AFRM16		TEA 14	CUT (FILL) DEPOSIT	(140006)

Interpretation

pit		floor		external occupation		wall/sill		post/stake hole		structural cut		drain/gully	
well		natural		external dump		oven/kiln		make-up/levelling		destruction debris		ditch	✓
grave				external surface		hearth		construction deposit		non-structural cut		pond	

other (please describe)

Discussion / reason for interpretation Single fill of ditch terminus [140007]. The fill is mixed sand and sandy clay and contained a lower jaw bone of an elderly cow and frequent IA pottery sherds some large. There were no obvious tip lins of gravel showing in the section, but a largish cobble was present at the base of the section. A couple of flint flakes were also present within the fill.

Discussion / reason for interpretation Fill of ditch [140012]. A single fill which contained half a side & base of an IA pot, plus other fragments of pottery. Within the fill were gravel tips from the N side, charcoal flecks & lumps and some lumps of manganese. Chalk pebbles were present on the sides of the ditch where they had rolled in from the edges when ~~[illegible]~~ first cut. The pot lay on its side in the lower part of the fill.

Interpretation

pit		floor		external occupation		wall/sill		post/stake hole		structural cut		drain/gully	
well		natural		external dump		oven/kiln		make-up/levelling		destruction debris		ditch	✓
grave				external surface		hearth		construction deposit		non-structural cut		pond	

other (please describe)

Discussion / reason for interpretation Cut of ditch - cuts natural (140003) of clayey sand with patches of chalk pebbles & gravel. Linear in shape, slightly irregular and continuing beyond the limit of excavation, both to the NW and the SE. A U-shaped profile with a flattish base, slightly irregular/uneven. Probably a plot boundary ditch - there are also a small number of other features close by - a curvi-linear ditch & a couple of postholes or small pits.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context including items marked * overleaf)*

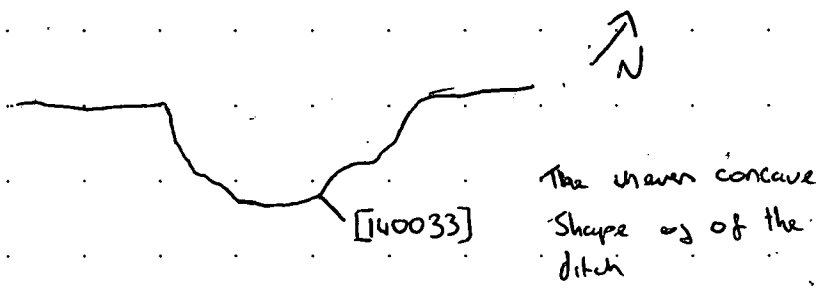

- Base is generally concave in shape, however the underlying natural gravel causes it to be uneven as well
- The shape is linear with slight a slight curve to the north

The sides are moderate on both sides of the ditch, but steeper on SW side

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[1400 41] is cut for curvilinear and relates to Slot 2 through its corner. Its main fill is (1400 42). As below sketch shows slot 1 of associated E-W [1400 33] Terminus. Both fills 1400 42 + 1400 34 are similar fills. Are one feature and event.

