ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Roundhouse with ring ditch [281966] has a diameter of 12.7m (N-S). The structure also features an interior ring ditch. The interior boasts 17 postholes, 2 larger postholes frame the entrance way (E side). 9 smaller postholes frame a large chalk filled post pit [282145], in the centre. 7 other clustered postholes are in the SW part of the structure. The entrance way also includes a relatively deep elongated pit [282110] along with another shallow pit on the exterior [282113] which contained a fragmented IA pot. The exterior in the NE features 3 varied size postholes. One small posthole is evident in the S ring ditch. Finds mainly consisted of IA pottery and various pieces of bone. 2 modern furrows truncate the feature, orientated E-W, which were removed by hand. A tree bowl is evident in the SW interior, adjacent to the ring ditch and clustered postholes. The area of the roundhouse appears to have been cosmetically tailored due to the evidence of tree removal indicated by the tree bowl [282151]. Some archaeology survived under the furrows such as the ring ditch, inner ring ditch and 6 postholes. On a site plan, there is another roundhouse somewhat close by the W side whilst to the NE side, there is a large square structure.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS PLAN OF STRUCTURE 282426 INDICATES SOME MEASUREMENTS THAT DETAIL KEY AREAS AND FEATURES.

THE MEASUREMENTS REGARDING THE SPATIAL PATTERNING OF CONTEXTS [282116] [282337] AND [282339] INDICATE A TRIANGULAR SHAPE ON THE EXTERIOR^{NE} SIDE OF THE LARGE RING DITCH. SIMILARLY, THE INTERIOR INDICATES A SUB-TRIANGULAR PATTERN OF POSTHOLES SURROUNDING THE CHALK POST-PAD [282145] & TOWARDS THE CENTRE OF THE ROUND HOUSE INTERIOR. THE POST-PAD IS SET SLIGHTLY TO THE ANTERIOR OF THE ROUND HOUSE (NOT EXACTLY IN THE CENTRAL AXIS).

POSTHOLE [282427] IS A PART OF A STRUCTURE
SIMILAR TO POSTHOLE [282242] & [282346].
THIS POSTHOLE IS ONE OF SEVERAL POSTHOLES IN A
LINE WHICH IS SUGGESTED TO BE AN INTERNAL
WALL. (SEE [282242] FOR DETAILS)
IT MEASURES 0.52M WIDE & 0.36M DEEP
ALTHOUGH THE FEATURE HAS NO ORIENTATION IT
DOES HAVE ONE WITH OTHER POSTHOLES
AS THEY RUN IN A LINE, RUNNING EAST/WEST.

(any further details that may be important for understanding the context, including items marked * overleaf)

CONTEXT (282428) IS A FILL OF POSTHOLE
[282427] WHICH IS A GREY BROWN/BLACK FILL,
WITH INCLUSIONS OF CHARCOAL (FROM BURNING OF POST-
PIPE) AND FREQUENTS AMOUNT OF BURNT CLAY. THIS
MAY WELL HAVE BEEN USED AS PACKING FOR
THE POST-~~PIPE~~. THERE WAS ALSO POTTERY
FOUND IN THE ~~PIPE~~ FILL WHICH HAS BEEN SUGGESTED
TO BE EARLY ROMAN IN DATE.

this E-W orientated feature is a terminus of a possible house or structure but it's the first slot we open on this area, so is not easy to see until we open more.

it has very vertical sides and concave base. With a lot of small stones in it ~~chert~~ and just a few pieces of roman pottery.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is the only one which is formed in the ditch [282429].

We found small stones, (≤ 0.05 m of diameter) most of them) and some chalk glazes, but

Also we found some small fragments of animal bones (small animal like rabbit or something else as big). And some pieces of pottery. We know thanks to this pottery that the date of use was roman.

Refer to context [282429]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This S-N orientated feature is a terminous of a possible mud house. Formed just with one fill - (282432).

We ~~passed~~ didn't find any relevant material to say a date of use. And I say that it's a mud house ~~but~~ because it seems like, but is the first slot we open in this area, so we have to wait to confirm this theory.

the shape

~~It~~ was formed as result ~~into~~ of a change in a construction basic process.

Refer to context (282432)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

this brown and moderated compact fill,
is forming the ditch * [282431].

We didn't find any relevant material into
it, so we can't speak of a date of use.
We need to open more slots in this area
to confirm if it is a round house. We just
have some small stones, chalk flakes and manganese.

It was formed by natural infilling.

Refer to context: 2

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(282433) is the fill of Tree-bull [282434].
 It is made up of dark brown clay mottled with red.
 Occasional small stones are spread throughout the fill.
 Moderate amount of chalk concentrated towards the bottom of the fill with occasional
 chalk spread thinly throughout the rest.
 Moderate amount of charcoal in the fill, concentrated in clumps consistent with tree burning.

Refer to context [282434]

[282434] is the cut of abundant gut trees with steep - moderate sides ~~excavated~~ as from the surface. It appears like it could be a tree bowl.

its consistency, lack of fine and irregular shape suggest it was a tree bowl.

About 3 meters south of post hole [282266] and [282277].

Refer to context (282433)

CUT OF DITCH [282435].

FEATURE RUNS IN A NW-SE DIRECTION, CURVING TO THE WEST IN ITS NW END.

SEEING TO ITS SIZE AND SHAPE, THE DITCH IS MOST LIKELY A BOUNDARY DITCH. LATE IA / EARLY ROMAN POTTERY WAS FOUND, DATING THE FEATURE

POSSIBLY HAS A SECOND CUT RUNNING IN THE MIDDLE OF THE FEATURE (282452)

SECTION SHOWS SIGNS OF A POSSIBLE BANK ON THE NE SIDE; SEEMINGLY SLUMPED IN GRAVEL MATERIAL.

