ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310760) is a natural infilling with an occasional amount of stone, chalk and charcoal as inclusions, well spread along the fill.
The stones were natural, angular and small size flint and some medium - small pebbles.

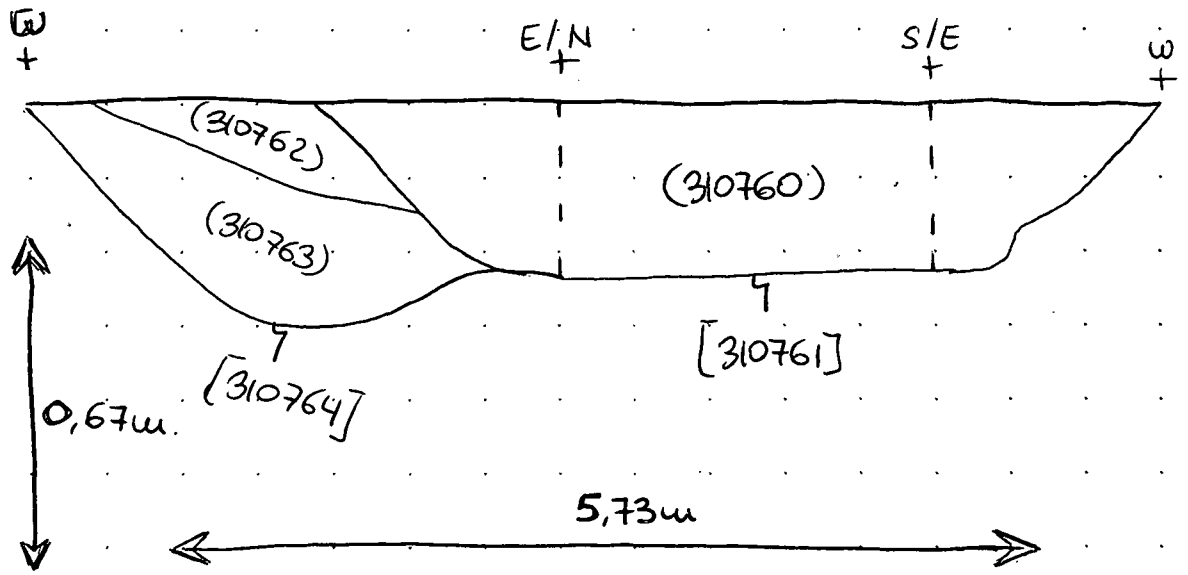

In respect of archaeological remains, we found a high range of them, although in small quantities.
The pottery is just one piece, really fragile and bad quality. ~~In respect~~ Regarding lithic industry, we only unearthed some fragment of debris and a couple of blades. None of these pieces have been retouched.

Chronologically we think it must be Late Iron Age - Early Roman due to the finds unearthed from it.

Refer to context

(any further details that may be important for understanding the context, including items marked * overleaf)

Context [310761] is the cut of a ditch which has got a linear shape and runs from the south to the north.

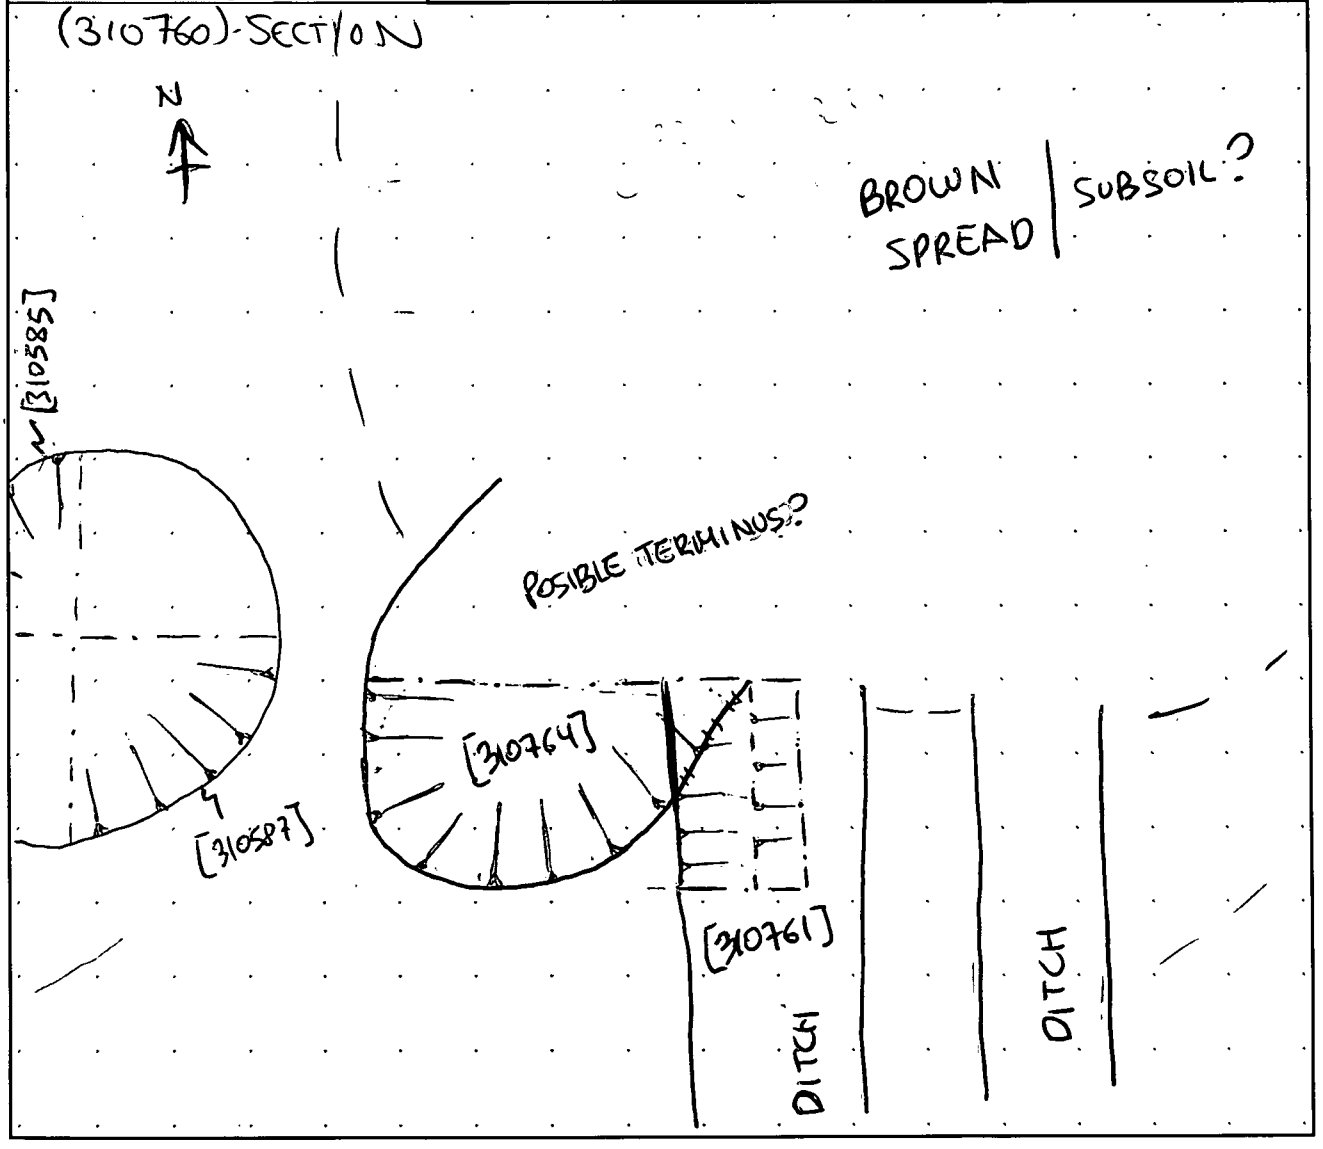

This cut has been filled up with only one context (310760) where we found some archaeological remains which suggest a Early Roman a Late Iron Age chronology.

The ditch is cutting another feature, a possible terminus [310764] and its two fills (310763) and (310762).

The main feature of this ditch is its stepped base.

Refer to context [310761]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310762) is a natural infilling with an occasional quantity of stones and chalk as inclusions. These stones were mainly natural, angular and small size flint.

Regarding archaeological finds, we unearthed some pieces of ~~prehistoric~~ bad quality and fragile pottery which could be dated as Iron Age. We found one fragment of animal bone and two lithic pieces, one blade, not retouched, and one debris.

This fill can be from the Iron Age and it has been cut by a possible late Iron Age - Early Roman ditch.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310763) is a natural infilling with an occasional amount of inclusions, stones and chalk. The former were basically natural, angular and small size flint.

Unfortunately we didn't find any archaeological remain.

In respect of chronology, we think it must be Iron Age.

This fill has been cut by ~~an~~ ditch [310761].

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context [310764] is the cut of a possible pit or terminus, we don't know it very well because the avec around the stot is covered by a brown spread ~~on~~ a subsoil. Under our point of view, we think it might be a terminus of a ditch due to one of the side is straight.

It has a linear shape and runs NE-SW direction.

Two content filled this cut up, (310762) and (310763).

Chronologicaly it could be Iron Age, due to the remains found in the upper fill and because it has been truncated by a Late Iron Age - Early Roman ditch. [310761].

Refer to context [310761] - PLAN (consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FIRST FILL OF DITCH [310799]. THIS FILL CONTAINED NO FINDS AND A HANDFUL OF SMALL STONES. THIS FILL IS LIGHT GREY IN COLOUR WITH PATCHES OF ORANGE SAND (BEING SAND). DUE TO THE COMPOSITION- IT IS SUGGESTED THAT THIS FILL WAS FROM WEATHERING OF THE DITCH EDGE, AS THE MATERIAL EASILY FALLS AWAY FROM THE EDGES.

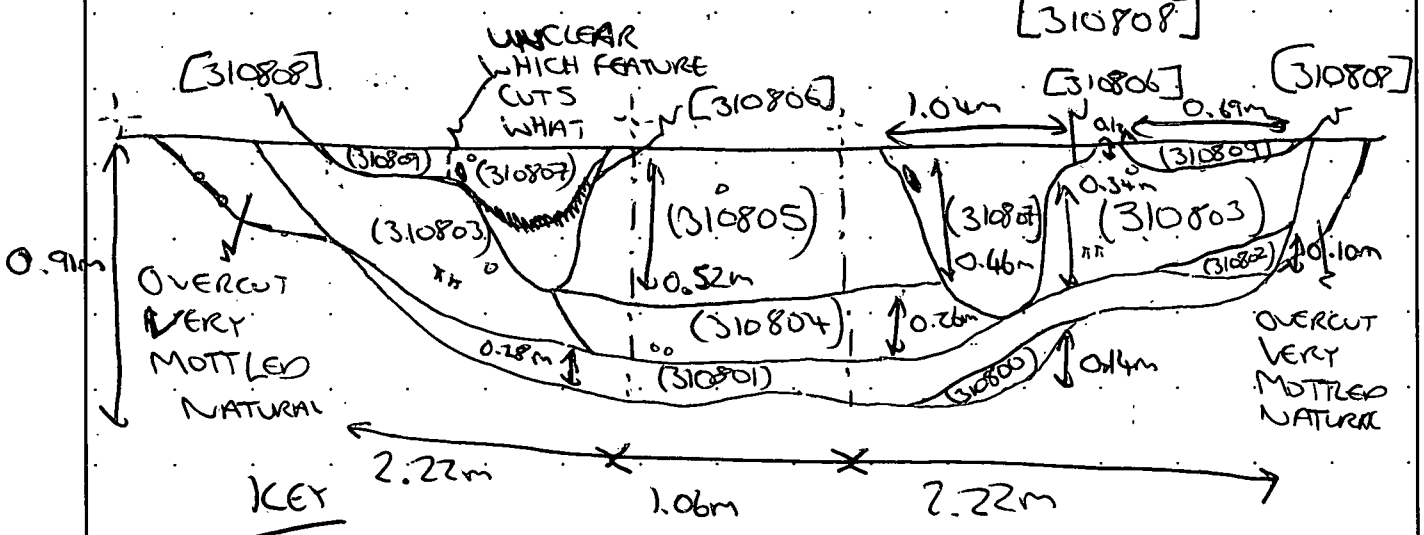

Refer to context: MATRIX - (310801)

CUT OF SMALL DITCH [310808]. THIS DITCH RUNS OVER 35m SE TO WHERE IT TERMINATES + GIVEN NO. [310647]. IT THEN RUNS NW AND CURVES NNW TO WHERE IT TERMINATES. THIS FEATURE CUTS INTO AN EARLIER DITCH FILL (310805). IT ALSO MERGES WITH ANOTHER DITCH [310806] THOUGH A RELATIONSHIP BETWEEN THE TWO CAN'T BE DISTINGUISHED.

