ADDITIONAL INFORMATION

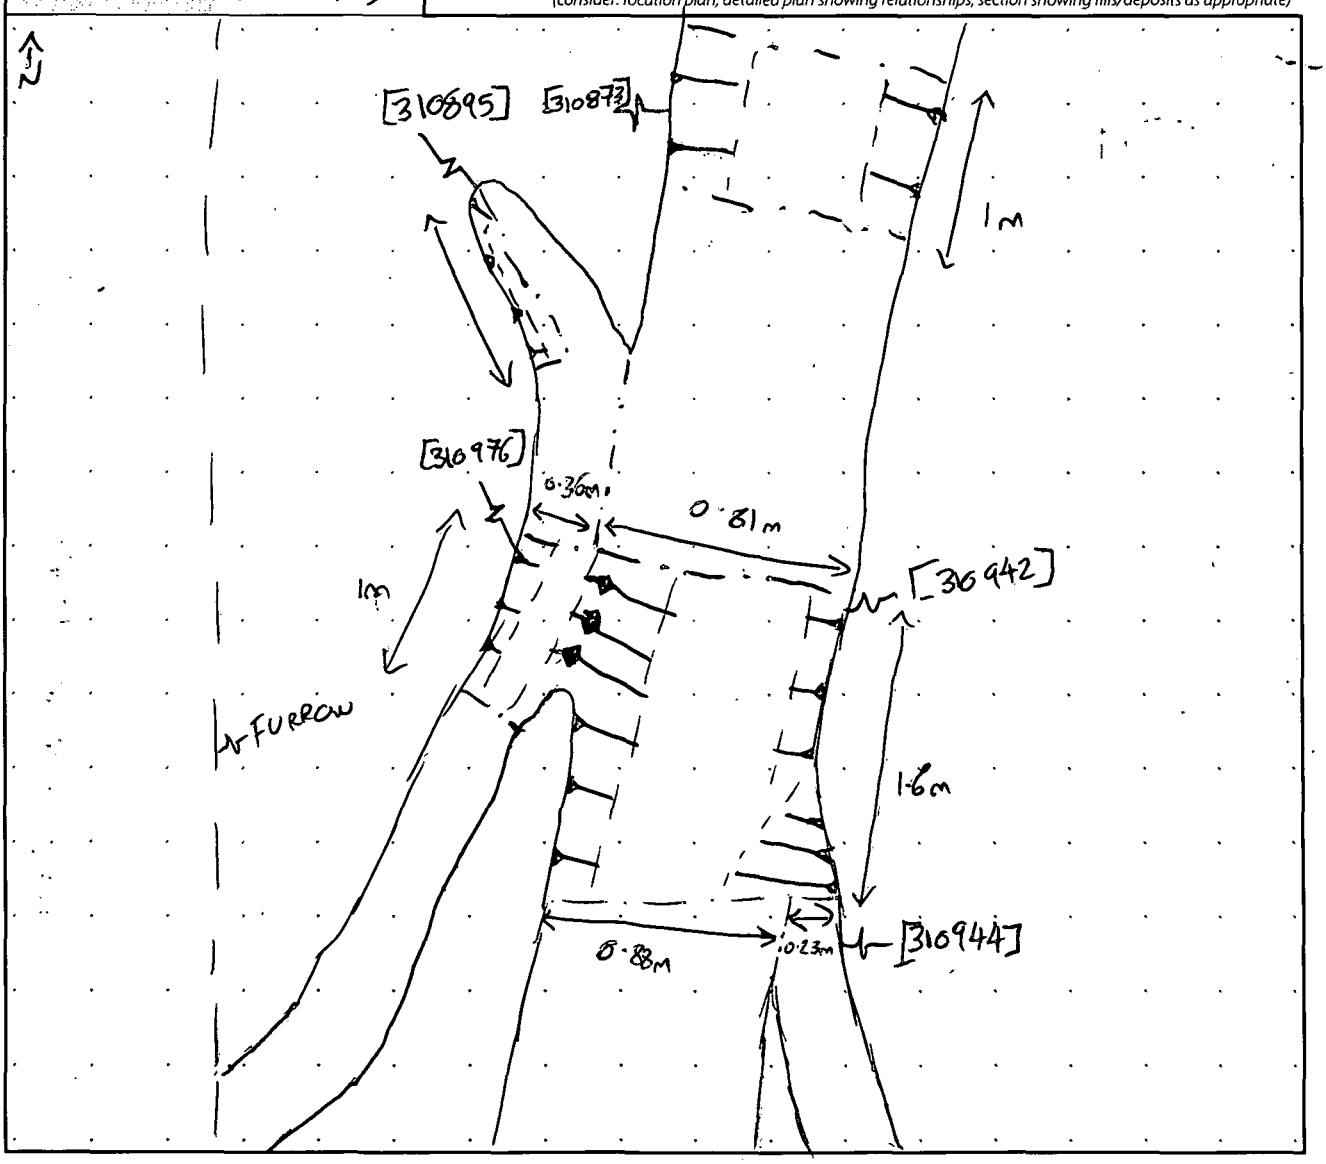

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of post-hole [310977]. Contained occasional small stones & charcoal flecks. Also contained moderate, crushed bone & occasional lithics.

It is likely that this fill formed through deliberate backfilling following removal of the post. The animal bone present in this fill was all badly degraded & could not be retrieved, though some may survive in the sample taken from it.

Refer to context [310977]

Orangeish and dark grey silty clay bottom fill of ditch [310554].
Only few small size (< 10 mm) stones and very occasional charcoal small flakes.
No finds.
Could be result of natural silting.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of subcircular shape pit [310993].
Oval shape, width 0.60 m ca and lenght more than 0.80 m (not fully visible its extent, as it goes beyond the slot edge).
Sides are moderate/gentle sloping and base is concave.
It has a very mixed fill, (310994): made of patches of natural clay mixed with silty clay soil with charcoal.
This pit is the earliest feature in the area where this slot was dug: it is truncated by a ditch [310554] and by the roundhouse [310552].

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Single fill of pit [310993]
It is very mixed, made of bits of natural reworked clay mixed with dark grey silty clay soil containing some charcoal and few small (< 10 mm) stones.
Finds: few small potsherds, looking Iron Age.
Seems result of a deliberate backfill.

Refer to context

(310995) Primary fill of LINEAR [310996] Possible Gully.

This fill very baked due weather.
after surface spit removed, Silty Sandy Clay diffused and mixed more Silty clay more orange brown almost diffusion purple hue near base.
- Suggestive Gradual infill by water processes.
- could suggest Gully for Drainage Purposes.
- One find; very Poor condition, possible Pig dentition. Disturbation affecting visability of clear interface with natural resulting in slight over Cut.

Refer to context [310996]

[310996] cut of Linear Running Northern - Southern Direction. NW Corner area SITE.
PRIMARY Fill (310995) silty clayey, natural infill via Water Processes.
↳ suggestive of drainage function.
– no datable finds only fragmentary animal dentition again poor condition supports watery conditions
– Phase uncertain from this SLOT.

Refer to context (310995)

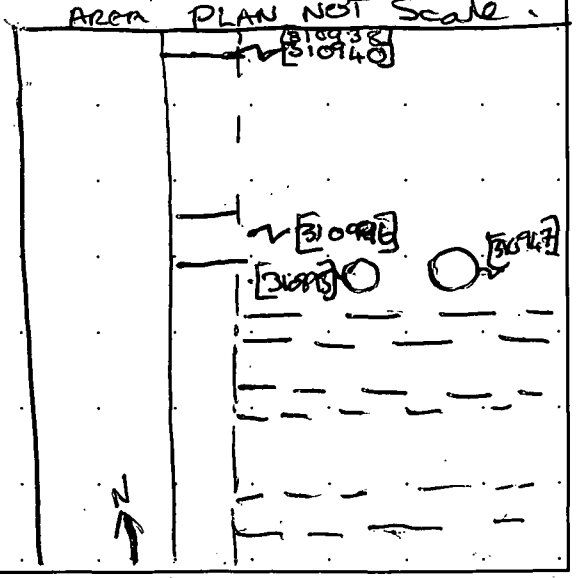

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

PLAN SKETCH (NOT Scale)

NOTE ON PLAN this linear appears to cut W-E Lineals so is possibly latest in linear sequence but IN SLOT IN North is cut by Pit feature [310938]

AREA PLAN NOT Scale.

CUT OF SUB-CIRCULAR PIT. RECARDING THIS PIT FROM THE WEST FACING SECITION OF THE INTERSECTION SCOT WECAN OBSERVE THAT THE PIT SHOWS THREE FILLS AN A DEPHT, IN CORRISPONDANCE OF THE DEEPER POINT OF 0.82 m. ON THE NORTH-WESTERN FACING SECTION WE CAN OBSERVE INSTEAD THE RELATION WITH DITCH [310876] [310878] [311022]. THE PIT CUTS FILLS (311019) AND (311020) OF THE DITCH [311022]. PROBABLY, WHEN THE DITCH WAS DISMISSED A PIT WAS OPENED IN A PORTION OF THE DITCH! WE HAVE NOT ARCHAEOLOGICAL MATERIAL FOR ESTABILISHING A MORE PRECISELY CHRONOLOGY.

(310021)
NATURAL INFILLING OF DITCH. WE HAVE INDIVIDUATED SIMILAR CHARACTERISTICS AS THE CASE OF FILL OF PIT (311016). CHARACTERISTICS ARE THE FOLLOWING. - UNIFORM SILTY-CLAY COMPOSITION. - OCCASIONAL LITTLE STONES VISIBLE ON THE FACES OF THE SECTION. - ON THE DETECTED PORTION OF THE DITCH, THE FILL FOLLOWS THE RIGHT SIDE OF IT AND RESTS ON THE BASE. - PROBABLY THIS FILL IS CONNECTED TO NATURAL ASSESTMENTS' PROCESSES OF THE FEATURE.
WE HAVEN'T NOT ARCHAEOLOGICAL MATERIAL FROM THIS FILL.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is one of the fills of a terminus ditch. This fill had some charcoal remains together with some pottery. Chalk and a few stones were also found here. This fill could be same as context no (311038) from cut [311017], towards North.

