# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

cremation / grave good deposit located near the Stomach area. The deposit has not been measured for thickness however it was roughly 0.10m thick. Dark black-silty-clay with charcoal and burnt bone.

The deposit contained one copper coin and a concentration of cremated bone was found within the context. Might represent votive offering as it could be cremated animal bone - from a funeral feast?

Similar to deposits (285630), (285626) and (285623).

Refer to context [285615]

(285616)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)
