAN PERIOD. THE ~~POSS~~ BOTTOM FILL (604101) COULD BE PART OF THE DEEPER TERMINUS OR ALSO A. NATURAL FILL IN A DEPEND OF IT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Skeleton found in what was originally thought to be a kiln. Possibly dug into kiln once it had gone out of use + was partially fired in. The skeleton's skull forced down, into the ground + was fractured in places, either from the pressure of the backfill, or from pressure placed in the burial pit, the skull could have been forced in further. It's interesting the body is on it's side, but the skull is face down - possibly didn't die like that. There were no finds from the actual skeleton - but a pig jaw was found close by, and burnt animal bone + pot were found in the backfill. The larger bones were fairly intact when they were uncovered, but they fractured easily. The ribs, spine + pelvis were very fragmentary, and many of the bones appeared to be missing. The spine itself was very curved, and again maybe due to the weight of backfill, or from being forced into the pit. The material of the pit is very sandy, which could explain the lack of preservation of the skeleton. One foot, the shoulder blades + what collars appear to be missing - + the other foot + hands are badly preserved. The skull is resting on the red clay (604061) = (604187) that extends from the side of the red clay that extends from the side of the burial pit up to the top of the feature - probably relating to the pyrotechnic installation at the northern end. The skeleton doesn't have any ~~any~~ epiphyses - possibly all decayed? The back of the skull was hit by the mattock while excavated - as a skeleton was not expected in the feature.

Refer to context (6040112) - (6040113)

Burial. (604035) - matrix

SINGLE FILL OF DITCH [604104]

CONSISTS OF DARK BROWNISH GREY SANDY SILT WITH OCCASIONAL STONE AND CHARCOAL INCLUSIONS.

THIS FILL LIKELY ACCUMULATED NATURALLY IN AN AREA RELATIVELY HIGH IN HUMAN ACTIVITY. THIS CAN BE SEEN IN THE MODERATE AMOUNT OF CHARCOAL INCLUSIONS.

ONE PIECE OF POTTERY WAS RECOVERED FROM THIS FILL WHICH APPEARS TO BE A ^{LATE} IRON AGE IN DATE.

Refer to context [604104]

CUT OF SHALLOW CIRCULAR PIT [604106]

THIS PIT CUTS (604105)

IT HAS MODERATELY SLOPING SIDES WITH A FLAT BASE AND IS SIMILAR (ALTHOUGH SMALLER) TO PIT [604012] THAT IS ONLY A FEW METERS TO THE NORTH WEST.

IT CONTAINS ONLY ONE FILL (604107)

THIS PIT HAS A RELATIONSHIP WITH DITCH [604104] AND IS LATER IN DATE.

POTTERY FINDS FROM FILL (604107) SUGGEST A ROMAN DATE.

Refer to context [604104]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

[604111] is a Gully running E-W which cuts [604109]. [604111] was investigated in a 130 x 120 x 0.33 m slot. Material found places it may be within Roman times although the physical relationship suggests that [604111] is later in time than [604109].

Deliberate backfill of burial cut. Dumped on top of inhumation (604103). Small pieces of burnt animal bone and some pottery. One piece of pottery was found within pit possibly contemporary to the skeleton but possibly relating to the pyroclastic inundation to the north.

Lots of burnt small pieces of burnt animal bone found in this backfill + one pig jaw close to the skeleton. Possibly just part of a dump that was then used to fill in the burial pit. Some possibly Iron Age pottery was found close to the skeleton too.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS DARK BROWNISH GREY NATURAL INFILLING [604114] HAS A COMPACT COMPACTION AND A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE GULLY [604116] AND IT IS ITS NEWEST NATURAL INFILLING.

THIS FILL IS SAME AS THE NATURAL INFILLING (604104954) THAT BELONGS TO THE ~~SAME~~ FEATURE [104842], A PART OF THE GULLY ROUND-HOUSE GULLY.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH GRAVELS.
 - OCCASIONAL PRESENCE OF CHALK FLAKES.
 - OCCASIONAL PRESENCE OF CHARCOAL.
 - OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE EDGE OF THE EAST POINT OF THE SECTION SKETCH
- WE DIDN'T FIND ANY PIECE OF POTTERY TO DATE THE FEATURE.

Refer to context [604116]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID GREYISH BROWN NATURAL INFILLING (604115) ~~IS~~ A MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION. THIS FILL BELONGS TO THE GULLY [604116] AND IT IS ITS OLDEST NATURAL INFILLING. THIS FILL IS SAME AS THE NATURAL INFILLING (104953) THAT BELONGS TO THE SAME FEATURE [104842] A PART OF THE ROUND-HOUSE GULLY. THIS FILL HAS THE FOLLOWING INCLUSIONS:

- MODERATE PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH GRAVELS.
- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF CHARCOAL.
- OCCASIONAL PRESENCE OF MARINE SHELLS AND SQUID FOSSILS.

WE DIDN'T FIND ANY POTTERY TO DATE THIS FILL IN THIS FEATURE

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS GULLY [6040116] HAS A CONCAVE BASE AND STEEP AND MODERATE SLOPING SIDES (STEEP OUTSIDE AND MODERATE INSIDE THE ROUND-HOUSE). THIS FEATURE [6040116] IS FILLED BY TWO DIFFERENT FILLS: THE NATURAL INFILLINGS (604114) AND (604115) THAT ARE SAME AS (104954) AND (104953) RESPECTIVELY. THIS FEATURE WAS ~~DUG~~ DUG IN A 2'2 x 1'4 m SLOT AND ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. THIS FEATURE [6040116] IS A PART OF THE IRON AGE ROUND-HOUSE THAT HAS THE REFERENCED NUMBER [104908]. THIS PART OF THE GULLY ROUND-HOUSE ~~IS~~ HAS THE LARGEST WIDTH OF ~~THE~~ ALL THE GULLY WITH ITS 1'4 m AND IT IS DEEPER THAN THE REST AS WELL.

Solid layer of black CBM acting as a outer lining to the kiln [104923]. The sill is thin, but deep, covering the entire side of the kiln in this area. After the deposit is a deliberate act of construction to line the outside of the kiln. CBM was packed into the wall over a layer of clay (604118), To create elements of the kiln structure. This includes a ledge, however the ledge was not present in this section of the sill. Furthermore, holes were created in the black CBM layer to allow the deposit to support kiln structure e.g. bars. The lining was removed and stored as a bulk find.

Initial episode of kiln lining, in kiln C104923's central chamber.
The lining is red possibly due to it being burnt, and lines the walls and the base of the kiln. However only small elements of the base survives.

The lining is a deliberately constructed deposit aimed at reinforcing the edges of the kiln. It is directly overlain by a similar deposit (604117), which is the same depth and thickness, however it is black.

This could represent an episode of remodelling of the kiln, to further secure the edges, or possibly just another layer used for more structural purposes or supporting the kiln structure.

The Deposit was removed and stored as a bulk find.

Deposit of kiln lining, part of kiln [104780]. The deposit is the same as ~~soil~~ deposit (604117). Please see (604117) for further information.

The ~~big~~ deposit is black CSM deliberately constructed to line the kiln. It features a stepped edge and holes to support kiln furniture. It overlies (604120), another layer of kiln lining, possibly indicating that this layer may have been placed later to re-model / re-secure the edges of the kiln.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Layer of red kiln lining, part of kiln central chamber [104780].
The layer is the same as sill (604118). Please see (604118) for further information.

The deposit represents a deliberately constructed layer lining of the kiln, used to support the edges. The layer would have been deliberately placed as clay, before being burnt during the use of the kiln to turn it red.

It is overlain by another layer of kiln lining, (604119), which is solid block material, with more intricate constructional elements to it, e.g. a ledge and holes for kiln bars.

However (604120) extends still further than (604119) also covering areas of the floor of the kiln and parts of the glue.

FILL OF POST HOLE [604121]

THIS CONSISTS OF MID ORANGEISH BROWN SANDY SILT WITH
OCCASIONAL SMALL STONE AND CHALK INCLUSIONS.

IT DOES NOT APPEAR THAT THE POST DECAYED IN-SITU
THEREFORE IT IS LIKELY THAT THE POST WAS
REMOVED AT THE END OF THE STRUCTURES
USE, ~~AND~~ ALLOWING THE POST HOLE TO INFILL
NATURALLY.

NO FINDS RECOVERED.

Refer to context [604121]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS LIGHT BROWNISH GREY NATURAL INFILLING (604127) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION, SIMILAR TO THE COMPOSITION OF THE NATURAL IN THE EDGES.

THIS NATURAL INFILLING (604127) BELONGS TO THE DITCH [604128] AND IT'S ITS ONLY FILL. THIS FEATURE IS INSIDE AN IRON AGE ROUND HOUSE [104908] BUT LOOKS LIKE THAT IS NOT RELATED WITH IT. THIS FILL IS SAME AS (604006) AND (104907).

THIS FILL (604127) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL SUB-ANGULAR STONES MIX WITH GRAVEL IN THE BOTTOM. WE KEEP TWO FLAT STONES THAT MAY BE ARE WORKED.
- OCCASIONAL FLAKES OF CHALK AND CHARCOAL
- OCCASIONAL PRESENCE OF SQUID FOSSILS
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE EDGES

WE DIDN'T FIND ANY POTTERY TO DATE THIS FEATURE.

* WE FOUND FRAGMENTS OF A MEDIUM / BIG SIZE ANIMAL JAW IN THE BOTTOM OF THE FEATURE.

Refer to context [604128]

this form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

THIS EAST-WEST LINEAR SHAPE DITCH [604128] HAS STEEP SLOPING SIDES AND A CONCAVE BASE. IT WAS RECORDED IN A $1'03 \times 0'87$ m SLOT, WHERE ONE OF THE EDGES ^(THE NORTH-ONE) IS TURNING A LITTLE BIT TO THE SOUTH-EAST. THIS SLOT IS DUG INSIDE THE IRON AGE ROUND-HOUSE. THIS DITCH [604128] IS FILLED BY ONLY ONE FILL, THE NATURAL INFILLING (604127) WHERE WE DIDN'T FIND ANY POTTERY TO DATE IT. THIS FEATURE IS SAME AS [104907] AND [604007]. THE SLOT WAS RECORDED WHERE A RELATION 'SLOT' WAS DUG BEFORE TO UNDERSTAND HOW THE POST-HOLE/CREMATION [104891] IS CUTTING THIS DITCH AS WE CAN SEE IN THE D# 63090. THIS FEATURE [604128] IS A PART OF THE DITCH THAT IS CUT BY THE IRON AGE ROUND-HOUSE [104908] GULLY AND WE THOUGHT THAT IS NOT RELATED WITH THIS STRUCTURE. THE SHAPE OF THIS DITCH IS RESULT OF A DESIGN IN A CONSTRUCTION BASIC PROCESS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604129) in pit cut by roundhouse gully with cut [604130].

Fill consists of a moderate compaction of mid orangeish brown with a composition of silty clay with inclusions of occasional manganese and small to medium stones.

No finds into the fill.

The fill is most likely the result of natural infilling of the pit in its disuse. This fill might be the same as (604115), recorded initially as #1 one of the fills of the roundhouse.

Refer to context [604130]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [604130] of pit cut by roundhouse gully with fill (604129).

Part of slot excavated in the roundhouse gully in order to determine relationship between roundhouse gully and pit which is previous.

Cut hasn't got section or any drawing.

Cut has 104 m of diameter into the roundhouse gully which is 8.6 m of diameter.

The shape of the pit is curvilinear with moderate sloping sides with a concave base.

This shape is most likely a result of design in a construction basic process.

Refer to context (604129)

F/O PIT. THE FILL IS ~~JUST~~ ~~THE~~ ~~JUST~~ THE BOTTOM LAYER OF A PIT, VERY SHALLOW OR HEAVILY ERASED BY THE MACHINE. IT WAS VERY DARK WITH AN INTENSE PRESENCE OF CHARCOAL AND SMALL PIECES OF BURNED WOOD. SOME MEDIUM STONES (AROUND 0.15 m LENGTH), NOT BURNED, WERE CLOSE TO THE SECTION, ONE STILL IN THERE. SOME BONES IN THE FILL, NOT BURNED. NO POT. ~~IT LOOKS LIKE THE PIT WAS MADE FOR SOME REASON (MAYBE TAKING OUT THE NATURAL GRAVEL?) AND SOME WASTE WAS USED TO FILL THE HOLE.~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

F/O PIT. THE FILL WAS RICH OF VERY SMALL FRAGMENTS OF STONES (AROUND 0,03 cm LENGTH) AND CHARCOAL (~~NOT~~ NOT AS MANY AS THE FILL (604131)).

THERE WERE ALSO MANY FRAGMENTS OF POTTERY (ROMAN) AND SOME BONES CLOSE TO THE FILL OF THE UPPER PIT (604131). ON THE EAST SIDE OF THE FILL THERE WAS A "PIECE" OF PURE CLAY (YELLOW GREYISH).

~~RECENTLY~~ ~~THE~~ ~~PIST~~ CLOSE TO THE PIT THERE IS A SMALL KILN (AROUND 2 m DISTANCE) AND THIS FILL ~~COULD BE~~ ~~COULD BE~~ ~~COULD BE~~ COULD BE SOME WASTE ~~COULD BE~~ RELATED TO A POTTERY'S PRODUCTION (PIECE OF PURE CLAY, BROKEN VESSELS, SOME CBT).

IF THE KILN AND THE PIT ARE CONTEMPORARY IT COULD BE THAT THE PIT WAS FILLED BY SOME WASTE RELATED TO THE KILN.

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of possible tree throw/bowl. The cut has a maximum depth of 0.23m. The feature was half sectioned and excavated to a length of 0.68m. The feature has a maximum half width of 0.43m.

The base of the cut is concave but slightly irregular in areas which suggest natural processes rather than man made although the feature was thought to be a terminus of a linear running N-S the ditch/linear is difficult to see on the surface.

No dating evidence found to establish a date.

The cut has steep to moderate sides.

The cut has one fill context (204136)

Refer to context (204136)

CUT OF POST HOLE [604137]

SIDES ARE MODERATELY SLOPING

THIS POST HOLE IS PART OF A LINEAR ALIGNMENT THAT INCLUDES POST HOLES [604125] [604123] [604121]

THERE IS NO EVIDENCE FOR A PARALLEL LINE OF POST TO FORM A STRUCTURE. THIS MAKES THIS ALIGNMENT MORE LIKELY TO BE FOR A FENCE LINE FOR FIELD DIVISION.

THERE ARE 3 FURTHER POST HOLES TO THE EAST [604139] [604141] [604143] THAT MAY ALSO BE ASSOCIATED.

Refer to context

Fill (604145) of pit [604146]

Fill consists of a moderate compaction of mid orangeish brown silty clay composition with inclusions of occasional manganese, gravel and fired clay.

No finds. The fill is most likely the result of natural infilling of the pit in its disuse.

Refer to context [604146]

This pit is cut by the roundhouse gully [104846].
Pit is previous to the house

Cut is orientated N-S, with 0.62m of length in a pit of 1.42 m of diameter.
Cut has a corvilinear shape with moderate sloping sides and a concave base.

This shape is most likely a result of design in a construction basic process.

Refer to context (604145)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

THIS MID GREYISH ORANGEISH BROWN NATURAL INFILLING IS MODERATELY COMPACT AND HAS A CLAY (604149) COMPOSITION.

THIS FILL BELONGS TO THE DITCH [604150] AND IT IS ITS ONLY FILL.

THIS NATURAL INFILLING (604149) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL SUB-ANGULAR STONES MIX WITH PEBBLES IN THE BOTTOM OF THE TERMINUS.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF CHARCOAL, ALMOST ALL OF IT IN THE DEEPER AND ENDING PART OF THE TERMINUS, MAY BE DUE TO THE REST ORGANIC RESTS THAT WERE LEFT THERE.
- OCCASIONAL PRESENCE OF MARINE SHELLS AND SQUID FOSSILS.

WE DIDNT FOUND ANY POTTERY TO DATE THIS FEATURE.

Refer to context [604150]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS NE-SW RUNNING DITCH [604150] HAS STEEP SLOPING SIDES AND A CONCAVE BASE. IT WAS RECORDED IN A 0'87 x 1'03 m SLOT, WHERE WE HAVE FOUND IT, THIS TERMINUS OF A DITCH [604150] FIRST WAS DUG ONE HALF OF IT TO RECORD THE ITS LONGITUDINAL SECTION (D# 63168) AND THEN EXCAVATED COMPLETELY (D# 63167) TO RECORD ITS WIDTH. THIS TERMINUS [604150] IS FILLED BY ONLY ONE FILL, THE NATURAL INFILLING (604149) WHERE WE DIDN'T FIND ANY REMAIN LIKE POTTERY TO DATE THE FEATURE. THE SHAPE OF THE DITCH IS SLIGHTLY CURVILINEAR. ~~TH~~ ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. WE DIDN'T FIND ANY DATABLE REMAIN IN THE REST OF THE SLOTS THAT WAS WERE RECORDED IN THIS DITCH.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of curvilinear gully [604152], possibly a road gully. The fill comprises of mid grey silt with ~~gravel~~ charcoal and stone inclusions.