Refer to context [311037]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

See [311037] for plan sketch.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Context (311047) is a natural infilling with an occasional amount of stones, chalk and charcoal as inclusions. The stones were angular and medium - small size of flint.

Regarding archaeological remains, we found an occasional quantity of animal bones and pottery. The latter is some fragments of greyware (I - IV century A.C), so Roman pottery.

In respect of chronology, thanks to the greyware we can know that this fill is Roman.

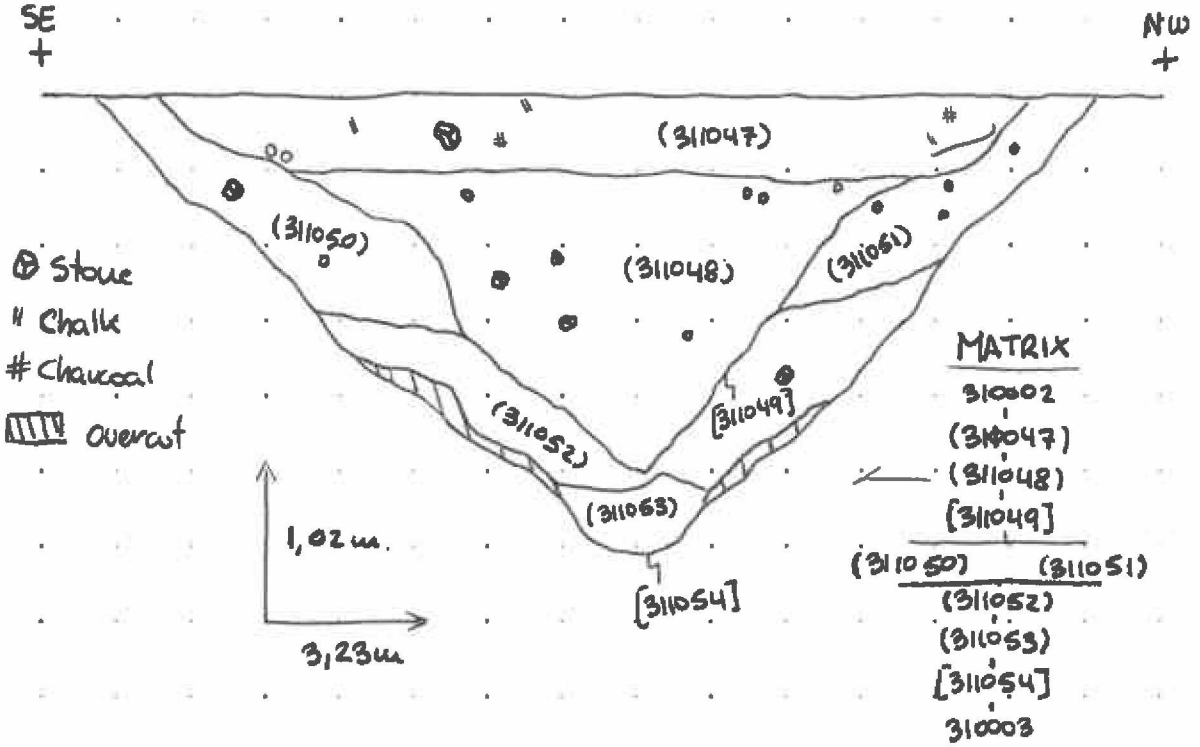

SKETCHES

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Context (311048) is a natural infilling with an occasional amount of angular and small size of flint as inclusions.

Unfortunately we didn't find any archaeological remain in it.

Chronologically it must be a Roman fill, because it is situated between two Roman fills: (311047) and (311052) Both have Roman Greyware pottery.

Refer to context (311047) ~ Section

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

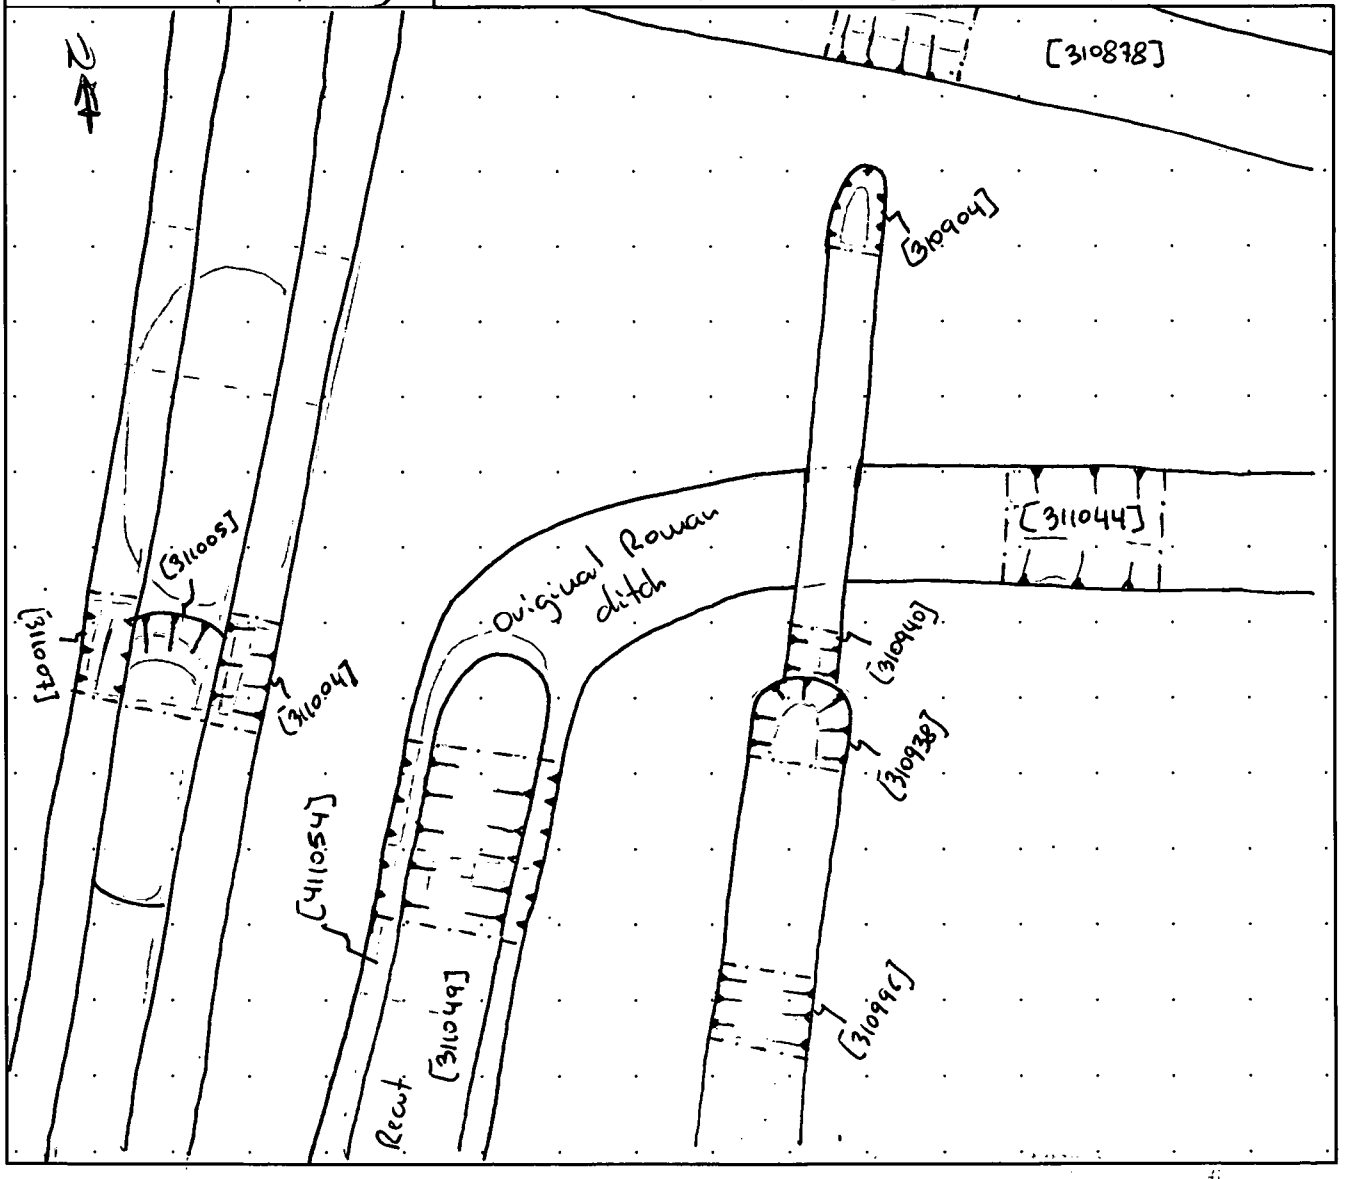

Context [311049] is the cut of a ditch which has a linear shape and runs NE - SW.

It has got two fills, both dated as Roman thanks to some pieces of greyware found in (311047).

This ditch is recutting a previous ditch, and some of its fills: (311050) (311051) and (311052).

Refer to context (311047) - SECTION

This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Context ~~315~~ (311050) is a natural infilling, really similar to the natural, with an occasional amount of angular and medium-small size of flint as inclusions.

Regarding archaeological finds, they were completely absent.

Probably, the origin of this context is the collapse of the bank of this ditch, which could explain why the fill is so similar to the natural and the absent of finds.

Originally, this fill was lied over the whole ditch but at some point it was cut by a ditch (recut).

Refer to context (311047) - SECTION [311049] - PLAN

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

spliting it up in two: (311050) and (311051), this is the reason why these two fills are the same.

Chronologically, this fill must be Roman, because it is between two Roman fills (311047) and (311052), where we have found Roman evidence.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Context (311052) is a natural infilling with an occasional amount of stone (angular and small size flint) as inclusions.

We found some pieces of animal bones and only one fragment of greyware pot.

Chronologically this fill is Roman thanks to the pottery found in it.

This fill has been cut by a Roman ditch (vc cut) [311049].

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Content (311053) is a natural infilling without inclusions, which appears at the bottom of [311054], being the ~~olderest~~ oldest fill in this ditch

Unfortunately we didn't find any archaeological remain.