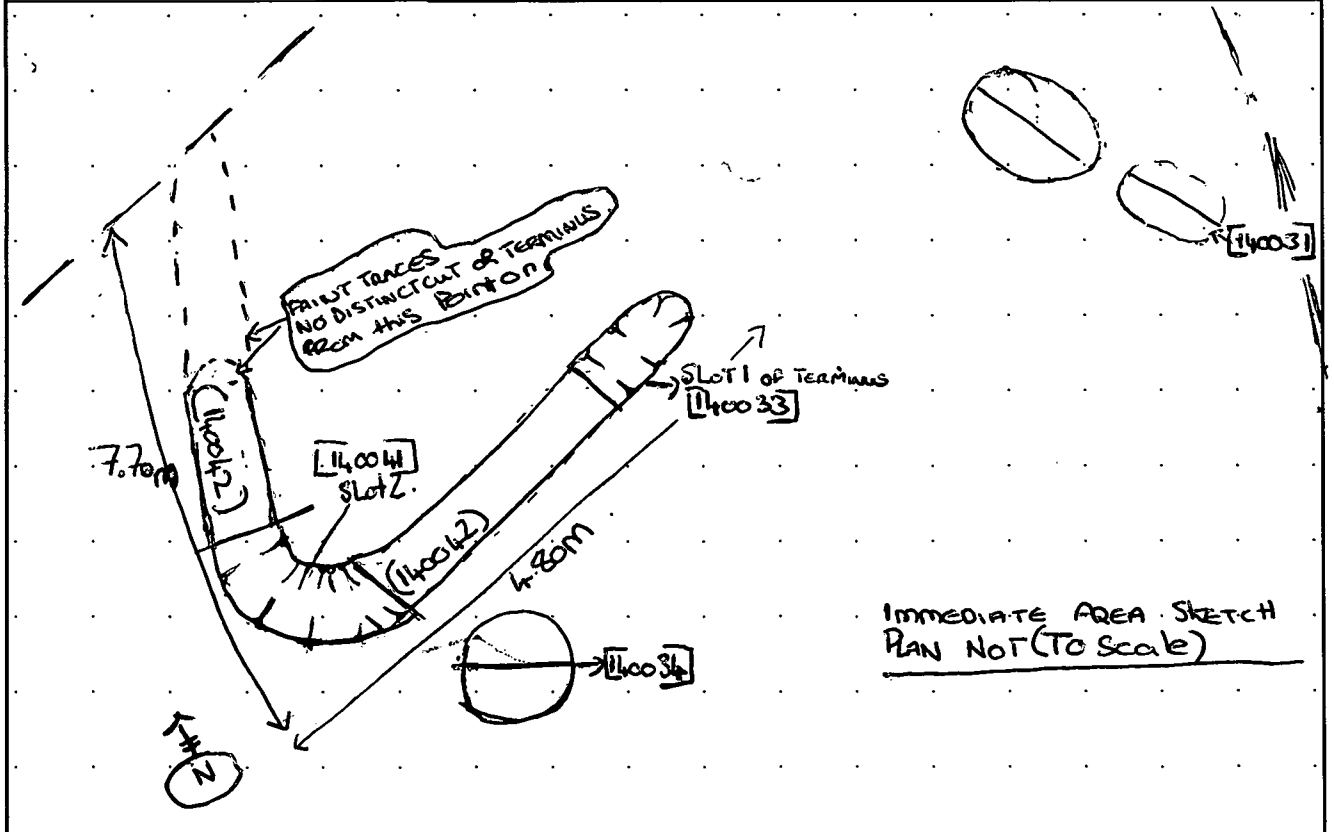

This slot 2 shows irregular edgin~~g~~ edges from bioturbation and composition of the natural is gravel sandy with pockets of more sandy consistency. This has affected excavation of feature. But both edges are clearly defined. Section shows true profile.

Curvilinear runs N-S, continue off into limit of excavation. Very faintly and no evidence of terminus.

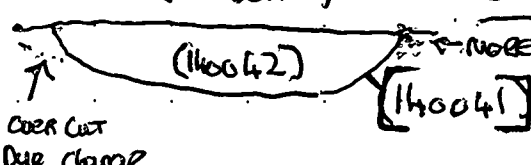

Fairly shallow - base slightly uneven reflects possible difficulty of cutting into natural or possibly natural composition of a gully.

Refer to context 1400 42

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Immediate area sketch plan not (to scale)

Facing section of [1400 41] (1400 42)

More gravel natural than west edge.