CUT OF BURNT TREE BOWL

~~THE~~ THIS FEATURE APPEARS TO BE ONE OF A LARGE NUMBER OF BURNT TREE BOWLS LOCATED IN THIS AREA OF THE SITE. THESE TREE BOWLS ARE LIKELY EVIDENCE OF LARGE SCALE DEFORESTATION IN THE AREA DURING THE ROMAN PERIOD IN ORDER TO OPEN SPACE FOR DEVELOPMENT AND EXPANSION OF THE SETTLEMENT.

NO DATABLE MATERIAL WAS RECOVERED FROM THE FILLS OF THIS FEATURE, HOWEVER AS ALL CONSTRUCTION FEATURES IN THIS AREA ARE DATED TO THE ROMAN PERIOD, IT IS LIKELY THIS DEFORESTATION PROCESS OCCURED ALSO AROUND THIS TIME.

Refer to context

FILL OF BURNED TREE BOWL [282449] COMPOSED OF A DARK REDDISH GREY, SILTY CLAY MATERIAL WHICH IS THE RESULT OF IN SITU BURNING.

NO STONES WERE PRESENT IN THIS FILL, HOWEVER IT CONTAINED A LARGE AMOUNT OF CHARCOAL.

NO DATABLE FINDS WERE RECOVERED.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CONTEXT [282450] IS A RE-CUT OF PIT [282341]. IT APPEARS THAT THE PIT [282341] FILLED UP NATURALLY WITH (282345) ~~BUT EVERYTHING ABOVE [282450] IS~~ BUT THEN IT WAS RE-OPENED TO BE USED AS A DUMP AS EVIDENT WITH (282343). THIS CUT FOLLOWS A SIMILAR SHAPE AS THE ORIGINAL PIT [282341] EXCEPT IT IS NOT AS DEEP, AND PROBABLY LONGER. IT MEASURES 0.58 m DEEP AND 5.66 m IN LENGTH.

FOR WIDTH SEE [282341]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CONTEXT (282451) IS THE FINAL FILL WITHIN
 PIT (282450). THIS FILL IS PROBABLY A
 DELIBERATE BACKFILLING TO LEVEL OF THE
 PIT. THERE SEEMED TO BE NO FINDS, IE
 POTTERY OR BONE VISIBLE WITHIN THIS FILL,
 (ALTHOUGH IT IS ONLY WHAT COULD BE SEEN IN
 THE SECTION AS MACHINING TOOK AWAY MOST OF
 THE FILL WITHIN THIS HALF OF THE PIT).
 THERE WAS A MODERATE AMOUNT OF STONE
 INCLUSIONS RANGING FROM 1cm UP TO AROUND
 6cm.

Refer to context (282345)

UPPERMOST FILL OF DITCH [282435]

FILL IS RICH IN CHARCOAL AND IS VERY DARK. IN SECTION IT LOOKS A LITTLE LIKE A SEPERATE CLUT, BUT SINCE IT IN PLAN SEEM TO FOLLOW THE ACTUAL DITCH WHEN IT TURNS, IT SEEMS MORE LIKELY TO BE A FILL.

EARLY ROMAN / LATE IA POTTERY WAS FOUND, TOGETHER WITH SOME ANIMAL BONES.

OCCASIONAL COARSE ROCKS (N 2-6CM) AND A LOT OF GRAVEL.

SEEMS TO BE A COMBINATION OF NATURAL INFILLING AND OCCASIONAL DUMPED MATERIAL.

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

UPPER

MIDDLE FILL OF DITCH [282435]

FILL IS NATURALLY INFILLED AND VERY COMPACT. CONTAINED EARLY ROMAN / LATE IA POTTERY AND SOME BONES. OCCASIONAL COARSE ROCKS (3-5CM Ø) AND A LOT OF GRAVEL. A CONCENTRATION OF GRAVEL IN THE NW CORNER OF THE SECTION SUGGESTS A BANK, WITH THE GRAVEL SLUMPING INTO THE DITCH.

A SAMPLE WAS TAKEN FROM A PART OF THE FILL THAT WAS VERY RICH IN CHARCOAL (THE REST OF THE FILL IS PRACTICALLY EMPTY OF CHARCOAL). TWO TUBS, [28321].

This image shows a full page of blank graph paper. The grid consists of small squares formed by thin black lines. There are approximately 20 columns and 20 rows of squares. A thicker vertical line runs down the left side of the page, creating a margin. The paper has some minor scanning artifacts, such as small dark specks and faint smudges, particularly near the top and bottom edges.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a pit. The cut has steep slopes and a concave base. Orientated N-S.
Cut is half sectioned.

Finds of pottery may be able to provide a date but it is believed to be from around the Roman period.

The pit is aligned with 3 other pits in a square shape possibly surrounding a kiln or furnace.

Refer to context (282464)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary fill of pit [282463]. Inclusions of stones, chalk and charcoal along with the occasional pieces of bone.

Finds of pottery may be able to provide a date but is believed to be Roman.

Possibly part of a natural silting episode but the presence of bone may suggest deliberate backfilling.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Second fill of [282463], Inclusions of Stones, chalk and Charcoal.

No dateable finds so date is unknown.

Finds of 2 nails made from Iron may indicate that there was possibly a structure surrounding the kiln / furnace. (F28143 and F28144)

Possibly a Natural Slumping episode as the lack of bone suggests no deliberate backfilling.

Refer to context [282463], (282464)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CUT OF DITCH [282485].

DITCH IS A PART OF A SQUARE ENCLOSURE, AND PIECES OF ROMAN POTTERY HAS BEEN FOUND IN IT. THE DITCH CUTS THROUGH AN EARLIER, WIDER DITCH, [282487]. ~~THIS IS NOT~~

THE TWO DITCHES ARE NOT SEPARABLE IN PLAN, A PART FROM A CLEAR NARROWING OF THE FEATURE WEST OF THE MODERN DITCH.