Chronologically we can not ensure anything, but it is probably a Roman fill due to the fill on the top, (311052) is Roman.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Structure sheet for possible roundhouse / work area structure. The structure appears to have two entrances - one appears to be a SE entrance and the other is a much wider opening which might indicate that the building was not a domestic space but a work area. The building appears to be crescent shaped not fully circular. Flint Flakes and cores have been found which might indicate flint knapping?
Slot 2 of structure [3109055] suggests a segmented construction as cut [3108501] is significantly deeper than [3108477] although they are both sections recorded from slot 2.
The structure has a diameter of around 11.5 - 12m.
Post holes such as [3109337] and [3108397] indicate a large post structure packed with large stones see context (3109422) and D# 31192. Other post holes with packing were found as the structure was excavated 100%. A possible hearth was found in the centre of the structure, which indicates a building.
The ring gully [3108477], [3108501], [3109361], [3109271] and [3109285] contexts.
The ring gully is very irregular in terms of depth and width - the depth appears to decrease on the Northern side of the structure.
The building is truncated by two large exclusive ditches [3108285] and [3107185]
This might suggest the western part of the gully was also truncated away.

Refer to context

Gully / ditch [3109241] also truncates the ring gully.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Gully with two fills (311064)-(311065) unknown function. In the fill (311064) animal bone found and a potential, probable lost iron nail in (311065).

High quantity of clay in (311065) probably duct running under.

Cut of roundhouse ringditch [311068]. filled by (311069). This slot is one of a number dug through the ringditch of roundhouse [redacted]. This area of the ditch is far shallower than it is on the Eastern side due to the ground level being ~~lower~~ lower than elsewhere.

It is likely that this ditch was filled through deliberate backfilling, perhaps in the form of packing, during construction of this roundhouse.

Refer to context (311069)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of roundhouse ringditch [311068]. Contained occasional stones, some large, charcoal flecks & occasional chalk. Also contained occasional litrics.

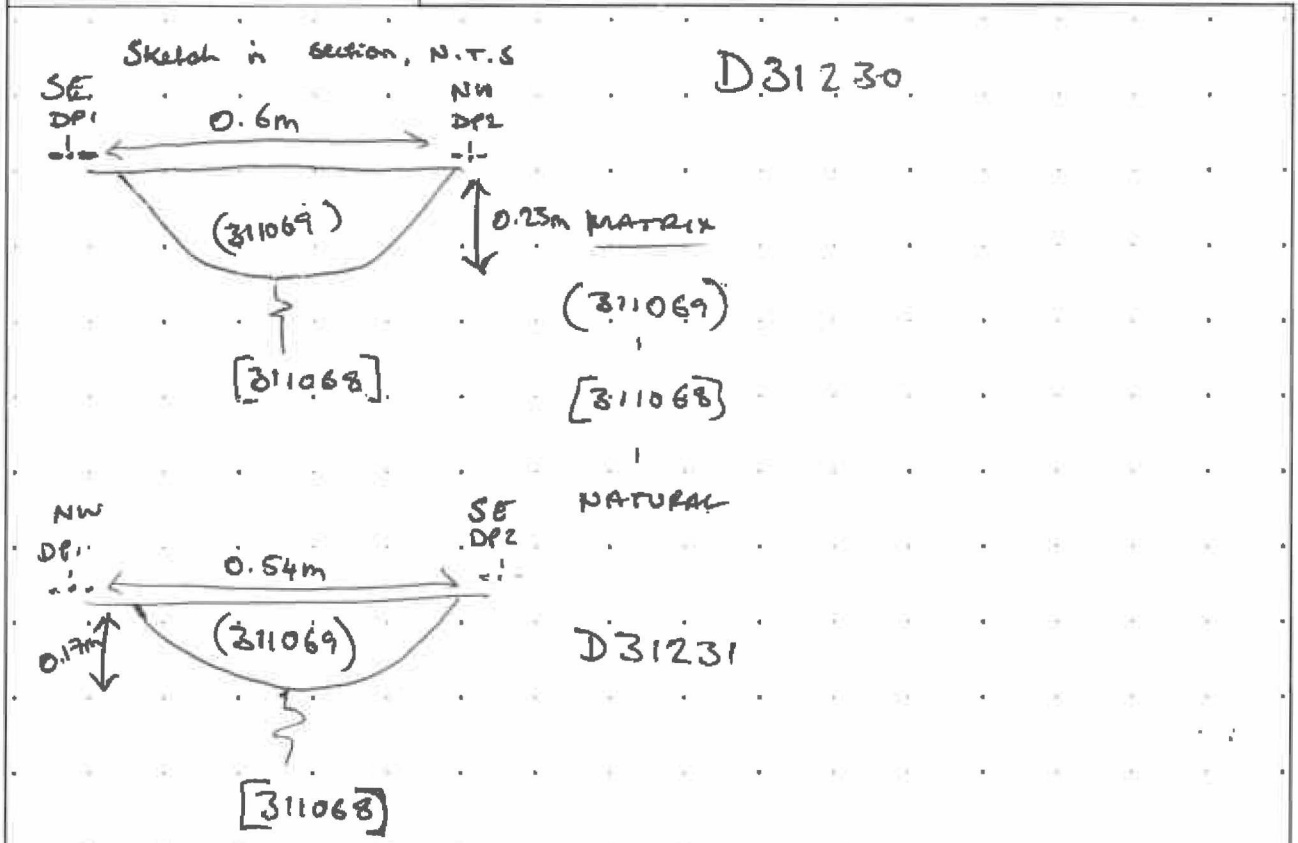

It is likely that this fill formed through deliberate backfill, perhaps during construction of the roundhouse or following its final abandonment. The hard compaction of this fill would suggest packing, though at the time of digging the ground was baked hard.

Though the only recovered find was a Neolithic/Bronze age litric, pottery found elsewhere along the ringditch is firmly of iron age date.

Refer to context [31

*(any further details that may be important for understanding the context, including items marked * overleaf)*

[310470] is the structure number for a roundhouse
It is located in the centre of the site. It has a SE facing entrance, with a distance of 3.80 m in between the termini. It has a maximum diameter of 12 m, with a hearth just off-centre, slightly towards S.
Before the excavation two parts of an evaluation trench were visible on the surface (see plan).
A singular postHole [310507] was found within the roundhouse to the SE. Two further postholes [310414] and [310522] were found inside the ringditch during the 100% excavation.
It is shallowest at the termini (0.05 m) and gradually gets deeper as you go around the roundhouse (0.38 m). There is a ledge on the inside of the ditch running from the S around to the E and then to the N.
Dense area of charcoal found within the ditch running from the S round to the E then to N. This in situ burning could possibly suggest the collapse and destruction of wooden elements related to the structure of the roundhouse.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

On the S side the roundhouse is truncated by a trackway ditch [310416]=[310482]; at the SE the roundhouse cuts an earlier pit [310476] and along the W side truncates an earlier ditch [310401]=[310438].

Finds include potsherds dating to Iron Age, small quantity of clay-burnt clay and animal bones and flint debitages. Small finds: F31042 piece of Cu, evidence of copper smelting; F31031 a flint scraper; F31032 is a flint debitage.

(311074)

DELIBERATE BACKFILL OF TERMINUS OF DITCH. THIS FILL SHOWS A COMPACT CLAY COMPACTION AND A DARK GREY COLOUR WITH YELLOW FADES. OCCASIONAL STONE AND CHALK INCLUSIONS ARE PRESENT, FREQUENT CHARCOAL INCLUSIONS CAN BE OBSERVED INSTEAD. CHARCOAL INCLUSIONS WAS SAMPLED WITH 1 BAG OF 10 L AMOUNT. IT CORRESPONDS OF 50% OF THE VOLUME OF FILL. BONES AND POTTERY WERE RECOVERED.
BONES CONSIST OF 6 FRAGMENTS OF ANIMAL BONES (MID-SIZE MAMMALS LIKELY). THE SURFACE SHOWS A WITH COLOUR; IN ONE CASE THE COLOUR IS ORANGISH-WHITE.
POTTERY CONSISTS OF 16 FRAGMENTS. FRAGMENTS SHOW A DARK CORE WITH DG INCLUSIONS, THE SURFACE IS DARK AS WELL. IN ONE CASE IT IS DARK ORANGE. THE CHRONOLOGY OF POTTERY IS SUPPOSED TO BE IRON AGE.

[3110 76]

CUT OF TERMINUS OF DITCH. A SLOT 0.72X 1.20m WAS OPENED FOR DETECTING THE TERMINUS OF A DITCH. THE DITCH IS NW-SE ORIENTED, 17m LENGHT AND 2m WIDHT IN THE OBSERVED PART OF IT. TWO FILLS WERE INDIVIDUATED (311074) AND (311075). THE FILL (311074) PROVIDED IRON AGE POTTERY. A VOLUME OF 50%, WITH CHARCOALS OF THIS FILL WAS SAMPLED.
THE DITCH [311076] IS COLLOCATED IN A COMPLEX AREA WITH OTHER DITCHES ARE COMING THROUGHT FROM N[redacted] AND E[redacted] (TO SEE PLAN SKETCHES).

Refer to context (311074) FOR SECTION

SKETCHES

NATURAL INFILLING OF A DITCH. IT IS CUT BY [31108L] THAT IT IS THE RECUT OF THE DITCH [31108L]. FOR THESE REASON (311080) AND (31108L) ARE VERY SIMILAR QUITE IMPOSSIBLE TO DISTINGUISH ONE FROM ANOTHER IF IS NOT FOR A THIN LAYER OF NATURAL DEPOSITION BETWEEN THE TWO. ALSO THE POTTERY IN THE TWO FILLS IS QUITE SIMILAR

~~PRIMAR~~ SECONDARY FILL OF DITCH SLOT [3110] A SILTY CLAY MATERIAL CONTAINING SOME CHARCOAL. LIKELY THIS CONTEXT FORMED NATURALLY VIA RAIN WASH AND SLUMPING.

3 SMALL BONE FRAGMENTS AND A SINGLE PIECE OF REDWARE WERE DISCOVERED WITHIN.

Refer to context [3110 9 3]

Cut of roundhouse ring ditch [311096]. Filled by (311097). Cuts fill of ditch [311098]. Represents part of the ring ditch of a roundhouse, this feature has been heavily disturbed by later features & is also dug into an area of complex archaeology.