140055

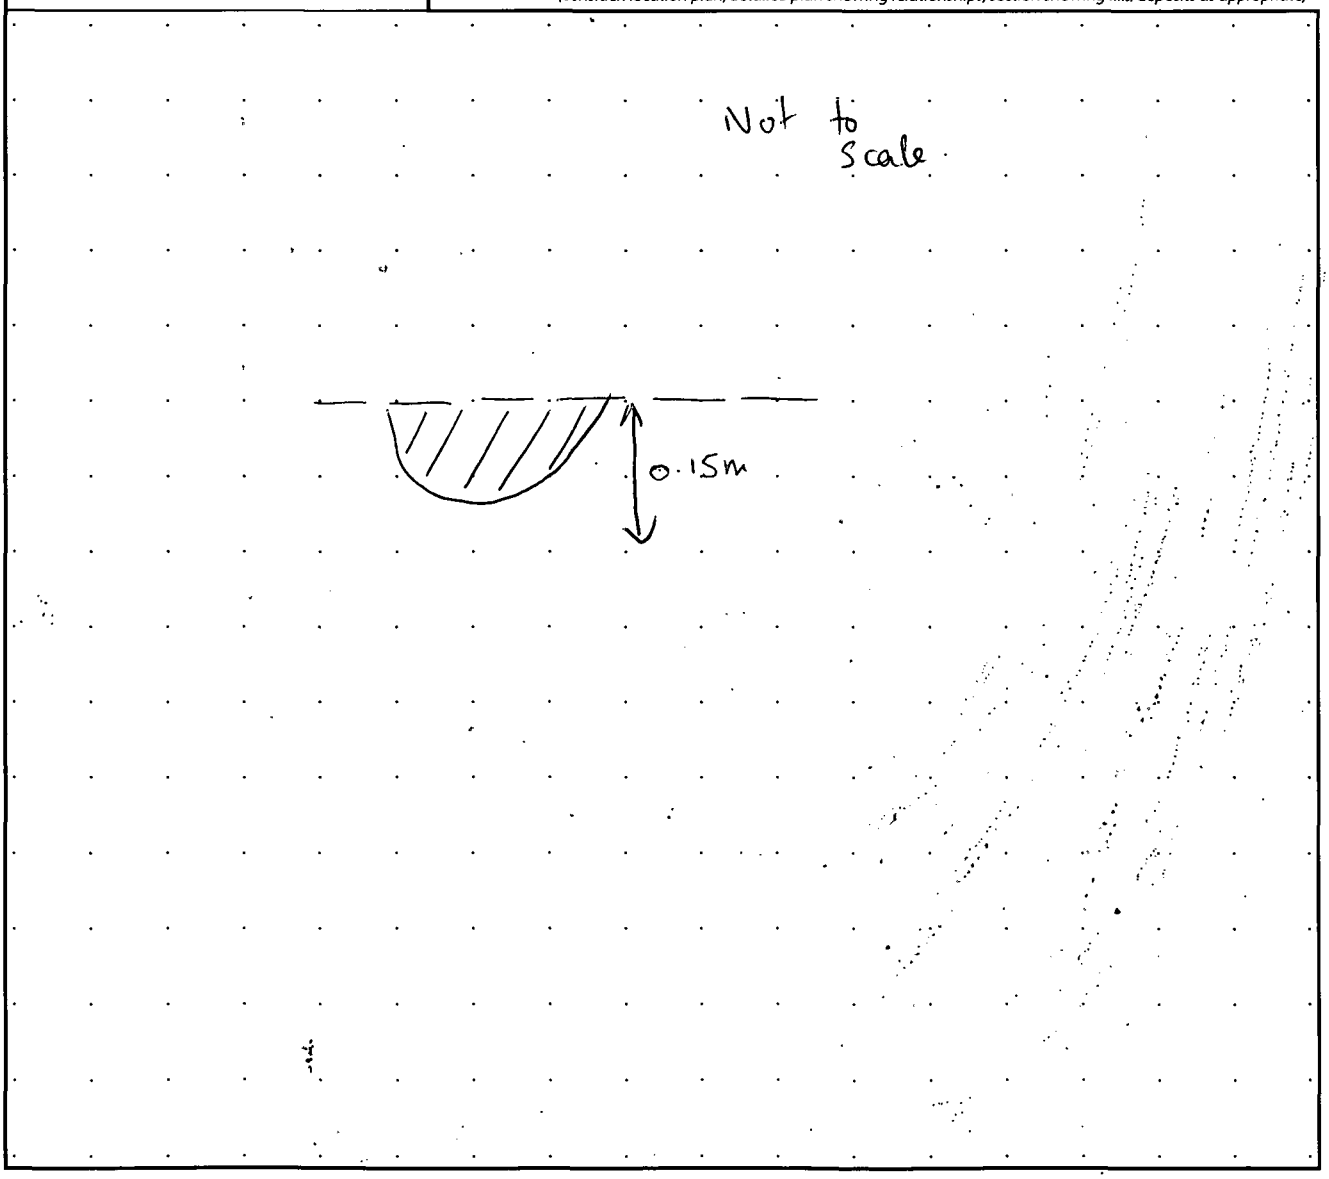

Fill of ditch terminus, occassional pottery - probably Roman. Moderate small sub-angular pebbles. Fill was sandy silt - probably formed naturally.

There was some iron panning visible towards the base of the ditch terminus where the fill & base met.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