Refer to context

FILL OF DITCH [310813]. CONTAING BONE, POT AND CHARCOAL THIS FILL IS CUT BY DITCH [310811]. MADE OF A ~~SILTY~~ CLAYEY SILT MATERIAL WHICH WOULD HAVE FORMED THROUGH WASHING INTO THE DITCH OVER A LONG PERIOD OF TIME. THE FRAGMENTS OF BONE IN THIS FILL ARE QUITE LARGE POSSIBLY INDICATING DELIBERATE DISCARDING ~~OF~~ INTO AN ABANDONED DITCH RATHER THAN THROUGH RAIN WASH ALONE.

ADDITIONAL INFORMATION

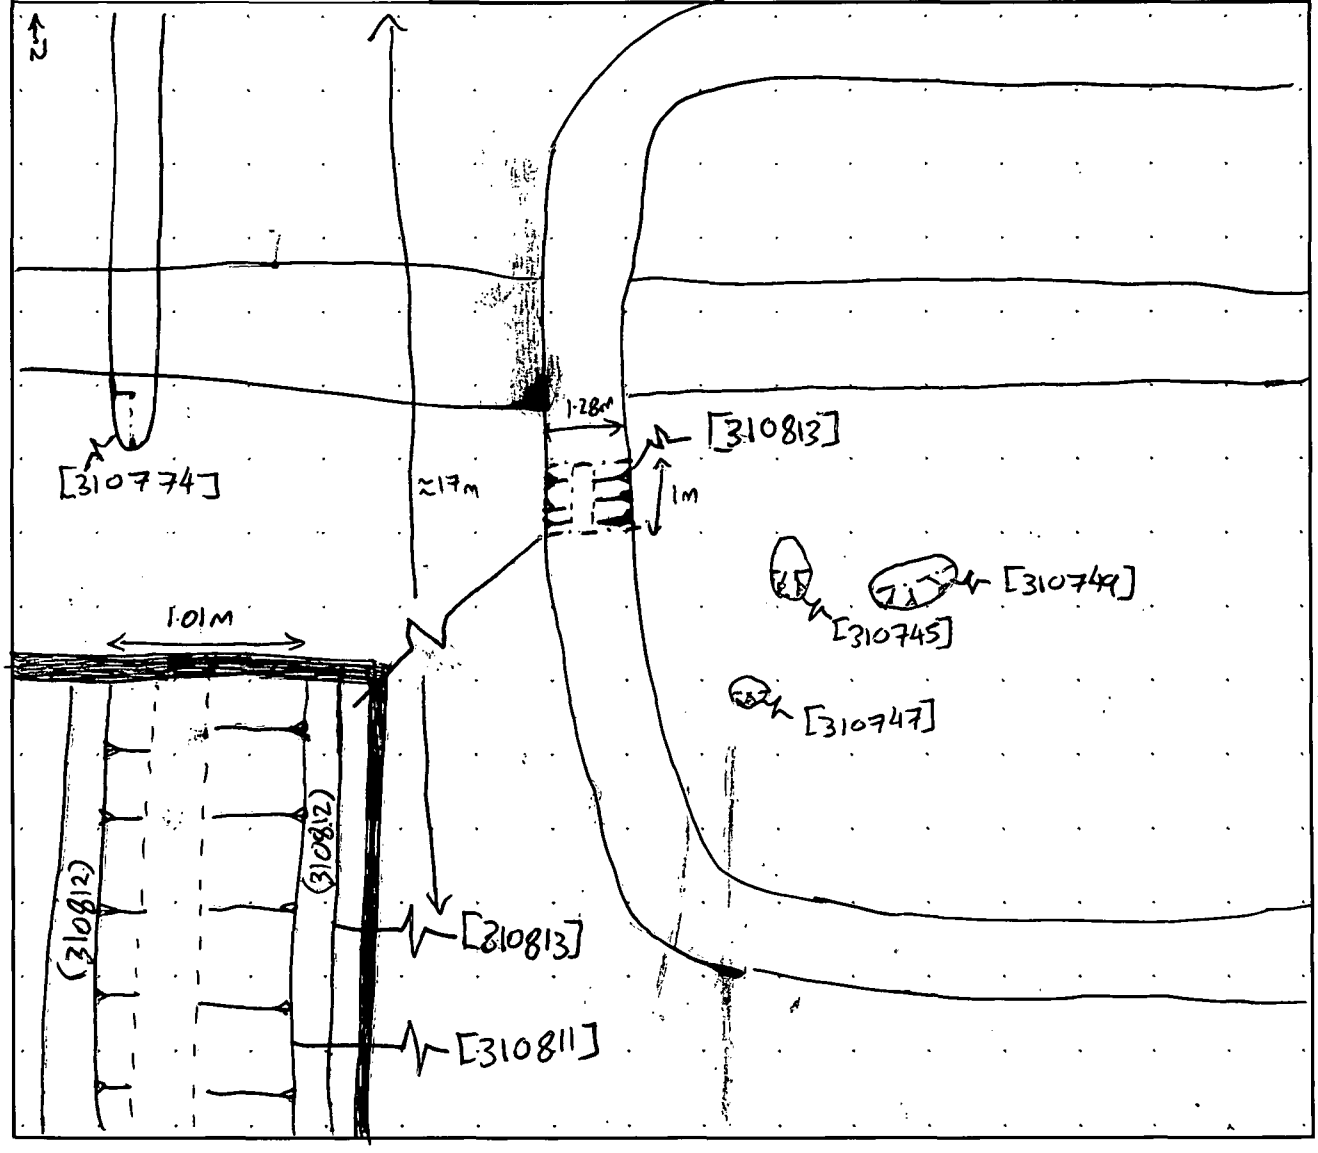

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of ditch [310817], filled by (310818). This ditch is not very long or deep, making it unlikely to have been part of a field system. It is possible that it represents part of a smaller scale enclosure, perhaps part of an animal pen.

It was difficult to discern the fill of this ditch from natural, so it is likely that it filled slowly in the absences of Human activity.

Refer to context ~~(310818)~~

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ditch [310817]. Contained occasional small stones & charcoal flecks. Also contained occasional pot

It is likely that this fill formed through natural infilling. This is due to its close resemblance to surrounding naturals.

Refer to context [310817]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

1m SLOT OF DITCH RUNNING NORTH SOUTH, COULD BE PART OF AN ENCLOSORE AS IT DOES TURN OFF TO THE EAST.

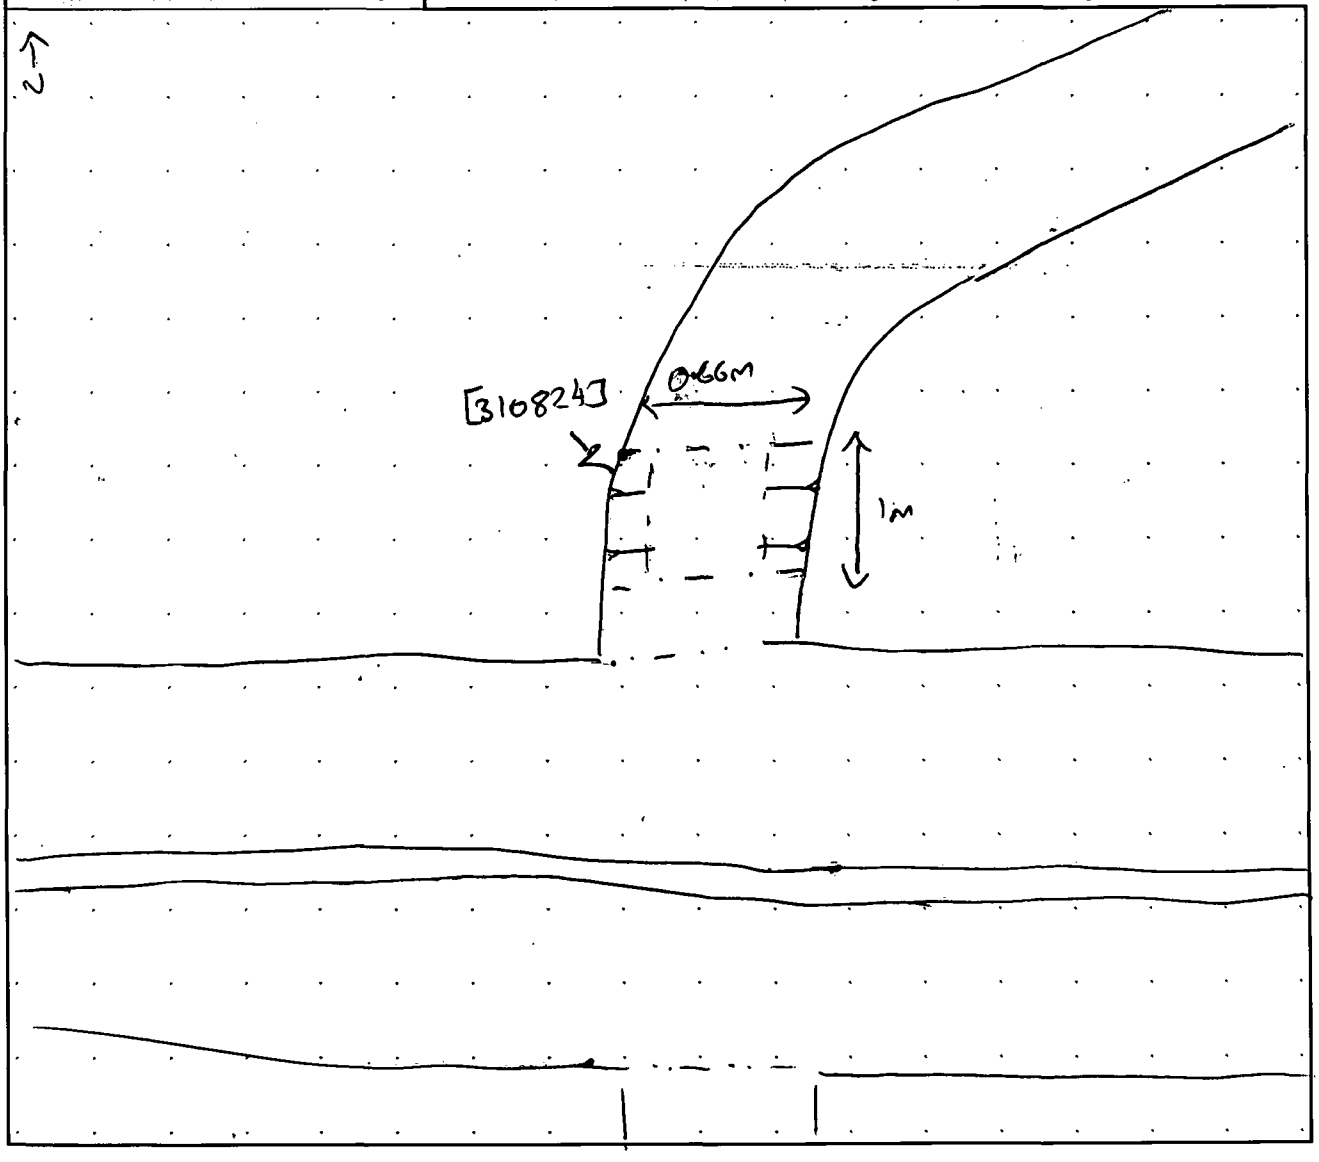

HAS MODERATE SLOPING SIDES AND A CONCAVE BASE.