It is likely that this feature filled ~~was formed~~ through deliberate backfilling, due to the colour & consistency of its only fill (311097).

Refer to context (311097)

Fill of roundhouse ring gully [311096]. Stratified above [311096] & below ~~311099~~ SUBSOIL. Contained occasional small - medium stones & charcoal flecks. Also contained occasional lithics.

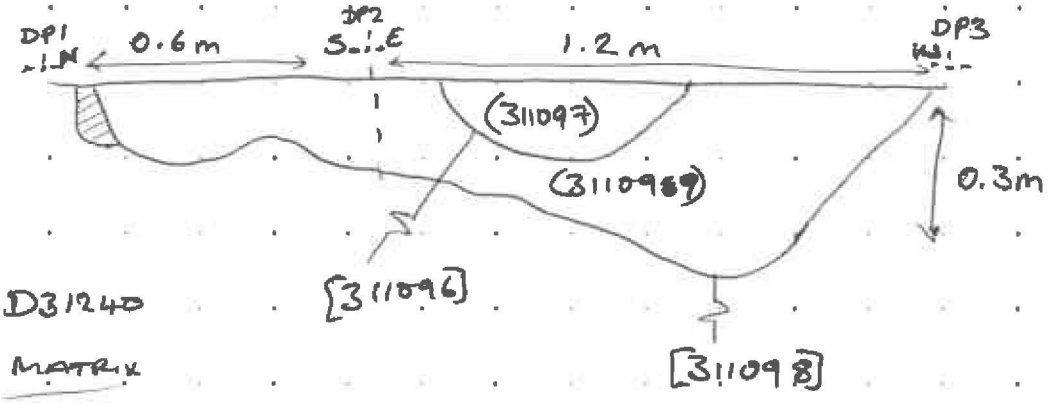

It is likely that this fill formed rapidly through deliberate backfill. The presence of larger stones could suggest packing, or it could have been filled as part of the destruction of the roundhouse.

Refer to context (311096)

Cut of ditch [311098]. Filled by (311099). This ditch predates the roundhouse ringditch which cuts it. This is one of many features which underlay the roundhouse ditch & add difficulties in interpreting the area. The ~~base~~ base of this ditch is very uneven, this could be due to rooting whilst the ditch was still open.

Refer to context {311096 / 311097}

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ditch [311098]. Stratified above [311095] & below [311096]. Cut by [311096]. Contained occasional stones & charcoal flecks. There were no finds present in this fill.

It is likely that this fill formed through natural infilling, due to the lack of finds & the colour & consistency of the sediment.

There is a possibility that the area is actually a large cluster of shallow pits, intercutting one-another

Refer to context [311096] (311097)

FILL OF DITCH (311100)

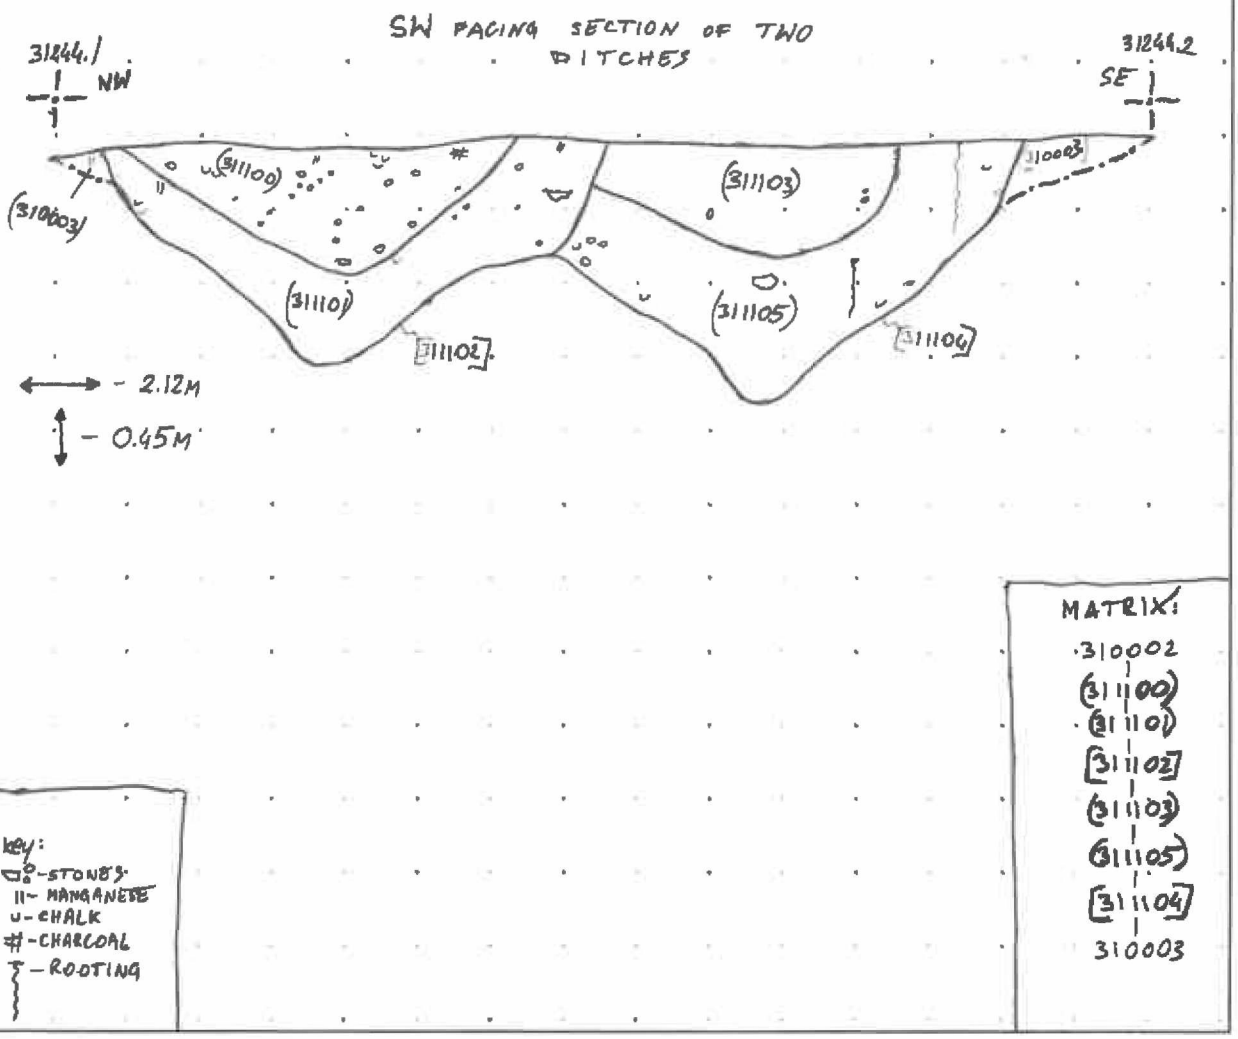

QUITE COMPACT FILL COMPOSED OF DARK BROWNISH-GREY SANDY SILT WITH OCCASIONAL ANGULAR STONES (MEDIUM AND SMALL). VERY SPORADIC CHALK, MANGANESE AND CHARCOAL. EXCAVATED PART OF THIS FILL CONTAINED 9 SMALL FRAGMENTS OF DIFFICULT TO IDENTIFY POTTERY (POSSIBLY ASSOCIATED WITH ROMAN PERIOD). FILL WAS FORMED AS A RESULT OF NATURAL SEDIMENTATION.

FILL OF DITCH (311105)

BROWNISH-GREY SANDY CLAY WITH OCCASIONAL STONES, CHALK AND MANGANESE. NO FINDS. FILL LITTLE BIT LIGHTER THAN CONTEXT (311103) THIS FILL IS QUITE SIMILAR TO THE NATURAL LAYER BUT ITS COMPOSITION IS MORE CLAYEY. FILL IS A RESULT OF NATURAL SEDIMENTATION