Finds recovered from the fill include pottery but likely to date to the Romano-British period. Furthermore animal bone was also recovered, mostly long bones, of medium mammals - e.g. deer sized.

Although the fill does include evidence of human activity, it is likely that the fill was accumulated naturally due to there being no evidence of deliberate deposition within the fill. The fill is likely to have accumulated however near to an area of human occupation, due to the presence of charcoal and waste pottery and bone being dumped in the fill.

Refer to context [604152] for plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of curvilinear gully. The gully contains a sole pit (604151). The fill comprises of grey silt with charcoal inclusions. Pottery was found in the fill dating the feature to the Romano-British period. Animal bones were also recovered. The gully forms a circle, with a ^{possible} opening to the West end, however in its northern extent, the route of the gully gets lost due to a number of other gullies crossing it in the area. The ring gully in this area runs close to gully [604154], which it cuts, implying earlier activity was occurring in the area. The function of the gully is unknown, however it is likely to represent an enclosure e.g. for livestock, which was later dismantled to create the surrounding gullies. Once out of use, the gully filled in naturally however a human presence was still nearby, due to the presence of charcoal and finds in the fill.

Fill of linear gully [604154]. The gully fill comprises of mixed clayey silt with or rare charcoal inclusions. No finds were recovered from the gully.

The full extent of the gully is unknown due to it being cut at its southern edge by gully [604152].

Due to the lack of human activity in the gully, it is likely to have accumulated naturally. This process must have occurred before the creation of [604152], which is dated to the Romano-British period, implying it was infilled on or before this period.

Refer to context [604154] for plan.

The feature is however cut by [604152] a ring gully that briefly crosses its alignment. Finds from the ring gully indicate a Romano-British date, implying it was constructed [604154] was constructed during or before this period. This information matches pottery found in another section through the same gully [604082] which also implies indicates it it was constructed during the late Iron Age $\rightarrow$ Romano-British period.

The function of the gully is unknown, however due to the large number of other gullies in the area it may have been damming or enclosing which was part of a larger series of enclosures in the area.

RED LINING OF KILN CUT [694159], PACKED CLAY OF KILN EDGE IMMEDIATELY ON THE TOP OF THE CUT LINE, RED COLOUR AND VERY COMPACT. OCCASIONAL FREQUENCY OF VERY SMALL REDDINGS. THIS RED LINING IS PART OF THE KILN CONSTRUCTION, IT IS THICKER ON THE WEST SIDE THAN ON THE EAST, IT COVERS ALL THE KILN EDGE, ~~AND~~ PARTIALLY THE BASE AND INCLUDES THE FLOE WHEN IT WAS MADE WITH THE SAME MATERIAL. IT LOOKS LIKE IT WAS USED TO FIX THE PILLARS IN THE BASE, PACKING ALL AROUND THEM AT THE BOTTOM. THE KILN WAS BUILT IN 4 QUADRANTS, THIS DEPOSIT IS THE SAME INVESTIGATED IN THE OPPOSITE QUADRANT (694163), IT INCLUDES ALL THE BASE AND THE WHOLE FLOE BUT ALL SAMPLED SEPARATELY AND SURVEYED AS ENVIRONMENTAL SAMPLE POINTS.

~~SECTION 1 (604155) - (604156) KILN CUT WITH 2 FILLS~~
(604155) - (604156) AND 2 DEPOSITS, BLACK LINING (604157) AND RED LINING (604158), CIRCULAR SHAPE, STEEP SLOPING SIDE, QUITE FLAT BASE.

IT'S A KILN BUILT IN AN INDUSTRIAL AREA WITH ~~ONE~~ VERY CLOSE AND SIMILAR ^{ONE} [604333] WITH SQUARE PILLARS, AND BIGGER ONE IN THE WEST SIDE [104923], 2 FIRE PITS WITH SMOKEHOLE [104970] AND [104926] THIS LAST ONE WITH A TERRACE IN THE SMOKEHOLE PART (604123); INSTEAD THE EARLIEST KILN WAS FOUND IN THE SOUTH SIDE OF THE SITE [107795]. IT'S MADE IN TWO PART THE KILN AND THE SMOKEHOLE, THEY HAVE DIFFERENT CUT NUMBER BUT BOTH ARE PART OF THE SAME ACTION AND BUILDING, SO ~~CONTEMPORARY~~ CONTEMPORARY.

THE KILN WAS BUILT IN 4 QUADRANTS, THE FIRST WAS THE NE ONE THEN THE CENTRAL WEST ^{ONE} WHICH INCLUDED THE SMOKEHOLE AND THE DUCT [604162] - [604171].

THE KILN HAS 2 CLAY LINES, ONE BLACK ON ALL AROUND THE EDGE, WHEN COVERS THE RED ONE, WHEN WAS FOUND ON THE TOP OF THE BASE CUT, WHERE THERE WERE FIXED 8 PILLARS 2 ON THE EAST SIDE, 3 ON THE WEST SIDE AND 3 IN THE MIDDLE, THE CENTER ONE HAD A BOWL ON THE TOP OF IT, WHEN SHOULD BE PART OF THE STRUCTURE (604327). CONSIDER THE MATERIAL, THE KILN TYPE, THE AREA AND THE FINDS INSIDE, IT SHOULD BE A LATEAN KILN. ^{Refer to context}

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

(any further details that may be important for understanding the context, including items marked * overleaf)

TOP FILL OF KILN CUT [604154], MASSIVELY COMPACT, DARK BROWNISH GREY COLOUR, SILTY CLAY COMPOSITION. OCCASIONAL FREQUENCY OF SMALL ANGULAR STONES, ALL THE FILL IS FULL OF CHARCOAL AND BURNED BRUFF INSIDE, GOOD PRESENCE OF POTTERY DISHES, MANY PIECES OF CBH ALMOST ALL COME OUT FROM THE PILLARS WHO PROBABLY HELD A ROUNDED CLAY DISH UP. THE KILN WAS DUG IN 4 QUADRANTS, THIS FILL IS THE SAME INVESTIGATED IN THE OPPOSITE QUADRANT (604155); IT WAS SAMPLED AT 50%.

BLACK LINING OF KILN CUT [694164], PACKED CLAY OF KILN EDGE ON THE TOP OF THE RED ONE (694163), REALLY BLACK COLOR AND VERY COMPACT, OCCASIONAL FREQUENCY OF VERY SMALL STONES AND SMALL PIECES OF CHARCOAL.

THIS BLACK LINING IS PART OF THE KILN CONSTRUCTION, IT IS ON THE TOP OF THE RED ONE, PACKED PROBABLY BEFORE TO INSERT THE PILLARS (THERE IS NO PHYSICAL RELATION BETWEEN THEM). IT IS ALL AROUND THE KILN EDGE, MORE THICK ON THE NORTH SIDE LESS IN THE SOUTH, IT COVERS ALL THE KILN SIDE BUT IT DOESN'T REACH THE BOTTOM.

THE WAS SUB IN 4 QUADRANTS, THIS DEPOSIT IS THE SAME INVESTIGATED IN THE OPPOSITE QUADRANT (694157). IT WAS ~~SUB~~ SAMPLED AT 100% AND SURVEYED AS ENVIRONMENT SAMPLE POINTS.

KILN CUT WITH 2 FILLS (604160) - (604161) AND 2 DEPOSITS, THE BLACK LINING (604162) AND THE RED ONE (604163), CIRCULAR SHAPE, STEEP SLOPING SIDE, QUITE FLAT BASE.

IT IS A KILN BUILT IN A POSSIBLE INDUSTRIAL AREA WITH VERY CLOSE AND SIMILAR ONE [604333] WITH SQUARE ALIENS INSIDE, A BIKON AN DEEPER ONE IN THE WEST SIDE [104923], 2 FINE PITS WITH STROKEHOLE [104920] AND [104926], THIS LAST ONE WITH A HUMAN LAVER IN THE STROKEHOLE PART (604103); INSTEAD THE LARGEST KILN WAS FOUND IN THE SOUTH SIDE OF THE SITE [107795].

THE KILN WAS BUILT IN 4 WALLS, THE FIRST WAS THE NE ^[604153] ONE THAN THE GENERAL WEST [604164] WHO INCLOSED THE STROKEHOLE [604167] AND THE ROLLY [604171]. THE KILN AND THE STROKEHOLE HAVE DIFFERENT CUTS BUT ALL OF THEM ARE CONTEMPORARY BECAUSE PART OF THE SAME ACTION AND BUILDING.

THE KILN HAS 2 BEAT LINING, ONE BLACK ALL AROUND THE KILN SIDE WHO COVERS THE RED ONE, WHO INSTEAD REACHES ~~ABOUT~~ AND COVERS PARTIALLY THE BASE, USED ALSO TO FIX THE BOLLARS, PACKING IF AROUND THEM. IT WAS FOUND 8 PICKERS: 3 ON WEST SIDE, 2 ON EAST SIDE AND 3 IN THE MIDDLE, THE CENTRAL ONE HAS A

BOLL ON THE TOP OF IT WHO SHOULD BE PART OF THE STRUCTURE. (604327). CONSIDERING THE KILN TYPE, THE MATERIALS WHO MAKE IT, THE GENERAL AREA AND THE FINDS IN THE ^{SKETCHES} ~~CONTEXT~~, IT'S A ~~WATANK~~ KILN. (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Full of linear gully [604176]. The fill comprises of brown mixed clayey silt. The fill was fairly sterile with only a few stones and inclusions. Due to this, it is likely that the fill accumulated naturally due to no human activity being present. The mixed nature of the fill may be due to a mix between the clayey material and a more organic rich subsoil which filled the feature after going out of use.

Refer to context [604176] → see plan.

Cut of linear gully containing a sole sill (604175). The sill comprised of naturally infilled material, which was very stable, containing no datable evidence or charcoal. However sections through the gully to the S/E ([604080], contained more evidence of human occupation, including pottery dating the sequence to the Late Iron Age - Romano-British periods. This may also indicate that the majority of activity was based towards the south east of the gully. The section of the gully is continuous, however to the S/E the gully gets cut by a ring gully [604152], possibly implying that a series of small enclosures were in the area, outlined by these small gullies, or similar construction.

SAME AS [604080] [604154]

Refer to context (604175) for section and matrix.

CUT OF GULLY [604179] - continuation of gully cut [104995], running on a NE-SW orientation and cut by later cremation. Gully sides are moderately sloping and gully has an almost completely flat base unlike the usual V-shape of gully bases, possibly a result of natural processes over time, resulting in collapse and infilling of base.

Truncation of feature by cremation pit suggests the gully had fallen out of use before the cremation was placed there.

Cut of gully is far ~~smaller~~ shallower than the cut of the slot dug into gully immediately to the south-west. As yet it is unknown as to why this is the case - it is unlikely to be deliberate so may be result of natural processes but this cannot be definitely proven. May have been used for bringing water into uninhabited area nearby. NB: measurements given ~~are~~ do not include the truncated area.

Refer to context (604180) FOR SECTION

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL (604180) OF CUT OF GULLY [604179]. NO FINDS OR INCLUSIONS FOUND OTHER THAN ONE LARGE STONE THAT PROBABLY PRESENT DUE TO NATURAL INFILLING. NO EVIDENCE OF BIOTURBATION WITHIN THE MAIN GULLY [OF FILL] OF GULLY. HOWEVER THERE APPEARS TO BE SOME EVIDENCE OF BIOTURBATION NEAR THE TRUNCATION OF THE GULLY BY THE CREMATION PIT BECAUSE A LARGE STONE CROSSES THE BOUNDARY BETWEEN THE FILLS. UNLIKELY TO BE RESULT OF NATURAL INFILLING BECAUSE THE CREMATION IS LATER THAN THE GULLY WHICH HAD PROBABLY ALREADY INFILLED BY THE TIME THE CREMATION PIT WAS DUG. SINCE THE CREMATION FILL WAS NOT THE RESULT OF NATURAL INFILLING IT SEEMS TO SUGGEST THAT THE STONE WAS IN THE GULLY FILL AND WAS SLOWLY MOVED. ALTHOUGH A DARKER BROWN COLOUR THAN THE NATURAL, THERE ARE SIMILARITIES IN COMPOSITION AND THE ORANGEISH COLOUR OF THE TWO FILLS SUGGESTING THIS FILL WAS THE RESULT OF NATURAL INFILLING. IT SEEMS THAT ONCE THE GULLY FELL OUT OF USE, THE FEATURE WAS LEFT TO FILL IN NATURALLY OVER TIME.

F/O GULLY'S TERMINUS. AS THE REST OF THE GULLY (~~SEE~~ SEE (604188)) THE TERMINUS IS VERY SHALLOW, HEAVILY ERASED BY THE MACHINE. SOME SMALL FRAGMENTS OF NATURAL FLINT WERE ~~DISCOVERED~~ ~~FOUND~~ IN THE INTERSECTION BETWEEN THE N FACING SECTION AND THE W FACING SECTION. DURING THE SURFACE CLEANING A FRAGMENT OF POT (LOOKS LIKE ROMAN) HAS BEEN FOUND IN THE FILL ~~AREA~~ WHICH CAN BE CONSIDERED A NATURAL INFILLING, AT LEAST ANALYZING WHAT REMAINS OF IT.

Fill (604185) in a terminus of a ditch with cut [604186]

Fill consists of a moderate compaction of mid orangeish brown silty clay with inclusions of occasional manganese (as the natural) and moderate inclusions of small angular stones.
We didn't find any finds (bone or pottery).

This fill is most likely the result of natural infilling of the terminus of the ditch in its disuse.

*

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [604186] of terminus of ditch with fill (604185)

Cut is NW-SE orientated with dimensions 0.76 m length, 1 m of width and 0.35 m depth.

The shape of the terminus is curvilinear with moderate sloping sides and a concave base.

Cut is done in a mix natural with two different compaction, silty clay with frequent inclusions of manganese and some gravel. There is a minimum overcut in the base of the whole section [ref 604185]

This shape is most likely a result of design in a construction basic process. The terminus is part of an ditch earlier curvilinear ditch terminated by the round-house.

Refer to context (604185)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Burnt clay in stakehole area. Possibly could be part of the rakeout fill - maybe it was still v. hot and baked the clay at the south end of the rakeout / stakehole. This red clay is only at the south end of the feature and doesn't extend that far around. No fills from the eastern quadrant.

CUT OF SHALLOW GULLY [604190] TERMINUS

THE GULLY HAS A MODERATELY SLOPING EDGE ON THE NORTHERN SIDE APPROX. 50°

THE GULLY SLOPES GENTLE TO MODERATELY APPROX 35-40° AS IT TERMINATES IN THE WESTERN END OF THE SLOT.

THE TERMINUS CONTAINS ONLY ONE FILL (604191)

IT IS POSSIBLE THAT THIS GULLY MAY HAVE BEEN CUT TO FORM PART OF AN ENCLOSURE AROUND INDUSTRIAL ACTIVITY (POSSIBLY POTTERY PRODUCTION BASED ON NEARBY POTTERY KILNS OF ROMAN DATE)

NO DATING EVIDENCE WAS LOCATED IN THE GULLY TERMINUS BUT IT IS POSSIBLE THAT IT IS CONTEMPORARY WITH KILNS. SAME AS [604176] [604080] [604154]

THIS MID GREYISH BROWN NATURAL INFILLING (604192) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION

IT BELONGS TO THE PIT [604196] AND IT'S THE ONLY FILL OF THIS PARENT CONTEXT.

THIS FILL IS SAME AS (604193) BUT WE GAVE DIFFERENT NUMBERS BECAUSE THEY ARE NOT CONNECTED DUE TO THE PIT [604203] IS CUTTING IT.

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS

- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES FOR SMALL AND MEDIUM SIZES MIX WITH GRAVEL
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF CHARCOAL.
- OCCASIONAL PRESENCE OF MARINE SHELLS AND ROOT DISTURBANCES

~~WE FOUND FLINT IN THIS FILL~~

WE DIDN'T FIND ANY POTTERY TO DATE THIS FEATURE

THIS MID GREYISH BLUE NATURAL INFILLING (604194) IS MODERATELY COMPACT AND HAS A CLAY COMPOSITION.