JUST WEST OF THE FLOT, ~~THE~~ TERMINUS FOR THE EARLIER DITCH WAS FOUND ([282487 + [282520]). THIS SUGGESTS THAT THE EARLIER ENTRANCE TO THE ENCLOSURE WAS CLOSED OFF AND PERHAPS MOVED DURING THE LATER PHASE.

Refer to context (282486)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

UPPERMOST FILL OF DITCH [282485]

FILL IS NATURALLY INFILLED AND CONTAINS BONES AND ROMAN POTTERY. (282488)
THE EXACT BORDER BETWEEN THE FILL AND THE NEIGHBOURING ONE IS QUITE HARD TO MAKE OUT AS THIS DITCH WAS CUT INTO AN EARLIER ONE. SOME SLUMPING AND MIXING OF THE FILLS HAVE OCCURRED, LEAVING THE BOUNDARIES SLIGHTLY ARBITRARILY DEFINED.

THE FILL HAS A SLIGHTLY BLUISH TINT, SEPARATING IT FROM THE OTHER ONES.

Refer to context [282485]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a ditch 0.56m depth, made in a half section 1st. 1st.
slot → 0.64m width and 0.81 length.

This ditch has N-S orientation and steep sides with curve back end.
is part of a common enclosure.

There is no dating material.

Refer to context [282492]-[282495]

This image shows a full page of dot grid paper. The background is white, and it is covered with a regular pattern of small, dark grey or black dots. The dots are arranged in straight horizontal and vertical rows, creating a grid-like appearance. There are no margins, text, or other markings on the page.

LOWEST FILL OF DITCH [282457]

Fill is slumped in natural from the sides, mixed with the initial infilling of the ditch.

NO FINS, VERY SANDY.

Refer to context

Refer to context $\frac{1}{2} [292405] + (292405)_{(const)}$

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a pit. The cut has steep slopes and a concave base. Orientated N-S. Cut is half-sectioned.

Finds of pottery may be able to provide a date but it is believed to be Roman.

Also found were bone and CBM.

The pit is aligned with 3 other pits which form a square around what may be a kiln or furnace, suggesting there was some sort of structure.

NATURAL INFILLING OF DITCH (282510) INVESTIGATED IN A SLOT
IN THE TERMINUS OF IT

THE FILL CONTAINS MODERATE STONES (2 - 12 CM Ø) WITH
SUB-ANGULAR SHAPE, AND OCCASIONAL CHALK (1-3 CM Ø).
IT HAS BEEN FOUND OCCASIONAL ANIMAL BONES AND
FOUR FRAGMENTS OF POTTERY. BECAUSE OF IT, ~~THIS~~ THIS
FEATURE COULD BE IRON AGE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of ditch [282510] investigated in the terminus of it.

This fill is in the bottom and contains occasional stones (1-3 cm Ø) with sub-rounded shape and occasional chalk.

No artefacts were recovered but probably it's an iron age feature.

Refer to context 282507

NATURAL INFILLING OF NE-SW RUNNING DITCH. [282514] INVESTIGATION
 WITHIN 17 x 15m SPOT. VISIBLE ONLY IN THE NW FAC. SEC.
 THE FEATURE WAS RESEARCHED IN ITS
 EXTENSION ONLY IN
 THE FEATURE IS SUB-LINEAR WITH SOME MODERATE
 INCLUSIONS OF CHALK AND OCCASIONALLY MEDIUM ROUNDED
 STONES; IN THIS FILL APPEARED THE SPECIAL
 FIND NO SF 28/36 COULD BE A LATE ROMAN OBJECT.
 THIS FILL HASN'T REVEALED OTHER ARCHAEOLOGICAL REMAINS
 WAS TRUNCATED BY LATER DITCH [282519] & [282687] VISIBLE IN
 NW. FAC. SEC.
 THE FEATURE WAS RESEARCHED IN ITS SPOT WEST
 SIDE & LONG TO W. BUT IT IS NECESSARY WAIT UNTILL
 THE STRIPPING OF THE AREA TO UPDATE A INTERPRETATION

Refer to context

cut of 10-15 running ditch investigation 3 investigations
 SN 17'00" x 1'5" shot in its southern end, this
 feature was truncated by a later ditch or rock
 [282519] in its southern edge. Due to is not possible to know
 the real width or base of the feature, and by a
 transverse N-S running ditch [282514]
 the material associated to its fill give us a rough
 chronology
 It is necessary a later stripping to have a real interpretation
 but if this context could be the same as [282514]

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of E-W running ditch investigated in 12'00m 15m slot.

This ~~site~~ feature is the most recent event in the southern side of the ditch because it cuts previous ditches as [282514] & [282516] as is possible to see in the section sketch. This ~~feature~~ could be the same as [282312] more than ^{context} 25m ~~westward~~ westward so it is necessary wait to the next stripping to give a ~~partial~~ more detailed interpretation.

Due to the pottery associated to this find the feature belongs to a Roman chronology.

CUT OF 1A DITCH TERMINUS [282520].

HALF SECTION OF 1A DITCH TERMINUS BELONGING TO A SQUARE ENCLOSURE WITH AN EARLIER 1A PHASE, AND AN INTERCUTTING LATER ROMAN PHASE.

THE FEATURE HAS BEEN CUT BY A MODERN ~~SD~~ N-S RUNNING DITCH [282523], BUT THE TERMINUS COULD BE FOUND UNDERNEATH.

NO FINDS, BUT IN THSINCE IT BELONGS TO [282487], THE SAME DATES CAN BE ASSUMED, I.E. 1A.

