ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for ditch containing 2 fills (208153), (208154). Cut has moderate sloping sides, a concave back and is a linear feature aligned E-W.

Feature is + 1.10m long, + 1.77m wide and 0.61m deep.
Ditch truncates pit [208165].

Possible evidence for gully in the south side of the feature, possible cut shape. However, no differentiation in fills, so concluded as part of same ditch feature.

Refer to context [208166]

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Initial infilling for cut or ditch [208152] - Natural infilling composed of moderately compact orangeish brown silty clay, extending 10-18m thick.

Fill is slumped slightly onto the north side of the ditch.

Fill contained occasional animal bones, deposited as fill was (some broken up during excavation), note from a cow - also contained occasional charcoal flecks.

~~Substantial pottery fragments, including~~ Pottery fragments were mixed with those from (208154), as they were mixed upon excavation.

Context was mottled with natural, suggesting an occasional layer of washed in sediment, possibly from north side.

Refer to context [208152], [208160]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Receding fill for ditch cut [20152] ~~and~~ Natural infilling, composed of moderately compact mid greyish brown clayey silt, extending to 0.24 m thick. ~~Context~~ deposited ~~deposit~~ ~~to provide evidence~~

Context deposited evenly, no slumping, in the deposit.

Fill cut by the ditch recut [20155] and gully [20157]

Deposit containing inclusion of occasional charcoal flecks and shag cotton flint fragments, unworked. occasional animal bone, probably mostly cow bone and occasional pottery.

Small and flat Fe object, probably a nail. (F74126), found in base of deposit.

occasional pottery with natural in base of context.
Includes pottery from (20153) within context.

Refer to context [20152], [20160]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for gully containing 2 fills (20P152) (20P154). Gully cut is aligned E-W, running for 0.90 m. Cut has steep sloping sides, and a flat base.

Cut is 0.90 m long, 0.56 m wide and 0.35 m deep.

Gully is truncated by lower ditch (20P160), and gully terminates within the slot, probably running 'inside' the line where the lower ditch runs. To the west, there is evidence of other gully, which may relate to this context.

Cut truncates (20P156), and (20P154). Both fills or a cut and recut or an older ditch.

Refer to context (20P152) (20P160),

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary fill for cut-off gully (268157). Consists of loess dark grey brownish grey clayey silt extending to 0.35m thick.

Fill is deposited slumped to south side of gully.

Inclusions of occasional small stones, pebbles, occasional charcoal pieces, occasional pottery and animal bone. However, these were mixed up during excavation with context (208159) so all finds will be labelled and bagged under this context.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Secondary silt for cut or gully [2081573]. Natural infilling composed of mid brownish grey, ~~moderately~~ moderately compact clayey silt up to 0.35m deep.

deposit is truncated by cut or ditch [208160] and later rock [208163].

Inclusion of occasional charcoal flecks, occasional animal bone and occasional pebble inclusions.

This deposit is also slumped against previous deposit, facing north.

This context has the find box (208158) assigned within this, as finds were not separated during excavation.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary fill for ditch cut [20P160], natural infilling consists of moderately compacted and orangeish brown silty clay, extends to 0.17m.

Fill is slumped slightly towards the northern side, and is mottled with natural, suggesting a context formed by deposition from water washing into ditch from north side.

Context contained occasional charcoal flecks, pottery ~~fragments~~

Refer to context [20P152]
[20P160]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of pit this pit contains a dark clay with some finds of pottery, Bone and CBM. There were also stones and ~~the~~ gravel in the fill. The fill is probably from natural infilling.

Refer to context

NATURAL INFILLING OF THE DITCH [208174]

IT IS MADE OF A MODERATELY COMPACT SILTY CLAY, MID GREYISH BROWN IN COLOUR.

STONES AND CHARCOAL FLAKES ARE OCCASIONALLY PRESENT.

LATE ROMAN POTTERY IS COMMON, AND DETECTED IN DIFFERENT TYPOLOGIES, ~~AND~~ (BOTH COARSE AND FINE WARE), SUGGESTING A DATE AROUND 3rd - 4th CENTURY AD.

IT IS CUT BY THE PIT [208172].

FILL (208175) OF TERMINUS OF DITCH [208176]

The only fill dug in the terminus is a mud brown layer of silty clay. It has stones, charcoal, a small fragment of pottery and a bone as inclusions.

Sampled in 2 buckets (80%) -> S 20816

No dating materials.

Refer to context [208176]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF A DITCH TERMINUS [208176]

In a "complex" archaeologid area (see sketch below) is located the terminus of a ditch - (Basically between [208160] and [208070])

Orientation is E-W end, this side on gently sloping to a concave ~~base~~ base.

It's filled by (208175), where I haven't found dating materials.

More suggestion for the chronology will come after digging some relationship shot in west direction, with some feature oriented approx. N-S.

Refer to context (208175)

SKETCHES

Natural deposit (208177). This is a thin deposit spreaded over ~~several~~ several features in the west area, which still needs to be cleaned and excavated.

In this slot, it is over fill (208178) of possible pit (208180).

It is a clayey silt deposit with no finds in it.

It is probably the result of a natural deposition caused by a colluvial process.

Refer to context

(208178) For Section

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Fill (208178) of possible Pit [208180]. This is the most recent fill of that pit. It is a silty clay fill with only some charcoal in it. It is quite similar to fill (208179) but it is a bit lighter and with yellowish soil inclusions. It is probably the result of a natural process of deposition of sediments once the feature fell into disuse and was filled by context (208179).

Refer to context [208180] For Plan

Fill (208179) of possible pit [208180]. This is the oldest fill of that pit. It is a silty-clay fill with some little charcoals in it. It is quite similar to fill (208178) but a bit darker and is also similar to fill (208181) of ditch [208182], so could have been created by the same process.

It is probably the result of a natural process of deposition of sediments, once the feature fell into disuse.

Cut [208180] of Possible Pit. This feature has appeared under deposit (208177); ~~it's~~ it's cutting fill (208181) of Ditch [208182]. Since we cannot see it on the surface we don't know its shape, its orientation not how big it is. However, according to the edge we have dug, it looks to be a pit, being this edge its SE side. This side is truncating ditch [208182], and is quite sloped. This feature is filled by two contexts: ~~(208178)~~ (208178) and (208179).

Cut [208182] of Ditch. This cut is filled by only one context (208181). It is a not-too-big ditch with a E-W orientation, which is ~~is~~ Its base is sloping down to the West till being truncated by feature [208180]. After this point to the West we cannot see it on the surface, due to the spreaded deposit (208177). This one could be a Late Iron Age or Early Roman ditch.

Fill (208187) of Terminus of Ditch. This is the only fill of that Terminus. It is a silty clay fill with a couple of very little fragments of pottery and some ~~little~~ small charcoals in it. It is probably the result of a natural process of deposition of sediments with dragged materials, caused by the water.

Refer to context [208188] For Plan

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Fill of a ditch [208199]

It is a moderately compact fill with mid-brownish-orange color and silty-clay composition.

No inclusions - No finds.

It has been interpreted as a result of a natural infilling. It is the same fill as (208218) and both are cutting by the pit [208201].

AFTER REMOVING THE FURROW WHICH WAS OVER THE FEATURE WE FOUND THE TERMINUS AND DUG IT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a pit [20820].

It is a regular pit coming from the South to the North.
The sides are vertical and the base is concave.

This pit is cutting two ditches [208197] and [208199] = [208217] which are running E-W direction.

The cut only has a single fill (208202) plenty of pottery.

* This plot has been extended in order to find the terminus of the pit, but it was just in the section, so we stopped digging. Co

Fill of cut [20820].

It is a moderately compact fill, with dark brownish-grey colour and clay-silt composition.

As inclusions has occasionally stones (big and medium size); occasionally chalk; moderate presence of charcoal and frequent presence of bones and pottery. The bones were sheep bones, and it was an immature sheep because the bones weren't fused. The biggest piece of pottery was a 3-4th century pot, which was almost half of the piece. We can see better this piece of pottery at the photos n° 2015227-28.

* This slot ~~has~~ been extended in order to find the terminus of the pit, but the terminus was just in the section. So we stopped digging. Over the pit is the ditch [208199-208217].

FILL (208213) OF THE DITCH [208214]

This context is a mid brown compact layer caused by nat. infilling in to the E-W ditch. It's the same as (208193) and others (no cont numb yet) (208210)

Inclusions consist mainly in stone and a couple of small fragments of more age pottery (probably) late, ~~early~~.

Further excavations indicates that this is a pit. Same dating still applies and no change to the fills interpretations have been made. a new drawing of the location have been made (D7535A) 19/4/18 JK

Refer to context [208214]

PUT OF DITCH [208214] fill by

An oriented E-W ditch (already dug in other slots) [see sketch below] cut the (approx) N-S ditch's fill (208215) -

Edges mod - sloping to a concave base. NB! so deep (~9.45)

No particular evidences will help for dating (in the it's fill just some "bed" fragments of (maybe) late iron age pottery).

Further excavations indicates that this is a pit.

Dating still applies. An extension and new

Drawing have been made (D78357). 19/4/18 JK

Refer to context (208213)

FILL (208215) OF THE DITCH [208216]

This orangeish fill is ^{exposed} the natural infilling into the ditch.

Even if it was dug just a small portion ~~1000m~~ $1m \times 0,5m \times 0,20m$, it has revealed a relevant number of small finds.

All flekes [From F74131 to F74137 (TOT 47)]

Two particular significant - (worked, sharper, etc).

Others seems to scratch, and be a part of a same nucleus.

The ^{found} pottery shows characteristics of Arribelle iron period.

Refer to context (208213) [208214]

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

CUT OF DITCH [208216] fill by (208215)

Ditch is running ~ NNW-SSE, it has markedly sloping sides and a pretty-convex base.

The feature is cut by the latest [208214] oriented E-W.

According to finds (with 7 diff. FLAKES) and the pottery this context ~~may~~ might belong to the IRON AGE.

Refer to context (208213)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208225] IS A LINEAR SHAPE CUT OF A DITCH. IT IS RELATIVELY DEEP WITH ITS 1.03 METER OF DEPTH. IT HAS THREE FILLS IDENTIFIED, ALL OF THESE WITH ROMAN POTTERY AND ANIMAL BONES IN LARGE QUANTITY. THE DITCH IS N-S ORIENTATED AND HAD BEEN RE-CUT BY A DITCH IN THE SAME ORIENTATION AND BY TWO OTHER DITCHES FROM "NE". IN THE MEDIEVAL PERIOD MANY FURROWS CUT THE AREA FOR AGRICULTURAL PURPOSES, ONE OF THESE FURROWS RAN SHALLOW ON THE TOP OF THE TERMINUS OF THIS DITCH FROM E-W ORIENTATION. IN THE SECTION IT IS NOT VISIBLE. ALL THE FOUR DITCHES ARE TERMINATED HERE. AT THE SOUTH-WEST DIRECTION WHERE ONE OF THE DITCHES TERMINATED (POSSIBLY) HAD A STEPS KIND OF CUT VISIBLE WHICH COULD INDICATE THAT PEOPLE COULD GAIN ACCESS TO THE BOTTOM OF THE DITCH AT ONE POINT IN THE ROMAN PERIOD. BY THE CONDITION AND VARIETY OF FINDS WE CAN ASSUME THAT THESE DITCHES HAD BEEN FILL IN BY WASTE. REGARDING AT THEIR SHAPE AND SIZE IT IS POSSIBLE THAT THESE DITCHES WERE BOUNDARY DITCHES.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208226) IS THE BOTTOM FILL OF A LINEAR SHAPE BOUNDARY OR ENCLOSURE DITCH. IT IS RELATIVELY SHALLOW AT THE BOTTOM AND WEST BANK OF THE DITCH, HOWEVER IT IS PROMINENT ON THE EAST BANK. IT IS SANDY IN ITS CONTEXT, IT HAS LARGE SIZE ROCKS AND SEVERAL ANIMAL BONES IN FRAGMENTS. LATTER ARE DISARTICULATED. AMONG THE ANIMAL BONES ARE LARGE SPECIES AND DOG JAWIS FROM AT LEAST TWO ANIMALS. THE OCCURANCE OF POTTERY IS RARE IN THIS FILL. IT IS POSSIBLY A DELIBERATE BACKFILL OF RUBBISH (SUCH AS ANIMAL REMAINS) AND LARGE SIZE STONES MAYBE FROM A CLEANSING OF AN AREA.