IT BELONGS TO THE PIT [604197] AND IT'S ITS OLDER FILL.

THIS FILL IS CUTTING BY THE PIT [604207] IN ITS RIGHT SIDE AS WE CAN SEE IN THE DRAWING D#63178.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH GRAVEL.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF CHARCOAL
- OCCASIONAL PRESENCE OF MARINE SHELLS AND SQUID FOSSILS.

WE DIDN'T FIND ANY POTTERY OR ANOTHER DATABLE REMAIN IN THIS NATURAL INFILLING.

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID BROWNISH GREY ~~NATURAL INFILLING~~ ^{DELIBERATE BACKFILL} (604195) IS MODERATELY COMPACT AND HAS A GRAVEL COMPOSITION.

THIS FILL BELONGS TO THE PIT [604197] AND IT'S ITS NEWER FILL.

THIS FILL IS CUTTING BY THE PIT [604207] IN ITS RIGHT SIDE AS WE CAN SEE IN THE SW FACING RECORDED SECTION D#63178.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- ~~OCCASIONAL~~ ^{FREQUENT} SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZE BECAUSE OF THAT LOOKS LIKE A DELIBERATE BACKFILL IN THE TOP OF THE FEATURE.
- OCCASIONAL PRESENCE OF CHALK FLAKES AND CHARCOAL.
- OCCASIONAL PRESENCE OF MARINE SHELLS.

WE DIDN'T FOUND ANY POTTERY TO DATE IT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS PIT [G04197] HAS MODERATE SLOPING SIDES AND A CONCAVE BASE.
IT WAS RECORDED IN A 4 1/4 x 1 m SLOT AND WAS RECORDED THE SW FACING SECTION (D#63178)
THIS PIT HAS A CIRCULAR SHAPE.
THIS FEATURE WAS FILLED BY THREE DIFFERENT FILLS: (G04195), (G04193) AND THE PRIMARY FILL (G04194).
THIS PIT [G04197] IS CUT BY THE PIT [G04203] AND IS SAME AS THE PARENT CONTEXT [G04196] BECAUSE OF THAT WE GAVE TO DIFFERENT CONTEXT NUMBER TO THE SAME PIT DUE TO ARE CUTTING BY [G04203] AND ARE NOT CONNECTED PHYSICALLY.
IT'S SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.
WE DIDN'T FIND ANY POTTERY TO DATE THIS FEATURE, BUT IS THE OLDER FEATURE IN THIS SLOT.

THIS MID ORANGEISH RED NATURAL INFILLING (604198) IS MODERATELY COMPACT AND HAS A GRAVEL COMPOSITION. IT BELONGS TO THE PIT [604203] AND IT'S ITS NEWEST FILL.

THIS FILL IS SAME AS (604199) BUT WE GAVE DIFFERENT NUMBERS BECAUSE ARE CUTTING BY THE DITCH [604207] THAT IS CUTTING ITS FEATURE [604203]. NOT CORRECTED

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- ~~OCCASIO~~ ^{OCCASIONAL} MODERATE PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH GRAVEL.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- OCCASIONAL PRESENCE OF IRON PAN DUE TO THIS FILL HAS RED AND ORANGEISH COLOURS.
- OCCASIONAL PRESENCE OF MARINE SHELLS

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

THIS PIT [604203] HAS STEEP SLOPING SIDES AND A CONCAVE BASE.
IT WAS RECORDED IN A 4'40 x 1m SLOT AND WAS RECORDED THE ~~SW~~ FACING SECTION (D#63178)
THIS PIT HAS A CIRCULAR SHAPE
THIS FEATURE WAS FILLED BY THREE DIFFERENT NATURAL INFILLINGS: (604198) - (604199) THE NEWER, THE MEDIUM ONE (604200) - (604201) AND THE OLDER ONE (604202).
THIS PIT [604203] IS CUT BY THE DITCH [604207] ALMOST IN THE CENTER OF ITS DIAMETER AND IS CUTTING THE PREVIOUS PIT [604197] [604196]
ITS SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.
WE DIDN'T FIND ANY POTTERY TO DATE THIS FEATURE

[604196]

- L.E. It is possible that this is an well / water hole, truncating an earlier iron age gravelly pits / (pits cluster). Probably late iron age dating, possibly on the same period with the nearby roundhouse. The full extent of the pit wasn't visible on plan, due to the fact that it is covered by an gravelly deposit (see plan 63183) (FAL 03.01.18)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS DARK GREYISH BROWN NATURAL INFILLING (604202) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE DITCH [604202] AND ITS NEWER FILL, AND THE NEWER OF ALL THE FEATURES OF THIS SLOT ITS COLOUR IS DUE TO ITS CONTACT WITH THE SUB-SOIL (100002)

THIS NATURAL INFILLING HAS THE FOLLOWING INCLUSIONS:
- OCCASIONAL PRESENCE OF SUB-ANGULAR STONES OF SMALL AND MEDIUM SIZES MIX WITH GRAVEL AND PEBBLES.

- OCCASIONAL PRESENCE OF CHALK FLAKES

- OCCASIONAL PRESENCE OF CHARCOAL.

- OCCASIONAL PRESENCE OF ROOTS DISTURBANCES IN THE SURFACE.

WE DIDN'T FIND ANY POTTERY TO DATE THE EARLIER FILL OF THIS SLOT.

THIS MID GREYISH BROWN DEPOSIT <u>E</u> (604208) IS
MODERATELY COMPACT AND HAS A SILTY GRAVEL
COMPOSITION.
IT WAS RECORDED IN A 4'40" x 1m SLOT AND
WAS RECORDED THE <u>EW</u> FACING SECTION (D#63178)
THIS DEPOSIT IS SAME AS (604209) BUT WE GAVE
DIFFERENT NUMBERS BECAUSE THEY ARE NOT
CONNECTED DUE TO THE DITCH [604207] IS CUTTING IT.
THIS DEPOSIT HAS THE FOLLOWING INCLUSIONS:
- MODERATE PRESENCE OF SUB-ANGULAR STONES OF
SMALL AND MEDIUM SIZES MIX WITH GRAVEL
- OCCASIONAL PRESENCE OF CHALK FLAKES AND
MARLINE SHELLS.
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES IN THE
SURFACE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FLO TREEHOLE. THE FILL IS QUITE MIXED IN COLOR AND COMPOSITION. THE S PART OF THE FILL WAS DARKER, ^{AND GREY} WITH MORE CHARCOAL AND SOME SMALL FRAGMENTS OF NATURAL FLINT. THE N PART WAS ~~DARKER~~ LIGHTER IN COLOR AND MORE ORANGE. ~~THIS~~ THIS MIXED COMPOSITION, THE CHARCOAL AND THE IRREGULAR SHAPE OF THE WT SUGGEST THAT THE FEATURE IS THE RESULT OF A BIO-DISTURBANCE, PROBABLY A TREEHOLE.

Deposit of stones. Stratified above (604214) & below (604033) cut by (604033). Contained ^{has vent} ~~separate~~ stones. There were no finds present in this deposit.

~~It is likely that this deposit was formed through natural infilling.~~

This is ~~part of possibly part of the same deposit~~ of stone same as (604203), (604208), (604084), (604088), (604212), and part of of possible landscaped/deliberate backfilling on older quarry pit/pit cluster area. Is truncated by an iron ditch (604207) and a Roman pit (604033). Is truncated further west by an iron & edge enclosure.

Fill Natural infilling of quarry pit [604213]. This fill was visible in the western part of the pit. Was covered by an large gravelly deposit and truncated at the top part by an shallow roman pit [604220]. frequent sub-angular medium stones. This fill is probably an nat. infilling and may be due to an flooding event.

~~Excavated~~ ~~JA/RB pit~~ ~~604032~~ ~~cut of~~ of shallow pit truncating earlier JA pit - ~~but~~ latter truncated by ~~later~~ FA/RB pits. Occupation ~~deposits~~ with some frags of bone & pot. Probably Roman dating. It's truncated by at least 2 later pits / or large post holes - same as [604033]. The cut of the pit is gentle ~~moderate~~ sloping with a shallow, concave base. It was excavated in two quadrants.

cut of an quarry pit. Was truncated by a later quarry
 pit [604027] and covered in the eastern part by an ~~deep~~
 gravelly deposit. Wasn't visible in plan. Was excavated in
 an slot, initially open as an gashant of for the
 pit [604220] / [604033]. It's part of an earlier part of the
 pit cluster area, in the same stratigraphical position
 with [604193], [604196].

Refer to context [604207]

Fill of ditch [604232]. The silt comprises of brown silt with occasional stone and charcoal inclusions. Finds from the silt included pottery. The pottery consisted of dark waxy ware of which contained shell inclusions, possibly date the pit to the Late Iron Age.

The silt accumulated on top of deposit (604291), which was an almost complete horse skeleton. It is likely that the horse was dumped in the ditch before the natural infilling process accumulated silt (604231).

During its infillment human activity was likely to have continued nearby, due to the presence of charcoal and pottery in the silt.

Refer to context [604232] for plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut as ditch. The ditch contains a side sill (604231) and a deposit (604291).

The ditch's deposit (604291) comes in the form of a horse skeleton. The horse is almost complete and appears to be dumped on its side, possibly after the ditch went out of use. The ditch was then filled by (604231). This fill consists of brownish silt which naturally filled the ditch. This fill contained pottery, dating the ditch to the Late Iron Age period.

The ditch was then cut by a gully, which also removed the horse's pelvis.

The function of the ditch is unknown, however due to the amount of ditches and gullies in the area, it may have been used as a land boundary, that was later reshaped with gully [604234].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of shallow gully, comprised of greyish clayey silt. The silt contains inclusions of small stones and rare pieces of charcoal.

A sole find was recovered from the silt, a segment of a bronze brooch, SF/10198, believed to date the silt to the Romano-British period.

The silt is likely to have accumulated as a result of natural settling, with no evidence of a human cause in the creation of the silt, however the silt may have accumulated near to an area of occupation, seen through evidence such as the brooch and charcoal within the silt.

Refer to context [604234]

Cut or gully containing a side sill of (604233) (604233) comprises of clayed silt containing small amounts of charcoal. It is likely that the silt accumulated naturally after the gully went out of use.

The gully contained a side sill of a brooch ^{ref 101481}. This is believed to date the feature to the Romano - British period. This dating evidence is backed up due to it cutting the linear ditch [604232]. Pottery from the ditch contained ~~ear~~ dark pottery, often with shell inclusions in some of the coarser ware, possibly dating the feature to the Iron Age.

During the construction of [604234], where the gully cut through ditch [604232], it met horse skeleton (604291). It met the skeleton at its rear, and during the construction of [604234], they removed the pelvis and its right(?) femur as well as possibly a section of its tail to make way for the construction of the gully. The rest of the horse skeleton remained undisturbed.

(~~604~~ 235) a SECONDARY FILL OF EASTERN-WESTERN Ditch RUNNING NORTHERN MOST AREA OF SITE BEING [~~604~~ 238].

THIS FILL APPEARS TO BE ISOLATED WITHIN THIS INTERSECTION SLOT BETWEEN [~~604~~ 238] + [~~604~~ 241]. COMPOSED OF FREQUENT GRAVELS AND SANDY SILT LENSES, FEW PEBBLE SIZED STONES DISPERSED WIDELY THROUGHOUT. SHARES SIMILARITIES WITH SURROUNDING NATURAL. MODERATE INTRUSION BY ROOTING WITHIN SURFACE. 3. POSSIBILITIES IT IS DELIBERATE BACKFILL MIXED WITH NATURAL SEALING DITCH. OR NATURAL INFILL OR BASED ON E. WESTERN SECTION COULD BE ISOLATED ~~OUT~~ OF FEATURE WITHIN ^{INTER} SECTION. THIS UNLIKELY DUE OVERALL CHARACTER OF FILL IN OTHER SECTIONS. IT IS ~~NOT~~ A RECURT OF DITCH AS IT IS ISOLATED TO THIS SLOT.

Refer to context

604236-B.

(604237) A Fill of Ditch [604238]. unclear if it is PRIMARY OR SECONDARY AS L.O.E IS AT 0.4m DUE TIME CONSTRUCTIONS COULD NOT BOTTOM Ditch. BUT Relationship IS VERY distinct in WEST FACE AND IN PLAN whilst excavating.

Excavation affected by weather, light conditions it is similar to (604236) when loose just slightly darker AND slightly more clayey. Note possible cross contamination pottery in this area due truncation by [604238] to [604241].

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS THE CUT OF A CURVILINEAR ~~DITCH~~ ^{GULLY}. THIS SLOT IS POSITIONED OVER THE CORNER (APPROX 90°) OF THE ~~DITCH~~ ^{GULLY} WOULD INDICATE THAT THIS MAY FORM PART OF AN ENCLOSURE POSSIBLY FIELD BOUNDARY ~~DITCH~~ ^{GULLY}. IT IS ALSO POSSIBLE THAT THIS MAY HAVE BEEN USED FOR ~~THE~~ DRAINAGE PURPOSES.

THE GULLY IS SHALLOW WITH MODERATELY SLOPED SIDES AND A CONCAVE BASE.

THE GULLY CONTAINS ONLY 1 FILL (604243)

THE GULLY TRUNCATES A TREE BOLE SUGGESTING THAT TREES MAY HAVE BEEN CLEARED BEFORE THE FIELD SYSTEM WAS CREATED.

Refer to context (604243)

PLAN

This image shows a full page of blank graph paper. The grid consists of small squares formed by light gray lines. There are approximately 20 columns and 20 rows of squares. A thicker vertical line runs down the left side of the page, creating a margin. At the top center, there is some faint, handwritten text that appears to say "Graph Paper". The rest of the page is empty except for the grid lines.

Fill (604246) of post-hole [604247] in the same section of a pit [604249].

Fill consists in a moderate compaction really dark brownish grey with inclusions of moderate charcoal and fired clay and inclusions of occasional chalk and ~~meat~~ small to medium angular stones.

In this fill we found some fragment of copper which was been recorded as small find with S.F. 10199 number

The fill is most likely the result of natural infilling of the post-hole in its desuse.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [604247] of post-hole in a pit. The cut is E-W orientated, with moderate sloping sides and a concave base.

The shape is most likely result of design in a construction basic process.

This post-hole is most likely from Roman period and it makes part of a group of post-holes from the same "roman house".

To have more further information about planning top look for sketch plan in [604255] context sheet.

Refer to context (604246)

Cut of pit [604249] in a relationship slot excavated in order to determine relationship between different pits from the Roman period and a ditch from The Iron Age.

Cut is E-W orientated with dimensions 110m ~~length~~ length for 0.20m depth in a slot of 3 metres length. This pit [604249] and the other one [604251] are cutting a Iron Age ditch.

The shape of the pit is curvilinear with moderate ~~steep~~ sloping sides and a concave base. It's a result of a design in a basic construction process.

Cut of pit [604251] in a relationship slot excavated ~~to~~ in order to determine relationship between different pits which are cutting an Iron Age ditch coming from the Roundhouse [104908]

Cut is E-W orientated with dimensions 1.9m length for 0.27m depth, with moderate sloping sides and a concave base.

The shape of the pit is ~~an~~ result of a design in a basic construction process

Fill (604258) of post-hole in roman house area

Fill consists in moderately compact mid brownish orange silty clay with inclusions of occasional manganese from the natural (100003)

This fill is most likely result of natural infilling of the post-hole in its desuse.

We took 50% sample, 10 litres cause we couldn't open it 100% cause the deadline

Refer to context [604265]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [604259] of post-hole, most likely connects with other post-holes in the same area (roman house)

This post-hole draws an almost straight line with post-hole [604277] and [604279] as the top plan shows [604265]

The line is NE-SW orientated and is ~~parallel~~ parallel with the line of another post-holes like shows the plan in sketch [604265]

Refer to context [604265]

Fill (604264) of post-hole.

In this case fill is different of the other post-holes, darker, more organic, with inclusions of moderate fired clay, charcoal and some small to medium angular stones.

The fill is most likely result of a natural infilling of the post-hole in its disuse.

Refer to context [604265]

Cut [604265] of post-hole in

This cut is deeper than the other post-holes, most-likely cause it didn't have the same purpose.

The cut is SE-NW orientated, with moderate sloping sides and a concave base. The cut is most likely a result of a design in a construction basic process.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch. Cut by Roman ditch running roughly NW to SE from the W edge of L.O.E of site. Quite possibly the same ditch as [604241], as fairly similar composition, but cannot be 100% certain. The base of this ditch is slightly unusual - as it dips sharply and there is almost a 'shelf' in the S most corner of the excavated area - looks almost like a terminus, but nothing can be seen in section to suggest this. The topography of the area could explain this change in depth - but unable to tell for certain.