SKETCHES

Refer to context: [282485] + ([282521])

UPPERMOST FILL OF DITCH TERMINUS [282520]
FILL CONTAINS QUITE A LOT OF GRAVEL AND A MODERATE AMOUNT OF CHALK, BUT NO FINDS. HOWEVER, IT CAN BE DATED TO THE 1A THROUGH ITS AFFILIATION WITH 282485 (282488).
IT IS THE RESULT OF NATURAL INFILLING, AND IS CUT BY A MODERN DITCH [282523] IN THE WEST PART OF THE SECTION.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CONTEXT (282531) IS THE FILL OF PIT [282530]. THIS FILL IS MOST LIKELY A NATURAL INFILLING AS THERE DID NOT APPEAR TO BE ANY CHARCOAL OR OTHER MATERIAL INDICATIVE OF A BACKFILL (BAR ONE FRAGMENT OF POTTERY). THERE WERE A MODERATE AMOUNT OF STONE INCLUSIONS, THE SIZE RANGED FROM 1-2cm up to 8-10cm. WITHIN THE FILL THERE WAS ALSO A BAND OF GRAVEL, WHICH AT FIRST THOUGHTS WAS THE BASE HOWEVER THE FILL KEPT GOING BENEATH SO IT WAS ~~NOT~~ CLEARLY NOT THE BASE OF THE CUT.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a pit. The cut has steep slopes and a concave-ish base. Orientated N-s. Cut is half-sectioned.

Finds of pottery including a bottle stopper (F28183) may be able to provide a date. Possibly Iron Age or Roman.

The pit is situated close to a possible kiln and 4 other pits. An iron nail found (F28184) may suggest there was a possible structure close by.

It is possible that this may have been a rubbish or storage pit due to the range of finds.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Third fill of [282532]. Inclusions of Stones, chalk, charcoal, the odd root of a plant remain, Marine Shell and pieces of Several bones.

Finds of pottery along with a bottle stopper (F28183) could be able to provide a date which is assumed to be Late Iron Age or Roman.

A bent nail was also found (F28184) which may suggest there was a possible structure close by.

Possibly deliberate backfilling due to the presence of bones.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Single fill of a linear feature [282547], noted within an enclosure. Function is unknown.
The fill is a sandy-silt and contained a piece of pot and an animal bone. It is likely it was a natural build up after the linear feature went out of use.

FEATURE RUNS ACROSS AN IA/ROMAN SQUARE ENCLOSURE. CONTAINED NO Datable MATERIAL. FUNCTION UNKNOWN.

W-E RUNNING

CUTS A TERMINUS [282544] IN THE WESTERN SIDE OF THE SECTION.

DOES NOT SEEM TO BE AN INTEGRATED PART OF THE ENCLOSURE, AS IT EXTENDS BEYOND IT BOTH N AND S-WARDS.

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Cut of a gully terminus. The cut has moderate slopes and a concave base. Orientated E-W with the terminus ending towards the E.

Finds of pottery may be able to provide a date but for now the date is unknown.

Other finds include several pieces of fired clay and bones which can be identified as part of a jaw of an animal.

The gully is very shallow and is situated close to a large pit and a few ditches.

Refer to context (282560)

Fill of gully terminates [282559]. Inclusions of Stones, Chalk, charcoal, several pieces of CBM and bones of an animal jaw.

Finds of pottery may be able to provide a date but for now it is unknown.

Possibly a natural silting episode and part deliberate backfilling due to the presence of bone.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cur of a gully. The cut has steep slopes and a flat-ish base. Orientated E-W in a linear shape.

Finds of pottery may be able to provide a date but it is believed to be Roman.

The gully is close to a few deep ditches and a possible square structure indicating the presence of human activity.

Also recovered was a variety of animal bone and marine shell.

Refer to context (282566)

Fill of gully [282567]. Inclusions of stones, chalk, marine shell and a variety of animal bones.

Finds of pottery may be able to provide a date, but is believed to be Roman.

Possibly deliberate backfilling as the presence of bone is of a high quantity for it to be natural siltting.

Refer to context [282567]

CUT OF CURVILINEAR GULLY [282574].

FEATURE CUTS AN EARLIER NE-SW RUNNING DITCH [282570].

THE FULL EXTENT OF THE FEATURE IS NOT CLEAR IN PLAN, EITHER CUTS OR IS CUT BY SEVERAL OTHER FEATURES, AND IT IS NOT YET CLEAR WHICH SEGMENTS OF LINEARS BELONGS TOGETHER.

NO FINDS OR DATERABLE MATERIAL. FUNCTION UNCLEAR, BUT PERHAPS A PART OF A ROUNDHOUSE.

A FEW METRES TO THE SOUTH, THERE IS AN IA ROUNDHOUSE.

FEATURE IS FOUND WITHIN A LATE IA/EARLY ROMAN SQUARE ENCLOSURE.

SKETCHES

THIS DITCH IS A ENCLOSURE WHICH CAN HAVE THE ENTRANCE
IN THE EAST, BUT THIS WILL BE INVESTIGATED.

THERE ARE MORE SLOTS IN THIS FEATURE BUT THEY'RE STILL IN PROGRESS.

ABOUT THE PERIOD, IN THIS SLOT HAS BEEN FOUND TWO FRAGMENTS OF ROMAN POTTERY SO THIS FEATURE COULD BE ROMAN.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282584) a natural infilling with an occasional amount of inclusion, almost absent. We documented chalk and stones, normally natural flint, but also fired clay and charcoal. Regarding archaeological remains, we found some pieces of Roman pottery (Rims, bodies and base) and a few fragments of animal bones, one of them is a ~~the~~ tooth.

In respect of chronology we suggest it could be a Roman level due to the pottery unearthed in it.

As this level was really smooth and easy to dig, without many inclusions, we consider convenient to take some sample bucket, whose number is S28366.

Updated: after dug the whole pit we found a ^{new} moderate amount of animal bones ^{and as} moderate quantity of pot. Two more Iron nail were found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282585) is a natural infilling with many inclusions. It had a frequent amount of chalk, moderate of stones, mainly flint, and occasional charcoal.

In respect of archaeological remains we found some oyster shells, some fragment of pottery, where we highlight a samian rim, a iron object, probably a horse shoe* and different fragments of animal bones, within which we have two horse pelanges and one horse metapod.

Regarding chronology we suggest it must be a Roman level due to the samian pottery found in it.