IT IS IN AN AREA OF LOTS OF DITCHES LIKELY INDICATING VARIOUS FIELD BOUNDARIES SPANNING A LONG PERIOD. THIS DITCH APPEARS TO BE CUT BY A PAIR OF DITCHES ORIENTATED EAST-WEST.

Refer to context (310 823)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF DITCH [310830]

DITCH RUNS ON THE NE-SW AXIS AND CONTAINS FIVE FILLS. IN UPPER FILL WERE FOUND BADLY PRESERVED IRON AGE POTTERY AND PIECE OF FIRED CLAY. FROM LOWER LAYER WE HAVE THREE FLINTS. ON THE BOTTOM OF THIS FEATURE WERE FOUND SMALL FRAGMENTS OF ANIMAL BONES. THIS DITCH IS CUT BY CONTEXT [310835].

Refer to context (310825) – SECTION

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ring gully to possible roundhouse / work area. The cut has a maximum depth of 0.39m and a width of arand 0.43m. Sleep sides and concave base.

The gully is truncated by enclosure ditch [3108417] which indicates the roundhouse / structure pre-dates the MIA enclosure.

The cut has two possible stake hole in the bottom of the gully which might indicate a wattle wall.

The cut has two fills (310837) and (310838).

Post hole [310839] might be connected to the roundhouse / structure as it is next to the cut of the gully however no relationship could be made.

Refer to context [310839]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ring gully cut [310836]. The fill has a maximum thickness of 0.30m and is composed of a dark greyish brown sandy - silt.

The fill might represent a packing fill for a wall / posts of a roundhouse structure however no significant amount of finds were collected to strongly suggest a deliberate backfill. Might be the same context as (310923).

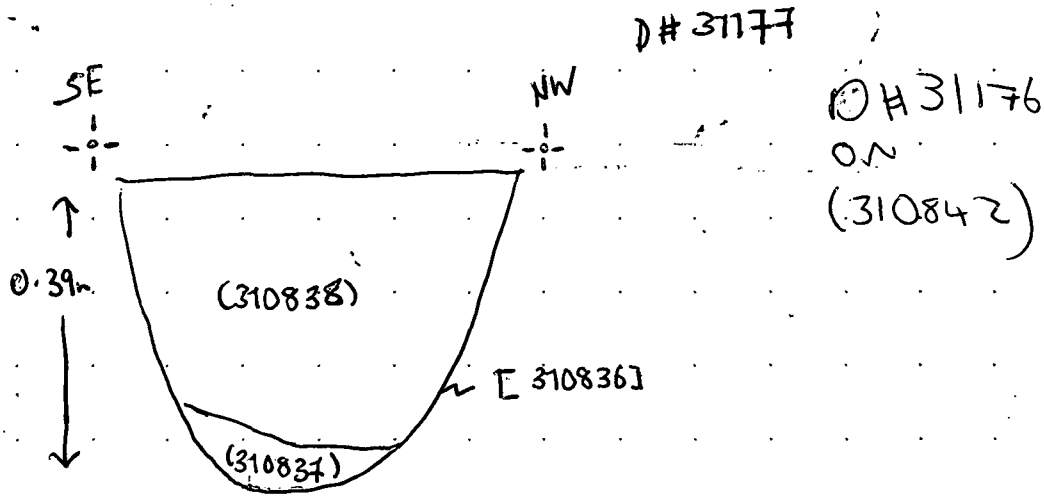

Stones found in section measure around 10mm - 25mm - the might indicate packing stones however this is not clear.

Refer to context [310836]

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of possible posthole. The cut has a depth of 0.19 m however full depth of the cut would have been 0.57m, however enclosure ditch [3108417] truncates the cut almost compleatly.

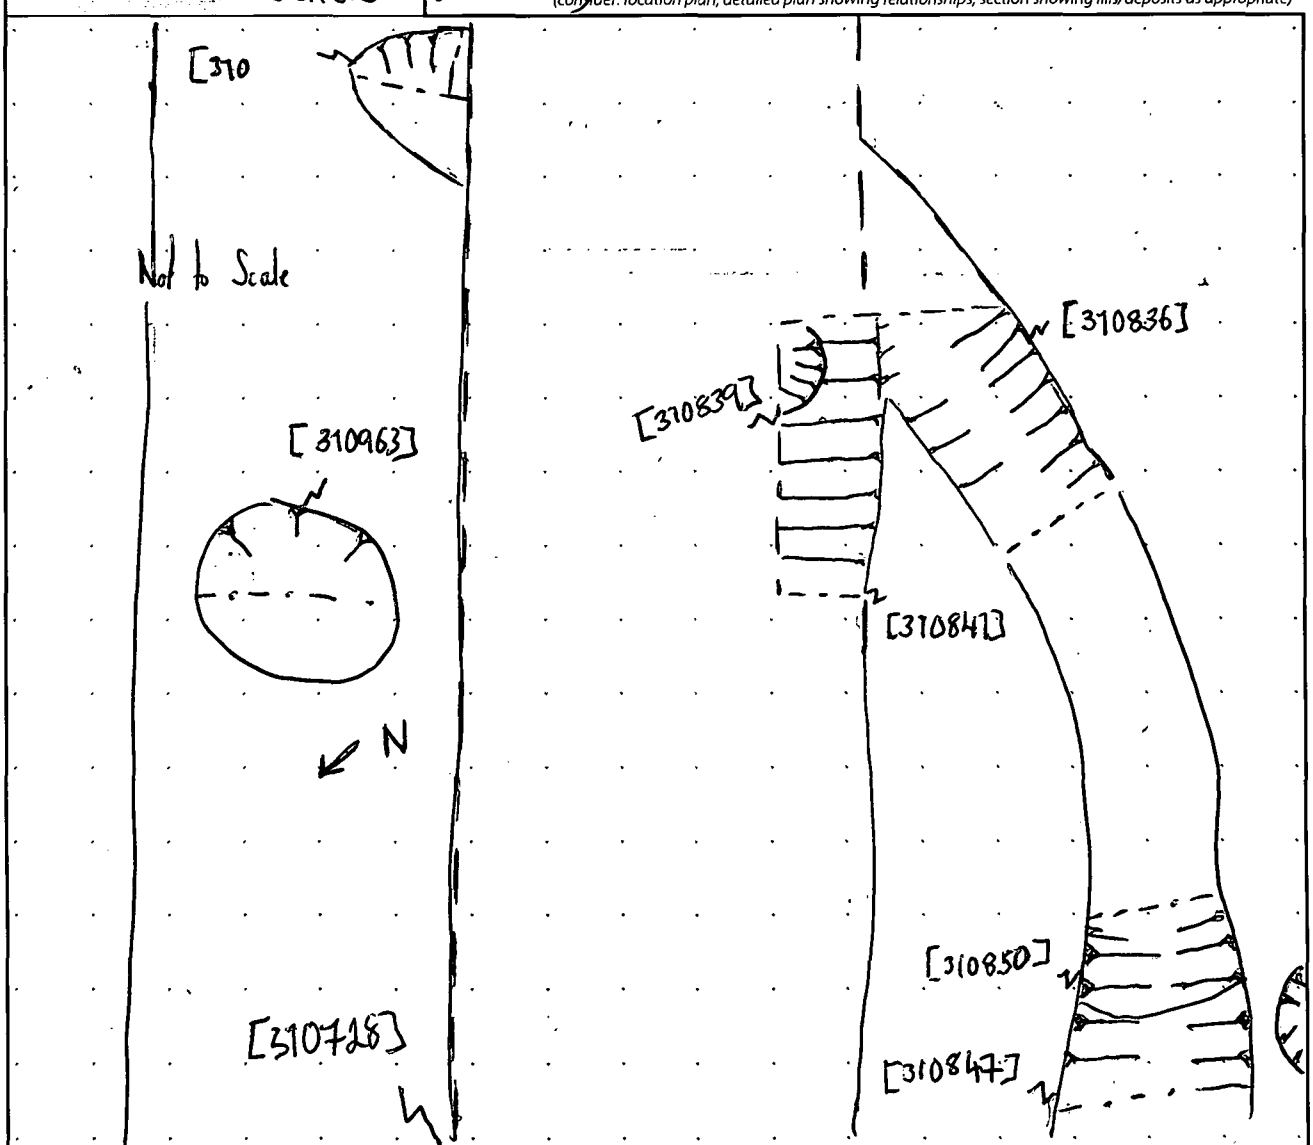

The post hole is most likely contempory with gully cut [3108367] and probably made up part of a roundhouse or some other type of structure.

The post hole doesn't have packing stones which were found in conection with post hole cut [3109337] however these might have been cut away or disturbed by enclosure ditch cut [3108417].

The post hole has one fill (3108410) and there is no sign a post was left in situ.

Refer to context SECTION (3108417)

Fill of posthole [3108397]. The ~~cut~~ fill has a maximum thickness of 0.79m.

The posthole fill has been cut by enclosure ditch [3108477] which establishes the relationship.

(3108440) is most likely natural infilling caused by the extraction of a post however it is not fully clear how the post hole filled.

Refer to context [3108397] – PLAN

Cut of MIA enclosure ditch. The ditch was excavated to a depth of 0.40m to establish the relationship between [310847] and [310836]. [310847] is seen to truncate nog gully [310836].