Refer to context (604269)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch. Moderate amount of pottery from this fill - all very similar to each other - if not the same pot, then many fragments of pots in a very similar style. Quite possibly black burnished ware? Very smooth black pottery with simple decoration - small ridge like ridges. No visible inclusions. ^{quite a bit} large amounts of fairly well preserved animal bone in this fill.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch. This ditch runs from the very W edge of the site - dated as Roman based on finds from the slots dug to the W. This ditch was not fully excavated, as the main objective was to work out the relationship between the two ditches. ~~Moreover this ditch~~ The depth of this ditch + several of the pits are only as deep as arbitrary + would be much deeper. Several different phases of use + disuse in this ditch. To see a full profile and depth of this ditch, refer to either [604295] or [604787].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [604270]. One piece of pottery in the section - similar to the other pieces of pottery found in the ditch in other fills - reddish/orange with a black centre - possibly late Roman? This fill seems to be somewhat of edge collapse, as it is very similar to the natural around this slot. ~~Cannot tell whether this fill is~~ This fill ~~does not~~ is deeper thicker than shown in section, as the ditch was not fully excavated. It is possible that the ditch had already gone out of use when this ~~was~~ fill happened, but unable to tell due to the fact it was not botanised.

Refer to context

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch. Ditch was not fully excavated, so ^{real} thickness of this fill is not fully known. Some pottery - one very thick and coarse, the other possibly very flat and finer than the other piece. Large amounts of fairly well preserved animal bone - large pieces of bone relatively intact. Similar composition to (604275) apart from a slightly darker colour. Lots of gravel and charcoal in this fill - again v. similar to (604275) - possibly very similar process.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

fill of ditch. Very similar in composition to natural-line (604271) - very prominent edge collapse - suggesting some kind of bank that fell on N side of ditch that collapsed in? No finds in this fill, but very gravelly. This fill didn't extend very far in this slot - didn't come any close to the S edge of the ditch.

Fill (604276) of post-hole in roman house area

Fill consists in moderate compaction mid brownish orange silty clay with inclusions of occasional manganese from the natural (100003) and moderate charcoal and fired clay.

This fill is probably result of natural infilling of the post-hole in its desuse.

We took 50% sample (10L) cause we couldn't open it 100% because of the deadline.

Refer to context [604265]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604280) of grave cut (604281). This fill was a deliberate backfill to complete the burial of skeleton (604282). Finds - some pottery and glass - date unknown however it is likely that this is roman. Date - Roman. No evidence of Violation.

L.E. The pot found was hand made local pottery, possibly that the pot found was predating the grave. The fill is secondary a tertiary from the if they sacked the grave with the same material.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of burial [604281]. Contains burial pit (604280) and skeleton (604282). For more information regarding the skeleton please reference (604282). The cut of grave is quite shallow; this suggests that skeleton (604282) was buried in quite an unceremonious fashion. Date - Roman. Roman dating. The cut of the grave was shallow with an flat base, oval shape, with the eastern part of the pit (where torso and leg were found) a bit more wide.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Inhumation burial (604282). Skeleton of a child found, it's age has been estimated between 11 years and 6 years old, because the inhumation is closely located to the Roman Settlement it could be likely that the child was 7 years old or ^{older} younger. Date - Roman. The large part of the skull that is missing is likely due to damage during the initial machine strip of the area. The preservation of the skeleton was very poor with the hands, feet, and the left side of the ribs all being completely absent. The grave cut was quite shallow (604281) which could also indicate that the child was 7 years old or ^{older} younger; it seems the child was laid to rest in an unceremonious(?) fashion. No grave goods found. Some pottery and dark found within grave pit (604280) however it is unlikely that there is any direct relation to the burial. L.E. (TN). The juvenile was buried in an ~~an~~ crouched position, with the head orientated toward south west, on one side, looking south. An adult grave was found nearby. Probably, situated outside the sack of the Roman main enclosure ditch - SKETCHES

Fill (604283) of post-hole in roman house area

Fill consists in a moderate compaction mid brownish orange silty clay with inclusions of occasional small angular stones, occasional charcoal and manganese which comes from the natural ground.

We took 1 sample 10L to have ~~1000~~⁵⁰% excavated because of the deadline

Fill is probably result of natural infilling in its of the post-hole in its desuse.

Fill (604285) of post-hole in roman house area

Fill consists in moderate compaction mid brownish orange silty clay with inclusions of occasional manganese from the natural (100003)

We took samples, 50% (10 litres) cause we couldn't open it 100% because of the deadline

Refer to context [604286]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Horse skeleton deposited at base of ditch [604232]. The skeleton was oriented with its head to the North, laying on its left. The hind and forelimbs were met at the seat, due to its hind limbs being pushed forward, this did raise the suggestion of the animal being bled, however it is likely that this was due to the narrow ditch, causing the hind legs to be pushed forward in order to fit.

The Horse skeleton was severely complete, implying that it entered the ground whole with only its pelvis and right femur being notably missing, due to it being cut by gully [604234]. There is little evidence of modification of the ditch to accommodate the horse, implying that the horse was likely dumped in the ditch after going out of use, rather than the creation of a deliberate burial cut.

Cent of poss' ~~the~~ ^{pit} early IA pit. feature is masked by coluvium and was ~~not~~ discovered when excavating a large IA pit. The pit is situated in a cluster of large pits which appear to be located to the South and west of IA & RB settlement activity.

The feature is full of burnt & fire cracked stones (pot boilers). My first thoughts are that this might be a burnt mound/savina. Prior to excavation I discovered two frags of black crushed flint tempered pottery which suggested date 64/early IA.

the fill is ^{silty} clay and ~~appears to be~~ which suggests the feature was used to hold water and stones from fire were piled into the water/clay. or the pit was water storage and used as a dump for pot boilers entirely and ~~later back filled~~ ~~used~~ and waste from intense ~~of~~ pyrotechnic activity.

Fill of tree bowl [604298]. The silt is a very mixed composition, probably due to the rooting disturbance that had taken place within the silt.

The silt is very sterile with only a few stones being present as inclusions, showing that it is likely to have accumulated naturally.

No finds were recovered to date the accumulation of the silt, however it is cut by ditch [604232], which is dated to the late Iron Age, implying that it must have been infilled before this date.

Refer to context [604298]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of tree bowl containing a sole fill of naturally infilled material (604297).

The tree bowl is one of many in the area e.g. [604244], indicating a number of trees were present in the area previously. The full extent of the tree bowl is not known as it was not fully excavated.

The feature contained no finds to provide dating evidence, however it is cut by ditch [604232], which is believed to date to the Late Iron Age, implying it was infilled before this date.

Refer to context

(604297) & section cut through.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604301) of posthole (604302). No finds. Date - probably Roman due to close location to Roman settlement and Roman graves. Posthole (604302) is likely to be related to posthole (604306) to the S, and to posthole (604304) to the SE. The level of charcoal in this fill isn't high enough to indicate in situ burning.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS DARK GREYISH BROWN NATURAL INFILLING (G04311) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION. THIS FILL BELONGS TO THE GULLY [G04312] AND IS ITS ONLY FILL.

THIS NATURAL INFILLING (G04311) IS VISIBLE IN THE SOUTH FACING SECTION (D#63235) AND IN THE EAST FACING SECTION [D#63221]. IN THE LAST ONE WAS RECORDING THE TERMINUS OF A GULLY [G04312] BEFORE EXTENDED THE SLOT AND THE EAST FACING SECTION. THE FILL (G04311) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES.
- OCCASIONAL PRESENCE OF CHARCOAL AND CHALK FLAKES.
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES.
- OCCASIONAL PRESENCE OF BONE FRAGMENTS OF BIG AND MEDIUM ANIMALS.
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY FRAGMENTS LIKE A ^{BLACK} EARLY POTTERY RIM.

Refer to context (G04314) [G04312]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS NORTH - SOUTH RUNNING GULLY [604312] HAS A LINEAR SHAPE, STEEP SLOPING SIDES AND A CONCAVE BASE.

2'3 x 1'9

THIS FEATURE WAS RECORDED IN A 7 x 7'9 m SLOT AND WAS EXTENDED THE EAST SOUTH FACING SECTION UNTIL 4m.

THIS TERMINUS OF A GULLY IS FILLED BY ONLY ONE FILL, THE NATURAL INFILLING (604311).

THIS FEATURE WAS RECORDED LONGITUDINALLY IN THE EAST FACING SECTION (D# 63221) AND THE WIDTH OF THE GULLY IN THE EXTENDED SOUTH FACING SECTION (D# 63235).

THE SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THE CONSTRUCTION OF THIS FEATURE IS OF THE SAME PHASE (EARLY ROMAN) AS THE PIT [604316] AS WE CAN DATE IN ITS FILL (604311) WITH ITS EARLY ROMAN POTTERY.

Refer to context (604311) (604314)

THIS LIGHT GREYISH ORANGEISH BROWN NATURAL INFILLING DEPOSIT (604313) IS MODERATELY COMPACT AND HAS A CLAYEY SILT COMPOSITION.

THIS DEPOSIT (604313) IS SAME AS THE FEATURES (604209) ^{FEATURE} AND (604208) AS WE CAN CHECK IN THE DRAWING PLAN D#63183. ^{THIS DEPOSIT IS COMING BY (604312)} AND (604316).

~~WE~~ ^{LATER} IT WAS RECORDED IN A 2'3 x 1'9 m SLOT AND WAS EXTENDED THE SOUTH FACING SECTION UNTIL 4 m.

THIS DEPOSIT HAS THE FOLLOWING INCLUSIONS:

- FREQUENT PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES, GRAVEL AND PEBBLES
- OCCASIONAL PRESENCE OF CHALK FLAKES AND MARINE SHELLS.
- OCCASIONAL PRESENCE OF ROOT DISTURBANCES.

WE DIDN'T FIND ANY POTTERY TO DATE THIS DEPOSIT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS BROWNISH GREYISH BLACK NATURAL INFILLING (604314) IS MODERATELY COMPACT AND HAS CLAY COMPOSITION.

THIS NATURAL INFILLING (604314) BELONGS TO THE PIT [604316] AND IT IS ITS EARLIEST NEWEST FILL AS WE CAN SEE IN THE SOUTH AND WEST FACING SECTIONS (D#63235).

THE FILL (604314) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES.
- OCCASIONAL PRESENCE OF CHALK FLAKES
- MODERATE PRESENCE OF CHARCOAL, COULD BE THE REASON OF THIS DARK COLOUR OF THIS ^{AND ORGANIC} FILL.
- OCCASIONAL PRESENCE OF BONES FRAGMENTS OF BIG ANIMALS
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY FRAGMENTS LIKE ~~THREE~~ 3 BLACK POTTERY RIMS.

Refer to context (604311) [604312]

THIS GREYISH BLACK NATURAL INFILLING (604315) IS MODERATELY COMPACT AND HAS A CLAY COMPOSITION.

THIS NATURAL INFILLING (604315) BELONGS TO THE PIT [604316] AND IT IS ITS OLDEST FILL (PRIMARY FILL) AS WE CAN SEE IN THE SOUTH AND WEST FACING SECTIONS (D#63235).

WE DIDN'T KNOW THE THICKNESS OF THIS FILL DUE TO WE STOPPED TO DIG DEEPER AT 1 M DEEP. & THE WATER TABLE APPEARS AT 0'85 M DEEP.

THIS FILL (604315) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES
- OCCASIONAL PRESENCE OF CHALK FLAKES, ROOTS AND MARINE SHELLS
- OCCASIONAL PRESENCE OF ANIMAL BONES FRAGMENTS
- MODERATE PRESENCE OF CHARCOAL.
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY FRAGMENTS

THIS SUB-CIRCULAR SHAPE PIT [604316] HAS STEEP SLOPING SIDES AND A CONCAVE BASE.

THIS FEATURE WAS RECORDED IN A 2'3 X 1'9 M SLOT AND WAS EXTENDED THE SOUTH FACING SECTION UNTIL 4 M.

THIS PIT IS FILLED BY TWO BLACK AND ORGANIC NATURAL INFILLINGS: THE OLDER (604315) AND THE NEWER ONE (604314).

THE SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THE CONSTRUCTION OF THIS FEATURE IS OF THE SAME PHASE (EARLY ROMAN) AS THE GULLY [604312].

WE DIDN'T RECORD THE BASE OF THIS FEATURE BECAUSE IS UNDER 1 METRE DEEP.

LOOKS LIKE THAT THIS FEATURE WAS BUILT TO BE A WELL(?) IN THE EARLY ROMAN PERIOD.

Refer to context

(604311)
(604314)
(604312)

BACK FILL OF GRAVE [604318] MADE OF CLAY SILT MIXED WITH SOME LITTLE STONES. THE FILL WAS DARKER UNDERNEATH THE ^{LOWER} BODY, WITH AN HIGH PRESENCE OF CHARCOAL. ~~MANY~~ MULTIPLE SAMPLES WERE TAKEN IN DIFFERENT LOCATION OF THE GRAVE ITSELF.

FRAGMENTS OF POT (LATE IRON AGE, POSSIBLY) WERE FOUND, BUT SO TINY AND DEGRADED THAT THEY MIGHT HAVE BEEN PART OF THE SOIL USED FOR THE BACKFILL ~~OR~~ PREVIOUS THE CREATION OF THE BURIAL CUT. SAME GOES FOR THE FEW ANIMAL BONES - IN TINY FRAGMENTS - RETRIEVED FROM THE FILL.

THE FILL (AS THE SKELETON) ~~INTERFERED~~ WAS EFFECTED BY THE CONSTRUCTION OF THE XIX CENTURY LAND DRAIN.

CUT OF GRAVE WITH CURVILINEAR ~~SHAPE~~, QUITE IRREGULAR SHAPE. THE GRAVE IS SHALLOWER WHERE THE HEAD WAS LAIN, WITH A PRESERVED DEPTH OF CIRCA 0.10 m, AND GENTLY SLOPING SIDES, IT BECOMES DEEPER WHERE THE REST OF THE BODY LAY, IN A CROUCHED POSITION ON ~~THE~~ THE LEFT SIDE, WITH STEEP SIDES. THE WIDTH OF THE CUT IS ~~NO~~ UNDER 0.50 m, WIDENING IN THE AREA RESERVED TO THE LEGS. ORIENTATION IS E-W WITH THE HEAD OF THE BODY LOCATED EAST.

APPARENTLY

THE GRAVE WAS ~~WICKED~~ BY A LATER POST-HOLE [604293], BUT JUST AT W ~~EDGE~~ ~~NO AND THE GRAVE~~ AND FOR A FEW CENTIMETRES. ~~GRAVE~~

MUCH LATER THE XIX CENT. LAND DRAIN ~~TRUNCATED~~ ~~SEPARATED~~ THE BURIAL, EFFECTIVELY SEPARATING THE HEAD AND SHOULDERS OF THE SKELETON FROM THE REST OF THE BODY - SEE CONTEXT (604319) FOR INFO.

THE GRAVE WAS ALSO EFFECTED BY THE STRIPPING OF THE AREA BY MACHINE PREVIOUS ~~EXCAVATION~~.

A SECOND GRAVE WAS FOUND NEARBY, BELONGING TO ~~THE~~ ^A CHILD, ~~THE~~ REMAINS TO BE SEEN IF BOTH BURIALS WERE PART OF A GRAVEYARD - IRON AGE / EARLY

ROMAN TIMES ERA

Refer to context (604319)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

LOCATION OF ~~SKULL~~ YOUNG ADULT MALE. THE SKELETON WAS EFFECTED BY ^{AS THE GRAVE} LATER EVENTS, ESPECIALLY THE CONSTRUCTION OF A LAND DRAIN (XIX CENT.) THAT TRUNCATED AND DESTROYED THE UPPER PART OF UPPER BODY - PART OF THE RIBCAGE AND SPINE, BOTH ARMS, RIGHT SHOULDER AND LEFT HAND WERE LOST. THE MACHINING PREVIOUS EXCAVATION ALSO EFFECTED THE SKELETON, CUTTING AWAY THE RIGHT SIDE OF THE SKULL, AND ~~THE RIGHT~~ THE BODY WAS IN A CROUCHED POSITION, LAYING ON HIS LEFT SIDE, LEFT FOOT AND ANKLE UNDER THE RIGHT LEG, BOTH ARMS BENT AT THE ELBOW, THE RIGHT HAND ~~AND~~ IN FRONT OF THE CHEST.