We took two sample buckets: S28367

~~* we found as well a iron nail~~

Refer to context 282584

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

updated After had dug the other quarter of the pit, we have found a big amount of archaeological remains as a frequent quantity of pottery in general a medium quality, with some pieces of high quality. The oyster shells were frequent as well. In respect of animal bones, we only found some fragments.

Nine iron nails were found in this fill.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282586) is a deliberate backfill with an occasional amount of inclusions like chalk and flint.

Sadly we ~~did~~ didn't find any archaeological remains.

Regarding chronology, we can't ensure it is a Roman level, because we didn't find anything which can tell us that, but if we consider that the pit is Roman in general, this fill must be Roman.

Refer to context (282584)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282589) is a dumped layer with an occasional presence of stones, all of them flintangular, small and natural and a high amount of chalk, well spread along the fill. along the fill.

Regarding ~~ancient~~ archaeological remains, we didn't found anything in it. Another possibility is that during the excavation process we had problems to identify this fill and the remains went to the find bags of context (282585) or (282590) which are very similar.

In respect of chronology we are probably before a Roman fill.

Refer to context: (282584).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282590) is a dumped layer with an occasional quantity of inclusions, which were stones and chalk, all of them with small sizes.

In respect of archaeological finds we have a good range of finds, but all of them with an occasional amount. The pottery has a bad quality in general, being a dark Roman pottery. We highlight an iron nail very well preserved. The bones are animal bones, and the CBM was almost absent.

Regarding chronology we consider this fill as a Roman dumped layer.

It is the ~~same~~ same fill as (282603) and it has been truncated by two animal burrow.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

We sampled this fill: sample number S.28369.

Updated: After had dug the other quarter of the pit, we have unearthed more finds, between we highlight an occasional amount of CBM, an occasional quantity of animal bones, probably from cattle and horse, so animal with big sizes. Related to the pottery, we found only some pieces of it, in general with a low quality.

One iron nail was found in this fill

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [282592] is a cut of a pit which at the beginning it could have had an extraction use, ~~but then~~

Once the pit was abandoned, we have a first level of natural infilling, followed by a phase of use like a waste disposal. This phase of waste disposal is the responsible of the succeed of dumped layers and deliberate backfills. All these ~~blanks~~ dumped layer have a dark colour, related with a higher component of organic material, while the deliberate backfills are lighter, due to a less organic composition.

Our idea about this is that the black levels ~~are~~ were rubbish and the light levels were thrown into the pit to cover and avoid the rubbish and the smell.

This pit cuts a gully [282594].

Regarding chronology we suggest it is Roman due to the remains found in it.

* Please have a look [282595] for an updated location plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282593) is a natural infilling of a gully, with an occasional amount of chalk and stones. The latter were mainly natural and angular flint, with small sizes.

The finds were absent, so it is difficult to say a exactly ~~also~~ chronology for this feature. Anyway if we consider the pit, which is cutting the gully, Roman. This gully must be Roman or earlier, ~~rather~~ older.

This fill is the same as (282526)

Refer to context (282584)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [282594] is the cut of a gully, which runs from the S to the N.

It has been cut by a Roman pit [282592].

We didn't find any archaeological remains, but if the gully has been cut by a Roman pit, this feature must be Roman or ~~ear~~ ^{even} ~~later~~ older.

This cut is the same as [282527]

Refer to context [282592]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [282595] is the cut of a pit with multiple fills, with a possible extraction function (material to be used for construction of surrounding buildings). A secondary usage is evident as a rubbish pit, identified by a sequence of dumped layers and deliberate backfills.

Chronologically we consider this pit as a Roman feature due to the pottery found in it, for instance Samian.

This pit is cutting two older features. The first one is a ditch, probably Iron Age / Late Iron Age [282613] and another pit [282612]. Also, this pit has truncated a gully [282594]. Please have a look drawing n° 28517 for this Relationship: Pit / Gully.

This cut has been truncated by a furrow [282611]

Refer to context (282607) (282606)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill (282596) is the top fill of the pit cut [282595].

Large quantities of oyster shell were recovered, as well as various sizes of animal bones and different styles of pottery alongside a couple of pieces of fired clay.

From the vast amount of finds, the evidence suggests that this pit was (eventually) used as a waste disposal pit, due to the copious amount of food waste, pottery sherds and fired clay.

Between the small finds we can highlight ~~var~~ different sizes of nails and fragments of Roman glass.

FILL (282599) IS A DELIBERATE DUMPING OF FOOD + POTTERY WASTE.

THIS IS EVIDENT BY THE VAST QUANTITY OF OYSTER SHELLS AND ANIMAL BONE. THERE IS ALSO LARGE QUANTITIES OF POTTERY (MANY DIFFERENT TYPES).

THE POTTERY VARIES IN SIZE, TYPE, CONSISTENCY + COLOUR, WITH MULTIPLE DIFFERENT RIMS, BASES + BODIES. ~~(NO SAMIAN WARE EVIDENT)~~

THE ANIMAL BONE APPEARS TO BE MAINLY LARGER SPECIES.

THE OYSTER SHELLS ARE EXTREMELY FREQUENT IN THIS FILL.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (282600) has a silty sand composition in comparison to the other fills above and below it. It is much lighter with no evidence of finds.

This fill could be an example of capping the previous fills in this pit.

No inclusions or finds present.

Refer to context

[282595] ~~[282613]~~ (282614) (282607).

THIS FILL (282601) IS A DARK IN COLOUR WITH OCCASIONAL-LARGE INCLUSIONS OF CHARCOAL.

THIS FILL (282601) DIFFERS FROM THE PREVIOUS FILL ~~(282602)~~, LEADING TO THE INTERPRETATION (282604) THAT THIS WAS A DUMPED LAYER WITH THE INTENT FOR UTILISING THE PIT FOR WASTE (NOT A CAPPING LAYER).