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

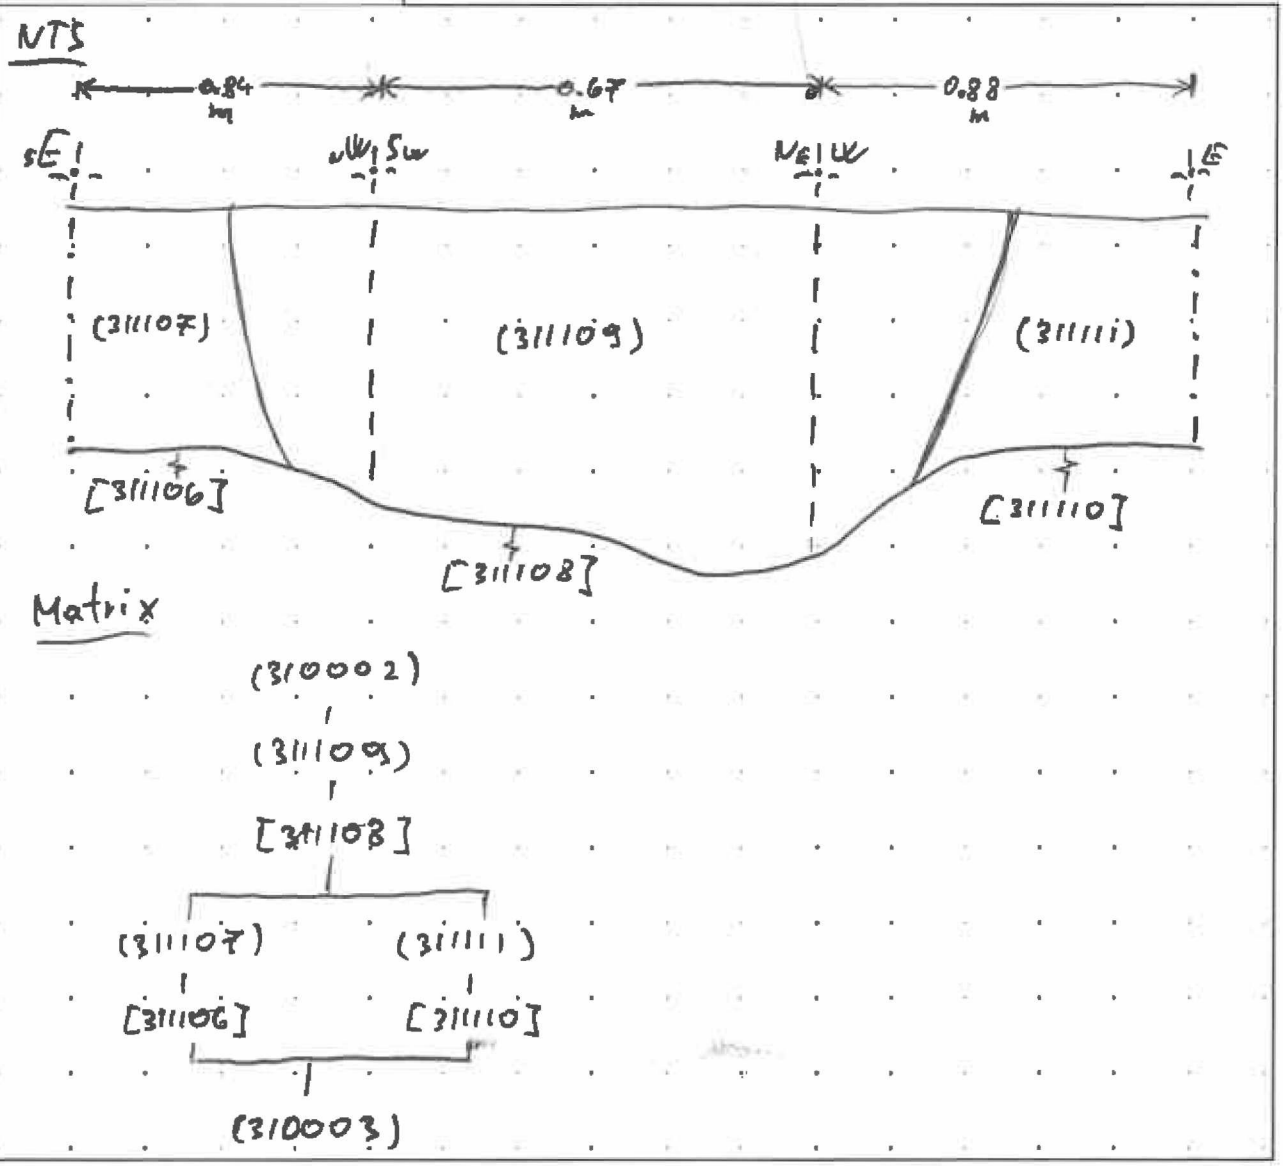

Context is the cut of a gully, which is running on E-W orientation with moderately sloping sides and concave base.
It appears that it has only one natural infilling through the erosion of the sides and the surrounding materials.

Although, it is not entirely obvious on the section wall, but it seems that this gully was cut by a ditch [311108] running on N-S orientation.

Refer to context

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Context is the cut of a ditch, running on N-S orientation with steep sides and concave base.
This feature appears to be the part of a drainage system what was not maintained and naturaly infilled by time.
Context seems to cut two linear features (311107) and (311111) / spreading from E-W.

No dating objects have been found.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Content is the only fill of [311108] ditch which is moderately compact reddish grey material. It has significantly more patches of ferric-oxide visible on the section-wall comparing to (311107) and (311111).

The fill appears to be heavily disturbed by bio-turbation.

No dating objects have been found.

NATURAL INFILLING OF DITCH
IT WAS MODERATELY COMPACT, MID GREY-ORANGEISH COLOR AND SILT-CLAYEY TEXTURE.
THERE WERE AN OCCASIONAL PRESENCE OF STONES AND IS POSSIBLE TO SEE A BONE IN THE SECTION BUT NO BONES FIND DURING THE EXCAVATION.
IT WAS ON THE BOTTOM OF THE DITCH.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[311121] IS A LONG PIT THAT MOST LIKELY HAD A FUNCION OF COLLECTING WATER. ITS FILLS ARE ALL NATURALLY FORMED. THE BASIC MATERIAL FOR THEM IS SAND. A CLEAR LINE BETWEEN THE FIRST FOUR FILLS CANNOT BE DISTINGUISHED SO IT WAS PARTIALY ARBITRARY DRAWN WHERE THE CONSISTANCE AND COLOUR OF THE FILLS FELT LIKE CHANGING

SEE (311122) FOR SECTION

CUT OF POSTHOLE [311127]

CIRCULAR POSTHOLE WITH VERTICAL SIDES AND CONCAVE BASE. IT HAS 0.43m OF DIAMETER AND 0.35 OF DEPTH.

APPARENTLY THIS POSTHOLE COULD BE INSIDE A ROUND HOUSE WHICH IS DIGGING NOW IN FEW SLOTS.

Refer to context

SKETCHES

FILL OF POSTHOLE [311127]

IT IS A MODERATELY COMPACT FILL WITH DARK. GREYISH-BROWN COLOUR AND SILTY CLAY ~~FIE~~ COMPOSITION.

AS INCLUSIONS HAS FREQUENT PRESENCE OF CHARCOAL AND OCCASIONAL PRESENCE OF ANIMAL BONES

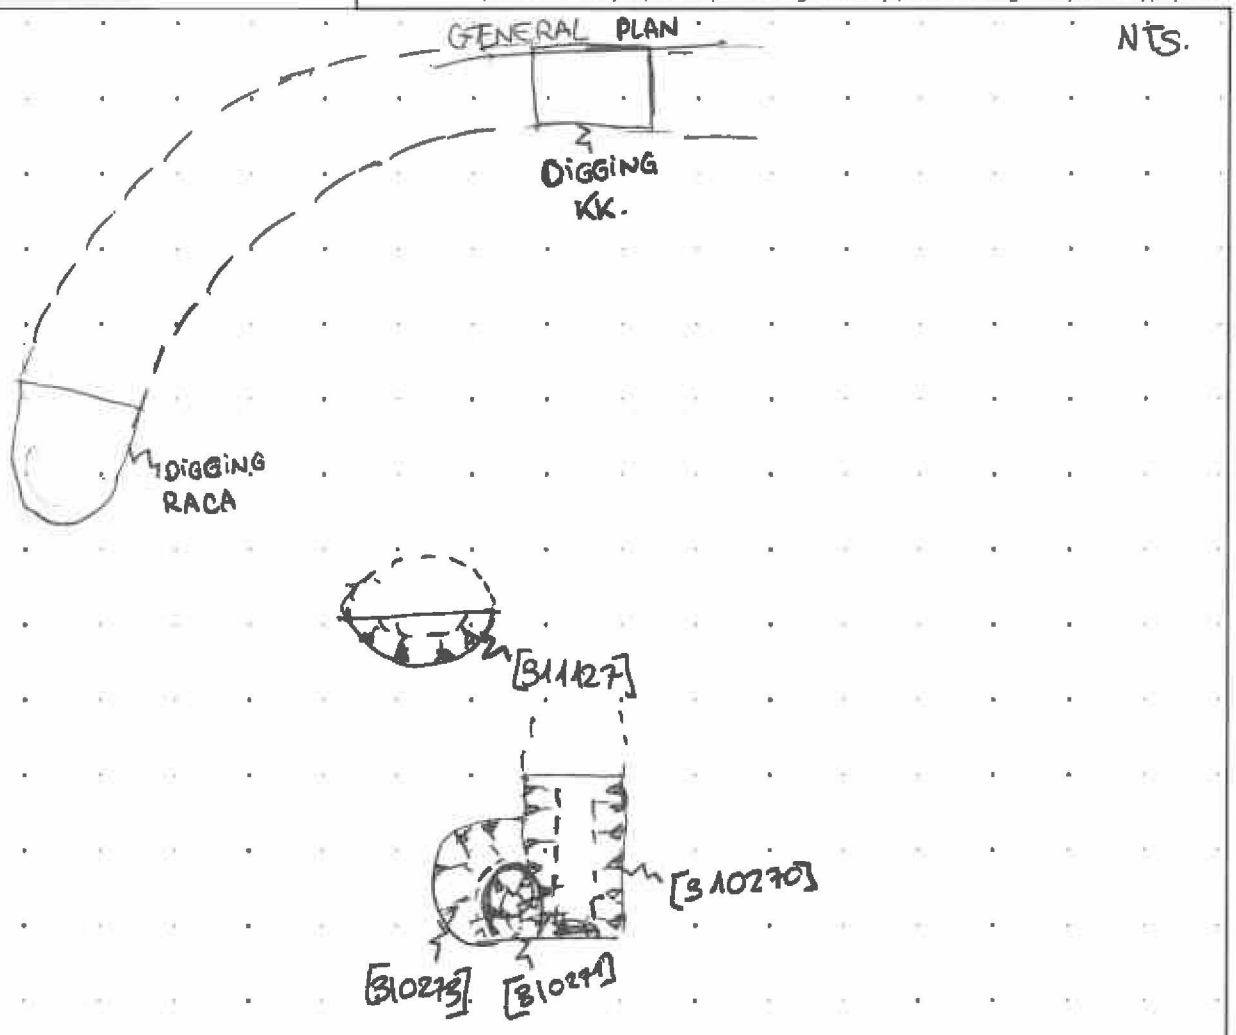

HAVE BEEN TAKEN 3 BUCKETS OF SAMPLE Nº 31076.

IT HAS BEEN INTERPRETED AS A RESULT OF A NATURAL INFILLING.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

[311130] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS A „SE-NW" COURSE. THERE IS NO FIND RECOVERED FROM HIS ONLY FILL. IT RUNS NEXT TO A SMALL PIT AND INBETWEEN TWO, AND TERMINATES THERE. IT HAS A GOOD HALF A METER DEPTH WHICH MAKES IT SIGNIFICANTLY DEEP IN THIS CLOSE AREA. TOWARDS THE TERMINUS IT IS BECOMING EVEN DEEPER THAN IN SECTION. IT IS POTENTIALLY A DRAINAGE DITCH WHICH WAS DRIVING WATER INTO THE PITS.