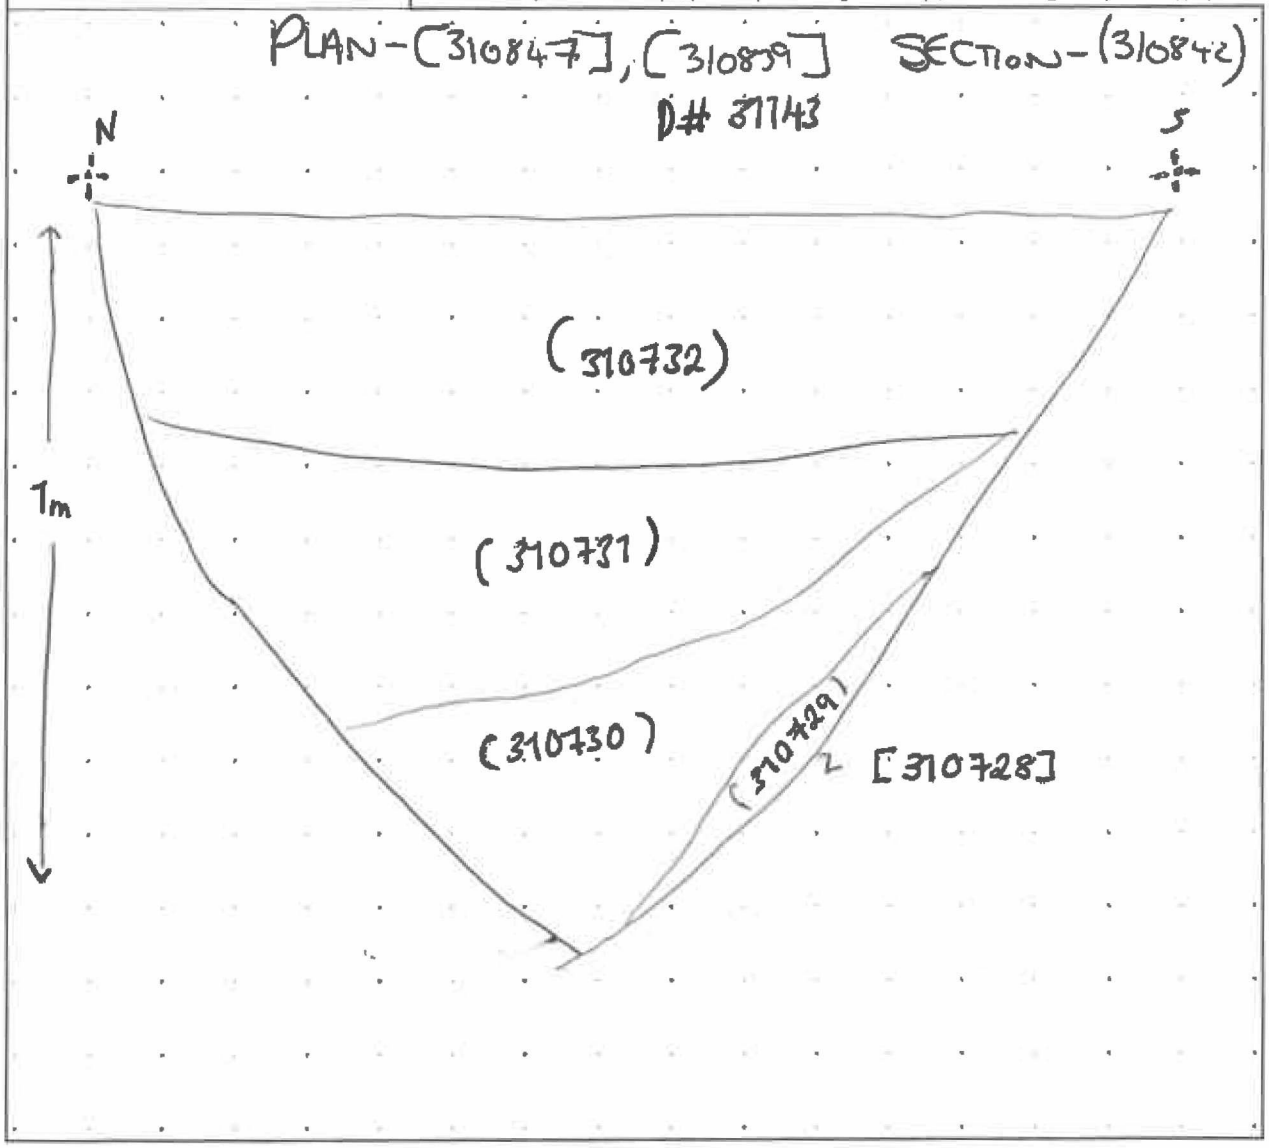

The ditch is the same as context [310728] See D# 31143 to see full profile of the enclosure ditch.

MIA enclosure ditch has a full depth of 1m so has fully truncated a large amount of nog gully cut [310936]

Refer to context

Top fill of enclosure ditch cut [310847]. The fill is the same as (310732) see D# 31743. The fill had a maximum thickness of 0.40m and was composed of a silty-sand.
The fill contained no datable find however the fill is associated with a MIA enclosure ditch.

The fill most likely represents a silting phase of the ditch after it was abandoned - Natural infilling.

Refer to context [310847] - PLAN

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of roundhouse ringditch terminus [310843]. Filled by (310844), (310845) & (310846). This terminus represents one side of an entrance way to the roundhouse. However, there is a pair of ditches which heavily truncate the ringditch in multiple places.

It is likely that this ditch filled naturally (310844) shortly after it was freshly dug, prior to having been packed to contain posts for the main structure. (310845). (310846) represents disturbance caused by a ~~large~~ ditch being dug nearby.

Refer to context (310846)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Earliest fill of roundhouse ringditch terminus [310843]. Stratified above [310843] & below (310845): contained occasional small stones & charcoal flecks. ~~Also contained~~ There were no finds in this fill.

It is likely that this fill formed through natural infilling prior to the completion of construction on the roundhouse. Perhaps, given the loose, sandy nature of natural nearby, it represents a period of heavy rain washing loose sediment from freshly cut edges.

Refer to context [310843] (310846)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of roundhouse ring-ditch terminus [310843]. Stratified above (310844) & below (310846). Contained occasional stones & charcoal flecks as well as flecks of burnt clay & burnt bone. Also contained occasional bone & pot sherds.

It is likely that this fill represents packing formed during construction of the roundhouse in order to hold posts in place. This is supported by its tight compaction & the inclusions found inside the fill.

Refer to context [310843] (310846)

Final fill of roundhouse ring ditch terminus [310843]. Stratified above (310845). Contained occasional small stones & charcoal flecks. There were no finds in this fill.

This fill could possibly represent disturbance caused by the digging of ditch [310] in close proximity to [310843]. If so, it is likely natural redeposited by the digging of that ditch

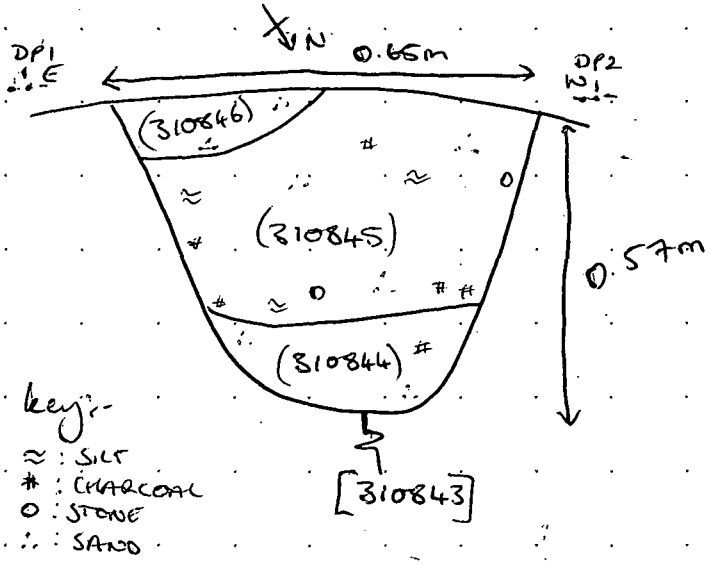

Refer to context [310843]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

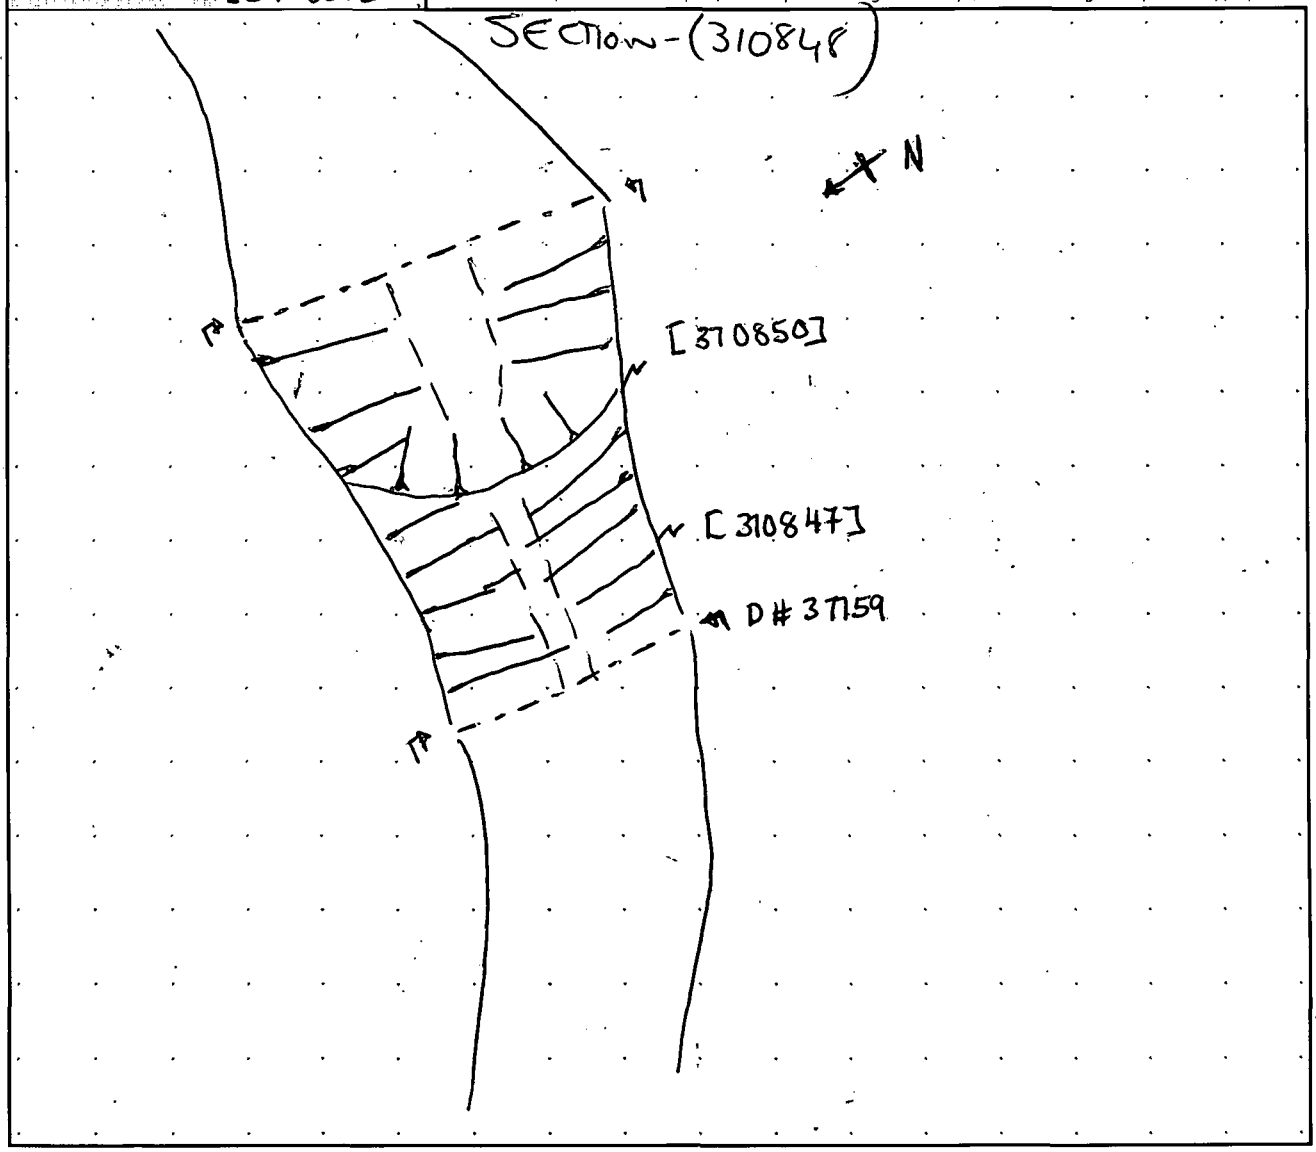

Cut of a ring gully of a possible roundhouse & working area. The cut has a maximum depth of 0.45m and a width of 0.72m. The gully appears to have an almost V-Shape and moderate to steep sides.
The cut appears different and shallower to cut [310850] See D#37160. which might suggest the ring gully was constructed in segments.

The gully has two fills (310848) and (310849).

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Orangish - brown - silty - sand fill of ang-gully cut [310847]. The fill has a maximum thickness of 0.20m

Some badly degraded Iron Age pottery was found within the fill.

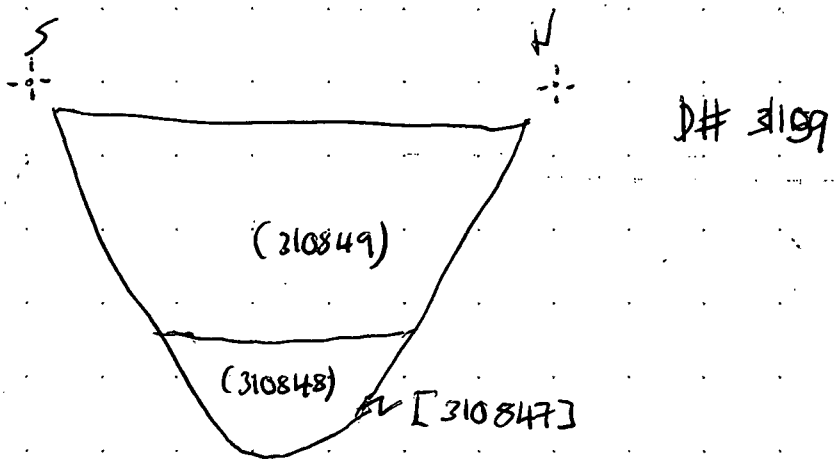

The fill might be the same as context [310851].