* Addition - F74710

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208228) IS THE TOP FILL OF LINEAR SHAPE BOUNDARY/ENCLOSURE DITCH. THIS FILL IS RICH IN CHARCOAL AND HAD SEVERAL ROMAN POTTERY FRAGMENTS AND BROKEN ANIMAL BONES RECOVERED. THIS IS ONE OF THE MOST SIGNIFICANT FILLS IN ASPECT OF SIZE/EXPANSION AND FINDS. METAL HOBNAILS AND A BROKEN BONE PIN HAD BEEN RECOVERED HERE AS WELL. THIS FILL IS A DELIBERATE BACKFILL OF WASTE. THIS FILL IS CUT BY TWO DITCHES - ONE IS RUNNING A N-S COURSE WHILE THE OTHER A NE-SW ONE.

Refer to context: (208226)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208233] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS A NE-SW ORIENTATION. ITS ONLY FILL HAS OCCASSIONAL POTTERY AND A FEW AMOUNT OF ANIMAL BONES RECOVERED. IT IS CUTTING A N-S ORIENTED DITCH AND IT IS TERMINATING HERE. LATER IT HAD BEEN CUT BY A LARGER SIZE DITCH WHICH IS A RE-CUT OF THIS CURRENT DITCH. IT HAS THE SAME ALIGNMENT TO IT. IT HAS A NEARLY "V" SHAPE, POSSIBLY FUNCTIONED AS A DRAINAGE.

Refer to context [208225]

Cut of Ditch that's going from
south to north and is truncating
an older ditch [208139].
This ditch is possibly medieval.

Refer to context

Fill of ditch. This fill contained a brown
 silt with some finds of pottery and
 CBM. In the top of the fill a
 horse shoe was found. The ditch
 is probably medieval.

Refer to context

P20454 D75377

this context is same as [208011] and [208219]

1 (Federico Coruso) decided to record the ^{latest} ~~new~~ "face" of the slot in D75377 (P20454) and reelaborate the matrix (see (208336))

Unfortunately the materials are already off site and it wasn't possible to have a look on them. As well the contexts sheet written by I/O

doesn't contain information about pottery or inclusions in general.

~~(2012)~~ (3)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked "overleaf")

Fill (208258) of ditch [208260]. This is the most recent fill of the ditch. It is a quite compact (when it's dry) silty-clay fill with some little charcoal, a piece of possible dog, a flint core (F75145), some small fragments of Roman pottery, few (C81 and a couple of fragments of Roman) animal bones that were possible as we couldn't keep them.
This fill is clayey and greyer than fill (208259), which is under it.
It is probably the result of a natural process of deposition once the ditch fell into disrepair and was naturally filled by context (208259).

Refer to context [208260]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208259) of Ditch [208260]. This is the oldest fill of that ditch. It is a sandy-silty clay fill with ~~by~~ mammal bones, a complete Roman pot, and other fragments, some small charcoals and medium stones.

This fill is looser and lighter than fill (208258), which is above this one.

It is probably the result of a natural process of deposition of sediments * and materials thrown in it once this ditch lost its initial use.

Refer to context

Cut [208260] of Ditch. This ditch is filled by two contexts: (208258) and (208259). It is a linear ditch going from E to W and cutting at this point the fill (208261) of Ditch [208262], which is located parallel to this one. This ditch could be part of the Roman boundary system or be related with it.

Refer to context

Fill (208261) of Ditch [208262]. This is the only fill of that ditch. It is a quite compact fill (when it's dry) due to the high amount of clay it has, with some animal bones that were fragile so we couldn't take them, big fragments of chalk, some small charcoals and few fragments of Roman pottery. It is probably the result of a natural infilling, with dragged materials once the ditch fell into disuse and of sediments. was ~~done~~ done before ditch [208260]

Cut [208262] of Ditch. This ditch is filled by context (208261). It is a ditch with an E-W orientation which is sloping down as it goes to the east, so the sides have a gentle slope in its West part but they have a moderate slope in its East part. This ditch is being truncated by ditch [208260] in its South side (just the top of the side) and is ~~truncating~~ cutting the fill (208263) on its North of Ditch [208264] in its North side. Three of them are parallel. The function of this ditch is not clear yet.

CUT (208266) OF PIT. THIS IS FILLED BY ONE PIT (208265).
IT'S A SUB-CIRCULAR PIT, NEXT TO OTHER PIT. IT HAS GENTLE SLOPES
AND THE BASE IS CONCAVE.

THIS PIT IS A CONSTRUCTION BUT WE DON'T KNOW THE EXACTLY
USE. WE DON'T FIND ANYTHING, EXCEPT A PIPE MODERN.

WE THINK ~~WAS~~ THAT HAS THE SAME ORONOLOGY THAN THE OTHER
PIT. FOR THAT, THE PIT IS MODERN (POST-MEDIEVAL), PROBABLY LATER
CENTURY 18th.

CUT [208208] OF PIT THIS IS FILLED BY QUE FILL (208203).
IT'S A SUB-CIRCULAR PIT, LEX TO OTHER PIT [208260]. ITS EDGES
ARE MODERATE AND ITS BASE IS CONCAVE.
THIS PIT IS CUTTING THE MODER TERRACE (POST-MEDIEVAL). WE DON'T
HOW KNOW THE USE, LIKE THE OTHER ONE.

WS BEFORE EXTENSION

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

It's a curvilinear ditch that runs from west to east and probably turns to the south just east of the slot;
sides are stepped and the base is concave;
it seems to be the oldest feature of the slot;
it ~~cut~~ ~~cuts~~ the ditch [208296] (that runs from north to south) and [208271] (that runs parallel from west to east)
it dates roman

IS CUT BY DITCH

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

it's the natural infilling of a ditch;
it contains no finds but a small number of
stones;
due to it's yellowish colour and the fact that
it seems to have fallen into the ditch from
the northern side of the ditch, it's probably
redeposited natural

it's the deliberate backfill of a ditch;
it contains a moderate amount of charcoal
pieces distributed through out the layer,
also a moderate amount of stones, a few fragmented
animal bones and a lot of pottery (including
the fragments of one pot which seems to have
been lying in the open ditch long enough for
iron pan to appear in its base)
the pottery dates Roman

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

cut of ditch. this is a ditch that goes from east to west and curves south right before a bigger ditch that is probably medieval. ~~the~~ finds in this ditch's fill indicates that the ditch might be Iron Age. There were some mischape in the north edge of the ditch, probably from rooting.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

~~according to its shape, the layer was situated in the same place as the~~
~~last layer~~ Looks quite similar to the natural, probably der-
 liberate backfill with material from around.
 (208293) is most likely the same as (208273), but you can't be a 100%
 sure - both are fills at the base of ditch [208271], but since that ditch is
 cut by [208275], the ditch and its fills are interrupted and not forming a
 continuous fill. Therefore we can't tell for sure and treat them as ~~diff~~
 different contexts with different context numbers, to be on the safe side.

Refer to context:

sort of a ramp ~~with a~~ ditch [208271], ~~which is~~

The cut is not very obvious; the ~~cut~~ colour of (208298) and (208273) is almost the same, and so are ~~the~~ (208297) + (208300). There's a very slight difference, (208273) is slightly more greyish than (208298), and (208297) is slightly more brownish than (208300), but it's really hard to see.

But there's 3 more indicators: that pile of stones in (208297) - roughly forming a straight line ^{on} one level - ends exactly where the cut is supposed to be (see sketch below), and the same applies for - the thin line of gravelly sand underneath the stones, just a thin gravelly stripe. And there's that small overcut, which shape indicates a cut as well.

This why we (AK+MD) both ~~think~~ see a cut there, but ~~of~~ still there's a possibility that [208296] and [208271] are actually the same and form a continuous ditch. The final prove can only be revealed ~~with~~ through an extension of the slot.

That might also reveal what it actually is, since right now it's just a sloping hole of some kind (pit? ditch? impossible to tell for ~~now~~ now) → UPDATED 14/5/18.

DITCH WITH A N-S ORIENTATION [208296] AND HAS BEEN TRUNCATED BY DITCH [208271]

ITS ~~AN~~ ANOTHER

The cut is not too obvious, there's a chance that (208297) and (208300) are actually the same. We (AK+MD) both saw a cut in there, but a definite prove can only be given if the slot would be extended. Check [208296] on that matter as well.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

lower fill of [208296], looks ~~like~~ quite like the natural, but ^{a bit} more greyish and rather sandy & silty, while the natural around is more of a clayey kind. I assume a deliberate backfill.

The cut is really hard to see (refer to [208296] as well), it might be possible that (208298) and (208273) are actually the same & we have a continuous ditch there; we're (AK+MD) sure that there's a cut, but the final prove can only be given by an extension of the slot.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

many finds of different kinds, ^{soil} quite homogenic, probably a dumped layer, ~~after~~ post-use after the ditch was abandoned. The next oldest layer underneath looks like an effort to make the base level, so it might be a well-prepared reuse (see sketch below)

It might be the same as (208297), & please refer to (208297) and [208296]!!!

Actually, there were many finds incl. pot, bones & ^{also} ~~also~~ CDM. But the context wasn't recognized before cleaning the section, so the finds couldn't be separated. Some of the finds labelled as (208300) may belong to (208501) or (208273) respectively.

Refer to context [208264]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill ~~is~~ for cut of disturbance. [208302].

Consists of moderately compacted orangeish brown sandy silt, up to 0.38m deep.

Inclusion of charcoal flecks and small 'smalls' / flecks of clay.

Single pottery fragment found, from ditch east of probable roofing.

evidence of soil 'uplifting' with worms, rooting, bioturbation + disturbance.

[208304]

(208316) is the natural fill of [208317].

Natural stones, mainly small with a few larger ones, are spread evenly throughout the fill.

Occasional charcoal is spread throughout the fill thinly, & slightly concentrated towards the edges.

Heavily affected by natural weathering activity.

Refer to context [208317]

FILL (208323) OF DITCH (208325). IT IS THE NEWEST FILL OF THE DITCH. THE COMPOSITION IS SANDY CLAY AND THE COLOR IS ORANGEISH BROWN.

THERE WERE NO FINDS. THE FILL IS A RESULT OF A NATURAL DRAINAGE CAUSED PROBABLY FOR A COLLAPSED DEPOSIT, ONCE THE DITCH FELL INTO DISUSE.