THE PHOTOGRAMMETRY OF THE GRAVE WITH THE SKELETON WAS DONE, AND LEVELS ON ~~RECORD~~ TARGET POINTS OF THE BONES WERE SURVEYED (SEE SKETCH BELOW)

REF. (604322)

THIS IS THE ONLY ONE WHO WAS FOUND WITH AN ALMOST COMPLETE
~~POSSIBLE~~ VASE ON THE TOP OF IT. IT PROBABLY BE PART OF THE STRUCTURE,
 IT'S CLEAR TO SEE A KIND OF PREPARATION BELOW THE VASE TO
 FIX IT AND CREATE A STABLE BASE. PROBABLY THE CENTER PILLAR
 WAS TOO SHORT. OR OCCUPIED A BIT IN THE BASE OF THE KILN AND
 IT WAS NECESSARY THIS SOLUTION (APPARENTLY NOT UNUSUAL IN THIS KIND OF
 KILN).

of Terminus [604328]. Similar in size and depth to slot [604021]. A kiln to the NE approx 4.6m away. This is the terminus of a probable ring ditch/gully (as it's fairly shallow - but this could be due to the machining level or ground level). The other terminus quite possibly ends in or near the kiln - but it is currently being excavated. The width is approximate as the other half has not been excavated.

Fill of ring-gully/ring ditch. Fairly similar to fill of (604020).
No ~~fill~~ ^{rocks} and only a few inclusions - small to medium
stones + manganese - very similar to natural. Probably
went out of use + then naturally unfilled

Refer to context [604328]

Cut away kiln central chamber. The kiln was cut contemporaneously with its adjacent stoke-hole [604354]. The kiln was then lined with red clay to create a glaze and outer wall lining. However there is no evidence surviving for the glaze of the kiln being lined with red clay, unlike other kilns in the area. This was The sides were then reinforced with black clay (604448), before pillars were erected as supports for the pottery. A single kiln bar (604409) was also recovered, presumably also used to support pottery when firing. It is not known whether ridge kiln bars were originally present, however kiln [604333] has one loss pillar like the nearby kiln to the east, possibly indicating that the kiln bar was created as a replacement for the missing 8th pillar.

A burnt waste deposit is present in the kiln (604352), before the kiln went out of use and was deliberately backfilled with (604351). This fill also contained pottery, dating the kiln to the Romano-British period. The kiln is an area of high activity including the presence of a number of other kilns. This may imply an intensively used industrial area during the Romano-British period.

Fill (604334) of a pit in the "Roman House Area"

Fill consists in a moderate compaction of dark brownish grey silty clay with inclusions of moderate small to medium angular stones, fired clay and animal bone.

This fill had a cow leg which is in bulk and some small animal bone, most likely from cheep. This fill ~~ear~~ had inclusions of occasional chalk and black and red pottery, most likely roman pottery.

This fill is probably the result of natural infilling of the pit in its desuse.

Refer to context (604335) [604336]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604335) of pit [604336] in "Roman house area"

Fill consists in a moderately compact mid brownish orange gravelly silt with inclusions of occasional medium to big angular stones.

We didn't find any pottery or animal bone, but the color of the fill was darker than the natural (100003) so we are sure is not overcut.

This fill is most likely the result of infilling of the pit in its desuse.

Cut [604336] of pit in "Roman House Area"

The shape of this pit is as usual, with moderate sloping sides, with a concave base and with a circular shape.

Nothing to add.

Regarding location, it's ~~near~~ next to other pit and cut is E-W orientated.

This cut is probably the result of design in a construction basic process.

Refer to context

(604334)
(604335)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604337) of pit [604339] in the "Roman House Area"

Fill consists in moderate compaction of dark brownish grey with silty clay with inclusions of frequent big angular stones and moderate charcoal.

We found some pottery, most likely from Roman period, which has been put into bulks.

This fill is probably the result of natural infilling of the pit in its desuse.

Refer to context (604338)

Fill (604338) of a pit [604339]

Fill consists in a moderately compact mid brownish orange gravelly silt with inclusions of occasional challs and frequent medium to big angular stones, especially on the sides.

We didn't find any pott or bone in this fill but its darker than the natural which has frequent manganese and is more orange. That's why we think is not overcut.

This fill is most likely the result of natural infilling of the pit in its desuse.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut [604339] of pit in the "Roman House Area".

We thought it could be a empty grave, cause the pit had the same shape of the grave next to it [604318]. But it's not that deep so it's most likely a pit.

The shape is common, with moderate sloping sides and a concave base.

This shape is most likely result of design in a construction basic process.

Refer to context

CUT OF DITCH [604343] THE DITCH IS EXTENDS MORE OR LESS ON THE N-S AXIS AND CONTAINS THREE FILLS. *ALL FILLS CONTAINED IRON AGE POTTERY, POSSIBLY FROM ROMAN PERIOD. THE EDGES OF THIS FEATURE ON THE SURFACE ARE ENOUGH GOOD VISIBLE.

* ARCHAEOLOGIST IS UNSURE WHETHER THE POTTERY FOUND IN ALL THREE FILLS OF THE DITCH IS IA OR ROMAN. HE IS LEANING TOWARDS ~~THE~~ THE FORMER, HOWEVER, IT IS NOT TOO CLEAR.

Refer to context 604343

Fill (604344) of pit [604346]

Fill consists in moderate compaction of dark greyish brown silty clay with inclusions of occasional charcoal.

We found a small animal bone and roman pottery which are in bulks.

Fill is most likely the result of natural infilling of the pit in its desuse.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604345) of pit [604346]

Fill consists in a moderately compact mid brownish orange gravelly silt with inclusions of moderate fired clay, frequent small to big angular stones and occasional pottery (most likely roman pottery)

This fill is probably result of a natural infilling of the pit in its desuse.

Refer to context

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [604346] of pit in a ~~st~~ slot excavated in order to determine relationship with the roundhouse next to it. The pre-ex was wrong, there's not direct relationship with the ~~g~~ roundhouse gully.

The slot is 1.45m length cause we did overcut to make sure there was nothing in there.

The shape of the ~~cut of~~ pit's cut is W-E orientated and it has moderate sloping sides and a concave base.

The cut is probably the result of design in a basic construction process.

Refer to context (604344)

SKETCHES

Fill (604349) of posthole [604350]

Light orangish/grey fill.

Very little - no charcoal

Very small amount of manganese

No bone

No stone/litrics

One sherd of Pot rim. - Dark/black but quite finely made

- small inclusions in the temper = not early Iron Age

- Roman? Saxon?

Refer to context [604350]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of posthole [604350]

Small oval posthole.

Shallow - 0.07 m. deep

4-5 m from ditch relationship [604244]

5-6 m from ditch relationship [604101]

1 m from elongated pit - yet to be excavated.

Within boundary ditch area.

Refer to context (604349)

Fill of kiln central chamber. The silt comprises of dark grey silt with charcoal being commonly found. Finds from the silt include large amounts of pottery. The pottery was black or grey in colour, as seen as large body sherds from larger vessels such as jars, dating the silt to the 1st or 2nd century AD, dating the silt to the Romano-British period.

CBM was also commonly found in the silt, possibly remains of collapsed living or kiln furniture that had degraded.

Due to the large amounts of silt in the silt, and its dark charcoal composition, it is likely that the silt represents a dumped layer after going out of use. This may have been waste from the kiln, mixed with elements of the kiln's degradation and its silt string e.g. charcoal and CBM.

6101842 → 847 6101869

Deposit of black silt, very high in charcoal content. It is present in the more southerly area of the kiln central chamber, however it is absent around its most northern extent. Similarly, the gill is present in the stake-holes most northerly extent [604354] however is absent in the section further south [604357]. The gill appears to be predominantly located in the glue area of the structure, with it extending out the other side. Due to its location and high levels of charcoal, the deposit is likely to represent rake-out and remains of the fire that sat in the glue. This may possibly represent the last episode of the kiln's firing, where after the fire burnt out, it was not fully cleared leaving a large spike in the layer under the glue.

The gill stretches across both the stake-hole and the kiln central chamber. No finds were recovered from the deposit to date the ~~gill~~ deposit's context, however the kiln was believed to be in use during the Romano-British

The gill comprises a mixed gill limited to the ota kelohle area of the kila structure, overlying the wage deposit of (604352). The gill contained no gills, however in the area of the gill number (604356) some CBM and pottery were recovered. The pottery is believed to date the gill to the Romano-British period.

Due to the lack of human activity in the soil, the soil is likely to have accumulated naturally, with human occupation contributing markedly by the presence of charcoal and small amounts of pottery.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of stoke-hole. The same cut as [604357], please see [604357] for further information. The stoke-hole is shallower and narrower than other kilns in the area (see plan), with a deep, steep sided area nearer the gley, sloping upwards towards its southern edge.

The stokehole would have been cut at the same time as the kiln central chamber [604333], and used to rake-out the kiln and gley.

A rake-out deposit is seen in the (604352) deposit at the bottom of the stoke-hole. This was accumulated throughout the kiln's usage. After going out of use the stoke-hole began to naturally infill creating gill (604353).

This gill contained pottery dating the feature to the Romano-British period.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Clay lining of kiln [604333]. The lining would have been the initial phase of construction of the kiln, surrounding some of the edge of the kiln, and creating an archway to form a flue, before being reinforced with black CBM (604448).

The best preserved and thickest area of the lining is the glaze, however it may have also been present on the floor of the kiln.

Small patches of it are seen under the kiln pillars, and showing it may have been present across the floor of the structure elsewhere, but it did not survive.

Furthermore, there is evidence of the red clay on the walls of the kiln however it is thinly applied and does not survive as well as in other kilns in the area.

610773 6101812 6101869
6101806-209 6101842

Final episode of infilling, of stokehole [604357]. The silt is composed of silt with occasional stone inclusions. Charcoal was also present, slightly more common than in the silt of the gully it cuts through (604358), however far less common than in other sills of the kiln/stokehole structure, indicating that the silt was unlikely to have accumulated during the kilns period of usage.

Finds from the silt & gill included thin black ware, black pottery, believed to be Romano-British in date, and small amounts of CBM.

However compared to sills of stokeholes in other kilns e.g. [104780], pottery and finds were uncommon. This may indicate that the silt represents a natural accumulation after the kiln stopped going out of use.

Some sandy/gravelly patches are also seen in the silt, indicating a mix of the surrounding natural and subsoils comprising the silt.

Same as (604353), please see (604353) for further information. Sampled as (604353) SH 10849

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cutting stakehole attached to kiln [604333]. Although no relationship can be seen in section between the stakehole and kiln, due to their functions, they have been presumed to have been cut at the same time. Same as [604354], please see for further information.

The cut is an oval shape, with an almost flat end furthest from the kiln central chamber. The end furthest from the kiln chamber is shallow and gently sloped, with however the sides get steeper and deeper as the cut approaches the glaze. This may have been due to the activity e.g. raking out the glaze and kiln, taken took place at this end of the stakehole, causing the sides to erode to become steeper.

In this section, the stakehole cuts a ring gully [604359], which terminates shortly after reaching the stakehole. The gully is believed to be dated to the late Iron Age, showing that the stakehole must have been created after this date. This evidence is reinforced by the pit of the stakehole [604356] which held pottery believed to date to the Romano-British period.

Refer to context (604356) for section 1

Fill of ring gully. The gill comprises of a mixed silt clayey silt gill. ~~Other~~ Inclusions in the gill include stone, charcoal and bone. The bone recovered represents a small fragment of possible animal bone, no other bone was recovered.

The mixed nature of the gill indicates that it was likely to have accumulated through a natural process of settling and mixing with the natural over a long period of time. Charcoal was present, indicating some human activity however, only in small amounts.

The full extent of the gill is unknown due to it being cut by stakehole [604357], however it is likely to have spread soon after due to the ring gully terminating in the stake-hole.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of curvilinear ring gully. The gully contains a sole sill of (604353), which comprised of laterally installed mixed clayey silt. A sole sill of a small bone segment was found, however no pottery was recovered to date the feature.

However other slots through the feature did contain pottery, believed to date the feature to the Late Iron Age.

This dating evidence is also backed up by its relationship with hole (604357), which cuts the gully. As the hole is believed to be Romano-British in date, it is likely that the gully must have been backfilled before this date.

The gully deepens slightly towards its eastern edge, before rising up this is believed to be the terminus of the gully.

The gully may have been for a roundhouse due to it being a perfect circle, however the entrance way is very large leaving open the possibility of it acting as an enclosure as well.

Please note that after further excavation, a trench was discovered

separating it from the main gully, however due to its shallow nature, this may be solely

One of 7 pillars forming the construction of kln [604333]. The (604360) is the most North-Easterly pillar in the central row of 3, furthest from the Flue.

The pillar was assigned the small grid number 10408.

The pillar is formed of solid CBM which is black in colour, and is ~~dec~~ square in profile.

Some trace of red clay was found under some of the pillars implying that they were laid on a kln lining, however little evidence of the kln lining on the floor survived.

The pillars would have been used to support pottery during the firing process, through a grid rested on the top of the pillars.

The tops of the pillars do not survive, however, in nearby kln [604159] they resemble an upturned pedestal base.

(any further details that may be important for understanding the context, including items marked * overleaf)

Construction of a kiln Pillar. Please see (604360) for further information on the kiln pillars.

(604361) is located in the very centre of the kiln, with the other 6 pillars encircling it.

The pillar is constructed of solid CBM and would have been used to support pottery which was being fired.

~~(604361) was also connected to kiln bar (604409) which ran~~

(604361) was also connected to kiln bar (604409), which ran from the pillar to the eastern edge of the kiln.

Others may have existed previously, however they did not survive

For photo's please PTO.

One of 7 pillars forming the interior structure of kiln [604333].
* Please see the context sheet of pillar (604360) for further information.
(604362) is the most southeasterly pillar. As with the other pillars, it has a square profile. The pillar is leaning against the south-east edge of the kiln, presumably due to the deterioration of the pillar rather than its original position.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Deposit of one of 7 pillars forming the internal structure of kiln [604333]. Please see pillar (604360) for further information.

(604363) is the most south easterly pillar, slanting to the south/east resting against the black lining of the kiln, in a similar way to (604362). This may have been due to the degradation of the pillar or the dumping of backfill (604351) rather than the pillars original position.

The pillar is square in profile and has a small gird number of 104101

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

One of 7 pillars forming the kiln's internal structure.

Please see pillar (604360) for further information.

(604364) is the most westerly pillar in the central formation of 3. It is one of the largest pillars, and is square in outline. It is constructed of black CBM and would have been used to support pottery during the firing process.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THE FILL (604371) WAS VERY RICH OF CHARCOAL AND black. There were a little piece of burn animal bones. The clay was pure and mixed to the charcoal. Together they have been in the water for a long time, because ITS composition was similar to glue. This fill covered the fill (604370). Yet despite its many characteristics, The pit doesn't seem in situ burning.

Refer to context [634369]

Fill (604372) in the roundhouse gully [604375]

Fill consists in a loose dark greyish brown sandy silty with inclusions of frequent CBM, most likely as result of destruction debris.

Fill is really thin and it's not in the whole slot but just being part of the SE-~~NW~~ facing of the gully. See (604373) as reference.

We took samples (10L) with n° 10853.

Refer to context (604373)

SKETCHES

Fill (604373) of roundhouse gully [604375]

Fill consists in a moderately compact dark brownish grey silty clay with inclusions of frequent charcoal moderately fired clay and moderate pottery. We found small to medium animal bone and red and black pottery in this fill, which is most likely the result of natural infilling of the gully in its desuse.

We took 3 samples (30L) with n° 10854.

Refer to context (604372)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604374) of Roundhouse gully [604375]

Fill consists in a moderate compaction of mid greyish brown gravelly silt with inclusions of occasional small to medium angular stones and snail shells. It has inclusions of occasional red and black pottery and moderate small to medium animal bone. Both of them in bulks.

This fill has a lot of inclusions of gravel, which probably comes from the natural (100003). This fill is most likely result of natural infilling of the gully in its desuse.

Cut [604375] of Roundhouse gully

The cut is NW-SE orientated, with moderate sloping sides and a concave base.

~~There's~~ There's not so much to say. The depth is common in roundhouse's gullies.

The cut is most likely the result of design in a construction basic process.

Refer to context (604372)
(604373)

Cut of posthole [604377]

Small, steep-sided posthole.

Possibly had the post wiggled out as one end is 'stretched'

Close to [604347] - another, larger, posthole.

Otherwise it is isolated.

SKETCHES

Refer to context (604376)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS DARK GREYISH BROWN NATURAL INFILLING (604378) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS NATURAL INFILLING (604378) BELONGS TO THE DITCH [604380] AND IT IS ITS NEWER FILL AS WE CAN SEE IN THE SOUTH AND WEST FACING SECTIONS (D#63235).