ANDS INCLUDE OCCASIONAL AMOUNTS OF POTTERY (VARIOUS TYPES/STYLES) AND ANIMAL BONE.

Checked by

Context (282608) is a natural infilling, which has been truncated by a furrow [282611] and a Roman pit [282595].

The chronology for this fill could be Iron Age, late Iron Age, because of its position in the stratigraphic matrix, although we can't ensure it.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282609) is a natural infilling of a pit, which has been truncated by a furrow (282611) and a Roman pit (282595)

The chronology for this fill could be Late Iron Age, although we can't ensure it because we didn't find any archaeological remain.

Refer to context

This form is incomplete if fields marked with * are empty. PTD for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context (282614) is the fill is a natural infilling with an ~~occasional~~ frequent amount of stones and a moderate quantity of chalk as inclusions. The ~~found~~ were flint, natural, angular and small-medium sizes.

There are multiple finds from this fill. Most noticeable is the pottery, probably from the Late Iron Age, a bag of CRM and a couple of animal bones.

This feature has been truncated by a Roman Pit (282595).

*This fill is the same as: (282873) (282369) (282849)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NATURAL INFILLING OF PIT [282619] INVESTIGATED IN A
RELATIONSHIP SLOT (2'SS x 1'40m).
THE FILL CONTAINS FREQUENT STONES (1-7 cm Ø) WITH
SUB-ROUNDED AND SUB-ANGULAR SHAPE AND MODERATE
CHALK.
IT HAS BEEN FOUND OCCASIONAL ANIMAL BONES AND
TWO FRAGMENTS OF POTTERY (ONE OF IT A PLH), THAT
COULD BE ROMAN. FOR THAT, THIS FEATURE, THE PIT,
COULD BE ROMAN.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

PIT WITH THREE NATURAL INFILLINGS (282616) + (282617) + (282618), WITH AT LEAST 1'06 m OF DIAMETER (NOT FULLY EXCAVATED), INVESTIGATED IN A RELATIONSHIP SLOT (2'50 x 1'40 m).

THE PIT IS CUTTING THE FILL (282625) WHICH BELONGS TO THE GULLY (282626) AND THE FILL (282620), WHICH BELONGS TO THE GULLY (282621).

IT HAS BEEN FOUND TWO FRAGMENTS OF ROMAN POTTERY IN ONE OF THE FILLS OF THE PIT, SO COULD BE ROMAN.

THE SIDES OF THE PIT WHICH ARE NOT IN THE SECTION, ARE VERTICAL.

NATURAL INFILLING OF GULLY [282626] INVESTIGATED IN A RELATIONSHIP SLOT (2'50 x 1'40 m).

THE FILL CONTAINS FREQUENT STONES (1-6 cm Ø) WITH SUB-ROUNDED, SUB-ANGULAR AND ANGULAR SHAPE AND MODERATE STONES.

NO ARTIFACTS WERE RECOVERED.

IS CUT BY THE PIT [282619] AND IN THE EAST FACING SECTION ~~WAS~~ IT'S NO POSSIBLE TO SEE THE RELATIONSHIP WITH THE GULLY [282628], BUT IN A CLOSER SLOT IT'S POSSIBLE TO SEE THAT THIS FEATURE IS THE OLDEST, SO THE FILL IS CUT BY [282628]

Refer to context

E-W RUNNING GULLY WITH ONE NATURAL INFILLING (282625) INVESTIGATED IN A RELATIONSHIP SLOT. THE FILL OF THE GULLY IS CUT BY THE PIT [282619] AND BY THE GULLY [282628]. THIS LAST RELATIONSHIP IT'S NO CLEAR IN THE E FACING SECTION (RAW # 28520) OF THIS SLOT, BUT THE RELATION IT'S ALREADY KNOWN BECAUSE A CLOSER SLOT. FOR THAT, THIS ~~RE~~ GULLY IS SAME AS [282549] AND THE TERMINUS OF IT COULD BE IN THIS SLOT BUT IS ~~SENT~~ LOST FOR THE PIT (NO POSSIBLE TO SEE THE CONTINUATION ON PLAN)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling of gully [282628] investigated in a relation ship slot.

The fill contains frequent stones (~3 cm ϕ) with subrounded shape.

No artefacts were recovered.

In this slot it's possible to see the terminus of this feature.

- Roman ~~lake~~ pond / lake [282647].
- Sides of lake lined with cobblestone surface.
- Roman pottery found in fills. → wooden bucket (woven wood) found in dark fill (282651). → possibly a Roman fish trap.
- about 35 m across → base of lake not yet reached.
- Truncated by later ditch (mod.) [282653].

Refer to context (282651-48)
[282653].

NATURAL INFILLING AND PRIMARY FILL OF DITCH [282656]
 INVESTIGATED IN A 17m x 17m x 1,5m x 1,5m SLOT.
 THIS FILL CONTAINED OCCASIONAL STONES (0,05-0,06m Ø)
 WITH A SUB-ANGULAR SHAPE.
 IN THIS FILL WE ~~WAS~~ FOUND FREQUENT POT SHEAR FROM
 ROMAN PERIOD, AND ALSO FREQUENT ANIMAL BONES.
 THIS FILL IS CUT BY THE CUT [282659] AND IS TRUNCATED
 BY THE DITCH [282664].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of NW-SE running ditch investigated in a 17'00m x 1'5m plot. This feature is placed on the north eastern edge of the plot, it is possible to see it in both sections as it is shown in the local section sketch below, it is ~~probably~~ truncated by a later feature, maybe a terminus of a NW-SE running ditch [282664]. The relationship between both is not so clear due to the similarity of the layers. It could be necessary to dig the Roman the subsoil around the plot to give an interpretation. This old cut was ~~probably~~ a re-cut [282658] but that is cutting only the fill (282655). The only chronology we have is the Roman pottery we found on the top fill (282655).

Refer to context (282655)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

NW-SE RUNNING DITCH INVESTIGATED IN A 17m x 17m x 1.5m x 1.5m SLOT.