THE FILL IS PROBABLY A BROWN FILL, LIKE THE OTHER FEATURES NEAR MY SLOT.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208334) - PROBABLY A NATURALLY OCCURRING DEPOSIT IN A LOW AREA OF THE SITE. COVERS UNEXCAVATED ARCH FEATURES. THREE 1M WIDE TEST SLOTS DUG INTO LAYER. ~~THE~~ FULL THICKNESS OF DEPOSIT IS NOT YET IDENTIFIED. LINEAR FEATURES APPEAR TO RUN INTO IT. SOME AREAS OF STONE TO THE WEST WHICH MAY NOT BE NATURAL, SIMILAR TO ~~BY~~ DEPOSITED STONES IN OTHER AREAS OF SITE. ROUGHLY RECTANGULAR SHAPE, BUT DISTURBANCE FROM FURROWS HAS OBSCURED SOME OF THE SHAPE. POSSIBLY ROMAN IN DATE DUE TO SURFACE FINDS OF POT + CBM.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208334) IS A DARK BROWN COLOUR DEPOSIT OF A POSSIBLE OCCUPATION LAYER. IT HAD BEEN ACCUMULATED ON THE TOP OF ARCHAEOLOGICAL FEATURES. IT HAS A GREAT EXPAND ALTHOUGH IT IS RELATIVELY SHALLOW, IT IS 0.30m DEEP AT THE MAXIMUM IN SECTION. THIS DEPOSIT HAVE SEVERAL ANIMAL BONES OF LARGE SPECIES AND POTTERY, PROBABLY FROM THE ROMAN PERIOD. ALSO CBM HAVE BEEN FOUND HERE. THAT IS POSSIBLE THAT IT HAD BEEN ACCUMULATED BY THE ABANDONMENT OF THE AREA, WHICH WAS AN OCCUPATION ~~AREA~~ AREA. THIS AREA HAS BEEN CUT BY MEDIEVAL FURROWS FROM E-W ORIENTATION.

(any further details that may be important for understanding the context, including items marked * overleaf)

* Look [208335]

Cut [208339] of Ditch. This ditch is filled by two contexts: (208340) and (208341).

It is a deep ditch but not too wide, its sides are very vertical and is truncating all the ditches that are going from North to South, as this one is doing.

However, it is truncated by a couple of pits / small gullies which are perpendicular to this one.

This could be a drainage ditch or part of the Roman boundary system.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [208342].

This ditch is running E-W direction and it's cutting ~~by~~ the ditches N-S orientator. Also is cut by the furrow [208351] and it's paralel to [208347].

We can see it at the both sections

It is an small gully / long pit that looks to go into the N-S ditches as it is perpendicular to ~~to~~ them and becomes deeper as it goes into the boundary ditch [208271].

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [208347].

This ditch is running E-W orientation and it's cutting the ditches N-S orientation. Also is cut by the furrow [208351].

Tile can see it at both sections.

It could be on small gully/long pit and could have been use to go into the big boundary ditch.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [208348].

It is moderately compact; mid greyish-brown colour and silty-clay composition.

It has been interpreted as a result of a natural infilling.

AFTER REMOVING THE FURROW, WHICH WAS OVER THIS FILL, WE REALISED THAT THE TERMINUS WAS HERE AND IT WAS DIGGED.

Refer to context

(any further details that may be important for understanding the context, including items marked * overleaf)

* First thing I have to say about this slot is that I never digged it, I'm only doing the record so, all the information I have come from the post-excauation process and my personal point of view.

Cut of furrow running E-W on the top of the slot.

Cut of ^{PIT} ditch [208361]

This ^{PIT} ditch is running E-W direction. And ⁱⁿ the slot only can be saw at the East section.

It's a terminus with only a fill.

It's cutting by the N-S ditch [208363]

*UPDATE: After taking out the former [208351], which was over this feature, we have realised that this is a pit; ~~it~~ it is the same as [208407]

Refer to context

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is a dark grey silt containing a lot of bone and pottery also 4 iron nails and an iron object, possibly a hook (F74378) in the fill there were also spots of charcoal and bigger stones.

The pottery suggests that this ditch is Roman.

Fill of cut [208367]

It is a moderately compact fill cut mid-brownish-orange colour and silty-clay composition.

It has been interpreted as a result of a natural infilling.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

PRIMARY NATURAL INFILLING LAYER (208369) IN TO THE DITCH [208335]. Consistency is really clish and close to the "natural" (200003) characteristic. We can say it's an interface ~~with~~ between the fill and the natural.

Infect colour is really orange. Stones as inclusions and pottery.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Dark grey-brownish silty clay with moderate naturally watered stones and pebbles (diameter from 5 to 20 cm), plus occasional bone fragments (mostly cattle) and pottery shards (late Iron Age and Roman, ranging from I to III/IV century AD)

Feature has been interpreted as a deposit to be resulting of sowing process, created by spreading soil and scattered material (very likely after the ditch was disused) in order to drain the area or create an even surface.

Refer to context (208371)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208372) of Terminus of gully [208374]. This is the most recent fill of that cut. It is a reddish sand fill with only some charcoals in it.

It is a natural deposition of sand from the Natural (200002). As the difference is not too clear with the natural, it could be just a deposition in a natural cut.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208373) of Terminus of Gully [208374]. This is the oldest fill of that cut. It is a clay fill with a big amount of silt and some charcoals.

It is a very shallow fill, which is made a compound of silty grey clay and orangeish (clay) sandy clay. It is a natural infilling of sediments in a cut that could even be a natural truncation.

Refer to context:

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [208374] of gully. This cut is filled by two contexts: (208372) and (208373). On the surface it looked a curving gully from NW to SE; ~~but~~ however, after digging it, we considered the idea that it could be just a compound of grey spots, ~~which~~ some of them disappeared after giving a heavy clean to the surface. Even, the fills look quite natural, so we think this cut is just a natural truncation.

Refer to context (208372).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of Roman ditch terminated [208375], cut by ditch [208377].

Occasional stones, chalk and charcoal are evenly spread throughout the fill with no clear patterns.

Roman pot sherds spread throughout the fill with no visible pattern in distribution, size, type or fabric.

Animal bone spread through the fill evenly, a mix of small, large and miscellaneous mammal bone. No visible pattern in size, location, type or size, and no sign of butchery.

Fill of ditch (208387).

This is moderately-compact fill with mid orangeish-brown ~~fill~~ colour and sandy-clay composition.

As inclusions has moderate presence of stones (small and medium size); occasional presence of charcoal; moderate presence of bones and occasional presence of pottery and CBM.

It has been interpreted as a result of a natural infilling.

Refer to context

Fill (208398) of Fumour [208399]. This is the only fill of that fumour. It is a brown silty + clay with some CBF and a considerable amount of Roman pottery in it; there were some animal bones too and an Iron Nail. This fill was removed in order to see the features that were underneath: [208401], [208404] and [208407]. It is the same then fill (208352) of cut [208351].

Cut [208399] of Fumow. This cut is filled by only one context: (208398)
 It is a linear furrow crossing the site from E to W and
 truncating several features that we can find underneath:
 [208401], [208404], [208407], etc. Between the furrow and them there is a
 deposit: (208405).
 It is the same furrow than cut [208351].

Refer to context [208404] For Plan

Fill (208402) of Pit [208404]. This is the most recent fill of that pit. It is a silty-clay fill with a dark brownish-grey colour. It had some small charcoals in it, few animal bones and some fragments of Roman pottery and CPM.

This context is filling the "Terminus" of a long pit, its NE side. It is being cut by the Terminus of a kind of gully or pit [208401] with a NW-SE orientation.

This fill was covered by deposit (208405).

Refer to context [208423] For Plan

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

* > Cut [208404] of the "terminus" of a long pit with a N-S orientation. The pit is 5.76 long and in this side is filled by two contexts: (208402) and (208403). In its way this pit is truncating ditches [208530] and [208210]. In this side it is being truncated by pit [208401]. It could be part of an structure formed by different pits during the Roman Age; due to this is a complex area of ditches and pits.

Refer to context (208402) For Section

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208406) of Pit [208407]. This is the only fill of that pit. It is a silty-clay fill with no finds in it. It is filling the south side of the long pit and the fill (208362) ~~cut~~ which is in the opposite side of the pit, filling the cut [208361]. It is probably the result of a natural deposition of sediments once the pit fell into disuse. After that was covered by deposit (208405).

Refer to context (208402) For Matrix.

[208523] For Plan

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [208407] of small long pit with a North-South orientation. This pit has only one fill: (208406). And this cut is the South 'Terminus'. The other Terminus is the context: [208361]. This pit is located between a ditch [208404] and small pit/ditch [208347].

The function of this is unclear, but it could be part of a system of different pits and ditches that are in this area.

Refer to context (208406) For section

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Construction cut for a furrow with neat edges and clear profile, gentle sloping sides and flat base. Feature has been excavated and recorded through a relationship slot, to assess its physical and stratigraphic relationship with the nearby features. Furrow is very likely part of ploughing/cropping system, and appears to be the most recent feature inside the relationship slot.

Refer to context [208408]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Deliberate backfill, related to the disuse of a ditch;
^{occasional} a ~~small amount~~ amount of bone fragments has been recovered,
 together with fired clay and some shards of Roman pottery.

This (lay) fill can be related to the major phase of disuse
 of its parent context [412].

[208415] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS THREE FILLS IDENTIFIED. THE SIDES OF IT ARE QUITE STEEP. TWO OUT OF THE THREE FILLS HAVE SEVERAL POTTERY FRAGMENTS AND A FEW ANIMAL BONES RECOVERED. IN CASE OF THE LATTER WE CAN FIND SMALLER SIZE AND LARGE SIZE SPECIES. THE POTTERY APPEARE TO BE ROMAN. ALSO SOME HUBNAILS AND A STONE SCRAPER HAD BEEN RECOVERED FROM HERE. THIS DITCH RUNS TOWARDS E-W DIRECTION. POSSIBLY USED AS DRAINAGE. ITS FILLS ARE SANDY/SILTY IN GENERAL, SILTY CLAY IS ONLY THE BOTTOM FILL. CHARCOAL HAD BEEN FOUND ALL ALONG THE TOP FILL. THIS DITCH HAD BEEN CUT BY ANOTHER DITCH AT ITS "S" BANK, WHICH IS SHALLOWER, BUT RUNS IN ALIGNMENT WITH THE CURRENT DITCH.

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

(208416) IS THE BOTTOM FILL OF POSSIBLE DRAINAGE DITCH.
THE FILL IS A MIXTURE OF SAND/CLAY/SILT. IT IS FOCUSED MAINLY
TO THE "N" BANK OF THE DITCH. THERE ARE ANIMAL BONES
AND A POT FRAGMENT RECOVERED FROM HERE. LATTER APPEARS
TO BE ROMAN. THIS IS POSSIBLY A DELIBERATE BACKFILL
OF WASTE THROWN INTO THE DITCH.

Refer to context

CUT OF A DITCH.

A LINEAR DITCH WITH A NORTH TO SOUTH ALIGNMENT. THIS SLOT WAS MADE TO INVESTIGATE THE DITCH, IT IS 1.02m DEEP AND 2.60m WIDE, WITH TWO FILLS (208424) AND (208425) WHICH SHOW TWO POSSIBLE PHASES. BOTH HAD BONES INSIDE AND (208425) HAD ONE PIECE OF POTTERY.

ON THE WEST, 02.3m AWAY FROM THE DITCH AN EVALUATION TRENCH WAS MADE AND ON THE SOUTHERN SIDE OF THE SLOT THERE IS A NATURAL DISTURBANCE, NOT AFFECTING THE DITCH.

Refer to context (208424) for section

L.O.F

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL (208426) OF THE DITCH [208427]. THIS IS THE ONLY ONE FILL OF THE DITCH. THE COMPOSITION IS SANDY CLAY AND THE COLOUR IS BROWN.

THERE WERE SOME FRAGMENTS OF BONES, BUT I DIDN'T DO BAG BECAUSE THE BONES ARE DESTROYED.

THERE WERE SOME STONES AND CHARCOAL TOO, BUT IT'S NOT SIGNIFICANT.

THE FILL IS A RESULT OF A NATURAL INFILLING, CAUSED PROBABLY BY A COLLAPSE PROCESS, SINCE THE DITCH ~~IS~~ FELL INTO DISUSE.

Refer to context

DELIBERATE BACKFILL OF A PIT WHICH WAS CUT INTO AN EARLIER PIT. THE SOIL IS DARKER THAN THE NATURAL, HOMOGENEOUS AND CONTAINS A LOT OF STONES WHICH MAKES IT LIKELY THAT IT WAS DUE TO HUMAN INTERVENTION.