THIS FILL HAS DARKER COLOURS SO IT IS SO MUCH DIFFERENT FROM THE OLDER FILL OF THE DITCH (604379). DUE TO THE CHARCOAL AND OTHER ORGANIC ELEMENTS THIS FILL (604378) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL ~~SUB~~ SMALL AND MEDIUM SUB-ANGULAR STONES.
- OCCASIONAL PRESENCE OF CHARCOAL AND CHALK FLAKES.
- OCCASIONAL PRESENCE OF ROOTS DISTURBANCES
- OCCASIONAL PRESENCE OF BONE FRAGMENTS OF BIG ANIMALS.
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY FRAGMENTS

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID BROWNISH GREY NATURAL INFILLING (604379) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS NATURAL INFILLING (604379) BELONGS TO THE DITCH [604380] AND IT IS ITS OLDER FILL AS WE CAN SEE IN THE SOUTH AND WEST FACING SECTIONS (D# 63235).

THIS FILL ~~HAS~~ IS NOT AS DARKEN IN COLOUR ~~SO~~ AS THE LATER FILL (604378) IS.

THIS FILL (604379) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF CHALK FLAKES.
- OCCASIONAL PRESENCE OF CHARCOAL
- OCCASIONAL PRESENCE OF BONES FRAGMENTS OF BIG ANIMALS LIKE 3 ~~BEE~~ JAWS.
- MODERATE PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES.
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY FRAGMENTS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS NORTH EAST - SOUTH WEST RUNNING DITCH [604380] HAS A LINEAR SHAPE, STEEP SLOPING SIDES AND A CONCAVE BASE.

THIS FEATURE WAS RECORDED IN A 2'3 X 1'9 M SLOT AND WAS EXTENDED THE SOUTH FACING SECTION ~~TO~~ UNTIL 4 M.

THIS ~~FEATURE~~ DITCH IS FILLED BY TWO NATURAL INFILLINGS: (604378) AND (604379) ^{THAT ARE} SO DIFFERENT BETWEEN THEM IN COLOUR.

THIS FEATURE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THIS FEATURE WAS RECORDED LONGITUDINALLY IN THE WEST FACING SECTION AND THE HALF OF ITS WIDTH IS VISIBLE IN THE NORTH FACING SECTION (D# 63235).

THIS FEATURE BELONGS TO THE ENCLOSURE THAT IS SLIGHTLY TURNING. THE DITCH IS CUT BY THE PIT [604316] AND IS CUTTING THE DEPOSIT (604313) AND THE PIT [604385]

THIS SUB-CIRCULAR SHAPE PIT [604385] HAS GENTLE SLOPING SIDES AND A CONCAVE BASE. THIS FEATURE WAS RECORDED IN A 2'3 x 1'9" SLOTT AND WAS EXTENDED THE SOUTH FACING SECTION UNTIL 4M.

THIS FILL IS FILLED BY FOUR NATURAL INFILLINGS: (604381), (604382), (604383) AND (604384). THE SHAPE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THE CONSTRUCTION OF THIS FEATURE IS OF A DIFFERENT PHASE OF THE GULLY [604312], [604316]^{PIT} AND THE DITCH [604380].

FOR THE POTTERY THAT WE FOUND IN FILLS OF THIS FEATURE LIKE (604383) WE CAN DATE THIS PIT IN AN IRON AGE CHRONOLOGY.

THIS FILL IS CUT BY THE DITCH [604380] AND THE PIT [604316]

MODERATELY COMPACT DARK GREY FILL OF DITCH; THIS FILL IS 0.44m THICK AND IT HAS A ~~QUARTZITE~~ CLAY COMPOSITION. IN THIS FILL THERE ARE: VERY OCCASIONAL LITTLE STONES, MODERATE CHARCOAL, FREQUENT ANIMAL BONES (DIAGNOSTIC AND NOT DIAGNOSTIC FRAGMENTS) ~~THREE~~ 3 FRAGMENTS OF ROMAN POTTERY. THE MODERATE PRESENCE OF CHARCOAL AND THE FREQUENT PRESENCE OF ANIMAL BONES SUGGEST A DELIBERATE BACKFILL LIKE A INTERPRETATION. THE POTTERY SUGGESTS, ~~INSTEAD~~ A GENERAL CHRONOLOGY REFERRED TO ROMAN PERIOD.

Refer to context [604386]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF CUT [60448] MADE OF DARK BROWN/GREY SOIL, RICH OF CHARCOAL, MIXED, ESPECIALLY CLOSE TO THE BOTTOM WITH LIGHTER CLAY POSSIBLY BECAUSE OF ROOTING.

LARGE FRAGMENTS OF ANIMAL BONES WERE FOUND, WELL PRESERVED, A FRAGMENTS OF POTTERY WERE ALSO FOUND, ONE OF THEM, IN PARTICULAR, BELONGING TO A ROMAN COOKING POT.

A SMALL OBJECT IN BRONZE WAS RETRIEVED VERY CLOSE TO THE SECTION (AND THE SMALL AREA WAS SIFTED): IT PRESENTS TWO SMALL HOLES IN EITHER END WHICH SUGGEST THAT IT WAS POSSIBLY ATTACHED TO SOMETHING ELSE, MAYBE A WOODEN OBJECT SINCE AS TRACES OF BURNED WOOD IN A CIRCULAR SHAPE WERE IDENTIFIED CLOSE TO THE SECTION AS WELL. SEE SKETCH BELOW.

FILL OF DITCH [604395] MADE OF CLAY MIXED WITH SILT AND SAND. OCCASIONAL LITTLE STONES AND GRAVEL, EVIDENT SIGNS OF ROOTING, SOME CHARWAL. ITS BRIGHT COLOUR AND OVERALL SIMILARITY TO CUT GEOLOGY SUGGEST THAT THE LAYER IS THE PROCESS OF NATURAL MATERIAL INFILLING AN ABANDONED FEATURE.

THE FILL WAS LATER CUT BY POSTHOLE [604392] AND GULLY [604418], A RESULT OF THE DITCH ITSELF.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

TOP FILL OF DITCH [604398] MADE OF SILTY CLAY AND RICH IN BOTH CHARCOAL AND CHALK. MANY FRAGMENTS OF ANIMAL BONES WERE FOUND, SOME OF ~~LARGE~~ QUITE WELL PRESERVED, SOME GB7 WAS FOUND AND A FRAGMENT OF POT.

GIVEN ITS ORGANIC NATURE IT IS POSSIBLE TO INTERPRET THE ~~QUANTUM~~ FILL AS A DUMPED LAYER.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF ROUGHLY "V" SHAPED DITCH RUNNING N-S IN THE NORTHERN PART OF SITE. ITS NORTH TERMINUS HAS BEEN IDENTIFIED AND A SLOT HAS BEEN DUG TO UNDERSTAND THE RELATIONSHIP BETWEEN THE DITCH ITSELF AND A NUMBER OF CLOSE BY FEATURES. ~~THE DITCH ITSELF IS A V-SHAPED DITCH~~

THE SOUTHERN SECTION OF THE EXCAVATED SLOT SHOWS THAT [604398] CUTS AN OLDER GULLY [604400] WHILE THE NORTHERN SECTION SHOWS THE [604398] WAS IN TURN CUT VERY CLOSE TO THE EDGE BY A LATER POSTHOLE [604392].

THE CUT ITSELF HAS STEEP SIDES AND A NARROW, CONCAVE BASE, WHICH BECAME EVEN NARROWER TOWARDS SOUTH. GIVEN THE STRATIGRAPHY AND SOME OF THE MATERIALS FOUND IN ITS PRIMARY FILL, DITCH [604398] IS THE SECOND MOST ANCIENT FEATURE OF THE SMALL CLUSTER OF ARCHAEOLOGICAL FEATURES DOCUMENTED BY THE EXCAVATED SLOT, ITS ORIGIN POSSIBLY GOING BACK TO THE BRONZE AGE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF NARROW AND SHALLOW GULLY TRUNCATED BY LATER FEATURES.

THE SLOT IDENTIFIED TWO POINTS IN WHICH THIS HAPPENED, ONE IN THE S SECTION OF THE SLOT, WHERE THE FEATURE IS CUT BY DITCH [604398], AND THE OTHER IN THE SE SECTION, WHERE THE GULLY IS CUT BY DITCH [604395] - ~~MINOR~~ REFER TO CONTEXT SHEET [604412] FOR YC25.

IT IS NOT CLEAR WHERE THE GULLY ENDED AS ITS TERMINUS WAS NOT FOUND BEYOND THE EDGES OF LATER FEATURES, WHICH MEANS THAT IT WAS OBLITERATED BY SAID FEATURES.

SAME AS [604412]

Fill (604403) of pit [604404]. Finds - One single animal bone fragment, and one small find (a part of a Flint Core which has possibly been worked into a tool). Date - ~~Probably Iron Age~~, although this is ~~unknown~~ as there were no datable finds within this fill. Pit [604404] is cut by trench [604402] and ditch [604406]. Original use unknown. Date - probably Bronze Age, although this is unknown due to no datable finds within fill (604403). Due to lack of material found and divisions cut this feature could be a natural feature / fill of the landscape.

Refer to context [604402]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of pit [604404]. Date - Probably Iron Age, although this is unknown as there are no datable finds within this pit. Single pit (604403). Original use - unknown. Pit [604404] is cut by burrow [604402] and ditch [604406]. Date - probably Bronze Age, although this is unknown as there were no datable finds within pit (604404). Due to lack of material found and dubious cut this feature could be a natural feature / fill of the landscape

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (604405) of ditch (604406). Finds - Some occasional fragments of animal bone found and one small find (a piece of stone hint that could also be a worked tool). Ditch cuts pits (604408) and (604404). Iron Age looking pot found within fill. Date - potentially Iron Age based upon the pottery found within fill (604405).

Checked by **CC**

Kiln bar forming part of the internal structure of kiln [604333].

The kiln bar has a round cross section and is made of black CSM. It stretches from the central pillar (604361) to the eastern edge of the kiln. It may have originally been attached to pillar (604361) and the wall, to support a grid to allow pottery to sit on and be supported during the firing process.

Only one kiln bar was recovered, although it could be possible that others existed, it also may have acted as a replacement pillar due to the kiln having one less pillar than the kiln just to the east [604154].

FILL OF CUT [604414]. ~~MINOR~~ THE FEATURE IS TRUNCATED BY LATER DITCH [604395]. FILL (604413) IS VERY SIMILAR TO (604394) IN COLOUR, COMPACTION, AND COMPOSITION, WITH EVIDENT SIGNS OF ROOTING. TRACES OF CHARCOAL WERE FOUND, BUT NO ARCHAEOLOGICAL FINDS. (604413) IS VERY POSSIBLY THE RESULT OF NATURAL MATERIAL INFILLING AN ABANDONED FEATURE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF SHALLOW FEATURE LOCATED IMMEDIATELY EAST OF [604418] AND CUT BY IT IN SUCH A WAY THAT IT IS NOW IMPOSSIBLE TO RECREATE THE ORIGINAL PROFILE. THE FEATURE IS VERY VISIBLE FROM THE SURFACE, AND SEEMS TO HAVE A SUB CIRCULAR SHAPE, BUT IT'S VERY DIFFICULT TO DISTINGUISH IN SECTION, AS, IN PARTICULAR, ITS FILL, IS VERY SIMILAR TO THE ONE THE FEATURE CUT'S (FILL (604394)).

GIVEN THE SUB CIRCULAR SHAPE, IT MIGHT BE ARGUED THAT THE FEATURE ~~IS~~ MIGHT BE A POSTHOLE, ALTHOUGH ITS SHALLOWNESS MIGHT BE AN ARGUMENT AGAINST THIS INTERPRETATION.

PRIMARY FILL OF DITCH [604398] LYING OVER THE BASE OF THE CUT IN THE AREA WHERE THE TERMINUS IS LOCATED. THE FILL HAS BEEN IDENTIFIED THROUGH OUT 2/3 OF THE TOTAL LENGTH OF THE SLOT.

MADE OF BRIGHT, YELLOWISH CLAY, MIXED WITH SAND AND ~~AS~~ SOME STONES CLOSE TO THE BOTTOM, THE LAYER ~~MAKING~~ ~~TO~~ ~~THE~~ HAS ~~SEVERAL~~ RARE TRACES OF CHARCOAL, WHILE QUITE SIZEABLE ARE THE QUANTITIES OF POTTERY AND A BONES RETRIEVED. IN PARTICULAR, THE SKULL OF A ~~SMALL~~ MIDDLE SIZED DOG, VERY WELL PRESERVED AND SOME VERY LARGE FRAGMENTS OF POTTERY VASES, ASSOCIATED WITH ANIMAL BONES. ~~AND~~ THESE FRAGMENTS SUGGEST A DATE FOR THE FORMATION OF THE FILL DURING THE IRON AGE. ~~AND~~

CUT OF A NARROW DITCH MAYBE MORE PROPERLY A ~~GULLY~~ GULLY WHICH
 RETRACES ALMOST PERFECTLY AN OLDER DITCH [604395], WITH A
 CONSIDERABLY SMALLER WIDTH. STEEP SIDES CURVE INTO A CONCAVE
 BASE,

CONTRARY TO ITS DIRECT PREDECESSOR, DITCH [604418] IS NOT CUT
 BY THE ~~NARROW~~ ^{NEARBY} POSTHOLE [604392], LEAVING THE QUESTION OF ~~WHICH~~
 WHICH FEATURE IS THE OLDEST OPEN. THE FEATURE CUTS INSTEAD AN OLDER
 FEATURE, [604414], BARELY VISIBLE IN SECTION BUT EASILY SPOTTED
 ON THE SURFACE, ALTHOUGH ITS INTERPRETATION IS UNCLEAR.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

DURING THE EXCAVATION of features [604419] [604421] [604423] I have realized that they were very similar for composition, confidence and layer sequence. INSIDE THE PIT [604421] I could see that the STONES ON THE BOTTOM were not casual but were packing. Moreover none of the features have a clear cut of natural (100003). In fact we distinguish by the different colors (as though though they were deposits of more recent age). Not far from these features emerged one semi circular design. When I see its shape immediately I thought at circular hut or a circular structure. Any way IS POSSIBLE that they have an unrelated likeness? The three features are deposits over the hut? Or are the fills of the hut?

THE FILL (604422) WAS A RICH LAYER of charcoal and
BURNT ANIMAL BONES. IT WAS VERY dark and clayey.
IT COVERS THE FILL (604443); (604444).
IS NOT clear if it was a fill inside a probable
CIRCULAR STRUCTURE or if it was a usual FILL ON
THE PIT.
SEE CONTEXT SHEET [604421] for more info.

Cut of gully. This gully was thought to be a continuation of C604427 curving around but this slot has proven that they are two different features. This gully doesn't seem to go anywhere over from any further - but could have just been dug through by one of the other ditches. Very shallow gully - deeper in the other slot (C604178), but not much deeper. The lack of depth could be down to overmachining, or change in topography. There are two kilns close by, one to the SE of this slot, and the other to the ~~SE~~ E.

-this gully has a

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of shallow gully. Few inclusions - just some small stones and a moderate amount of pottery - fairly fine with small amount of simple decoration on it - possibly Roman, but could be late Iron Age - if it was Roman that would make the relationships in this area wrong. Very shallow gully, with a fairly grey fill - not natural infilling as the natural is fairly gravelly.

Refer to context [604425] - plan
[604428] - matrix

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch. This ditch is assumed to be the E to West ditch, cut by the ring ditch / gully. Also This ditch continues on past where the ring gully possibly terminates.

- Upon further cleaning the ring gully must terminate somewhere in the cut of this ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch - could be a ~~very small~~ gully, but probably too deep for that. Some fine orange pot with decoration on it found in the E side of this fill, towards the top -> but this pottery was also found in the fill of [604425] -> so ~~could be~~ assumed that this pottery comes from (604426) and was displaced into (604428) when [604427] was dug. One small rim of pottery found in this fill and some fragments of animal bone + teeth - one piece in section. Fair amount of charcoal in this fill too - quite possibly some kind of cooking waste dumped into this ditch to fill it up?

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

In the area of a large ditch running from NW to SE [604487] we discovered a number of overlapping Pits and Gullies. In order to get a clearer picture of the nature of the features discovered we started investigating a gully that joins into a large pit with several different fills visible in plan on the south-eastern side of the large ditch above.

The pit has received context number [604429] and its most visible feature is a patch of dark material with bone, pottery and charcoal, which is the top fill of the pit and received number [604430].