The might represent rep-deposited natural / trample after gully construction - possibly to pack post holes into the gully. However it is also possible that the gully filled in naturally.

Refer to context [310847]

Top fill of nrg gully cut [310847]. The fill had a maximum thickness of 0.23m. The fill was composed of a greyish-braun-silty-Sand.

The fill most likely represents natural ingulling washed into the gully before or after partial/de-structure 310858 is removed.

Pottery from this fill suggest a EIA-MIA date.

Refer to context [310847]

(any further details that may be important for understanding the context, including items marked * overleaf)

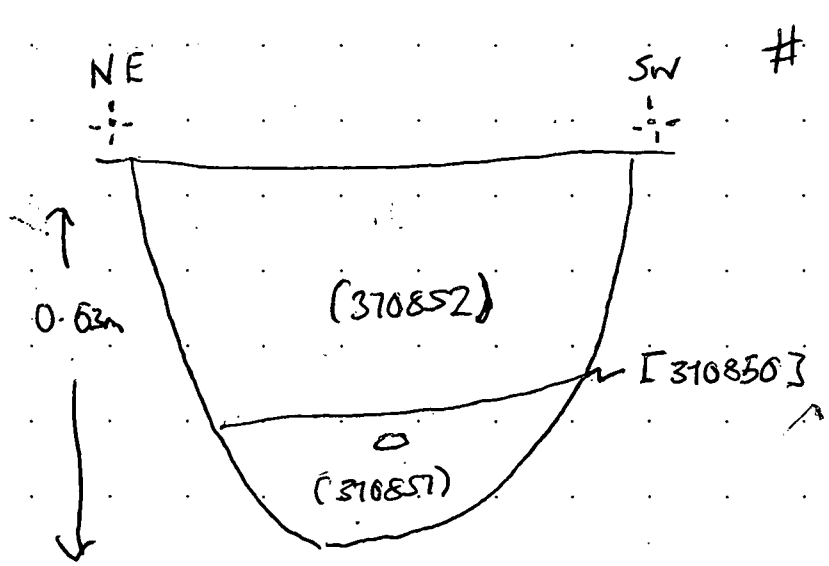

cut of ring gully of possible roundhouse / work area structure. The cut has a maximum depth of 0.63m and a width of 0.86 m. Steep sides and a concave base.

The depth of cut [310850] is significantly deeper than ring gully cut [310847] See D # 37159. which might indicate a segmented construction / posthole of pit cut into the ring gully - however after 100% of the gully was excavated the depth is very incosistant which might highlight segmented construction.

The gully has two fills (310857) + (310852)

Refer to context [310847] – PLAN

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Orangish-brown-silty-sand fill of cut [310850]. The fill has a maximum thickness of 0.30m.

The fill might represent a packing fill of mixed re-deposited natural to hold postholes in the ring gully - however this is unclear - might suggest natural infilling of trample begore construction of structure.

Bone found within fill however no datable finds.

Refer to context [310850] – SECTION

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Mid-greyish brown silty-sand fill of gully cut [3108550]. The fill might represent natural infilling however it's not clear whether it could have been a deliberate packing fill for post holes found within the gully.
The fill had occasional bone however no pottery was found within the context.

The fill most likely washed into the gully after posts were removed from the ring gully of the roundhouse

Refer to context [3108550] - SECTION

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

(310853) Primary fill of LINEAR [310854].
EXCAVATION Conditions Extremly dry, due hot weather and Sandy Silty Clay Composition baked. So Compact. rolled into ball so silty clay Predominately interface with natural unclear except with South side where it clear this Linear Recuts earlier feature leaving bridge distinct natural & base is and lowest sides very clear. Northern side not so much and as result is overcut.
- few animal bone, rib + tooth within fill.
- no Pottery.
- Composition suggests deliberate backfill over natural infill although it is mottled and definate contribution by natural processes like Wind, rain but no distinct lenses suggesting natural gradual infill of a ditch which is used for drainage.

Refer to context [310854]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[310854] CUT OF E-W COMPONENT OF A MULTI PHASE LINEAR. WITHIN CENTRAL belt, WITHIN SOUTHERN SITE. SLOT DUE WEST SUGGESTS TURNS SLIGHTLY WNW-ESE FASHION. DUE EAST OF THIS [310854] SLOT NOT VERY CLEAR IN PLAN, MAY BE ASSOCIATION WITH N-S LINEAR. UNCLEAR AT THIS POINT.
- IT IS IS CLEAR IT IS RECUT OF [310856] IN SECTION, FILLS ARE VERY SIMILAR.
- INTERFACE WITH NATURAL VERY DIFFICULT TO DIFFERENTIATE RESULTING IN EXCAVATION OF STEPPED SIDE but but THERE IS A GENTLE STEP TO SIDES. MOST CLAY IN SECTION.
- COULD BE PART TRACKWAY THAT HAS BEEN USED FILLED UP AND RECUT WITHIN SHORT PERIOD OF TIME.
- OR PART OF A RING STRUCTURE. UNCLEAR AT THIS TIME DUE GROUND CONDITIONS.

Refer to context (310853) [310856]

(any further details that may be important for understanding the context, including items marked * overleaf)

(310855) Primary fill of LINEAR [310856].

- VERY Similar to adjacent fill of (310853) of [310854]. could be a finely contemporary.
- also seems more deliberate backfill than natural layers of silting up of ditch as although mottled it is solid in colour tone. no lenses of natural.
- no finds.

Refer to context [310856]

SKETCHES

[310856] cut of a linear feature-
Primary fill (310855) no finds.
Cut by LINEAR [310854] so earlier phase of area function uncertain, Part ~~clay~~ track way, circular pen for animals based on it seems to be turning slightly Semi Circular direction due WEST slot but unclear at present.
- South side is slightly stepped in gradual step then it moderatly drops rounded base and north side is truncated by [310854].
NOTE BOTH LINEARS cut earlier darker N-S LINEARS DUE North of this SLOT.

- Phase LATER than this N-S LINEAR, no Pottery within this [310856] [310854] SLOT to be more exact.

Refer to context (310855).

[310858]

CUT OF TREE-BOLE.

THIS SUB-CIRCULAR FEATURE WAS DETCTING BY DIGGING A QUARTER SLOT. THE SLOT SHOWS A VERY SMALLOW FILL (310857) WITH CLAY COMPOSITION. FOUR FRACMENTS OF ANIMAL BONES ARE PRESENT AS INCLUSIONS. IT WAS NOT RECOVERED ANY PARTICULAR ELEMENTS OR OTHER ARCHAEOLOGICAL MATERIAL. IN CONSEQUENCE OF THIS A SINGLE QUARTER SLOT WAS OPENED, DUG AND RECORDED.

Refer to context (310857) FOR SECTION

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FILL OF A DITCH. IT IS A NATURAL INFILLING, PROBABLY DUE TO THE "FRAGILITY" OF THE SIDES OF THE DITCH, THAT COLLAPSED WHEN THEY ARE DRIED. IT IS ALSO POSSIBLE THAT THIS LAYER WAS DIGGED BUT DUE TO THE MAINTENANCE IT WAS PERIODICALLY ELIMINATED, LIKE (310865). FROM THIS FILL COMES A PIECE OF POTTERY, WELL DECORATED WITH A BRAID PATTERN ON THE RIM AND THE UPPER PART OF THE SHOULDER AND A BRUSH PATTERN ON THE BODY. IT SEEMS TO BE EARLY IRON AGE.

Refer to context: 310859, 310860

CUT OF A DITCH RUNNING E-W IN THE SOUTH PART OF THE SITE. IT IS PROBABLY A BOUNDARY DITCH RELATED TO AT LEAST ONE OF THE ROUND HOUSES, BUT PROBABLY MORE OF THEM. THIS DITCH HAS A RECUT [310860] DURING THE ROMAN PERIOD OR CLOSE TO THIS PERIOD, WHEN IT FALL IN DISUSE. DUE TO THE FIND IT IS PROBABLY THAT THE DITCH WAS MADE IN THE MIDDLE/~~END~~ FINAL IRON AGE AND PERHAPS THE EARLIER FIND ARE COMING FROM THE DITCH THAT THIS CUTS.
IT IS PROBABLY THE SAME DITCH OF [310520]

NATURAL INFILLING OF A DITCH (310860)
THERE IS A BIG PIECE OF A RUBBLE BASE THAT HAS A MORTAR FABRIC TO THE NW PIECES IN (310864).
IT IS POSSIBLE THAT THE TWO PIECES ARE IN SOMEHOW RELATED.
IN THIS FILL THERE ARE ALSO SOME PIECES OF CBM, LOCALIZE IN THE CENTRAL PART OF THE SLOT THEY CAN BE PART OF A STRUCTURE, BECAUSE SOME OF THEM HAD AN IMPRESSION OF SOME CYLINDRICAL, LIKE A STAKE.

Refer to context: 310860, 310859

ADDITIONAL INFORMATION

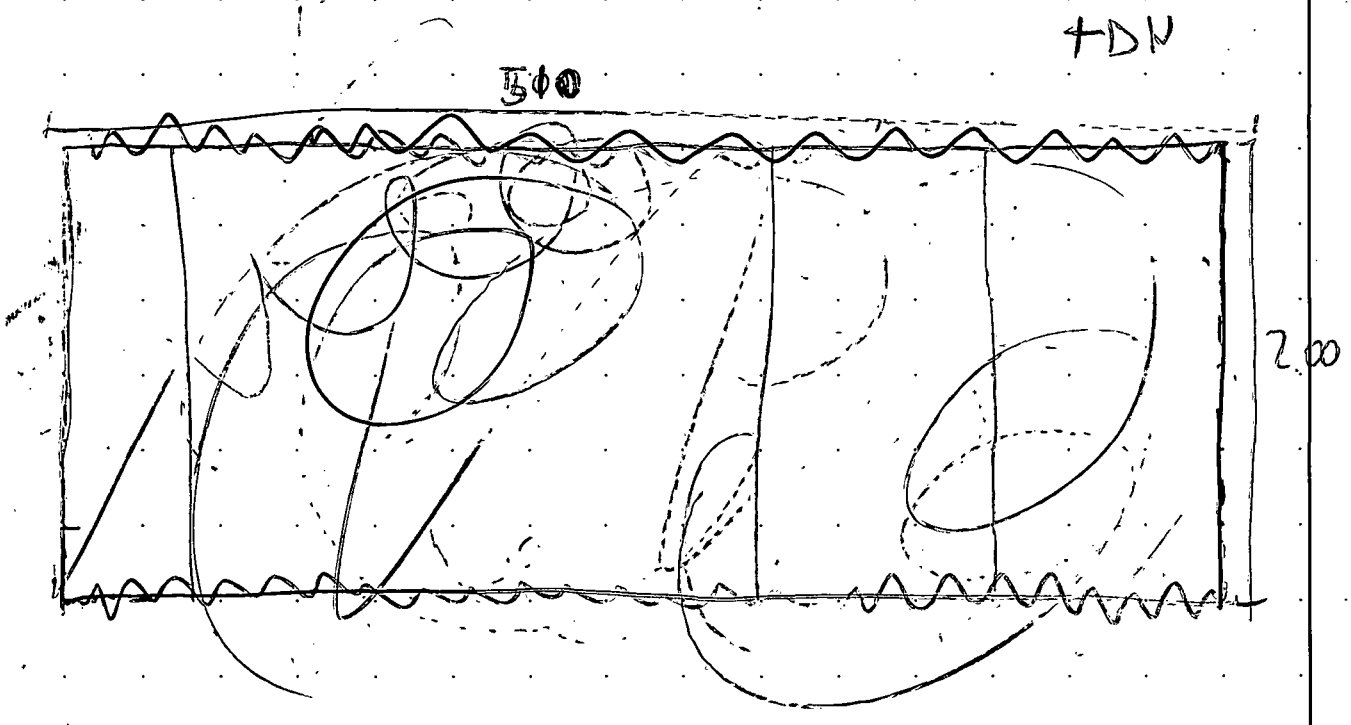

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of ditch [310881], filled by (310882), (310883), (310884) & (310885). Makes up part of a * series of field enclosures which cross site. Here, it truncates the terminus of earlier ditch [310906]. This ditch is likely of ironage date.