THE BONE, POT + CBT FINDS ARE MOST LIKELY FROM THIS FILL, BUT IT IS POSSIBLE THAT SOME MAY HAVE COME FROM THE SURROUNDING DARK BROWN FILLS WHICH WOULD BE TRICKY TO DISTINGUISH DURING EXCAVATION.

TWO NAIL HEADS CAME FROM AN AREA AT THE INNER CORNERS OF THE TWO SLOPS (SEE SECTION SKETCHES), CA 10-20CM DOWN.

NB. THE BONE WAS HIGHLY BRITTLE. WHAT IS PRESENT IN THE BUCK COLLECTION IS NOT REPRESENTATIVE OF THE AMOUNT PRESENT IN THE FILL AS IT DEGRADED QUICKLY.

REPER. NATURAL OF A PIT CUTTING AN EARLIER PIT.
THE BASE IS HIGH IN CLAY CONTENT BUT THIS FILL, THOUGH
THE SAME COLOUR, WAS STILL HIGHLY SANDY.

IT CONTAINED A NAIL HEAD EXACTLY THE SAME AS F74335
LARGER THAN F74334), BUT UNFORTUNATELY I LOST IT IN
THE SPOIL..

D7540754 #20453

RE CUT OF A PIT CUTTING EARLIER PITS [208441] ~~(SAKE AS [208433])~~ + [208180] AND DITCH [208473] (SAKE AS [208182]).

THE ABSENCE OF STONES IN THE DITCH FILL MAKES IT LIKELY THAT THE DIFFERENCE DENOTES A CUT BETWEEN [208433] + [208473].

THE DIFFERENCE BETWEEN [208433] + [208180] IS LESS CLEAR BUT THE 'STEPS' IN THE CUTS INDICATE MORE THAN ONE PIT.

[208441] + [208433] ARE DISTINCTLY DIFFERENT HOWEVER

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact mid brown greyish silty clay with frequent stones, bone fragments (mostly cattle, belonging at least to 2 individuals, 1 older and 1 younger) and frequent pottery sherds (Late Iron Age + Roman Age, ranging from I to III/IV century AD).

Feature has been interpreted as result of deliberate backfill process, related to the disuse of ditch [208444]

Refer to context (208445)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

FILL (208446) OF POST-HOLE [208447]. THIS IS THE ONLY ONE FILL OF THE CUT. THE COMPOSITION IS GRAVELLY CLAY, THERE WERE A LOT OF SMALL STONES. THE COLOR IS ORANGE WITH BLACK NOTES.

THERE ~~WERE~~ WAS A HUGE AMOUNT OF CHARCOAL AND ^{RED} CLAY, BUT NO FINDS. PROBABLY THE ~~THE~~ POST WAS BURNED IN SITU.

THE THICKNESS IS 0.08 m, IT MEANS THAT IT COULD BE THE BASE OF A POST-HOLE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT [208448] IS THE CUT OF A SUB-CIRCULAR SHAPE POST-HOLE / STAKEHOLE.

THIS CONTEXT WAS SURROUNDED BY OTHER FEATURES UNKNOWN AND SEVERAL ALIGNED PLOUGH MARKS.

THERE WERE NO ARCHAEOLOGICAL EVIDENCES INTO ITS FILL SO IT IS NOT POSSIBLE TO DATE THIS FEATURE.

IT LOOKS LIKE THE FUNCTION OF THIS HOLE WAS TO HOLD A STAKE OR SMALL POST. ANYWAY, THE PLOUGH MARKS AROUND SUGGEST AND INTENSE FARMING ACTIVITY THAT COULD HAVE DESTROYED PART OF THE FEATURE.

THIS IS A CUT OF A POSTHOLE OR SMALL PIT [208450]. IT HAS TWO FILLS [208451], [208452] NEAR IT IS A POSTHOLE [208453], WHICH IS CUTTING THE EDGE OF THIS FEATURE. IT IS CIRCULAR, BASE IS UNEVEN AND THE SIDES STEEP. IT IS NEAR THE SPREAD, ALIGNED WITH ANOTHER SMALL PIT/POSTHOLE AND A POSTHOLE [208456]

Refer to context (208451) [208453]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

THIS IS A CUT OF A POSTHOLE [208453].
IT IS COVERED BY FILL (208454).
IT IS CUTTING IN TO ANOTHER POSTHOLE/
SMALL PIT [208450].

THE SIDES ARE VERTICAL, THE BASE IS
PROBABLY CONCAVE (HARD TO SAY BECAUSE OF
A BIG STONE). FOR ITS SMALL DIAMETER
(0.20m) IT IS QUITE DEEP (0.44m)
PROBABLY IT HAD A SUPPORTING ROLE FOR
A BIGGER POSTHOLE

PROBABLY RELATED TO A SERIES OF
DEEP, SMALL POSTHOLES (SEE PLAN [208450])
EX. [208456]

Refer to context [208450], [208451]

FILL (208455) OF POST-HOLE [208456] IT IS THE ONLY ~~ONE~~ ONE FILL OF THE POST-HOLE. THE COMPOSITION IS SITY CLAY AND THE COLOUR IS DARK GREY.

THERE WERE SOME FRAGMENTS OF CHARCOAL, ONE FRAGMENT OF ANIMAL BONE, ONE OF ROLAN POT (SALWAN) AND A FEW FRAGMENTS OF FIRED CLAY

THE FILL IS A RESULT OF A NATURAL INFILLING, CAUSED BY DEPOSIT OF SOIL ONCE THE POST-HOLE FELL INTO DISUSE.

IT'S VERY SIMILAR TO THE FILL (208497) OF OTHER POST-HOLE CLOSED [208496]

Refer to context

CUT [208456] OF A POST-HOLE. THIS IS FILLED BY ONE TILL [208455]. THE SIDES ARE COMPLETELY VERTICAL AND THE BASE IS CONCAVE. IT IS A POST-HOLE VERY DEEP, MORE OR LESS 0.76 m. WE FOUND NEAR (E. PART) OTHER POST-HOLE WITH SIMILAR CHARACTERISTICS [208496]. THE DISTANCE BETWEEN BOTH IS 2.20 m. THE TWO POST-HOLES ARE PART OF A STRUCTURE OF A BUILDING. WE FIND SOME PDS AND OTHERS POST-HOLES AROUND TOO. THE LACK OF FINDS INDICATES THAT IT IS A BLIND-ROMAN POST-HOLE

Refer to context:

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208457] IS A LINEAR SHAPE DITCH, PROBABLY A GULLY. IT IS QUITE SHALLOW, ONLY 0.15m DEEP. THERE ARE ANIMAL BONES, TILE AND POTTERY RECOVERED FROM HERE. LATTER IS PROBABLY ROMAN TYPE, BASED THIS ON THEIR MADE AND STYLE. THE TILE IS A BROKEN PIECE. THIS GULLY HAS ONLY ONE FILL, THIS IS GETTING SHALLOWER TOWARDS SOUTH. IT IS IN A CLOSE PROXIMITY OF A DEEPER DITCH, WHICH APPEARS TO BE A ^{CUT} DITCH OF AN ENCLOSURE. THERE IS APPROXIMATELY A METER OF DISTANCE BETWEEN THE TWO FEATURES AND THIS BECOMES SHORTER AS THESE RUN TOWARDS NORTH. IT HAS A CHANCE THAT THESE MEET AT ONE POINT, HOWEVER A MEDIEVAL FURROW IS JUST CUTTING THE AREA FROM AN E-W DIRECTION EXACTLY WHERE A POSSIBLE RELATIONSHIP COULD BE VISIBLE. THIS FEATURE IS POSSIBLY A GULLY MADE BY NATURAL PROCESSES MAYBE IN A CLOSE RELATIONSHIP WITH THE ENCLOSURE NEARBY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208458) IS THE ONLY FILL OF A LINEAR SHAPE GULLY. THERE ARE ROMAN POTTERY FRAGMENTS, ANIMAL BONES AND A TILE PIECE FOUND HERE. THIS IS A QUITE SHALLOW FILL, WHICH BECOMES EVEN SHALLOWER TOWARDS SOUTH. THIS FILL IS POSSIBLY A NATURAL INFILLING. AS IT IS IN A CLOSE PROXIMITY TO AN ENCLOSURE DITCH, IT IS POSSIBLE THAT THE FINDS FOUND HERE ARE OVER WASHED OR 'REPLACED' FROM THERE TO THE GULLY.

Refer to context

C/O N-S SUBJECTED ROMAN BOUNDARY DITCH WHICH RUNS FROM [208908] IN THE NORTH TO [208049] IN THE SOUTH

IT WAS INITIALLY THOUGHT THIS DITCH HAD A RELATIONSHIP IN THIS SET WITH AN E-W ^{LINEAR} FEATURE HOWEVER ONCE EXCAVATED THIS E-W FEATURE WAS IN FACT A CLAY DEPOSIT IN A DEPRESSION IN THE NATURAL (208479). PROBABLY ASSOCIATED WITH A CHANGE IN THE NATURAL.

THE FINDS RETRIEVED AND THE ABSENCE OF AN OBVIOUS RELATIONSHIP IN THE N FACING SECTION SUGGEST THAT (208479) IS A RESULT OF PROCESSES CONTEMPORARY. QUITE FERTILE FOR SMALL FINDS.

+ HEAPS OF BONE + POT + CBM SEVERAL NAILS, HORNBAILS + OBJECTS. THE SLOT WAS BOXED BECAUSE VARIOUS CHANGES IN THE NATURAL MADE THE BASE + EDGES UNCLEAR.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for ditch containing single fill (208484). Cut is probably for Roman ditch truncated by the post medieval ditch.

Cut is curving, to the south this slot it was running N-S, and where the confinement the slot it begins to turn NE, both north-east of the slot it is running E-W.

(The entire ditch appears to be in an 'S' shape.)

Cut has steep sloping sides with a concave base.

Dimensions are :- 1.30m long, 0.77m wide and 0.33m deep.

only fill for ditch [208483]. Natural infilling consisting of moderately compact Dark & brownish grey sandy silt. contains occasional small stones / pebbles, mortar & broken flint, occasional pottery and animal bone.

context is 0-33 m ~~deep~~. Finish

At corner, fill becomes mottled with natural. probably water turns the corner and erodes / redeposits the natural along outside edge of corner.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Primary fill of ditch [2084PS] Redeposited layer of matted fill and
 natural, probable water erosion and deposition.
 Context is 0.06 m thick, composed of loose orangeish brown sandy
 silt.
 Inclusion of occasional small stone flecks, charcoal flecks & pottery fragments.

Refer to context: [2084PS]
 [2084PS]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [208491]

It is a moderately compact fill with mid-brownish grey fill and silty-clay composition.

As inclusions has moderate presence of stones and occasionally presence of charcoal. No finds.

It has been interpreted as a result of a natural infilling.

It's cutting by the ditch [208269].

Refer to context

Fill of cut [208493]

It's a moderately compact fill with dark brownish-grey color and silty-clay composition.

It has been interpreted as a result of a natural infilling.

We don't know the chronology because here didn't appear any material.

Refer to context [208523] For Plan

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of post-hole [208493].

It is a circular post-hole, with vertical sides and concave base.

Only has one fill (208492) and it is cutting the ~~the~~ ditch [208271] which is turning in that point. the fill (208296) which is top fill of ditch [208296]

We don't know the chronology because there ~~aren't~~ ^{aren't} finds

It has been interpreted as a post-hole because of the shape of it.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

CU [208498] OF A POST-HOLE. THIS IS FILLED BY ONE FILL (208497). THE EDGES ARE COMPLETELY VERTICAL AND THE BASE IS CONCAVE. IT IS A POST-HOLE VERY DEEP, MORE OR LESS 0.74m. WE FOUND NEAR (W PART) OTHER POST-HOLE WITH SIMILAR CHARACTERISTICS [208456]. THE DISTANCE BETWEEN BOTH IS 2.20m. THE TWO POST-HOLE ARE PART OF A STRUCTURE OF A BUILDING. WE FOUND SOME PITS AND OTHERS POST-HOLES AROUND TOO. THERE IS A ALIGNMENT (E-W) BETWEEN ALL OF PITS AND POST-HOLES.