Refer to context [311282]

[31132] IS A LINEAR SHAPE CUT OF A POSSIBLE GULLY. IT HAS TWO FILLS ALTOGETHER, NONE OF THESE HAD ANY FINDS RECOVERED. ITS BOTTOM FILL SEEMS TO BE NATURAL INFILLING WHILE THE OTHER LOOK MORE LIKE A DELIBERATE BACKFILL. IT IS CONSIDERABLY SHALLOW TO BE AN ENCLOSURE DITCH OR A DRAINAGE DITCH, IT IS MORE POSSIBLE TO BE A GULLY. IT ALSO TERMINATES INTO/ AT THE SIDE OF A SMALL SIZE PIT.

Refer to context [311282]

[31135] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS ONLY ONE FILL. THERE IS NO FIND RECOVERED FROM HERE. IT HAD BEEN CUT BY A SMALLER SIZE PIT (VISIBLE ON PLAN). IT IS ALSO CUT BY A SMALL GULLY FROM „NW" WHICH IS TERMINATING AT THE PIT, ALSO BY ANOTHER DITCH AT ITS „NE" SIDE, ALSO TERMINATING AT THE PIT. THIS DITCH POSSIBLY SERVED AS A DRAINAGE.

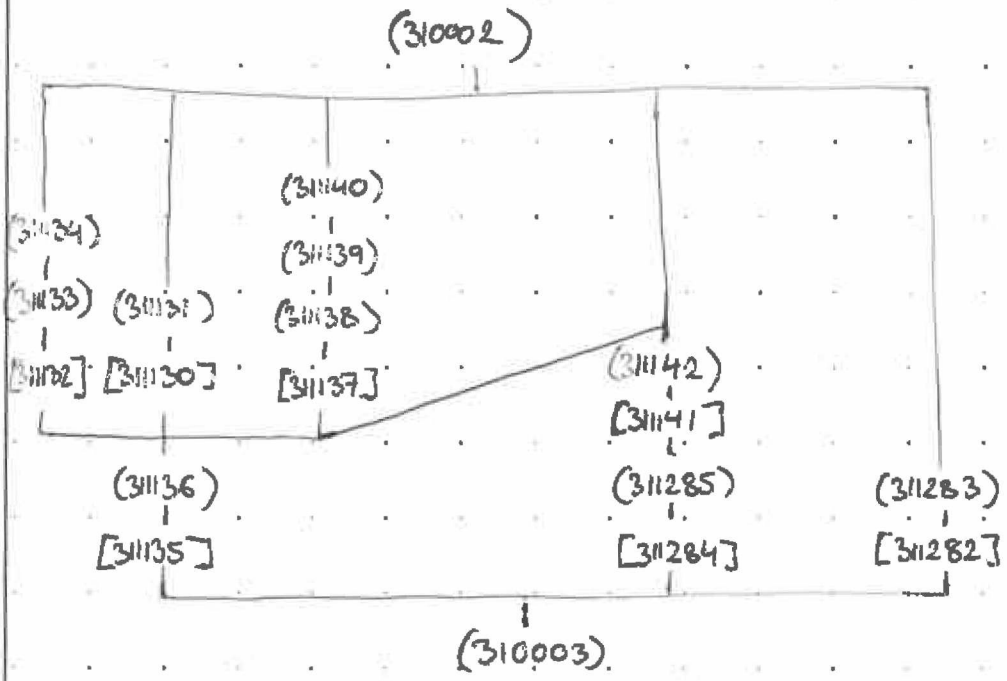

Refer to context [311282]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[311139] IS A QUITE DEEP CIRCULAR / OVAL SHAPE CUT OF A PIT. IT HAS A NEARLY A METER DEPTH. THE PIT CONTAINS THREE FILLS ALTOGETHER. THERE ARE ANIMAL BONES FOUND HERE ONLY, HOWEVER ONLY A FEW FRAGMENTED PIECES OF THOSE. THE PIT CUTS THREE OTHER FEATURES, ONE IS A POSSIBLE DRAINAGE DITCH AT ITS „NE" SIDE, THEN A DRAINAGE OR ENCLOSURE DITCH AT „SW" AND FINALLY, AS IT IS VISIBLE ON PLAN ONLY, A SMALL SIZE GULLY TOWARDS „NW". THIS PIT EITHER FUNCTIONED AS A FEATURE TO DRAIN WATER TO OR AS A WASTE PIT TO DUMP RUBBISH INTO.

Refer to context [311282]

*(any further details that may be important for understanding the context, including items marked * overleaf)*

[311141] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS ONLY ONE FILL. IT IS RELATIVELY SHALLOW AS IT IS ONLY 0.20 m AT ITS GREATEST DEPTH IN SECTION. THERE ARE NO FINDS FOUND HERE. IT IS RUNNING IN PARALEL WITH ANOTHER, EVEN SMALLER DITCH. IT HAD BEEN CUT BY A LARGE SIZE PIT AT ITS SW SIDE. DUE TO ITS SHALLOW APPEARANCE IT SEEMS TO BE A DRAINAGE DITCH RATHER THAN AN ENCLOSURE ONE.

Refer to context [311282]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Context appears to be a gully running on E-W orientation along another linear feature [311145].

The excavation revealed one fill (311144) in this cut.

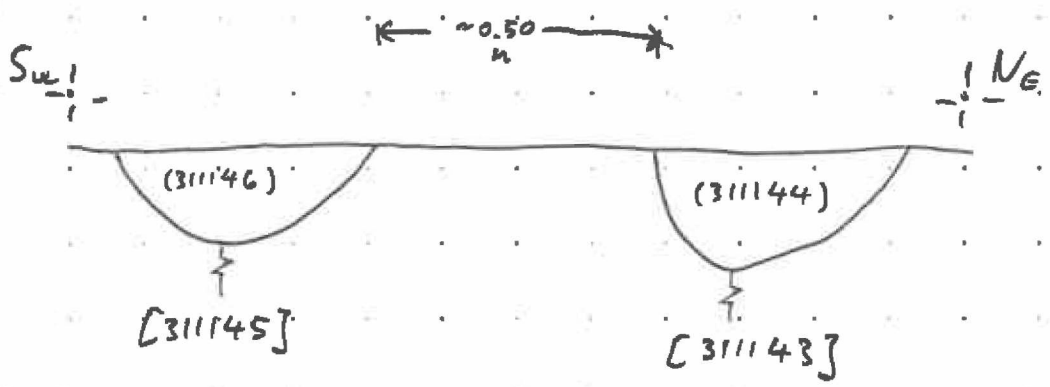

No dating objects have been found.

Refer to context

CUT OF DITCH [3111] TERMINUS. IT HAS MODERATELY SLOPING SIDES AND A FLAT BASE. LOOKS TO BE A RE-CUT OF [3111] [3156], BUT THIS FEATURE EXTENDS FURTHER NORTH THAN [3111] [3156] AND THEN BEGINS TO GRADUALLY CURVE BACK ROUND TO THE SOUTH-EAST

THIS LARGE CURVE SUGGESTS THIS DITCH FORMED AN ENCLOSURE

Refer to context [3110] [3111] [3150]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

TERMINUS OF DITCH, IT HAS MODERATE SLOPING SIDES AND A CONCAVE BASE. THIS TERMINUS IS JUST CUT BY DITCH [311154] WHICH RUNS EAST – WEST PERPENDICULAR TO THIS DITCH. IT IS ALSO CUT BY DITCH RE-CUT [311151] WHICH IS COMPLETELY WITHIN THIS DITCH RUNNING ON THE SAME ALIGNMENT.

THIS DITCH STARTS OFF RUNNING NORTHWARDS BUT DOES CURVE BACK GRADUALLY TO A SOUTH-EAST DIRECTION THIS

DITCH DISSAPEARS AFTER IT'S TRUNCATED BY DITCH [310889] TO NORTH MEANING IT'S FULL EXTENT IS NOT KNOWN

LIKELY A BOUNDARY DITCH.

Refer to context [311093] (311150)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of ditch running EW ~~and extending NS~~. The ditch is concave with steep sides. The ditch has one fill of heavy compacted deposit.

The ditch seems to be part of a Iron Age complex, but it might be part of something earlier, poibly Neolithic?