Due to the consistency of the fills & the lack of numerous finds, it is likely that this feature filled very slowly through natural infilling.

Refer to context (310885)

SKETCHES

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [310887]. Stratified above [310887] & below (310883). Contained occasional stones & charcoal flecks. There were no finds in this fill.

It is likely that this fill formed through natural infilling. Given it's position on the edge of the ditch & its close resemblance to natural, it is likely that this fill represents stabilisation of the sides shortly after digging of the ditch.

Refer to context [310881] (310885)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ditch [310887]. Stratified above (310882) & below (310884). Contained occasional stones & charcoal flecks.

It is likely that this fill formed through natural infilling. This likely happened in the presence of water, due to the colour & clayey consistency. This is supported by the fact that this fill lies almost entirely below the modern water-table.

Refer to context [310887] / (310885)

CUT OF RING DITCH TERMINUS WITH ~~MODERATE~~ STEEP SLOPING SIDES AND A CONCAVE BASE. ~~APPEARS TO BE 9m LONG BUT IS TRUNCATED BY OR TRUNCATES SEVERAL OTHER DITCHES SO IT IS NOT CERTAIN THAT THIS TERMINUS IS PART OF THE SAME DITCH AS TERMINUS [310891]~~ IS TRUNCATED BY DITCH [310942] AND A FURROW. LIKELY PART OF AN ENTRANCE ON THE EASTERN SIDE OF A RING DITCH. HOWEVER DUE TO A FURROW VERY LITTLE REMAINS OF THE RING DITCH.

Refer to context (310894). [310873]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

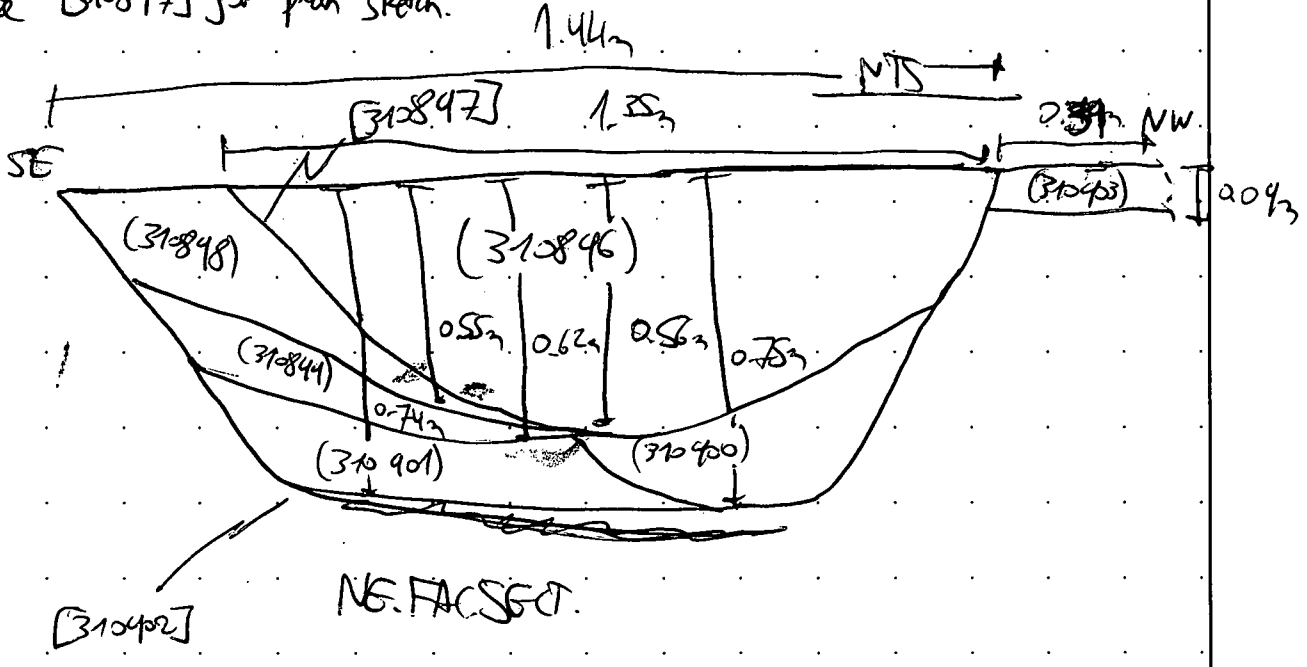

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is a fill of a ditch. This fill is part of a recut ditch [310897]. The original ditch is [310902]. This fill is same in context as (310341) which is in TERMINUS RECUT [310340]. It is also same in context as (310404). Within this fill some chalk was found, together with charcoal remains, which appeared moderately frequent. A few animal bones, pottery sherds and burnt clay were also retrieved from this fill.

Refer to context [310897]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

See [310897] for plan sketch.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is a cut of a ditch running NE-SW. This ditch is cut by [310847], which is the east of it. This ditch is cutting ring ditch [310333]. Its base is very flat and it might have been in use in the late bronze age, although that is unknown.
This ditch is filled by (310898), (310899), (310900) and (310901).
Within this ditch a dump layer with natural soil was also found and taken away.
Its use could have been defensive for the round houses, but also for draining water.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [310906]. Filled by (310907) (310908) (310909). Truncated by [310881]. This ditch likely makes up part of a water Management or Small enclosure System. It is not obviously related to any other features nearby.

It is likely that this feature filled slowly through natural infilling due to the consistency of its fills. Following being fully infilled, it appears that [310887] was dug through this ditch.

Refer to context [310881] (310885)

Primary fill of ditch [310906]. Stratified above [310906] & below (310908). Contained occasional stones & charcoal flecks. Also contained occasional pot.

It is likely that this fill formed through natural infilling in the presence of water, giving it a clayey consistency & ~~lead~~ leached colour.

Refer to context [310881] (310885)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [310906]. Stratified above (310908) & below [310881]. Cut by [310887]. Contained occasional stones & charcoal flecks There were no finds in this fill.

It is likely that this fill formed through natural infilling. This is due to the lack of finds & colouration of this fill.

Refer to context [310881] (310885)

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of ring gully of possible roundhouse or work area. The gully has a maximum depth of 0.54m and a width of around 0.43m. The sides of the gully are very steep with a concave base. The slot was excavated for a length of 0.90m.

The gully probably made up part of a roundhouse structure as postholes for example [310933] are cut into the natural within the gully which indicate a structure.

The gully appears to only have one fill (310923) alongside posthole packing stones (310922).

See D# 31793 for a plan of the gully and packing stones.

Middle Iron Age pottery suggests a MIA date. The structure / working area appears to pre-date all features in the area.
The gully is truncated by two large enclosure ditches see D# 21
The gully is also truncated by [3109247] see D# 31794

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

A deposit of large packing stones measuring from 0.16 - 0.09 m.
The Stones were used to help Secure a post for a structure in ring gully [310927] and postHole [310933].

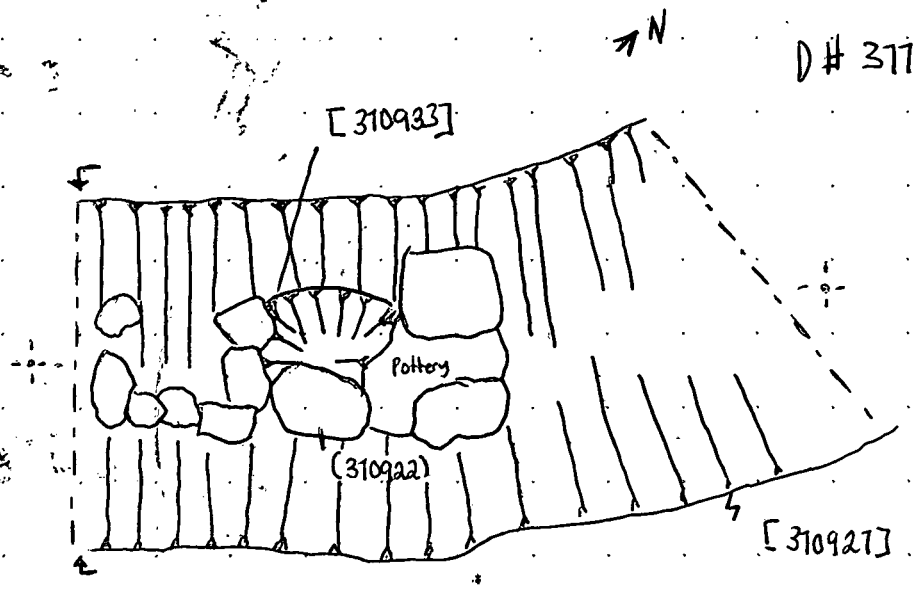

They were placed after the post was placed in the ground a before they were packed futher by packing fill [310923].

See plan D# 37792 to see positioning of the packing stones.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ring gully cut [310927]. The fill has a maximum thickness of 0.54m. The fill is composed of a sandy-silt.

The fill most likely represents deliberate backfill - possible as packing for a post, which sat in post hole [3109337].

The fill is most likley the same fill as (310934) the fill of the post hole cut [3109337] due to the Post having been removed.

Some charcoal found near the bottom of the gully.

Large fragment of EIA-MIA pottery found below packing stones in the fill of the gully - helps date the construction to the IA.

Refer to context

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of small / shallow gully. The gully has a maximum depth of 0.18m and a width of 0.60 in D# 31195 although its width increases to 1.11m and depth increases to 0.29m in D#31194.

The gully appears to turn to an E-W orientation from a NW-SE orientation

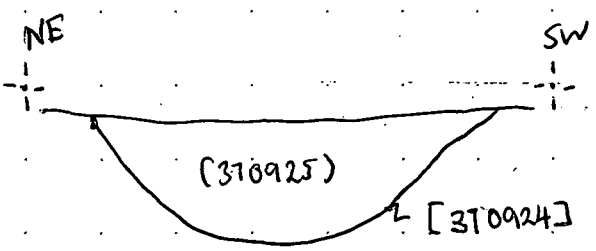

Some Iron Age pottery might suggest an IA date. However junction of the gully is unclear as it appears to terminate within the ring gully between [3109211] and [3109281]

Refer to context (310925)

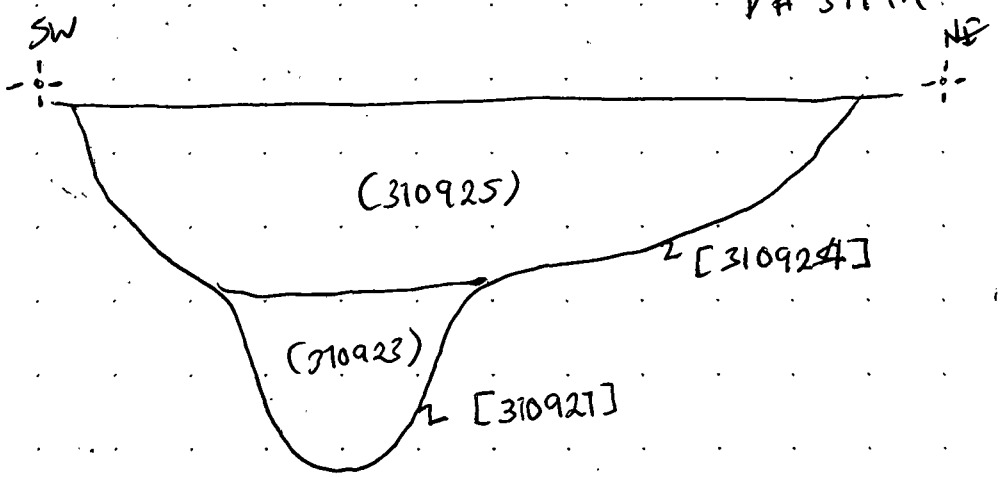

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Silty- Sand fill of cut [3109247]. The fill had a maximum thickness of 0.29m The fill was composed of a Light-mid brownish-grey- silty sand.