THE LACK OF FILLS INDICATES THAT IT'S A MID-ROMAN POST-HOLE

FILL (208497) OF POST-HOLE [208496]. THIS IS THE UNIQUE ONE FILL OF THE POST-HOLE THE COMPOSITION IS SILTY CLAY AND THE COLOR IS DARK GREY.

IT'S VERY SIMILAR TO THE FILL (208455) OF OTHER POST-HOLE [208456].

THERE WERE SOME FRAGMENTS OF CHARCOAL, ONE FRAGMENT OF ANIMAL BONE, ONE POTTERY POT ~~(SHP)~~ AND TWO IRON NAILS (F# 74337 / F# 74339).

THE FILL IS A RESULT OF ALIENAL JEWELING, CAUSED BY DEPOSIT OF SOIL, OVER THE POST-HOLE FILL INTO DISUSE.

CUT OF A DITCH.

A LINEAR DITCH WITH A SOUTH TO NORTH ALIGNMENT, LONGER THAN 40m AND WITH A DEPTH THAT RANGES BETWEEN 0.80m TO 1m.

THE SLOT WAS MADE TO INVESTIGATE THE RELATIONSHIP BETWEEN THIS DITCH AND [208502] THAT RUNS FROM SOUTHEAST TO NORTHWEST. THE SLOT REVEALED THAT [208502] TRUNCATES THE CURRENT DITCH [208498] AND IS TRUNCATED BY A FURROW [208537] THAT RUNS FROM EAST TO WEST.

THIS DITCH HAS 3 FILLS (208499), (208500) AND (208501).

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact light brown clayey silt with occasional small naturally watered stones, plus occasional scattered bone fragments, CBM/brick fragments and hani/Roman age pottery sherds.

Feature has been interpreted as result of natural infilling process, to be related to the disuse of ditch [208444]

Refer to context (208507)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS A FILL OF A CUT OF TERMINUS OF
[DITCH] 208509]. THERE IS ONLY ONE FILL

THE SOIL IS DARK GREYISH BROWN WITH
OCCASIONAL CHARCOAL, MODERATELY COMPACT,
SILTY CLAY. CHARCOAL WAS MORE CONCENTRATED
IN DEEP PART (SE)

FINDS: F74336 IRON NAIL (SMALL)

BONES

A LOT OF POTTERY

ALSO THERE WAS QUITE A LOT OF STONES

SKETCHES

Refer to context: [208509]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT [208511] IS THE CUT OF A SUB-SQUARE PIT /
POTHOLE OF A BIG SIZE. THE SIZE AND THE COMPOSITION OF
ITS FILL SUPPORT THE THEORY OF A BIG POST / PILAR PART OF
AN STRUCTURE MADE OBVIOUS BY THE ALIGNMENT OF POTHOLE IN
THIS AREA.

THIS CUT IS TRUNCATING [208535] AND [208513] AND BASED ON
THE ARCHAEOLOGICAL EVIDENCES COULD BE DATED INTO THE ROMAN
PERIOD, PROBABLY MIDDLE OR LATE ROMAN.

Refer to context [208513]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT (208512) IS THE FILL OF A SUB-SQUARE PIT / POSTHOLE.

THE COMPOSITION OF THIS FILL WAS VERY ORGANIC WITH PRESENCE OF CHARCOAL. THERE WERE RECOVERED FROM THIS FILL SOME POTTERY SHARDS, OF A ROMAN FABRIC; A FEW BONE FRAGMENTS, BELONGING TO SMALL ANIMALS (RABBIT/HARE); AND SOME FRAGMENTS OF CBM. THESE MATERIALS ALLOW US TO DATE THIS FILL INTO THE ROMAN PERIOD (PROBABLY MIDDLE OR LATE ROMAN). SOME STONES WERE FOUND INTO THIS FILL, ONE OF THEM OF A BIG SIZE AND REALLY HEAVY SO, PROBABLY THIS FILL WAS FORMED WITH THE PACKING MATERIALS USED TO REINFORCE THE POST.

Refer to context [208513]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT (208514) IS THE FILL OF A SUB-CIRCULAR SHAPE POSTHOLE.

THE ONLY ARCHAEOLOGICAL EVIDENCES RECOVERED FROM THIS FILL WERE A GROUP OF SKINNED BONES VERY FRAGMENTATED. SO, THERE ARE NO EVIDENCES ENOUGH TO DATE THIS FILL.

THE COMPOSITION OF THE FILL INDICATE THAT LIKELY WAS FORMED BY NATURAL INFILLING WHEN THE POST WAS REMOVED.

Refer to context [208513]

GRAVEL BACKFILL OF A GULLY WHICH IS HIGHLY SIMILAR TO GRAVEL DUMPS IN A PIT AREA OF RECTS, THE EDGE BETWEEN (208516) + (208585) IS A STRONG ASSUMPTION AS THE FILLS ARE TOO SIMILAR. IN (208585) THE GRAVEL SEEMED MORE DENSE HOWEVER. THE GRAVEL IS ALSO LESS FREQUENT THE FURTHER AWAY THE FILL ~~OF~~ OF THE GULLY IS FROM THE PIT.

Refer to context 208515-18

BACKFILL OF A LARGE DITCH CONTAINING A RANGE OF STONE SIZES FROM SMALL PEBBLES TO COBBLES TO STONES ~~IN~~ UP TO 20CM IN WIDTH. IT COULD HAVE BEEN FILLED BY HAND OR DUE TO AGRICULTURAL ACTIVITY.

CONTAINED 1 TILE, MOD. AMOUNT OF BONE, 1 PIECE OF SLAG + 1 SHERD OF POT (THAT CAN DEFINITELY BE SAID TO BE FROM THIS FILL)

MOST POT SHERDS CAN'T CLEARLY BE ASSIGNED AND HAVE BEEN ASSOCIATED WITH THE LATEST FILL (708589). THAT IS DUE TO (708589) + (708518) HAVING LOOKED TOO SIMILAR AT EXCAVATION.

CU-ALLOY COIN FOUND IN TOP OF DITCH TO WEST BY METAL DETECTOR

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of cut [208523]

It's a moderately compact fill with mid orangeish-grey colour and silty-clay composition

It has been interpreted as a result of a natural infilling

We don't know the chronology because, didn't appear any material.

Refer to context: [208523] For Plan

SKETCHES

This form is incomplete if fields marked with ▼ are empty. PTO for additional info (and describing all items marked with *) and sketches.

Cut of post-hole [208523]

It is a circular post-hole with steep sides and concave base. Only has one fill (208522), and it is cutting ~~the ditch~~ ~~(208356) which is a N-S ditch [208296]~~ the fill (208356) which is a fill of a N-S ditch [208296] * We don't know the chronology because we don't have any findg.

It has been interpreted as a post-hole because of the shape of it.

* This relationship was missed when the ditch [208271] truncated the ditch [208296] and this post-hole.

* SEE [208491] FOR GENERAL MATRIX,

Refer to context

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS IS A CUT OF A PIT [208532]. IT IS COVERED
BY TWO FILLS (208533), (208534).
A ~~DITCH~~ DITCH IS CUTTING INTO IT [208509]
NEAR FURROW IS SITUATED. (REF. PLAN [208509])

THE SHAPE IS IRREGULAR, A LITTLE CIRCULAR.
THE SIDES ARE STEPPED, BASE IS CONCAVE.
IT IS ~~DIFF~~ DIFFICULT TO DETERMINE ORIENTATION
DUE TO ITS IRREGULAR SHAPE.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT (208536) IS THE FILL OF A SUB CIRCULAR POSTHOLE. THERE WERE NO ARCHAEOLOGICAL EVIDENCES INTO THIS FILL, SO IT IS NOT POSSIBLE TO DATE IT YET. THERE WERE FOUND INTO THIS FILL SOME BIG STONES, LIKELY THIS STONES WERE PACKING AND DELIBERATELY PUT TO MAKE A STRONGER BASE FOR THE POST. THIS FILL PROBABLY WAS FORMED BY THIS PACKING AND STAYED WHEN THE POST WAS REMOVED.

Refer to context[208513]

This is the top fill of the ditch.
This fill was the deepest of the fills
and contained a grey silty clay.
In the fill there were some finds of
bone and pot, and one nail.
The fill is from natural infill

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

The ditch is in the south east part of the excavated pit. It is covered on the top by the spread [208552]. The relationship with the other pits [208554], [208557] and [208559] is uncertain. When they were excavated the fills looked similar and no distinction could be made, as the spread ~~is~~ is not visible in the other section (D75422) ~~on~~ we are going with the assumption that the other 3 pits are truncating this pit and the spread as shown in the matrix.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill was a dark gray silt with spots of charcoal in it. The fill was very similar to the fill of the spread that is covering this pit (208553). [208552]

The spread fill felt more clayey but it was still hard to differentiate the fills from each other, that is why they are divided with a dashed line on the drawing of the section D.75421.

The fill is probably from natural infill.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

fill of spread contained a dark silty clay with a lot of spots of charcoal, in the bottom of the spread it was a layer of stones. with the biggest stone at 316 cm and the smallest 1x2 cm. The fill is probably from natural infill.

The fill is similar to the fill (208651) see that context sheet for description.

In the fill there is some finds of pot.

This is a cut of a pit that is truncating
 an other pit [208554] and is heavily
 truncated by another pit [208559].
 we only have the east side of the
 pit still in the section and only
 one of it fills.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208564) is the top fill of [208559].

Small - large Stones are spread frequently throughout the fill with no visible patterns.

~~Animal~~ Animal bone is frequent, generally spread thinly but with a couple of clusters around ~~skulls~~ (2 horse, one bull) including scapula and limb bones of horse, cattle and sheep/goats.

Several Shards of Roman Pottery spread evenly. Charcoal was present in both very small - larger clumps, as was chert but no pattern.

Based on the inclusions this fill appears to have formed from dumping activity.

Contains 3 Fe Nails in different points in the fill.

BACKFILL OF A DITCH WHICH CONTAINED A RANGE OF STONES, FROM MED-SIZED PEBBLES TO CONSBLE STONES TO VERY LARGE STONES (UP TO 30 CM IN WIDTH), EITHER FILLED BY HAND OR DUE TO AGRICULT. ~~ACTIVITY~~ ACTIVITY. THE IRREGULAR SIDES OF THE FILL ARE LIKELY ~~BE~~ DUE TO THE EROSION OF THE EARLIER CUT, THE FILL WAS DISTINCTLY SILTIER, CONTAINING LESS GRAVEL, THAN THE FILLS BELOW (NAMELY (202518) + (202587)).

CONTAINED A MOD. AMOUNT OF BONE, 1 FE NAIL HEAD + 1 FE STRAP-LIKE OBJ.

THE BAG OF POT MARKED '112' IS DEFINITELY FROM THIS CONTEXT. BAG '212' IS UNCERTAIN AS THE SHERDS COULD HAVE BEEN FROM EITHER (202587) OR (202518) WHICH AT TIME OF EXC. LOOKED TOO SIMILAR. IT ~~IS~~ LESS LIKELY CONTAINS POT FROM (202576) AS THE DITCH BOUNDARIES WERE MORE CLEAR (AT LEAST IN PLAN) WHEN EXCAVATING.