THIS DITCH (282664) IS CUTTING THE DITCHES [282659] AND [282656].

IN THE SCOT WE HAVE THE TERMINUS OF THIS DITCH.

IT IS NECESSARY REMOVE THE SURFACE AROUND TO GIVE MORE INFORMATION ABOUT THE FEATURE.

THE ONLY CHRONOLOGICAL INFORMATION ARE THE PRESENCE OF ROMAN POT SHARD ON THE FILL (282660) AND (282661)

Refer to context: (282655)
(282656)

SKETCHES

Secondary Fill of NW-SW Running Ditch ²⁸²⁶⁵⁵ in Vostok Road in
 17. X 1'5" - 501; this ~~fill~~ Fill belongs to a cut of
 1'60 x 0'40 - is visible in both section in the south west.
 has the bigger thickness of 0'30 - and in the opposite of 0'10 -
 in this section is truncated by a later transverse
 NW-SW Running Ditch. [282514]
 WE ALSO FOUND ~~the~~ OCCASIONAL ANIMAL BONE

Refer to context [282667]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

- SPATIAL INFILLING OF NW-SE RUNNING GULLY OR ROCR [282673]
 THIS FEATURE IS ONLY VISIBLE IN THE S.E. FAC. SECT.
 - THE INTERPRETATION OF THIS FEATURE IS NOT POSSIBLE TO ENSURE
 TILL THE SURFACE AROUND WILL BE ALL BE STRIPPED BY THE MACHINE.
 - THE FILL HAS MODERATE CHALK INCLUSIONS AND OCCASIONAL
 SMALL SUBANGULAR STONES (0.01-0.05 m).

Refer to context

NATURAL INFILLING AND PRIMARY FILL OF FURROW [282681]
 INVESTIGATED IN A 17m x 17m x 1.5m x 1.5m SLOT.
 THIS FILL CONTAINED OCCASIONAL STONES (1.05-0.06m ϕ)
 WITH A SUB-ANGULAR SHAPE. IT ALSO HAVE OCCASIONAL.
 THIS FILL WAS RECORDED BECAUSE WE FOUND A ROMAN
 COIN IN THIS FILL.
 WE ALSO FOUND ~~ROMAN~~ OCCASIONAL POT SHERD FROM ROMAN
 PERIOD.

Refer to context 282655

E-W RUNNING FURROW INVESTIGATED IN A 17m x 17m x 4.5m
x 1.5m SLOT.

WE CONSIDER THIS FURROW WAS AN IMPORTANT
FEATURE IN OUR SLOT, BECAUSE ON THE FILL (282680)
WE FOUND A ROMAN COIN, AND ALSO BECAUSE IT
IMPORTANT TO EXPLAIN WHAT IS HAPPENING IN THIS SLOT.

This is a ^{dumped layer} ~~deliberate~~ backfill of a interesting pit structure investigated in a 1'14" x 0'60 slot.

This fill, as almost all the fills in this feature, it's a very dark fill. I think this is a kind of dump and the organic infilling is the reason why this fill is so dark.

This fill contained occasional small subangular stones and some rounded burned stones.

It contained also some charcoal flecks and chalk nodules.

According to the potsherds found the use of this dump can be dated in a transition moment between the iron age and the roman period.

Some animal bones and CBM were found as well.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a pit investigated in a 1'14 x 0'60 m slot. This pit is cutting the surrounding pits so it's one of the latest one in this feature.

In the section of this quadrant we can see that is cutting [282690].

The SE edge of this pit is very disturbed by roots.

Due to the finds found in its fill we can date the use of this pit in the transition moment between the iron age and the roman period.

This feature is close to the entrance of a round house, dated in the same moment, so it could be a related feature.

This same pit has been formerly recorded in other quadrant in the NW part #28256 [282698].

Refer to context 282681

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a natural infilling of a pit investigated in a 1'14 x 0'60 slot.

[282683] This fill belongs to a pit or a post-hole cut by the dump. The shape in plan is clear and the fill is much brighter than the organic dark fill of the dump. It has a greyish colour and a sandy composition. It doesn't have many inclusions, just some small subangular stones.

No archaeological remains were found on it.

Refer to context 282687
282688

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a pit or a post-hole investigated in a 1'14" x 0'60" slot.

This feature is cut by the dump, which is composed by intercutting pits, in this case [282688].

The fill of this pit is much brighter than the one from the dump and it doesn't contain any archaeological remains. The shape is also very clear in plan.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the ~~deliberate~~ ^{dumped} ~~barrel~~ ^{layer} of a pit investigated in a 1 x 0.40 m slot.

As the rest of the fills of this intercutting pits feature, this is a really dark fill, due to its organic origin.

Even if we didn't find a lot of archaeological remains in this quadrant, when the pit was fully excavated we found quite a lot big potsherds and some animal bones.

The potsherds found are mostly iron age, but we can also see some roman ones. For that, we can say that the pit was used in a transitional moment.

Some big burned stones were also found in this fill, but they are more ~~was~~ notorious in a quadrant in the NE side [282702] # 28526.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a pit investigated in a 1 x 0.40 m slot.
~~This~~ As we can see in the section of this slot, this pit is cutting a smaller pit or post-hole [282694]. But in a quadrant located in the NE part # 28526, we can see that this pit is cut by another two pits [282698] ~~[282698]~~ [282731].
 The potsherds found in its fill ~~the 282698~~ allows us to date this pit in a transitional moment between the iron age and the roman period.
 According to the kind of fill and the remains found I think that this is a dog dump.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a ~~deliberate backfill~~ of a pit investigated in a 1x0.4m slot. ^{dumped layer}

This pit it's located in the western part of this feature. The fill of this feature is not as dark as the rest of the fills of this group of intercutting fills. It has been also altered by later plow scars.