The fill had very occasional fragments of Iron Age pottery - however the fill is most likely the result of natural infilling.

Refer to context

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of possible ring gully of a roundhouse / work area. The cut has a maximum depth of 0.34 in D# 31197 however it appears to become more shallow in D# 31198 with a depth of 0.19m. This might suggest the ring gully on the Northern side is less deep compared with the Southern area.

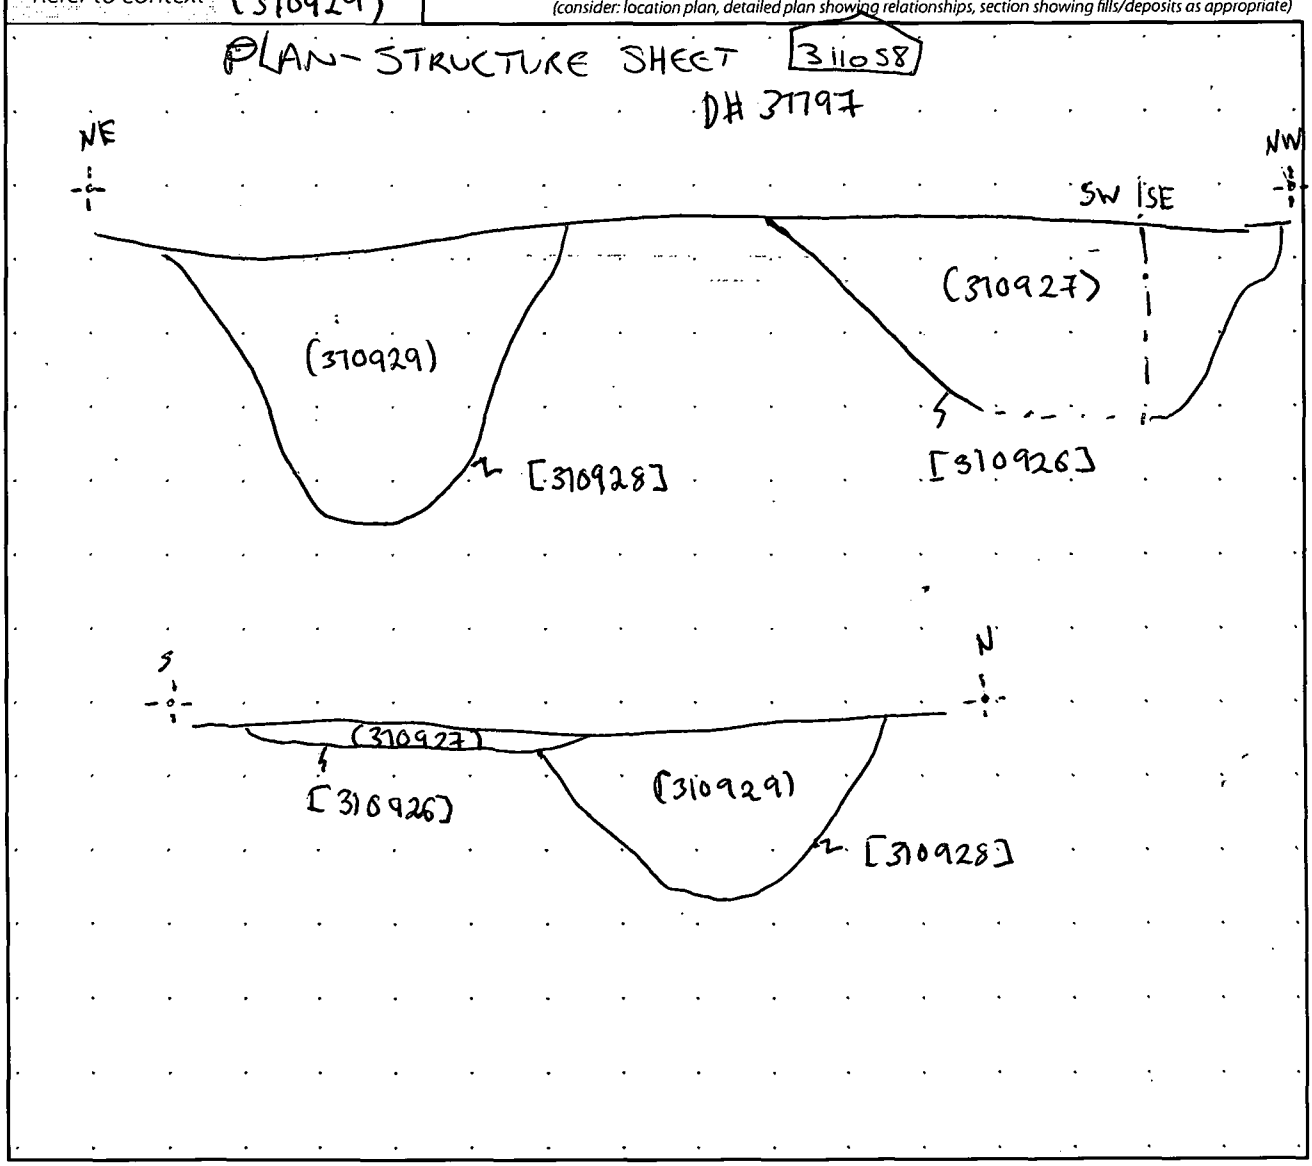

The gully has a maximum width of 0.53m

The gully appears to be truncated by roots of other natural processes [310926] see D# 31198.

Same as [310927],

Refer to context (310929)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of post-hole within gully cut [310921]. The post hole had a maximum depth of 0.19m and a diameter of 0.31m.

The post hole most likely was constructed for a post structure - possible a roundhouse / working space area.

It is also clear that a post with a diameter of around 0.15m - 0.17m was forced into the cut at a slight angle as there is a distinct depression of this size within the base of the cut.

No evidence of a post being left in situ although Packing stones (310922) survived.

The post hole has one fill (310934)

See D#31192 for plan of posthole + packing stones

Refer to context [310922]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of post hole [310933]. The fill had a maximum fill of 0.79m.

Most likely the same as context (310923) - due to the post having been removed and causing the hole to fill with (310923) packing fill.

No dating evidence found within the fill.

Refer to context [310933]

SKETCHES

(310945) SECONDARY FILL OF [310947] a CIRCULAR PIT north of CREMATION [310893]

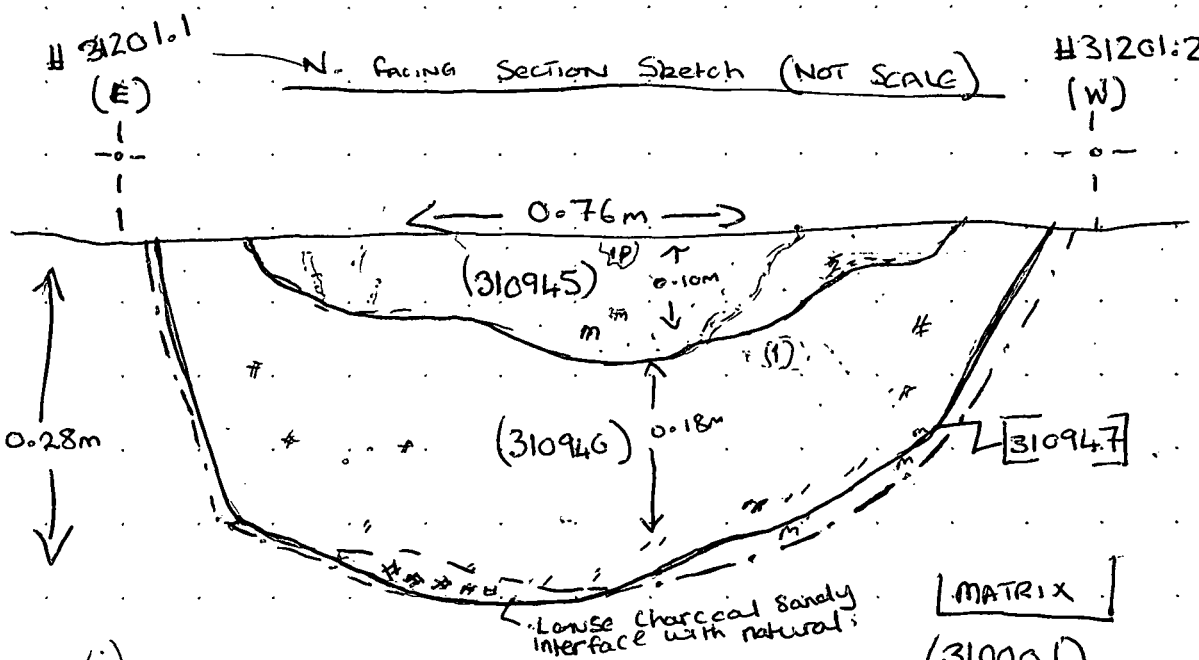

This layer is MIXTURE Slightly Silty Sandy Clay, mottled MISSHAPEN IN PLAN. Small gradular inclusions FROM Sand, throughout.

1→ Suggestive natural infill from Processes such as RAIN AND WIND.

- ONE Possible fragment POTTERY bagged.

Refer to context 310946 310947

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(310946) Primary fill of PIT [310947]

Similar to above fill (310945) IN THAT IT IS mottled but distinct enough TO SEPERATE INTO Different Contexts. As IT IS more Silty Clay and darker in Greys, Browns. More charcoal, lining of ~~cut~~ chalk at natural interface. That may indicate feature being filled with water Perhaps Silting up over time so IS More a natural infill than deliberate backfill.
- animal Jaw And dentition within this fill very Poor Condition. ~~Under~~ higher up in feature see (310945) Sketch.

Refer to context: 310945 310947

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

PRIMARY FILL OF DITCH [310942], MADE OF A MOTTLED CLAY MATERIAL WITH NO FINDS WITHIN. COULD HAVE BEEN DELIBERATELY PLACED TO FORM A LINING FOR AN IRRIGATION SYSTEM, BUT THE FILL DOES NOT FOLLOW THE EDGES OF THE CUT REGULARLY AND IT VARIES IN THICKNESS THROUGH OUT THE SLOT FOR THIS REASON IT SEEMS MORE LIKELY THAT THIS FILL IS THE RESULT OF NATURAL INFILLING THROUGH RAIN WASH.

THE CUT [310951] IS TRUNCATING THE FILL (310950)

IRON AGE POTTERY WAS FOUNDED.
THE DITCH/GULLY IS IN AN AREA OF SEVERAL CROSSING DITCHES AND CLOSE TO A ROUND HOUSE AND A POSSIBLE ROUND HOUSE.

TWO SLOTS WERE MADE IT TO UNDERSTAND THE RELATIONSHIPS OF THE DITCHES.

DITCH / GULLY [310958] = [310951] =[311063] WITH A UNIQUE FILL (310959) (310952)=(311065) WITH HIGH QUANTITY OF CBM, POSSIBLE REMAINS OF RUNNING WATER. THIS FEATURE IS TRUNCATING THE FILL (310957) =(310950) OF THE FEATURE [310950]=[310949].

LATE IRON AGE POTTERY FOUNDED AND ANIMAL BONES. NO SAMPLES.

THE DITCH/GULLY IS IN AN AREA OF SEVERAL CROSSING DITCHES, CLOSE TO A ROUND HOUSE AND A POSSIBLE ROUND HOUSE

TWO SLOTS WERE MADE IT TO UNDERSTAND THE RELATIONSHIPS OF THE DITCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of hearth [310963] filled by (310964). From its position in the centre of a heavily truncated roundhouse, it is likely that this feature represents the hearth associated with that structure.

It is likely that this feature filled through natural infilling after the abandonment of the roundhouse. The presence of large chunks of charcoal suggests that there may have been residue from a previous fire within the feature during this infilling.

Refer to context (310964)

SKETCHES

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of hearth [310963]. contained occasional small stones & moderate charcoal flecks & chunks. There were no finds present in this fill.