Refer to context 202515-18

[208593] IS A LINEAR SHAPE DITCH, MORE OF A CUT OF A GULLY. IT HAS TWO FILLS; THE BOTTOM ONE IS POSSIBLY A DELIBERATE BACKFILL, WHILE THE TOP IS A NATURAL INFILLING. THIS GULLY IS CUT BY AT ITS N SIDE BY A DITCH. LATTER IS PROBABLY A DRAINAGE DITCH. THIS GULLY IS IN ALIGNMENT WITH THE DITCH, HAVING AN E-W COURSE. THERE ARE FINDS RECOVERED FROM THE BOTTOM FILL, INCLUDING ANIMAL BONES AND FRAGMENTED ROMAN POTTERY. IT IS VERY SHALLOW IN ITS DEPTH, ONLY 0.26 m DEEP WHICH IS JUST ABOUT BELLOW THE HALF OF THE DITCH'S DEPTH NEXT TO THIS.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208596] is A CIRCULAR SHAPE CUT OF A POSSIBLE PIT. IT HAS AN IRREGULAR BASE PROBABLY CAUSED BY ~~NATURAL DEPRESSION~~ OR ROOTING. THE PIT HAD BEEN CUT BY AN E-W ORIENTED DITCH AT ITS S SIDE. THERE ARE CBM, A PIECE OF A ROMAN POT FREGMET AND ANIMAL BONE FRAGMENTS RECOVERED FROM ITS ONLY FILL. IT HAD BEEN PROBABLY USED AS A WASTE PIT. IT IS NOT VERY DEEP AND ITS ONLY FILL SEEMS VERY SIMILAR TO THE NATURAL BY LOOK.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208598] IS A LINEAR SHAPE CUT OF A DITCH. THIS HAS SEVERAL FILLS AND A SIGNIFICANT DEPTH. THERE ARE ANIMAL BONES (SMALL AND LARGE PIECES) NAILS AND ROMAN POTTERY RECOVERED FROM HERE. THIS DITCH CUTS A SMALLER SIZE GULLY AT ITS S SIDE AND A SMALLER SIZE, POSSIBLE PIT ON ITS N SIDE. THE DITCH IS QUITE WIDE, 2.68 M. THERE ARE SEVERAL MIDDLE SIZE STONES HAD BEEN DUG UP HERE AND IN THE COMPOSITION OF THE FILLS THE CLAY AND SAND ARE DOMINANT. THIS DITCH HAD BEEN POSSIBLY USED AS A DRAINAGE DITCH OR MAYBE AS A BOUNDARY DITCH WHICH HAS BEEN FILL UP WITH WASTE AS TIME WENT BY. THE DITCH IS CUT BY A SMALL SIZE DITCH CENTRALLY, WHICH HAS THE SAME COURSE AS CURRENT DITCH.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

(208601) IS THE UPPER CENTRAL FILL OF A LINEAR SHAPE DITCH. IT IS LOCATED ON THE SOUTH-CENTRAL SIDE OF THE DITCH. IT HAS SOME MID TO SMALL SIZE ROCKS IN ITS CONTEXT. THERE ARE ONLY RELATIVELY LARGE SIZE ANIMAL BONES RECOVERED FROM HERE, SOME WERE IN ARTICULATION SUCH AS SOME OF THE THORATIC VERTEBRAS AND THE RELATED RIBS, HOWEVER BECAUSE OF THE COMPACT CLAY THESE WERE IN VERY BAD CONDITION, CRAMBLIED APART. THE BONES BELONGED TO A LARGE SIZE SPECIES SUCH AS A COW. THE FILL IS A DELIBERATE BACKFILL OF WASTE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Sublinear elongated cut, N/S oriented, with gentle sloping sides and flat base.

Cut for a modern machine sandage, to be possibly interpreted as part of phase related to archaeological evaluation, preceding the mitigation phase. S and N edges are quite neat and clear; another possible sandage (EG - elongated and regular cut) runs parallel to [208607] eastwards.

A slot has been put through the feature to assess its extent, dimensions and interpretation.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact dark grey brownish sandy clay, very humic and organic, with moderate moderately watered stones, frequent plant remains and occasional pottery sherds (Iron Age and Roman), plus 1 single bone fragment and 1 metal fragment (screw/slag)

All the bulk finds - pretty scattered - come from the ^{upper} surface of the fill. Feature has been interpreted as deliberate backfill of a modern machine sandpit, very likely made using the top soil

Refer to context (208608)

FILL (208609) OF POST-HOLE [208810]. THIS IS THE UNIQUE ONE
FILL OF THE POST-HOLE. THE COMPOSITION IS SALT CLAY AND THE
COLOR IS ~~DRY~~ GREY.
MOD

THIS FILL IS VERY SIMILAR TO THE FILLS (208455) AND
(208497)

THERE WERE A LOT OF POTTERY (IF THEY ARE ROMAN POT), SOME FRAGMENTS
OF ANIMAL BONES AND TWO FRAGMENTS OF ORN.

THERE WERE ~~THE~~ THREE SPECIAL FILLS, THEY ARE IRON NAILS.
THE FILL IS PROBABLY A RESULT OF A NATURAL JUDGING THE POST-
HOLE WAS BURNED AND LATER SOME DEBRIS FELL INTO.

CUT OF POST-HOLE [208609] THIS IS FILLED BY ONE FILL (208609) [208610]

IT'S A SUB-CIRCULAR POST-HOLE ITS EDGE ARE COMPLETELY VERTICAL AND THE BASE IS FLAT.

THIS POST-HOLE IS EXACTLY THE SAME THAN THE OTHERS AROUND IT. MAYBE THIS IS DEEPER (0.79 m).

IN THIS AREA, THERE IS A ALIGNMENT OF POST-HOLES THESE ARE PROBABLY PART OF A BUILDING OF HUGE DIMENSIONS.

THIS POST-HOLE HAVE THE OTHERS POST-HOLES ARE [208456] AND [208498].

This is the fill of ditch [208612]

It is a moderately-compact fill with dark brownish-grey colour and silty-clay composition. No finds

It has been interpreted as a result of a natural infilling

Cut of ditch [208612]

It is a lineal ditch running N-S direction.

It has steep sides, concave base and only a single fill.

This ditch is cut by the ditch [208613] and it's cutting the ditch [208386].

It's the same than context sheets [208442] and [208487]

Refer to context

CUT OF A DITCH.

A LINEAR DITCH, WIDE AND DEEP, WITH A NORTH TO SOUTH ALIGNMENT. I MADE THIS SLOT TO INVESTIGATE THE RELATIONSHIP OF SAID DITCH AND E2086183.

IT SEEMS THAT E2086183 TRUNCATES E2086163, COMING FROM WEST TO EAST, IT IS POSSIBLE IT TERMINATES CLOSE BY.

THIS SIDE OF E2086163 SEEMS TO BE SHALLOWING, AND TAKING INTO CONSIDERATION THAT WITHIN 15m IT IS SHALLOWER THAN THE NORTHERMOST PART E2086233 THE ~~TERMINUS~~ TERMINUS MUST LIE CLOSE.

CUT OF A DITCH.

COMING FROM EAST TO WEST THIS DITCH TRUNCATES [208616].

THIS SLOT REVEALED THAT IT STARTS TO SHALLOW AND NARROW DOWN, SO IT IS POSSIBLE THAT THE TERMINUS IS A LITTLE FURTHER IN THE WEST.

ANOTHER SLOT IN THE EAST SHOWS THE DITCH DEEPER AND WIDER.

IT TRUNCATES [208670] IN THE NORTH AS THEY BOTH HAVE THE SAME ALIGNMENT.

Refer to context [208616] for plan
[208617] for section

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208626) of Post-hole [208627]. It is a dark brownish-grey, almost black fill with a considerable amount of charcoals and fired clay and a few animal bones; it had an iron nail too F74369.

This is the only fill of that post-hole ~~let~~ and it looks to be a deliberate backfill of the cut once it lost its initial use and the post was taken out.

Refer to context [208627] For Plan

Cut [208627] of Post-hole. This cut is filled by only one context: (208626), which is a deliberate backfill.

This post-hole is quite considerably deep and wide and has vertical sides with an undercut in the low part.

This post-hole is cutting the fill (208628) of the pit [208629], being located just in the middle of it and truncating the centre of it ~~and~~ including the base, since the post-hole is deeper.

At the beginning we considered that pit as a reinforcement of the post, since it was filled with compact clay; however it looks that the pit was a previous structure and was recut by the post-hole. The post-hole is part of an alignment of post-holes, some of them deeper than this one and ~~and~~ some of them truncating other pits, but not in the centre of them as this one does. The alignment has a E-W orientation.

Because of that, we think this post-hole is part of a considerable structure.

Fill (208628) of Pit [208629]. It is a quite compact clay with little silt fill and with a brownish-orange colour. Due to the characteristics of the fill we think it is ~~the result~~ an infilling with natural clay and sediments from around (land) once the pit lost its initial use. It could have been done by a natural process but it looks that was filled intentionally with compacted clay, maybe to dig the post-hole [208627] in it, which is cutting this fill.

cut [208629] of P.T. This cut is filled by only one context: (208628). It is a completely circular pit (or) with vertical sides ending in a flat base. This pit (uninterrupted) was truncated by post-hole [208627], which is located in the middle of the pit, once it had been filled by context (208628). Apparently this pit was open for a long time, since it has some lustration in its base, probably a den. This pit is part of a pits alignment (there are two or three more), from E to W, but the shape is totally different from the others, but (i) the dimensions are similar.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Sublinear, E/W oriented cut, with neat edges, flat base and moderate sloping sides.

Feature has been interpreted as a construction cut for a furrow, to be part of agricultural / farming landscape, whose activity clearly involved the northern part of TFA 20; the furrow truncates (208633), the fill of a tree hole.

Refer to context [208634]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill is a dark grey silt containing a lot of bone and pottery also 4 iron nails and a iron object, possibly a hook (F74378) in the fill there were also spots of charcoal and bigger stones.

The pottery suggests that this ditch is Roman.

CUT OF A GULLY.

A SHALLOW AND NARROW GULLY, WITH A EAST TO WEST ALIGNMENT.

THE SLOT WAS MADE TO INVESTIGATE THE RELATIONSHIP BETWEEN TWO ~~GULLIES~~ GULLIES ~~AND~~ E2086402, E2086423 AND A DITCH E2086442

THE EXCAVATION HAS SHOWN THAT THE DITCH E2086442 IS TRUNCATING THE GULLIES, THE RELATIONSHIP BETWEEN THOSE TO THOUGH IS LOST DUE TO THE DITCH. BUT, JUDGING BY THE WAY THEY MEET, I THINK IT'S SAFE TO SAY THAT THE GULLIES ARE CONTEMPORARY TO EACH OTHER.

Refer to context (208641) for section

[208646] IS A LINEAR SHAPE CUT OF A POSSIBLE GULLY. IT IS VERY SHALLOW AND HAS GENTLE SLOPING EDGES. ITS TWO FILLS SEEM TO BE THE SAME, ALSO BOTH ARE NATURAL INTILLINGS OR REDEPOSITIONS. THE GULLY HAD BEEN CUT BY ANOTHER GULLY, RUNNING THE EXACT COURSE AS THE CURRENT ONE. IT IS BECOMING SHALLOWER TOWARDS "NE" AND EITHER TERMINATES OR LOSES ITS DEPTH. IT DOESN'T REACH THE DITCH TOWARDS NORTH [208000]. THIS DITCH IS PROBABLY A GULLY. NO FINDS HAVE BEEN RECOVERED HERE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Construction cut with neat edges, linear shape and concave base; W facing side is moderate sloping, while E facing side is steep sloping (and cuts a different geological material & yes, so the different design might be related to this change into the geology).

Slot has been excavated and recorded to provide its characterization and interpretation, in order to assess possible differences / similarities / relationship with nearby features.

Feature has been interpreted as construction cut for a ditch, possibly part of water managing / enclosure system, related to the area development that involves the landscape between Iron Age and Roman Age.