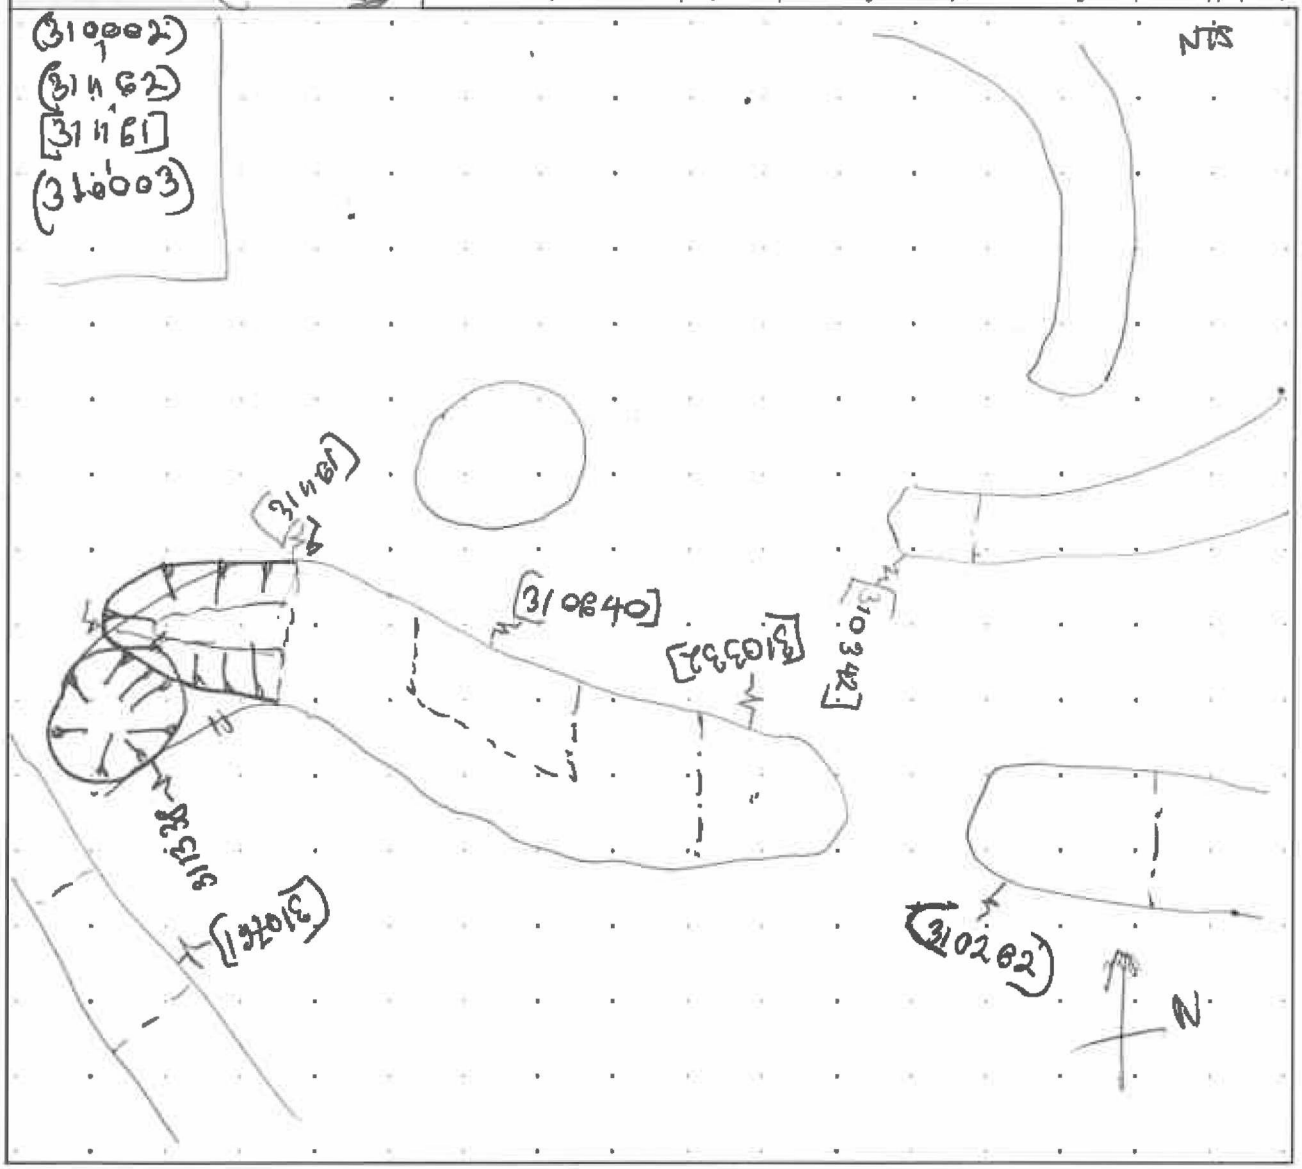

* The ditch has a pit to its SW side. Before it was excavated it looked like it was cornering because of silting / fill accumulated on top.
At the time of excavation the fill of the pit looked similar to (31162) of [31161] indicating contemp of the two features.

* Material in the pit was pottery, a partial swine mandibube and a fired stone that looked like an impotor for lithics manufacturing.

Refer to context (31162)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is a ditch that goes from east to west and is truncated by a pit [redacted] [3/1179] and a furrow [3/1181] and also another ditch [redacted] [3/1175]. The truncation by the other ditch is not shown on the drawing. This is because the relationship was lost due to the slots location, and where the furrow covered on plan. Though when the feature was excavated the truncation was obvious.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of NE-SW ditch. The cut had a maximum depth of 0.38m. The ditch appears to be cut through spread [311192] although this is not clear in section.

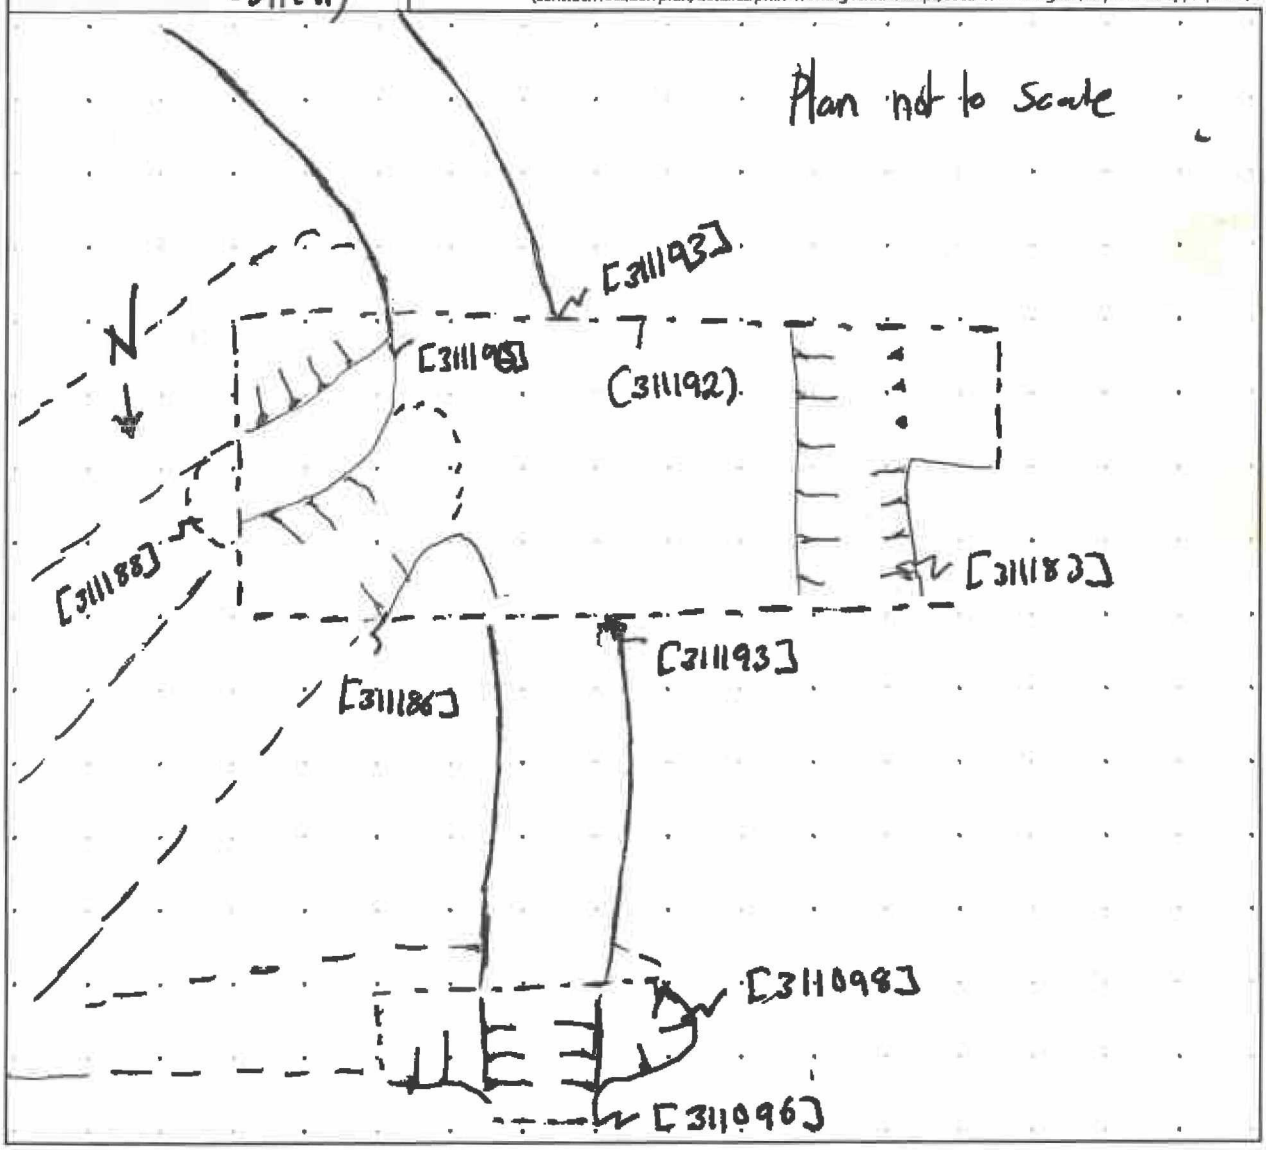

The ditch appears also to be cut by possible posthole [311188] see west facing sction of DA 31265.

The gully / ditch appears to be irregular and slight in plan which might suggest animal activity Badger / rabbit burrows?

Refer to context [311191]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of possible gully / ditch [311186]. The fill has a maximum depth of 0.38m. The fill is composed of a grey- silty- sand fill. No small stone inclusions.

The fill has no evidence of deliberate backfill as there is no pottery / bone found within the fill

The fill is cut by possible posthole [311188] and ring gully for a roundhouse [311193].

it is very unclear whether the fill has overlying deposit (311192). however it is clear the roundhouse cuts the spread.

Refer to context [311186] & (311191)

*(any further details that may be important for understanding the context, including items marked * overleaf)*

cut of possible post-hole. The cut however might represent more natural processes e.g. burrows.

The cut has a maximum depth of 0.36m

No finds to help date the feature were found.

The post hole / natural process truncate ditch cut [3111865] and ditch/pit cut [3111907].