In the bottom of this pit, we found a piece of white clay with a potsherd on top. When we fully excavated it we saw that the clay was bigger and that it also had remains of a burned clay on it. In my opinion this is not the original location of this clay was dropped inside this pit.

In a nearby slot in the NE part a surface of this same clay is being excavated and I think it could belong here. Some medium sub-angular and rounded shales were also found in this fill.

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a ~~the~~ pit investigated in a 1x0.5m slot. This pit is located in the western part of this feature, and it's cut by a bigger pit [282692]. Due to the potsherds found in its fill we can date this pit in the iron age - roman period transitional moment, as the rest of the pit of this feature. It's not as big as the ~~rest~~ other pits and its fill is not as so dark, so maybe we are speaking about a post-hole. In this case, the clay found in the ~~the~~ bottom could be a packing system.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a dumped layer of the [282698] pit, excavated in a 1'08 x 1'40 x 1'10 m slot.

It's a very dark fill, due to its organic composition. This fill contained some medium rounded burned stones and in some areas big amounts of small angular stones.

A moderate quantity of potsherds were also found and they allow us to date the use of this pit in a transitional moment between the iron age and the roman period.

Some animal bones were also found (pig jaw fragments).

Also a piece of clay (the same white clay as that was found in the (282693) fill) was found.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a dumped layer of [282698] pit. As we have said for (282696), I made the distinction of these fills because different colours were visible in the section but as we have said the fills of this feature have been formed as a result of dumping ~~again~~ rubbish on it, so the fills are quite similar.

For further information, check (282695), in that context sheet is the main information of the finds and composition of the fill of this pit.

ADDITIONAL INFORMATION:

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a pit, it's the bigger one in this feature and it's located in the western side.

This pit is not cut by any other, but it's cutting [282690] and [282702] = [282692].

The relation between this pit and [282731] was not visible so I have drawn them without any contact in the plan sketch.

This pit belongs to an intercutting pit feature, probably used for dumping rubbish on it. It's located close to the entrance of a round house so both features could be related.

This is the fill of [282702] pit. This fill contained a big amount of big rounded stones in the bottom, some of them burned.

Also some burned bones were found on it and quite a lot of ~~potter~~ potsherds, that let us to date the use of this feature in a transition moment between the iron age and the roman period.

3 small finds were found in this fill.

28152 → bronze piece of pin

28198 → worked flint

28199 → flint arrowhead.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a gully investigated in a 0'36 x 0'18 m slot.

This gully runs parallel to an intercutting pits feature that could be a dump. I don't think both features are related and they don't have physical relation. The fill of the dump was full of archaeological remains as it was very dark, but the fill of the gully is much brighter.

The gully is close to a round house (in the entrance) so it could be related with that.

Refer to context 282703

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a ditch / linear feature running on a E-W alignment.
The N side is almost vertical and is cut into a sandy natural.
The S side slopes moderately and is cut into a very gravelly natural. The difference in the two sides could be the result of recutting the side (S).
No finds to indicate a date. Function / purpose of ditch currently unknown.

1m slot excavated.

Refer to context (282712)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill (of two) of ditch [282711]

The sandy-silt is probably a natural infilling. The small stone inclusions and sand is likely to come from the erosion of the sides/natural. (the natural at this ditch is very gravelly).

Refer to context [282711]

(any further details that may be important for understanding the context, including items marked *overleaf)

THIS E-W RUNNING DITCH [282718] HAS A ~~CONVEX~~ LINEAR SHAPE, ITS SIDES ARE STEEP SLOPING AND ^{HAS} A CONCAVE BASE.

THIS DITCH [282718] WAS RECORDED IN A 2'10" x 3'8" METRES SLOT.

THIS DITCH [282718] IS FILLED BY ONLY ONE FILL: THE NATURAL INFILLING (282717).

THE SHAPE OF THIS DITCH IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS.

THIS DITCH [282718] IS CUT BY THE DITCH [282720] AS WE COULD IDENTIFY IN THE MIDDLE OF THE SLOT WHEN THE DITCHES ARE CROSSING BETWEEN THEM.

IN THE CLEANED SURFACE OF THE WEST ^{SIDE OF THE SLOT} WE CAN SEE AGAIN THAT THE DITCH [282718] IS CUT BY [282720] AFTER THE DITCH [282718] STARTS TO TURN TO THE NORTH-EAST. THE RELATIONSHIP IS ALSO CLEAR IN THE SHAPE OF THE EDGES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

THIS NW-SE RUNNING DITCH [282720] HAS A CORVILINEAR SHAPE, AND ITS SIDES ARE STEEP SLOPING AND ^{BASE} A CONCAVE BASE. THIS DITCH [282720] WAS RECORDED IN A 2'10" X 3'13" METRES SLOT.

THIS DITCH [282720] IS FILLED BY FOUR FILLS: THE NATURAL INFILLING (282719), THE DUMPED LAYER (283445), THE DELIBERATE BACKFILL (283444) AND THE NATURAL INFILLING (282730) ^{THAT IS} THE OLDER ONE. THIS FEATURE IS RESULT OF DESIGN IN A CONSTRUCTION BASIC PROCESS. THIS DITCH IS THE DEEPER FEATURE IN THIS RELATIONSHIP ^{SLOT}.

THIS DITCH [282720] IS CUTTING THE DITCH [282718] AS WE COULD IDENTIFY IN THE MIDDLE OF THE SLOT WHEN THE DITCHES ARE CROSSING BETWEEN THEM.

AS WE IDENTIFIED THE ~~POTTERY~~ ^{POTTERY} ~~REMAINS~~ ^{FRAGMENTS} OF THE FOUR FILLS OF THIS FEATURE AS EARLY ROMAN REMAINS SO WE DATE THIS FEATURE IN THAT CHRONOLOGY. THE FILL (283445) IS SEEMS TO BE A COLLAPSED KILN, OR ^{OR} ANOTHER CONSTRUCTION IN A DISUSE MOMENT OF THE FEATURE