Refer to context [208652]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact brown orangeyish silty clay with occasional pebbles, in association with manganese and iron pen remains.

Few animal bone remains (possibly belonging to sheep/goat) and few Roman and Norman pottery sherds have been recovered

Feature can be related to the process of natural infilling, related to the disuse of a ditch → [208652]

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact mid grey brownish sandy clay with occasional stones; faunal remains (mostly cattle) and occasional pottery shards (Roman/Iron Age) have been recovered.

Feature can be interpreted as result of natural infilling process, to be related to the disuse of the ditch [208652].

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of Gully [208661], cut by ditch [208659].

Occasional small stones spread throughout the fill, along with charcoal and chalk with no visible patterning/placement.

Roman pot sherds spread throughout the fill, no pattern in location or type beyond a Roman date.

Several animal bone fragments recovered, presumably medium mammal ones.

Refer to context

[208656] [208652]
[208661]

PART 1 OF DEPOSIT (208590)

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

This is a full-page image of a blank sheet of graph paper. It features a uniform grid of small black dots spaced evenly across the page. The grid covers most of the area, leaving narrow margins at the top, bottom, and sides. There are no lines or other markings present.

CUT OF A DITCH.

A LINEAR DITCH, 1.20m WIDE AND 0.80m DEEP WITH A EAST TO WEST ALIGNMENT. IT HAS THREE FILLS (208672), (208672) AND (208673) AND IS TRUNCATED BY [208618] IN THE SOUTH AND BY [208674] IN THE NORTH.

THE SLOT WAS MADE TO VERIFY IF THIS DITCH IS EARLIER THAN 208618] AND SO IT IS PROVED.

Refer to context

208669] for plan

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208680) of Terminus of Ditch [208681]. This is the only fill of that cut. It is a dark grey clay with a little amount of silt. It had a considerable (and) number of fragments of Roman pottery, some animal bones, charcoals and small stones.

The natural underneath of this fill is quite sandy and gravelly so it was very dirty, so we considered at the beginning that it could be another fill.

It is probably ~~to~~ the result of a natural deposition of sediments and ~~other materials~~ different materials, once the ditch fell into disuse.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut [208681] of Terminus of Ditch. This ditch is filled by only one context: (208680). It is a very shallow Terminus though the cut wasn't clear due to the ~~bad~~ gravelly-sandy natural clay very dirty.

The position of the ditch is not clear yet, but it starts here ~~and~~ and goes to the East.

Refer to context (208680) for Section

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This cully goes from East to West ~~and is truncated~~
~~to north just north to the ditch [208637]~~
 and is truncated by the ditch.

In the section drawing it is a bit unclear
 where the truncation is in the south facing
 part of the relationship drawing and is
 thereby drawn with a dashed line.

SKETCHES

fill of posthole [208687], probably a natural refilling originating from the wooden post rotting away ~~away~~ on one hand and the natural seeping in to replace the space the wood left behind on the other hand. That causes most likely the very dark, brownish colour. - MD, 14/06/2018 after 100% excavation

2 pieces of Roman pottery found

Refer to context [208687]

Fill of pit [208689]

~~It is a round pit~~

This is a compact fill with brownish-orange colour and clay composition.

No finds, ~~as inclusions~~ only inclusions are a few pebbles/stones and some manganese (not too much).

~~It has been interpreted as a result of a natural infilling~~

The fill is so similar than the natural and looks like a contaminated natural. It's most likely a backfill with hard clay to stabilise the post which is set within the pit. It's one of the postholes which belong to the building in the central Northern area of ^{the} site, it's part of the Southern row of posts. - MD, 14/06/2018 after 100% excavations

[208693] IS A LINEAR SHAPE DITCH WITH A NORTH-SOUTH COURSE. IT HAS THREE FILLS ALTOGETHER. THERE WERE ONLY A FEW POTTERY FRAGMENTS RECOVERED FROM HERE. THIS SLOT IS AN EXTENSION OF AN EARLIER SLOT TO UNCOVER THE RELATIONSHIP BETWEEN THE CURRENT DITCH AND TWO OTHER DITCHES CROSSING IT. IT TURNED OUT THAT THE CURRENT DITCH HAD BEEN CUT BY AT LEAST TWO DITCHES RUNNING E-W. THIS DITCH HAS A SIGNIFICANT DEPTH OF 0.63 m. AT LEAST TWO OUT OF ITS FILLS ARE DELIBERATE BACKFILLS. THIS DITCH MIGHT HAD BEEN USED AS A BOUNDARY DITCH WHICH HAD BEEN FILLED UP BY WASTE WHILE IT HAD BEEN USED.

(208695) IS THE MIDDLE FILL OF A LINEAR SHAPE BOUNDARY DITCH. ITS THICKNESS IS NEARLY $1/3$ OF A METER WHICH MAKES IT SIGNIFICANT IN THIS DITCH. THERE ARE NO FINDS RECOVERED FROM HERE AND FROM THIS SLOT. IT SEEMS TO BE A DELIBERATE BACKFILL OF A LINEAR DITCH. ITS COMPOSITION IS SANDY-SILT AND OCCASSIONAL STONES IN SMALL SIZES.

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208697] IS A LINEAR SHAPE CUT OF A DITCH. IT HAS AN EAST-WEST COURSE, WHILE CUTTING A NORTH-SOUTH RUNNING BOUNDARY DITCH ACROSS. THE DITCH HAS A RE-cut [208700] RUNNING IN ALIGNMENT WITH THE CURRENT DITCH. THE DITCH HAS TWO FILLS VISIBLE IN THE SECTION HERE, BOTH OF THESE HAVE ROMAN POTTERY FRAGMENTS AND SOME ANIMAL BONE FRAGMENTS. THERE ARE TRACES OF CHARCOAL IN ONE OF THE FILLS. THIS DITCH WAS PROBABLY A BOUNDARY DITCH, ITS FILLS ARE THE MIXTURE OR SEQUENCE OF NATURAL INFILLING AND DELIBERATE BACKFILL.

Refer to context (208694)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

[208700] IS A LINEAR SHAPE CUT OF A DITCH. IT IS A RE-CUT OF AN EARLIER DITCH, RUNNING E-W COURSE. THIS DITCH HAS ONLY ONE FILL WHICH IS ABUNDANT IN FINDS SUCH AS ROMAN POTTERY FRAGMENTS AND LARGE SIZE ANIMAL BONES. THERE IS A GREEN COLOUR GLASS FRAGMENT ALSO BEEN FOUND CLOSE TO THE SURFACE WHICH MAKES IT SUSPICIOUS BEING MODERN. A FEW METAL NAILS HAD BEEN ALSO COLLECTED FROM THE SURFACE, CLOSE TO [208700]. THE DITCH PROBABLY HAD THE SAME FUNCTION AS THE PREVIOUS ONE, POSSIBLY PART OF AN ENCLOSURE OR A BOUNDARY DITCH.

Refer to context [208693]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of a possible pit of a depth of 1.2m. width + length are unclear. It was considered that it might be a terminus, but due to other pitting by [208583], [208703] + [208710], ~~as~~ as well as pitting in association with ditches being common in the larger excav area, it is most likely a pit, as opposed to a very deep ditch with nearly straight edged sides.

Refer to context 208515-18

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut with neat edges, steep sloping sides and flat base.
Cut stretches on W side of archaeological area with
NW/SE orientation.
Feature has been interpreted as construction cut for
an enclosure terminus, probably created and designed
to keep livestock

Refer to context [208713]

Natural infilling, to be related to the disuse of an enclosure; EBH, pottery (Norman) and faunal remains have been recovered.

Feature has been truncated by [208715], a more recent enclosure, that crosses the area NE/SW.

Refer to context (208714)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Moderately compact dark greyish brown sandy silt, very humic and organic. A slot (2x1x0.30 m) has been excavated through the context to assess its depth and relationship with a wide stone surface (that runs NE/SW along the central/most recent area of the archaeological area) and with a linear feature (possibly a ditch) nearby, but about the second one more details are up to coming as excavation is progressing. Feature has been interpreted as deposit, resulting of washing/watering / alluvial process, ~~related~~ related to the disuse of the area. A good amount of bulk finds has been recovered, including mostly Roman Age pottery, animal bones and CBM; between the small finds some iron nails and 1 single glass shard.

Refer to context (208721)

~~44~~ SECONDARY FILL (208731) OF THE PIT [208733]

It's a gravel ^{dump} layer ~~of clay~~ or maybe the burned clay
formed by the activity of a fire pit.

No materials inside, except a smashed fired clay and
a good quantity of charcoal.

No finds inside.

Sampled as S 20958 in 2 buckets

Refer to context

EUT OF A PIT [208733], SUB-CIRCULAR SHAPE AND UNEVEN BASE, WITH GENTLY/MODERATE SLOPING SIDES

FILL BY THE PRIMARY (208732) AND THE SECONDARY (208731) WITH NO FINISH INSIDE

The feature has been dug for half section, then fully excavated and sampled.

In E direction there is another feature very similar to this. It might be possible that these are kind of fire pit / in situ burning, maybe related with a possible building located nearby, marked by a group of pits/holes.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [208737], affected by roosting on E side.

Natural Stones spread evenly throughout the fill, as is Charcoal and occasional chalk.

Animal bone fragments spread thinly throughout the fill with no visible pattern.

Roman pottery fragments spread throughout the fill fairly moderately.

(any further details that may be important for understanding the context, including items marked *overleaf)

CUT OF TERMINUS [208741].

It's the terminus of the ditch [209084]. Only has a single fill and it's running E-W direction.

The base is flat and the sides ~~steep~~ gently sloping

CUT OF A GULLY.

A SHALLOW AND NARROW GULLY WITH A EAST TO WEST ALIGNMENT. IT IS CONNECTING TO A DEEP DITCH (IN PROGRESS) IN THE WEST SIDE, NEXT TO A SURFACE WITH STONES (WHICH WE CALL THE SPREAD) (208334).

THE SLOT WAS MADE TO INVESTIGATE THE RELATIONSHIP BETWEEN THE GULLY AND A POSSIBLE FEATURE ADJACENT TO IT, RECTANGULAR SHAPED. IT IS NOTHING AS WE SAW, JUST A PATCH OF THE "SPREAD" NEXT TO THE GULLY.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for ditch containing 2 fills (208756), (208757). Cut aligned E-W, with dimensions of 1.87m wide, 0.36m deep and 10.86m long. Cut has moderate sloping sides, South facing more steep gradient, with a concave base. Overcut slightly at base of ditch, marked in backhand drawing. Probably ~~not~~ truncated by large boundary ditch. Does not continue westward of said ditch, and probably terminates within the feature.

*

Primary silt or ditch cut [208755] redeposited layer of natural lining
base of feature, possibly caused by alluvial deposition and erosion. Some evidence
of worm activity + for rooting within context slightly with context above.

fill consists of loose brownish orange sandy silt, extending to 0.12m thick,
contained occasional charcoal flecks. No finds present in context to date
~~feature~~

Refer to context [208755]

primary silt or ditch cut [208758]. Natural infilling consists of moderately compact brownish grey, clayey silt, extending up to 0.12 m thick.
Fill has greenish tints to it. greenish brownish grey.

Context is mottled at base with sandy natural. Evidence of working and disturbance at base.

Context so also features in sloth south in ditch cut [208748].

contained occasional charred flecks.

context truncated by E-W ditch cut [208755]

SKETCHES

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

This is a ~~very~~ Brown clay with
kinds of bone, pottery and a nail.

The fill is probably from natural
infill.

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This ditch goes from South to north and is possibly terminating ca 4 meters to the north. The ditch is truncating another ditch [208763] and is running alongside with a stone surface. On the top the ditch is covered by a spread, there is also a possibility that this spread is the topfill of the ditch that have spread out over the area.