The cut has steep sides and a concave base.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

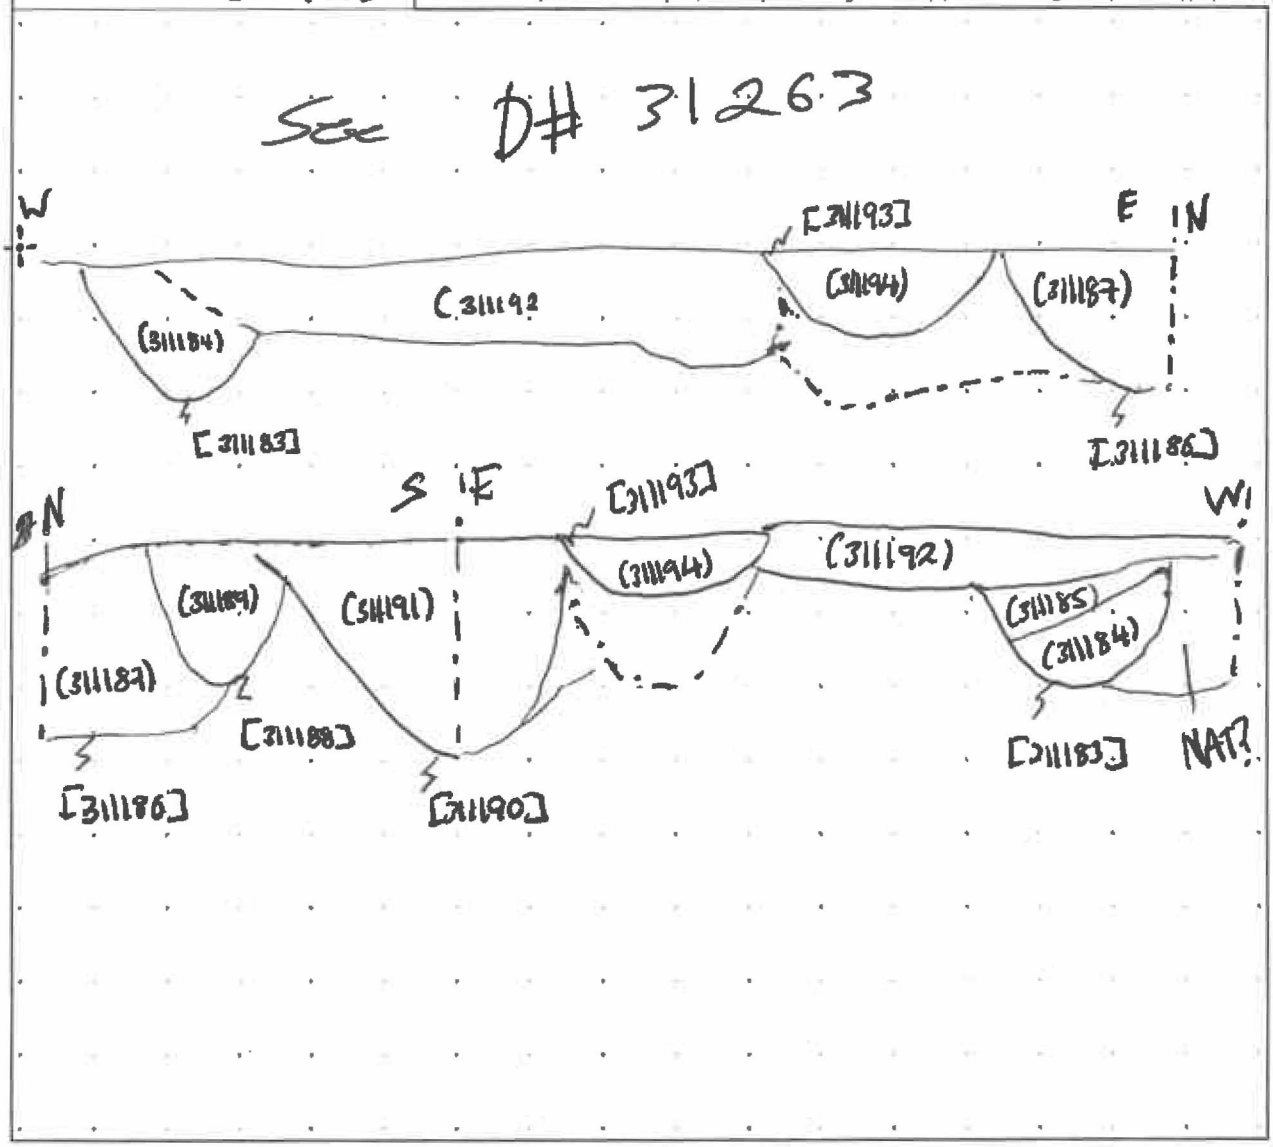

Fill of pit / possible terminus cut [311190]. The fill has a maximum thickness of 0.42m.

The fill was composed of a dark - brownish - grey - silty - sand.

The fill contained flint and one fragment of MIA - LIA pottery which help provide a rough date for the feature. Roundhouse ring gully [311193] cuts the fill which suggest the roundhouse sitting on top is more likely to Late Iron Age - transition.

Refer to context [311186]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Deposit of Silty-Sand that is Spread over a large area in the centre of site. the deposit is a mid-dark greyish-brown silty-Sand. The deposit appears to cover features mostly pits and a few gullys / ditchs for example the Spread covers gully [311193]

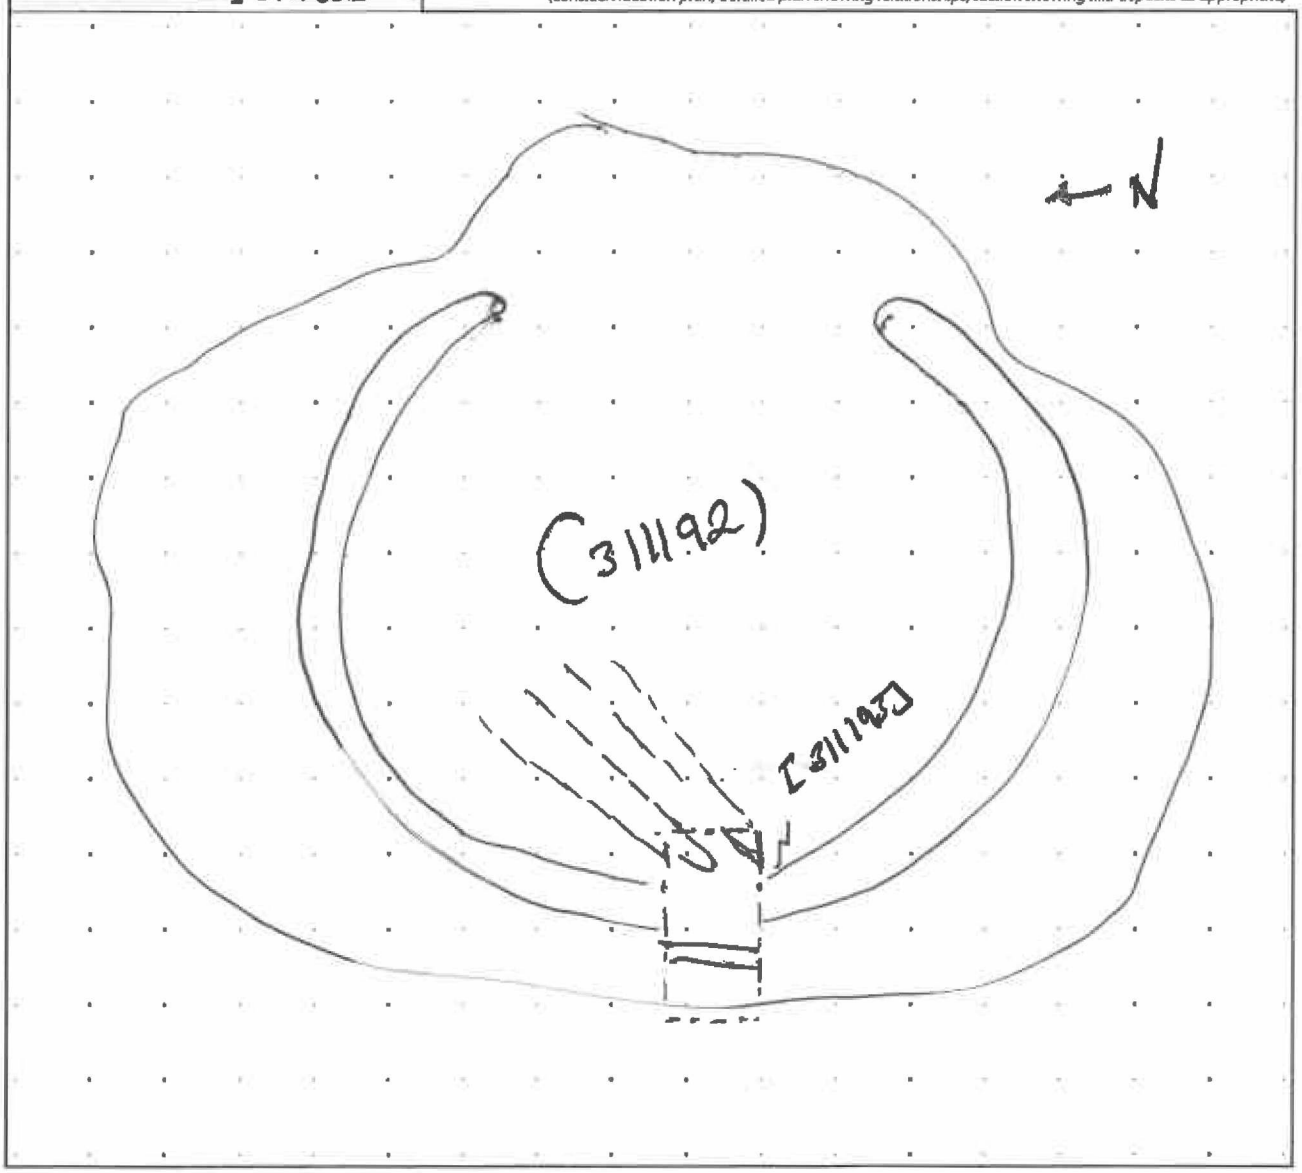

The Spread appears to have formed naturally after feature were abandoned - silting in and capping features.

The deposit is however cut by one gully [311193] which suggests the area was lyt and then used to build a roundhouse.

Refer to context [311186] + (311191)

Cut of ring gully of roundhouse. The cut has a maximum depth of 0.30m. The gully has a width of 0.74m. The cut is curvilinear and has relatively gentle sides and a concave base.

The cut appears to truncate a Spread deposit (311192) and pit / terminus [311190].

The feature was over-exposed due to poor light conditions and compounded by dark, patchy natural.

The ring gully might have been used in the construction of a roundhouse structures wall or formed into a drip gully around the roundhouse.

Refer to context [311186] + (311191)

Fill of ring gully cut [3111793]. Maximum thickness 0.30m.

Possibly same as context (3111097).

The fill is composed of a dark brownish-grey silty-Sand.
The fill most likely represents natural infilling after the roundhouse was abandoned.

Moderate amount of flint was found within the fill - mostly flakes and a very heavily used core

Refer to context [3111862] + (3111191)