Beneath this fill we identified 2 other fills of greyish-brown clayey silt which slightly differ in the frequency of stone-inclusions.

The gully [604433] is cut by the pit and contains rather homogeneous greyish-brown material in one fill.

The only fill containing signs of human activity is the dark fill [604430].

Refer to context (604430)

(604430) is the top fill of pit [604429]. It fills the center area of the excavated section ~~in a~~ and is only about 5 to 10 cm deep. While cleaning the surface a piece of coarse, black pottery as well as a bone and a large animal molar was uncovered. The molar is very well preserved, almost petrified ~~and~~ (very solid). The matrix is a dark brownish grey, charcoal rich clayey silt. A deliberate back fill of a pit with waste is the most likely explanation of this fill.

Refer to context [604429] for plan

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

A blank sheet of graph paper featuring a uniform grid of small black dots spaced evenly across the page. The dots are arranged in approximately 20 rows and 20 columns, forming a square pattern. A solid horizontal line runs across the top of the page, and a solid vertical line runs down the left side, intersecting at the top-left corner. There is some faint, illegible handwriting or smudging near the top center of the page, above the first few rows of dots.

FILL OF DITCH (604436)

THE FILL CONSISTS OF GREYISH-BROWN SILTY SAND WITH MODERATE NUMBER OF SMALL AND MEDIUM STONES AND CHALK. IT IS SIMILAR TO THE ABOVE LAYER ~~***~~ ~~*****~~ (604435) BUT LITTLE BIT DARKER.

THE FILL CONTAINED FEW FRAGMENTS OF ANIMAL BONES AND ONE SMALL POTTERY SHARD.

THE POTTERY IS MEDIUM QUALITY AND MEDIUM-TICKNESS WITH ENOUGH FINE ADMIXTURE. THE EXTERNAL SURFACE OF FOUND POTTERY IS BLACK, INNER-RED. POSSIBLY IT IS FRAGMENT OF ROMAN KITCHEN POTTERY

CUT OF GULLY [604442]

THIS SHALLOW GULLY CONTAINS TWO FILLS AND
IT EXTENDS ON THE NE-SW AXIS. IT IS DIFFICULT
TO DETERMINE ITS TOTAL LENGTH BECAUSE
THE EDGES ON THE SURFACE ARE VISIBLE
ON THE LENGTH OF ABOUT 4M (BEYOND THIS
STRETCH EDGES ARE SOMEWHAT UNCLEAR)
FROM THIS GULLY WE HAVE ONLY FEW FINE
LUMPS OF FIRED CLAY (BOTTOM FILL).
MOREOVER THERE IS RELATION-SHIP: THIS FEATURE
IS CUT BY CONTEXT [604439] (DITCH).

This form is incomplete if fields marked with are empty. PTO for additional information (and describing all items marked with *) and sketches.

For photo numbers please see reverse

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

One of 7 pillars/supports forming the internal structure for kiln [604333].
 Please see pillar (604360) for further information.
 (604446) is the most north-easterly column. It is the smallest column due to a significant portion of the top of the pillar missing. It is square in cross section.
 The pillar is formed of black CBM, used to support/hold pottery during the firing process.

Refer to context ~~(604333)~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

One of 7 pillars forming the internal structure of kiln
[604333]. Please see pillar (604360) for further information.
(604447) is the most North-westerly column. It is formed
of black (BM) and has a square cross-section.
Its original purpose would have been to support pottery during
the firing process.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Black lining of kiln [604333]. The lining comprises of black CBM, applied to the walls of the kiln central chamber. The lining could have been applied directly onto the lining of (604355), to support the walls of the kiln. The lining stops just short of the glue, where only the red clay lining remains present.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut of ditch small draining ditch oriented ~~E~~ E-NE.

This ditch doesn't continue west beyond the main iron age enclosure, probably part of an later phase of it. Is truncating the iron age pit clusters (including the a possibly deposit that on top of it). It's parallel with another ditch (on the same ~~face~~ of it with street face). Probably late iron-age - early roman dating.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of gully terminus [604463]. This was thought to be a continuation of the ring gully that was thought to terminate in [604357]. Once fully clean, it was clear this terminates, meaning there is a small gully close to the kiln [604357]. The ring gully that was meant to be here must terminate somewhere earlier, and is covered by the ditch running E/W.

Refer to context (604464).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

fill of terminus. Few inclusions, only some stones and charcoal. No finds. Fairly similar fill to terminus in the ditch that is cut by the kiln. Slightly 'jagged' outline of terminus - at first this was thought to just be truncation by the machine but the section looks convincing.

Refer to context [604463]

FILL OF DITCH [604525], SIMILAR IN COMPOSITION TO THE TOP ONE (604526) BUT MORE ORGANIC, RICH IN CHARCOAL. A LARGE AMOUNT OF A. BONES WERE FOUND, AS WELL AS FRAGMENTS OF POTTERY, MOST OF THEM APPARENTLY ROMAN OR OF ROMAN AGE.

TWO BRONZE OBJECTS WERE FOUND BOTH IN QUITE GOOD CONDITIONS: ONE SMALL COIN (SF 10421, ROMAN?) AND A SMALL BROAD, A FIBULA MISSING THE NEEDLE POSSIBLY ROMAN AS WELL (SF 10419). BOTH FINDS WERE FOUND VERY CLOSE TO THE S EDGE, AT DIFFERENT DEPTHS WITHIN THE FILL: A LOCATION THAT COULD OR COULD NOT BE BOTTOM RELATED TO THE GRAVE LOCATED JUST A TOP THE S EDGE [GRAVE 604523].

[604466] is a 60 cm deep ditch that runs from N to S and has relations with a large number of surrounding features. According to information obtained from other cuts into this ditch ([604343]; [604487]; [604494]) it has been dated to the Roman period. At the location excavated here, the "Roman ditch" cuts another ditch ^{gully} running in a NE-SW direction and joins a large number of overlapping features going SW. It is possible, that this other ditch ^{gully} ([604470]) terminates right at the point of truncation. Besides a small shard of thin, black pottery on the surface of ditch [604470] no other finds showed during excavation.

(604468) is a comparatively thin layer of light, yellowish material between fills (604467) and (604469). It is approximately 16 cm deep and formed most likely by erosion, when the ~~some~~ natural soil was exposed for a duration in the surrounding area.

This gully is truncated by the ditch [604466] which has been dated to the Roman period according to previous investigations. The gully [604470] has its terminus most likely at the point of truncation because no immediate continuation of the feature is visible further on. A single black and thin pottery shard was found on the top layer. It is possible that it was washed into it from the Roman ditch so the dating might not be reliable.

In SW direction the feature joins a large amalgamation of other features and precise establishment of the relations could be obtained by further work in this area.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is composed of densely packed small to medium stones which could possibly be the result of erosion or the flow of water in this gully. It is 15cm ~~deep~~ thick. A use of some kind of road bedding is possible.*

MOSTLY A CLAYEY SILT FILL* IT IS LIKELY THAT THE STONES MIGHT HAVE BEEN WASHED IN DUE TO THE TENDENCY OF THE SITE TO GET FLOODED

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THE FILL (604476) IS PROBABLY A REMNANT TOP SOIL MIXED WITH A SECOND FILL.

IT WAS DARK AND UNRELIABLE. THERE WERE NOT ANY BONES, ANY BONES AND PROBABLE MANGANESE.

THE COMPOSITION OF THIS FILL WAS CLEARLY A MIXTURE OF SAND, SILT, GRAVEL.

THE FILL (604478) WAS a complicated fill. ITS COMPOSITION ~~WAS~~ THE RESULT of the action's water. IN ITS BOTTOM WERE VISIBLE different grooves, shells, bones and gravel. THE QUESTION IS: Why has the ditch been cut? IS the flooding's water the motive?

THIS FILL (604479) Lay Between the fills (604480) and (604478).

IT SEEMS TO BE A LITTLE DEPOSIT of the heavier DEBRIS/MATERIALS (LIKE CLAY and STONES).

IT appear to have been a combination of DEPOSITS.

Refer to context [604477]

CUT OF GULLY TERMINUS [604482] RUNNING ALONG AN E-W AXIS. VERY SHALLOW WITH A FLAT BASE AND MODERATELY SLOPING SIDES.

GULLY GETS SHALLOWER FURTHER EAST AS THE GULLY DITCH [101945], DUG INTO THE SAME GULLY) IS MUCH DEEPER AND IS FURTHER WEST THAN THE TERMINUS

DIRECTLY EAST OF TERMINUS IS ANOTHER TERMINUS WITH A POST-HOLE CUT INTO IT. THESE 2 TERMINUSES SEEM TO CREATE AN ENTRANCEWAY INTO SOME FORM OF ENCLOSURE, THOUGH THERE IS NO EVIDENCE YET TO INDICATE WHAT THIS ENCLOSURE MAY HAVE BEEN USED FOR.

SKETCHES

Refer to context (604482) FOR PLAN

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FILL (604/482) OF GULLY TERMINUS [604/481]. SANDY SILT OF A ~~PA~~ YELLOWISH BROWN COLOUR. LOOSE FILL AS WAS EASY TO DIG WITH TROWEL.

FILL CONTAINS SEVERAL LARGE STONES, POSSIBLY PACKING, SINCE THE TERMINUS APPEARS TO FORM AN ENTRANCEWAY WITH ANOTHER TERMINUS TO THE EAST WHICH IS CUT BY A POST-HOLE. IT IS POSSIBLE THAT THIS GULLY TERMINUS ONCE CONTAINED A SIMILAR FEATURE THOUGH NO EVIDENCE OF IT REMAINS PERHAPS DUE TO THE SHALLOONESS OF THE PIT.

FILL IS MOST LIKELY THE RESULT OF NATURAL INFILLING BECAUSE OF SIMILARITY TO NATURAL SOIL SURROUNDING FEATURE AND THE FACT THAT THE ~~QUARRY~~ SECTION OF THE SAME GULLY DUG FURTHER WEST IS ALSO FILLED NATURALLY.

SUGGESTS THAT WHEN GULLY FELL OUT OF USE IT WAS LEFT OPEN TO FILL UP NATURALLY.

CONTEXT [604485] IS A CURVILINEAR DITCH RUNNING NE-SW. IT WAS INVESTIGATED IN A 2.20M X 2.30M X 0.66M SLOT WITH THE AIM TO ESTABLISH ITS RELATIONSHIP WITH [604487]. IN PLAN IT LOOKS LIKE THE LATTER CUT THE FORMER, BUT FURROW [604489] OBSCURED THAT. UPON INVESTIGATING WE CONCLUDED THAT [604485] IS CUT BY [604487] AND BY A FURROW [604489]. LIGHT CONDITIONS MADE POSITIONING A SLOT TO INVESTIGATE [604485] VERY DIFFICULT.

[604486] is a DELIBERATE BACKFILL OF DITCH [604485]. FILL WITH A LOT OF ARCHAEOLOGICAL POTENTIAL, SINCE A SIGNIFICANT AMOUNT OF POTTERY (POSSIBLY ROMAN) AND ANIMAL BONE HAS BEEN RETRIEVED. AS EXPLAINED ON [604485], THE STRATIGRAPHY OF [604486] WAS NOT EXHAUSTED, SO THERE IS THE POTENTIAL FOR AN EVEN GREATER NUMBER OF FINDS.

THE QUALITY AND FABRIC OF THE POTTERY ~~HERE~~ SUGGEST A ROMAN DATING. FOR THE FEATURE BIG ANIMAL BONES FOUND

ADDITIONAL INFORMATION

(only further details that may be important for understanding the context, including items marked * overleaf)

Cut [604487] is a ditch that runs N-S. It is mostly rectangular and truncates several features across site. We dug a slot measuring 2.20m x 2.30m x 0.66m with the aim to establish a relationship between [604487] and a curvilinear ditch [604485]. In section it has been established that [604487] ~~and [604485]~~ cuts [604485]. In turn the former is cut by a furrow.

Archaeological material retrieved suggests that [604487] is a Roman ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(604488) IS A FILL OF A FURROW (604489) SHALLOW FILL BUT RICH IN FINDS. SPECIALLY RELEVANT IS SK (603141) WHICH COULD HAVE BELONGED TO A PIG OR A SHEEP. MOSTLY ARTICULATED BUT MISSING MOST OF ITS PARTS EXCEPT FOR VERTEBRATE AND PELVIS. POTTERY FOUND IS POSSIBLY ROMAN, BUT IT IS NOT USEFUL FOR DATING AS (604488) IS A MIXED FILL DUE TO PLOUGHING ACTION

Cut of gully. 100% dug as v. then - probably truncated by machine, but possibly wasn't much deeper.
 It may have been longer, as this trails off into nothing. The other terminus has also been removed away - parts of it remain but very poor but only very patchy. This gully runs parallel to 60041897 - could be somehow related?

Refer to context (604491)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of shallow pit [604495]. The fill comprises of grey silt with a moderate amount of small to medium sized stones. No finds were recovered to date the feature. The pit was very sterile with only a few very rare flecks of charcoal being present.

Due to the sterile nature of the fill and lack of human activity the pit was likely to have accumulated naturally.

Refer to context [604495]

→ see plan

(any further details that may be important for understanding the context, including items marked * overleaf)

No girls were recovered to date the feature.

The function of the pit is unknown. Due to its fairly regular shape, it is likely to have been a man-made construct, rather than through natural processes such as a tree bowl. It is most likely to have been used as a small storage pit with no evidence for burning being found to indicate use as a site pit.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

SECONDARY FILL OF DITCH [604525] MADE OF FINE MATERIAL, VERY SIMILAR TO CUT GEOLOGY, FALLING INTO THE FEATURE AND STICKING OVER THE CUT ITSELF. ~~THE~~ CONSIDERING ITS USE - THE LIMIT OF A DITCHED ENCLOSURE, POSSIBLY CONNECTED TO THE FIRST PHASE OF THE ROMAN OCCUPATION - THE FEATURE WAS CONTINUOUSLY CLEANED, THIS FILL IS MORE RELATED TO THE USE OF THE DITCH THAN ITS ABANDONMENT.

OF THE POT FOUND HERE, ONE LARGE PIECE (IN FRAGMENTS) OF A BOTTOM ~~OF~~ IS VERY NOTABLE FOR THE HOLES CREATED IN IT PREVIOUS THE FIRING OF THE VASE ^{IN} (GIVEN THE PASTE, IT MIGHT BE INTERPRETED AS A COOKING POT). TWO LARGE IRON NAILS WERE FOUND (SF 10422 BROKEN, AND SF 10423). AMONG THE LARGE AMOUNT OF A. BONES SOME LONG BONES WERE RETRIEVED, AND, QUITE CLOSE TO THE BOTTOM, BONES BELONGING ~~TO~~ TO THE FOOT OF A LARGE ANIMAL.

THE FILL MIGHT BE INTERPRETED AS A DUMPED LAYER

Cut of ditch [604498]

Cuts ditch fill (604499) in ditch [604500]

Thin / small curvi-linear ditch cutting through large ditch [604500] that runs N-S.

No other features - visible features - that relate

Not fully excavated / bottomed

→ Only excavated until relationship with [604500] was able to be proved.

THIS MID ORANGEISH BROWN NATURAL INFILLING (604501) IS MODERATELY COMPACT AND HAS A SILTY CLAY COMPOSITION.

THIS FILL BELONGS TO THE PIT [604505] AND IT'S ITS LATER FILL

THIS NATURAL INFILLING (604501) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF ^{SMALL} SUB-ANGULAR STONES MIXED WITH GRAVEL
- OCCASIONAL PRESENCE OF CHALK FLAKE) AND CHARCOAL
- OCCASIONAL PRESENCE OF ROOTS DISTURBANCES IN THE SURFACE.
- OCCASIONAL PRESENCE OF ^{BIG AND} MEDIUM ANIMAL BONES FRAGMENTS,
- OCCASIONAL PRESENCE OF EARLY ROMAN POTTERY,

Refer to context [604505]

THIS MID GREYISH GRANGEISH BROWN NATURAL INFILLING (604504) IS MODERATELY COMPACT AND HAS A CLAYEY GRAVEL COMPOSITION.

THIS FILL BELONGS TO THE PIT [604505] AND IT'S ITS OLDER FILL (PRIMARY FILL).

WE CAN SEE IT PRESENCE IN THE EDGES (EAST AND SOUTH FACING SIDES OF D# 63266).

THIS NATURAL INFILLING (604504) HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL AND MEDIUM SUB-ANGULAR STONES MIXED WITH GRAVEL.
- OCCASIONAL PRESENCE OF MARINE SHELLS.
- OCCASIONAL PRESENCE OF CHALK FLAKES.