* gully

E/W oriented sub-linear cut with moderate sloping sides
-- and concave base; the terminus (belonging to ~~the~~ [208753])
has been excavated to assess its possible relationship with
some nearby linear features, turning out that there was
no relationship.

Feature has been interpreted as the terminus of a construction
cut for a gully.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

loose mid grey brownish silty sand, with occasional small angular stones, charcoal bits; few pottery shards (late Iron Age and Roman Age) have been recorded.

Feature can be interpreted as natural infilling, due to the disuse of a gully, terminus

Refer to context (208776)

SECONDARY FILL ~~of~~ (208777) OF A DITCH TERMINUS [208779]

It's a grey, silty clay layer, on the top of the primary fill (208778); caused by natural infilling.

It has different finds inside: especially 2 rimmer (one of a big jar or maybe a big amphora) and one smaller with a decoration. Other pot fragments basically looks from roman period.

There were also half of a coin F74655, a ~~big~~ big piece of CBA and small and mixed fire clay ~~and~~ materials.

Sampled in 2 buckets S20999

Refer to context [208779]

Cut of a terminus of a ditch [208779]

A ditch is running NE-SW and terminates while cutting a shallow (possible) gully [208781] ~~to~~ exactly in the northern side of the edge.

It's filled by 2 fills (208777, on top) and (208778, underneath)

~~It's not possible~~ The material's shown ^{in the fills} a chronology from late Iron age (or early Roman) to Roman (and late Roman) period.

Refer to context (208777)

This is a cut of a possible shallow gully ~~filled~~
[208781], filled by (208780)

Cut looks regular and linear, as the surface shows,
running NNE-SSW.

It might be also a kind of disturbance ^{cut} for this
reason there is a tree bowl in it's western edge.

This feature is probably cut by the terminus [208779]
in south direction.

No particular notes for a sloping (matrix excepted)

Refer to context

CUT OF A DITCH

A LINEAR DITCH, NOT TOO DEEP, WITH A NORTH TO SOUTH ALIGNMENT. POSSIBLY USED FOR WATER MANAGEMENT JUDGING FROM THE FILL (208786). THE SLOT WAS MADE TO INVESTIGATE THE RELATIONSHIP BETWEEN THE DITCH AND THE SPREAD (208742) AND TO ESTABLISH THAT THE FEATURE IS A DITCH. THE SPREAD IS LATER THAN THIS DITCH, AS WELL AS THE ONE THAT IS 2m TO THE WEST (208790] AND THE PIT (208787] WHICH IS THE OLDEST OF THEM ALL.

UPDATE FOR 12.06.18 REFER TO [208819],

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

pit in the middle of ~~the~~ stone surface (208784) and next to deposit (208745). It ~~cut~~ cuts through a ditch, it cuts both of the ditch's fills. The shape's roughly elliptic, it was half-sectioned, so a length & width is given (of the excavated part) instead of a diameter. Only one fill. This pit was one of those phosphate splodges, so a phosphate sample was taken, which is 570008. The fill of the pit ~~itself~~ was also sampled ~~(570009)~~ (570009), 4 tubs, cause it contained a lot of big charcoal chunks. — Side ~~is~~ is undercut on the Southern & Western edge, Eastern edge is stepped $\square$, refer to Date: Roman. sketch on [208834].

Refer to context [208834]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

only fill ~~is~~ of pit [208795], very dark ~~to~~ due to the charcoal chunks & plant remains in there. The charcoal comes in pretty large pieces, some of them were even recognisable as fragments of branches. Therefore, the fill was sampled (4 tubs), number S70009. Also, the fill contains probably phosphate (yellowish-greenish hint discovered during ~~the~~ cleaning prior to excavating it). So a phosphate sample was taken, too. 1 small find bag, registered as S70006. Those are indicators for a deliberate use of the pit, so I ticked "deliberate backfill".
Date: Roman.

Fill (208800) of Pit [208802]. This is the second fill of that pit.

Considering its greenish colour and all the pieces of pottery (some of them completed) and all the animal bones, we think it is a dumped layer, probably thrown once the pit lost its previous use.

Cut [208802] of Pit. This is a small pit filled by 3 contexts: (208799), (208800), (208801), (some of them are dumped layers). This pit is not truncating the south side of another pit [208806]. Its sides are quite vertical and has a kind of "rectangular shape". This pit is ~~made~~ inside of an enclosure, so could be related with it.

Refer to context (208799) For Section 4

Fill (208802) of Pit [208806]. This is the most recent
fill of that pit and is being cut by pit [208802],
~~It is~~ and ~~for~~ by a furrow.
It is probably the result of a dump of organic material.

Refer to context

(208802) For Section

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This is the second fill (208804) of the pit [208806].
 Due to all the ~~about~~ amount of animal bones and ^{Roman} pottery this
 fill has, and due to its organic composition, it is probably
 a damaged ~~layer~~ layer.

Refer to context

cut [208806] of Pit. This pit is filled by 3 contexts: (208802), (208804), (208805).

It is being truncated by a fence on its top and by pit [208802] in its south side.

It is truncating the natural feature [208808], which underneath. This pit has a long shape from N to S and it is inside of one small enclosure.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill (208807) of Natural Trenching [208808]. This is the only fill of that feature.
 It is a natural infilling produced by a sediments' deposition with dragged materials.
 However if ~~the~~ could be part of the pit [208806] since it is in its base, so could be its oldest fill.

compact mid greyish brown silty clay fill at ditch [208812].
Small natural stems spread throughout the fill with no visible pattern,
as chalk and charcoal.

One small (10cm x 10cm) square piece of Roman pot and one animal
bone fragment recovered, both from the bottom in centre of the fill.

Slightly rectus along its base

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

N-S. steep sided ditch, appear to disappear after about 1m S
wards of slot. Its path Nward is unclear.

From the scarcity of finds and its shape and size it seems likely this
was a drainage ditch.

*UPDATED 15/6/18: THE TERMINUS, WHICH WAS TO THE SOUTH OF THE FIRST
SLOT, HAS BEEN EXCAVATED; EXTENDING THE INITIAL SLOT

Refer to context (208811)

disuse

deliberate backfill, related to the ~~use~~ of a post hole [208817]; the big stones that have been recovered, lying between (208818) and (208940) were very likely part of the original packing of the post and they have been slipped when the post had been pulled out. No buckle finds have been recovered.

Refer to context (208818)

CUT OF A PIT.

AN ELONGATED PIT, SHALLOW AND WITHOUT ANY FINDS.

THIS SLOT WAS MADE TO INVESTIGATE THE PIT THE WE ^{E2087813} THOUGHT WAS TRUNCATED BY A DITCH [E208790]. THE SLOT SHOWED TWO PITS, THIS ONE [E208819] AND 950m TO THE NORTH [E208821], WHICH IS THE ONE CUT BY [E208780].

THE TWO PITS, ~~E208820~~ [E208819] AND [E208821] AREN'T RELATED TO EACH OTHER AND BOTH ARE COVERED BY THE "SPREAD" [E208742].

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for ditch aligned E-W containing 2 fills (208829), (208830). Shallow cut up to only 0.24 m deep, +0.62 m long and +0.40 m wide. Has moderate sloping sides and concave base.

Cut initially thought to corner and turn North, culminating in terminus [208813]. However with excavation, it appears that the terminus and ditch cut [208831] feed into and extend this context after truncating it.

↑
interpretation updated

- Cut not original forming, which has been truncated by terminus of [208831]. Cut could be drainage ditch or some form?

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Natural infilling as first fill of cut [20PP31]. Redeposited material of
reddish orange colour at sandy silt, mottled with orange clay natural
and some brownish grey from context (20PP33). Context - 0.13m thick.

Contained occasional small pebbles and charcoal flecks.

No find preservation feature to aid dating.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked *overleaf)

Second fill of cut [20883] - natural infilling composed of mud
brownish grey clay, silt, up to 0.10 m thick.

contained occasional small pebbles + charcoal flecks.

no finds present in feature to aid dating

occasional mottling at base with redeposited natural (20882).

Context gets thinner toward southern edge of slot, as ditch is
terminating.

Refer to context [20882]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

rather small ditch leading through stone surface (208784), refer to [208795] for plan sketch. It's coming from the North & then ~~to~~ turns slightly to the East, ~~so~~ so we have a N-SE orientation.

Contains 2 fills, one of them (lower one) ~~is~~ - (208848) - can only be seen in the Northern section (see sketch below). This is 'cause the base is sloping to the North, maybe the ditch peters out to the South or terminates there. That also explains the varying depth.

~~A~~ A pit, [209795], cuts through the ditch from the Western side, it cuts both of [208834]'s fills.

Refer to context [208795]

SKETCHES

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

top fill of ditch [208834], looks close to the natural (~~grey~~ brownish + especially orangeish mottles, but with a greyish silty hint). Probably a deliberate backfill to close or remodel the ditch, using natural soil from around. I'm not sure if there were finds, since the fill is cut by pit [208795] and finds only appeared close to the cut of the pit, I decided to rather ~~go with~~ walk on the safe side, and therefore I put all the finds into the younger fill, since it wasn't obvious enough if the finds came from the pit or the ditch. So, unfortunately, we have no finds for (208835), and therefore no dating material.

2016350

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of an oven, loose material, dark greyish black colour and silty clay composition.
Occasional inclusion of stones (small size) and charcoal. Very shallow, no finds.
Could be in situ burning. Being so shallow and small may be it's just the remainings of a bigger oven.
Could be the same fill as (208850), but due to this last one being so mixed with the natural was treated like another fill.
100% sampled.

Refer to context [208836]

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of an oven, loose ~~material~~ material, red colour and silty clay composition. Very shallow, no finds nor inclusions of anything. Very red colour, like ocre. Seeing in plan (208837), looks like it extended a bit more than the fill on the top, and made a weird semi-circle on the concave base. ~~material~~
100% sampled.

Refer to context (208837) for plan

CUT. OF PIT¹. CONTAINED ONE LAYER OF NATURAL INFILLING (208858). NO FINDS.

PIT HAD DISTURBANCE ON ITS NORTHERN EDGE - PROBABLY ROOTING.

PITS SITS ON EDGE OF STONE SURFACE & SPREAD (208782) & (208783) THOUGH ~~IT~~ ~~DOES~~ DOES NOT APPEAR TO HAVE BEEN ASSOCIATED WITH EITHER.

Refer to context (208858)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

NOT TO SCALE.

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Context is the cut of a gully running on E-W orientation and then turning N. It has moderately steep sides and concave base. It appears on the section wall that it has only one fill (208889).

* The section wall hasn't revealed any relationship, however the shape of the natural indicates that the turning gully is cutting the small terminus [208886] fill (208887). Therefore it is possible that the first feature was [208886] and it was followed by [208888] and these previous features were truncated by [208890]

Refer to context:

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

This fill contains a dark grey silt with finds of nails, bone and ~~the~~ inclusion of stone. The nails were found over the stone, about 20 cm down.

The fill is probably from natural infilling from when the ~~the~~ post was taken out.

This form is incomplete if fields marked with * are empty. PTO for additional information (and describing all items marked with *) and sketches.

Cut for elongated pit [208898], contains numerous cuts and fills.

Cut is sub circular in shape, and is 1.75 m long, 2.30 m wide and 0.86 m deep. Cut has moderate sloping sides, with a concave base, and is aligned NE-SW.

Original cut for ditch is truncated by another unrecorded archaeological feature. This feature was truncated by rear [208900], suggesting extended use or time for this pit.

Refer to context [208900]

only fill for original cut or pit [20P89P] ~~at~~ Natural infilling consisting of mid orangeish brown sandy silt, up to 0.52m thick.

Fill mottled slightly with fill (20P903) and with natural - probably working etc after deposition.

Also found base of fill, fill changed from orangeish brown to a more reddish brown fill.

contained occasional small pebbles - unworked. occasional charcoal flecks.

No finds present in context to aid dating

Refer to context