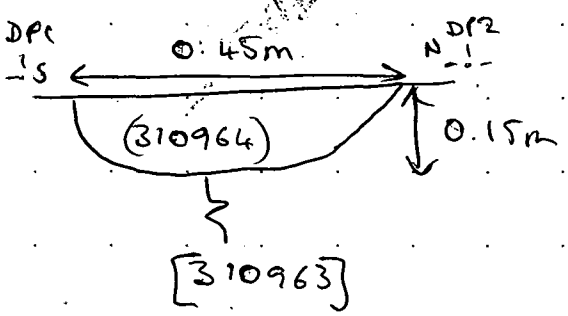

It is likely that this fill formed through natural infilling following abandonment of the roundhouse.

Refer to context [310963]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

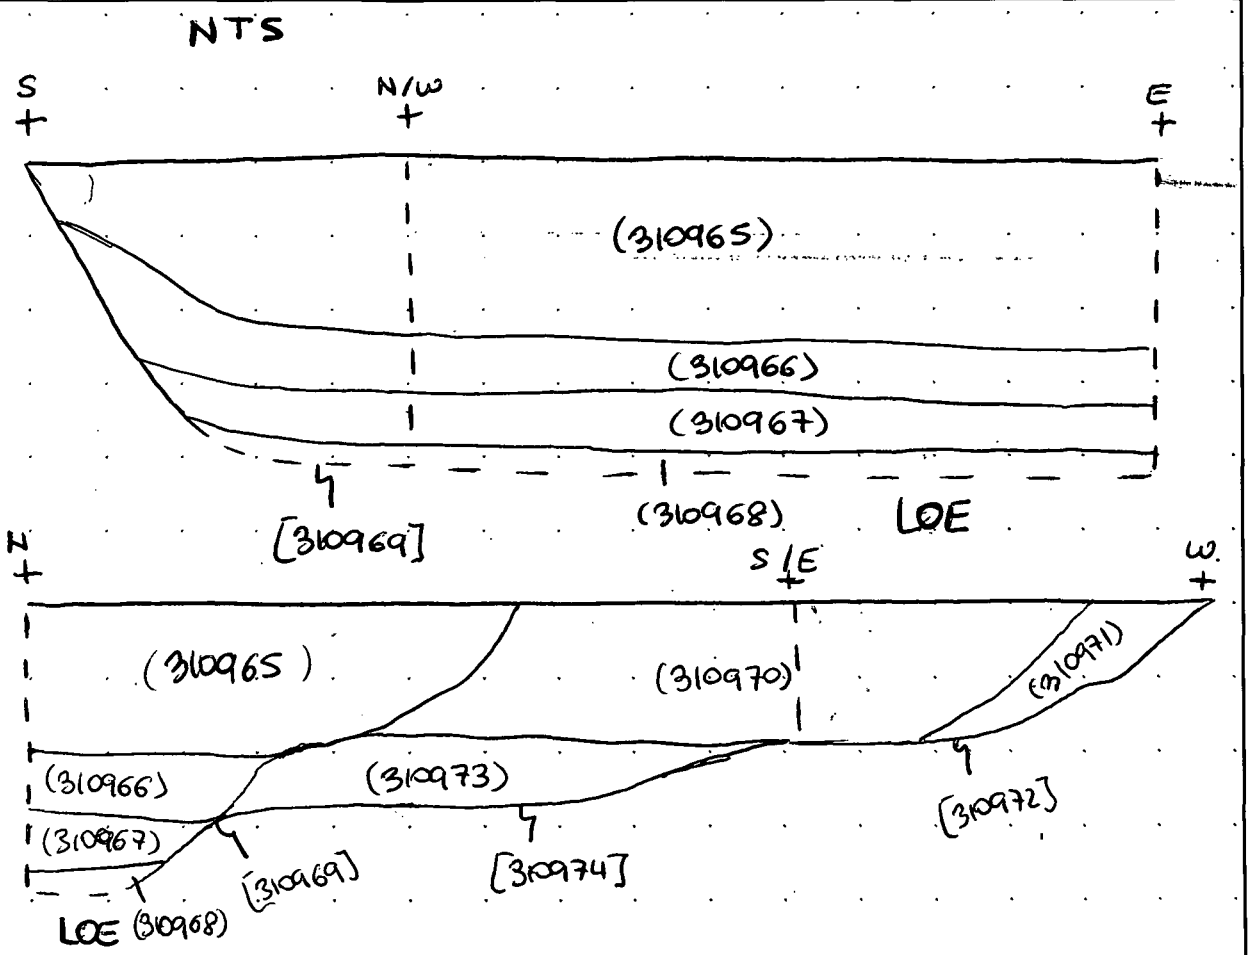

Context (310965) is a natural infilling with an occasional amount of stones, mainly small - medium size and angular flint; and a moderate of chalk.

Regarding archaeological remains, this fill has been quite poor, with an occasional quantity of animal bones, lithics and pottery. The latter, is a bad quality and really friable dark pottery.

In respect of chronology, we believe this fill could be Iron Age, due to the finds uncarthed from it.

Refer to context PLAN-[310969]

SKETCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310967) is a natural infilling with an occasional amount of stones (small size and angular flint) and chalk as inclusions.

Regarding finds this fill has been the ~~most~~ richest with a moderate quantity of pot and animal bones. The former continuous being the same bad quality pot as in the upper fill. Also, a couple of flint flakes were unearthed.

Chronologically this context must be Iron Age due to the remains found in it.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310968) is a natural infilling, very difficult to identify, because it is very similar to the natural, blueish clay. It doesn't have any inclusions, only some animal bones.

We couldn't dig it 100% because of the water table. Anyway this same fill was dug and recorded in other ~~of~~ slots.

In respect to chronology, we suggest it could be Iron Age.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

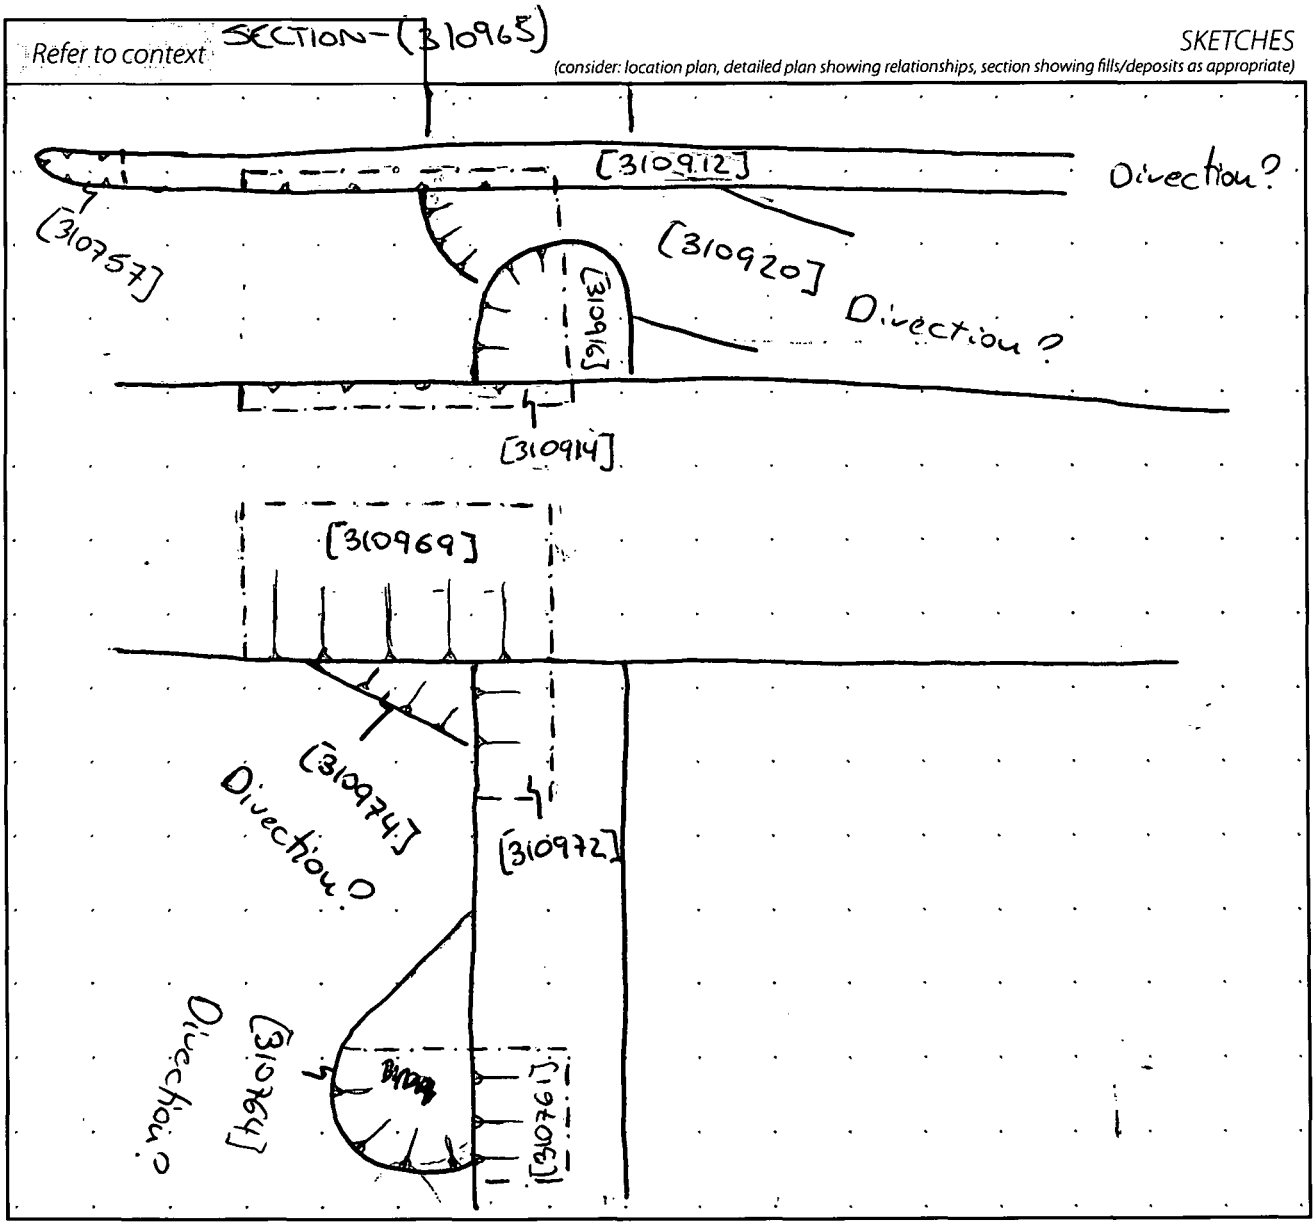

Context [310969] is the cut of a big ditch, probably an enclosure, which runs NW-SE and has a linear shape.
Regarding the base, we didn't reach it because the water table didn't allow us. Anyway this ditch has been already excavated in other slots where we have the base, which is concave.

It has four fills, which all of them have been dated as Iron Age.

In respect of stratigraphy, this ~~feature~~ feature is the newest in the slot, so this cut cuts the following context: (310970), [310972], (310973) and [310974]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context [310972] is the cut of a ditch which runs from the ~~sh~~ south to the north. and has a linear shape.

This cut has been filled up with two context (310970) and (310971), which has been dated as Iron Age.

Regarding stratigraphy this cut truncates a ~~older~~ ditch [310974] and its fill (310973) but also, this context [310972] has been truncated by [310969].

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context (310973) is a natural infilling with an occasional amount of stones (small and angular flint) and chalk.

We didn't find any archaeological remain in it.

In respect of chronology, ~~we this~~ it is the first evidence of this feature at the moment so what we can only say is that this ditch has been truncated by two newer ditches, [310969] and [310972] which have been dated as Iron Age.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context [310974] is the cut of a ditch. ~~It is the fis~~ This slot is the first evidence of this feature. Aparcitely is a ditch which must runs from the southeast to the Northwest. In our slot the shape is linear, but it might change in other areas.

Chronologically we only know that it has been cut by two Iron Age ditches. [310969] and [310972]

Regarding dimensions, sides and base, our information is not 100% ~~not~~ real because this ditch has been truncated and highly damaged by the other two ditches.

Refer to context