WE DIDN'T FIND ANY POTTERY THAT CAN DATE THIS PRIMARY FILL THAT ITS FEATURES ARE SO SIMILAR TO THE NATURAL (100003).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS SUB-CIRCULAR SHAPE PIT [604505] HAS MODERATE SLOPING SIDES, A CONCAVE BASE AND HAS IN PLAN HAS LIKE A "TEAR" SHAPE.

IT WAS RECORDED IN A 2'9 x 2'12 M SCOT. 2 THIS PIT [604505] IS FILLED BY FOUR NATURAL INFILLINGS: (604501), (604502), (604503) AND (604504).

THIS FEATURE IS CUTTING THE NE-SW RUNNING DITCH [604507] AS WE CAN SEE IN THE EAST FACING REC SECTION RECORDED IN THE DRAWING NUMBER D# 63266.

THIS FEATURE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. POTTERY

AS WE HAVE FOUND IN THE FILLS (604501) AND (604502) WE CAN DATE THIS PIT IN AN EARLY ROMAN CHRONOLOGY.

THE FUNCTION OF THIS FEATURE LOOKS LIKE TO BE TO WORK AS A WATERING PIT.

Refer to context (604501)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID BROWNISH ORANGE NATURAL INFILLING (604506) IS COMPACT AND HAS A CLAYEY SILT COMPOSITION.

THIS FILL BELONGS TO THE DITCH [604507] AND IT'S ITS ONLY FILL THAT WAS RECORDED IN THIS SLOT, AS WE CAN SEE IN THE NORTH AND EAST FACING SECTIONS (D#63266).

IS CUTTING BY THE PIT [604505].

ITS COLOUR ARE INCLUSIONS ARE SIMILAR TO THE NATURAL (100003).

THIS FILL HAS THE FOLLOWING INCLUSIONS: ~~604~~

- OCCASIONAL SMALL SUB-ANGULAR STONES MIXED WITH GRAVEL.
- OCCASIONAL PRESENCE OF CHALK FLAKES, MARINE SHELLS, AND ROOTS DISTURBANCES

WE DIDN'T FIND POTTERY TO DATE THIS FILL.

Fill (604509) in ditch cut [604513]

Fill consists of moderately compact of dark blueish grey, silty clay with inclusions of occasional big angular stones and charcoal, and moderate inclusions of black and red pottery most likely roman, and a small animal bone.

~~Fill's shape looks like a re-cut but we decided not take numbers for that "cut"~~

Fill is most likely result of natural infilling of the ditch in its desuse.

The fill was probably part of an re-cut, but because was the only ~~set~~ characterization set in the ~~rest~~ part of the enclosure, we didn't have enough evidence for that. Late iron-age /

Refer to context (604510) early roman dating (TA 30.01.18) SKETCHES

Cut [604513] of ditch, most likely roman's ditch

Cut is NE to SW orientated. The shape is curvilinear with moderate sloping sides and a concave base

The shape is result of design in a basic construction process.

In the same slot we found a post-hole but we don't know the relationship between them.

We took picture of the opposite side of the slot, which has PH 6101907 number in the record.

Refer to context (604509) (604510)

Fill (604514) in a post-hole [604515]

Fill consists of moderate compaction of mid brownish grey gravelly silt with inclusions of occasional charcoal and fired clay.

Fill is most likely result of natural infilling of the post-hole in its desuse.

Nothing interesting. No pottery or bone.

~~also~~ We put like "overcut" in the

Cut [604515] of post-hole in a slot opened in order to determine the shape and fills of a roman ditch [604513].

Cut is S-SE to N-NW orientated. The shape's cut is like usual, moderate sloping side and a concave base in a curvilinear shape.

This cut is result of design in a basic construction process.

We don't know the relationship with ~~the~~ the roman's ditch.

THIS FILL, BELONGED TO PARENT CONTEXT [604519] IS INTERPRETED AS NATURAL INFILLING. IT IS SUGGESTED BY MODERATELY COMPACT AND LACK OF HUMAN MANUFACTURES SUCH AS ~~STONES~~ LITHICS OR POTTERY. THIS FILL ~~STONES~~ EXHIBITS STONES AND CHARCOALS AS INCLUSIONS. STONES ARE VERY SMALL AND HAVE A MODERATE FREQUENCY. THIS SUGGESTS A GRAVEL PRESENCE IN THIS FILL. THIS SAME CHARACTERISTICS ARE EXHIBITED BY CHARCOALS THIS SUGGESTS A PRESENCE NOT RELATED TO A DELIBERATE HUMAN ACTION. FROM THIS FILL ARE RECOVERED TWO BONES FRAGMENTS. THIS BONES BELONG TO POST-SKELETON (PAW) OF MEDIUM DIMENSION MAMMAL. THEY DO NOT SEEM PRESENT BUTCHERY MARKS OR ANY INTENTIONAL TRACKS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS INHUMATION (604521) HAS A POOR PRESERVATION DUE TO IS CRUSHED AND DAMAGED BEFORE FINDING FOR THE ITS CONTACT WITH A LATER FURROW [604425] THAT IS CUTTING IT.

THIS ~~BURIAL~~ INHUMATION HAS AN EAST-WEST ORIENTATION AND THE SKULL IS FACING NORTH IN A CROUCHED POSITION. ~~ALTHOUGH IS DATE IN AN EARLY ROMAN PERIOD (TRANSITION)~~ THE INHUMATION RITUAL LOOKS LIKE OF THE LATE IRON AGE PERIOD.

THIS INHUMATION BELONGS TO THE BURIAL CUT [604523] THAT IS CUTTING THE DITCH [604520].

THE REMAINS THAT WE COULD RECOVERED WERE: THE RIGHT ARM BONES AND A LITTLE FRAGMENT OF THE CLAVICLE, AND THE RIGHT SIDE OF THE CRANIUM AND THE MANDIBLE DUE TO THE LEFT SIDE WAS DESTROYED BY THE FURROW [604225] WE TOOK SAMPLES OF THE CRANIUM AND MANDIBLE (S10885) AND THE RIGHT ARM (S10886).

~~ARE~~ ACCORDING TO THE WISDOM TOOTH LOOKS LIKE TO BE A MALE ADULT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS MID GREYISH ORANGEISH BROWN DUMPED LAYER (604522) IS MODERATELY COMPACT AND HAS A CLAYEY SILT COMPOSITION.

THIS FILL BELONGS TO THE BURIAL CUT [604523] AND WAS THROWN TO THIS FEATURE AFTER POTTERY LEAVING THE INHUMATION (604521) IN THIS GRAVE ~~IN~~ CLOSE TO THE EDGE OF THE EARLY ROMAN DITCH [604520].

THIS FILL AS ~~IN~~ ITS PARENT CONTEXT [604523] ARE CUTTING BY A FURROW [604425].

ITS COMPOSITION IS IN THIS WAY DUE TO ITS CONTACT WITH THE ORGANIC REMAINS OF THE INHUMATION.

THIS FILL HAS THE FOLLOWING INCLUSIONS:

- OCCASIONAL PRESENCE OF SMALL SUB-ANGULAR STONES AND GRAVEL
- OCCASIONAL PRESENCE OF CHALK FLAKES AND CHARCOAL.

WE DIDN'T FIND ANY POTTERY THAT COULD DATE THIS FILL.

Refer to context [604521]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS BURIAL CUT [604523] IS FILLED BY A MALE
ADULT INHUMATION (604521) AND THE DUMPED LAYER
(604522)

THE SHAPE OF THIS FEATURE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THE PHOTOGRAMMETRY THAT WAS DONE WITH THE NUMBER
6101917 ^(DA 6327) AND THE WORKING SHOTS WITH THE DITCH F60
[604520] FROM 6101910 TO 6101913.

THIS BURIAL CUT HAS AN OVAL SHAPE SO THE LONG DIAMETER IS $1\frac{1}{2}$ M AND THE SHORT ONE 0.60M. THIS BURIAL CUT LOOKS LIKE TO BE FROM AN EARLY ROMAN CHRONOLOGY.

Central structure of kiln. The kiln lies in between stakehole [604529] and gully shaped, possible second stakehole [604530]. The kiln chamber is dug in between the two stakeholes and lined with a red clay lining. A flue is visible to the south of the kiln, indicating that [604529], would have been used as a stakehole, however [604530] was not connected by a flue, possibly indicating a different purpose.

Remnants of the final firing of the kiln are seen in its fill (604536) which show evidence of in-situ burning such as charcoal and burnt clay.

Notes: The kiln central chamber itself is very small in size, with only a diameter of around 20cm. Due to this the kiln may have been used for a different purpose other than firing pottery, however its section is such now.

Notes: Were recovered from the fill of the kiln, however finds from the stakehole indicate a Romano-British date.

------------------------	-----------------------	---	--

- [604529] CUT ASSOCIATED WITH SOUTHERN COMPONENT OF A 'KILN TYPE' OF FEATURE.
- ~~Circular~~ ^{Circular} IN SHAPE, SMALL, base is slightly concave with slight slope towards NORTH WHERE IT MEETS clay lining (604533).
 - PRIMARY Fill is (604531). VERY uniform in this section.
 - POSSIBLE STAKE PIT OF a small kiln although it ~~could~~ does resemble a PIT PROFILE.
 - UNUSUAL feature, with limited time to investigate.
 - POSSIBLE it associated with a disused, partially deconstructed and backfilled kiln.
 - LOCATED SOUTHERN END OF SITE. WITHIN AREA with other kiln features INSITU.
 - AFTER removing fills (604531), ~~(604534)~~ (604535) (604536) DOES Resemble kiln with NORTH AND SOUTH STAKE PITS POSSIBLY.

Refer to context (604531) ^{for section} (604533) -	SKETCHES (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)
[604528] → for plan.

Cut of linear feature adjoining kiln [604528]. The cut is narrow, shaped like a gully, however is ~~ex~~ contemporary with a kiln to the south. This may indicate that the area was used as a stakehole, however little evidence of a gully was recovered, indicating it may have served another function relating to the kiln.

As for going out of use the feature crystallised through episodes of natural eroding. Furthermore finds were dumped in the cut including samian ware bowl SF 10424, dating the feature to the Romano-British period.

Fill of Kih structure. The fill spreads across the whole structure representing the spiral event in the structures life cycle.

Finds from the sill include a single sheep's tooth, and pottery dating the sill to the Romano-British period.

The gill is likely to represent natural settling after the kiln went out of use, with the samian bowl and other finds representing dumping of waste materials, presumably after the kiln went out of use.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Probable living of dismantled kiln [604528]. The living is comprised of red clay, living a small area of walls, a glue shaped structure, and a small column like structure separating [604528], from the gully feature to its northern end, [604530]. The living is not as solid as in other kilns, and although is clear in the glue area, it is less clear towards its northern end, possibly implying that the kiln was dismantled and is poorly preserved.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

() is a second fill, formed as a result of natural infilling of ditch [604485]. As explained before, the potential of it may not been fully exploited. At the depth we observed the fill, no archaeological materials found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Sub Soil deposit (604540). Date - unknown. Feature has Roman and Iron Age features cutting through it, date could possibly be early Iron Age however there is speculation that this featured pre dated human activity in the area. No finds, although some animal bone and a Flint Scraper have been found in the same fill in another slot located to the W of (604540).

(604540) is cut by - [604539], [604545], [604543], [604547]

Cut of ditch [604543] two hills (604541) and (604542).
 Date - Iron Age, feature is dated using pottery found in
 another slot of ditch that is located NE of [604543].
 Feature is cut by Roman ditch terminus [604545] and post
 medieval furrow [604539]. Feature cuts sub soil deposit
 (604540). Terminus of ditch is located North of [604543].
 Southern terminus is not visible in plan. Original use -
 possible drainage ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of ditch [604547], Single fill. Date - Roman
 feature has been dated using pottery found in another
 slot of feature that is located Sm NE of [604547].
 Finds - No finds. Ditch respects Roman enclosure located
 nearby N of feature. Feature cuts sub soil deposits (604540)
 which is dated between the Iron Age and Roman.
 possible use - drainage ditch.

Refer to context

FILL OF PIT (604548).

THE DARK GREY FILL CONSISTS OF SILTY SAND WITH OCCASIONAL STONES. DARK TINT (ALMOST BLACK) IS A RESULT OF PRESENCE OF CHARCOAL IN LARGE AMOUNT. EXCAVATED PART OF FILL CONTAINED AN AVERAGE AMOUNT OF FIRED CLAY, FEW PIECES OF SLAG, ONE ANIMAL BONE (POSSIBLY METACARPAL BONE OF COW) AND TWO SMALL FRAGMENTS OF POTTERY. THE POTTERY IS THICK-WALLED WITH MEDIUM-THICKNESS ADMIXTURE (CHALK?). EXTERNAL AND INNER SURFACE OF FOUND POTTERY SHARDS ARE BLACK (ALSO IN CROSS-SECTION). POSSIBLY THE POTTERY IS ASSOCIATED WITH IRON AGE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

SKELETON (604553)

THE SKELETON WAS ORIENTED ON NE-SW AXIS AND WAS LAID IN A SUPINE POSITION WITH BENT LEGS.

THE BROWNISH BONES ARE QUITE GOOD PRESERVED (EXCEPT THE VERY FRIABLE RIBS) BUT UNFORTUNATELY SUFFERED DURING THE EXCAVATION (ESPECIALLY THE CRANIUM AND LEGS AT THE KNEE HEIGHT). HOWEVER THE SKELETON WAS INCOMPLETE BEFORE EXCAVATIONS; THERE WERE MISSING BOTH HANDS AND PART OF THE RIGHT FOOT (HEEL BONE). SKELETON IS QUITE SMALL; MOST LIKELY BELONGED TO AN ADULT BUT A YOUNG PERSON. HOWEVER, AT THIS STAGE IT IS DIFFICULT TO DETERMINE THE SEX AND AGE OF THE INDIVIDUAL. THE BONES WERE NOT ACCOMPANIED BY ANY ARTIFACTS IN THE FILL.

Sole gill of tree-throw [604560].

The gill comprises of very sterile silt with only a few inclusions of small stones.

No evidence of human activity was seen in the gill.

The gill is likely to have accumulated through natural ingilling of organic silty material.

Refer to context [604560] → soc plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut as shallow, curved/irregular shaped hollow. Due to its irregular shape and base it is likely to represent a tree-bowl.

The feature contains a sole sill as naturally insilled material (604559) with no finds being recovered to date the feature.

To the north-west of the feature lies another tree throw [604636] which is a similar shape, showing it is possibly part of the same feature, however only these sections survive.

Refer to context

(604559) → section

fill of post hole. Fill surrounds post pipe. This fill did contain 3 large stones which could be packing for the post. However the position of the large stones ~~are~~ were not directly next to the post pipe in the fill and therefore ~~they~~ the fill could be caused just by natural infilling around the possible post.

~~It is possible that the fill (604571) is a post hole fill.~~

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Upper fill of tree throw (604574) which caps possible post hole [604571]. Fill probably formed by natural infilling of depression in the ground caused by the post hole & tree throw.

Refer to context

SECTION / [604581] FOR PLAN.

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

1. 1. The first step in the process of the scientific method is to ask a question.
 2. 2. The second step is to do background research.
 3. 3. The third step is to form a hypothesis.
 4. 4. The fourth step is to test the hypothesis by conducting an experiment.
 5. 5. The fifth step is to analyze the data and draw a conclusion.
 6. 6. The sixth step is to communicate the results.
 7. 7. The seventh step is to repeat the experiment to verify the results.
 8. 8. The eighth step is to publish the results.
 9. 9. The ninth step is to have the results peer-reviewed.
 10. 10. The tenth step is to use the results to develop a theory.

THIS CUT DEFINES A SUB-CIRCULAR PIT THAT EXISTS ON THE WESTERN LIMIT OF THE CORRIDOR. DUE TO THIS WE CAN'T DEFINE THE REAL EXTENSION AND SHAPE OF THE PIT. IN THE DETECTED PART THE PIT IS 0.77m ~~DEPT~~ LENGTH AND 1.17m WIDTH. THE PIT SHOWS TWO FILL A SILTY-CLAY FILL INTERPRETED AS A DELIBERATE BACKFILL AND A SANDY-CLAY FILL INTERPRETED AS A NATURAL INFILLING. THIS TWO FILLS SEEM SLIGHTLY MIXED WITH EACH OTHER.

This image shows a full page of dot grid paper. It features a uniform grid of small dots across the entire surface. A solid vertical line runs down the left side, creating a margin. A solid horizontal line runs across the top, creating a header area. The rest of the page is covered by the dot pattern.