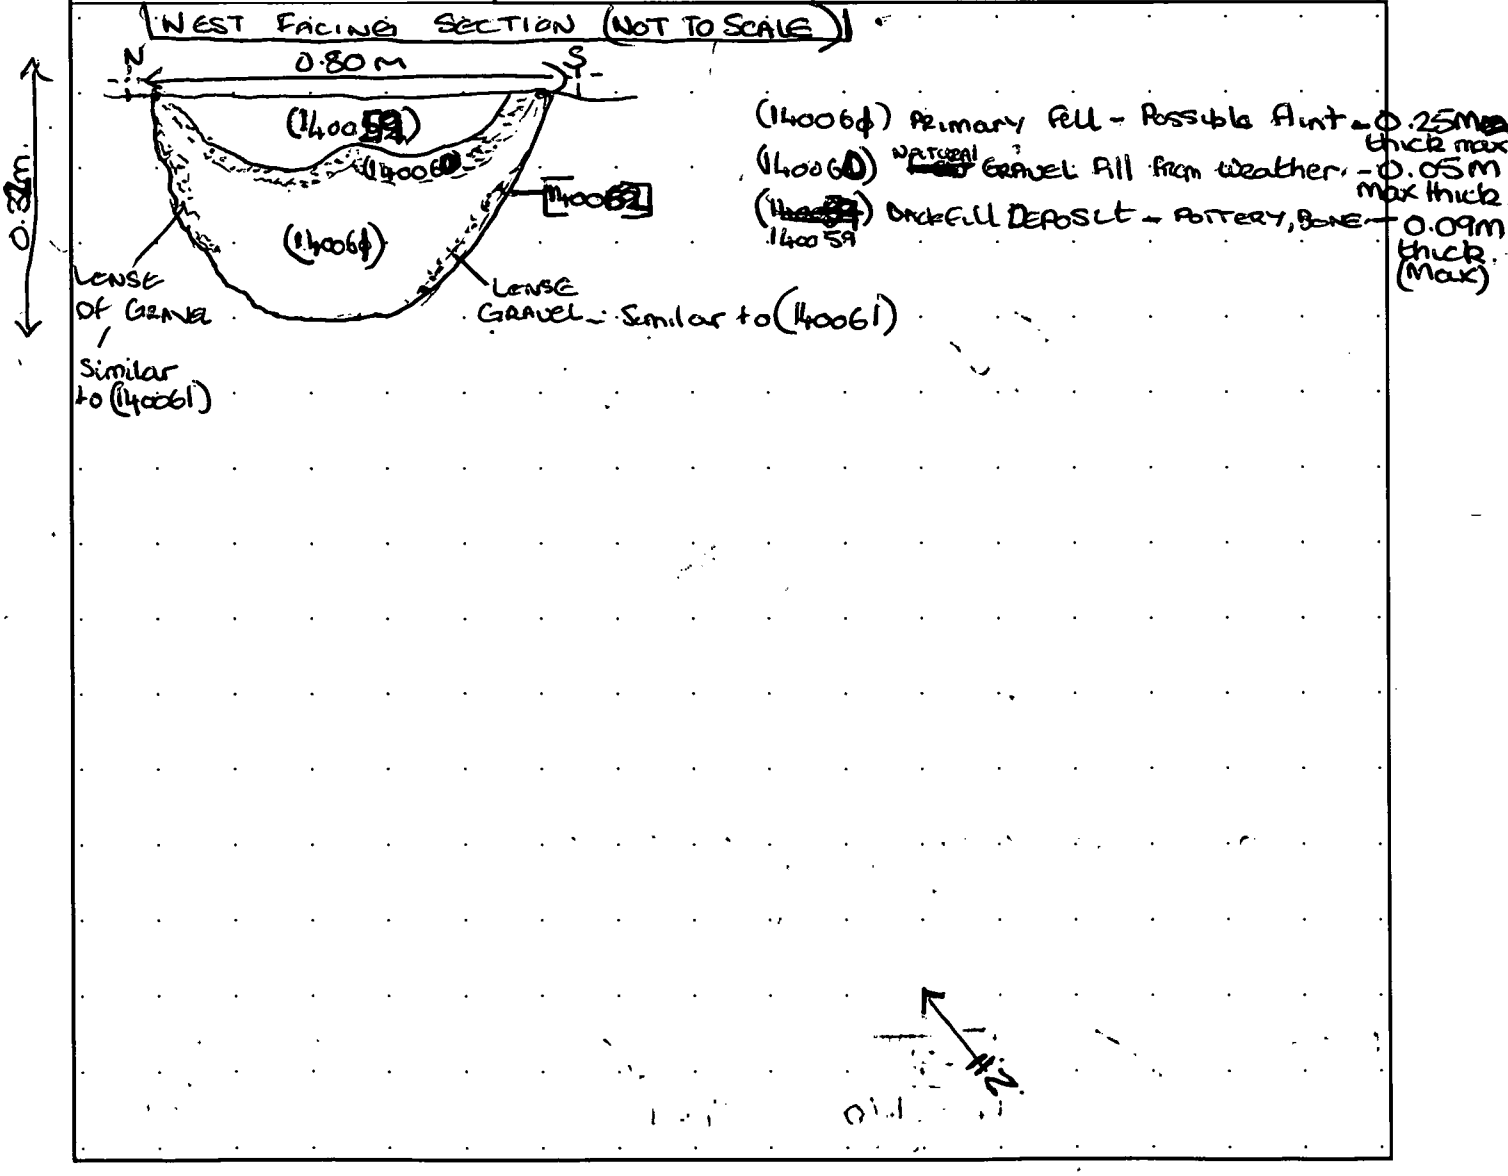

THIS CONTEXT (140059) IS THE TOPMOST BACKFILL LAYER OF PIT [140062]. SEE SHEETS (140060) (140061) AND [140062].

IT IS MOST RECENT POSSIBLE RUBBISH DUMP AS ANIMAL BONE WITHIN ITS SURFACE AND TWO RECOVERED BULK FINDED FRAGMENT OF POT VERY WITHIN 0.05M INTO FILL. NOTE FRAGMENTS POOR CONDITION EARLIER POTTERY AT BASE OF FILL BETWEEN INTERFACE WITH (140060). THIS MAY SUGGEST THIS POT IS EARLIER DUMP OR THAT ROMAN WARE DIFFUSED IN AT LATER TIME BY BIOTURBATION OR TRAMPLE OR (140059) AND ITS SISTER FILLS (140060) & (61) ARE CONTEMPORARY OVER SHORT PERIOD WITH (140060) GRAVEL WEATHER RAIN WASH FILL PERIOD TIME BETWEEN EVENTS BUT (61) MAY HAVE ONE FRAGMENT WORKED FLINT SO IF SO THIS HYPOTHSIS IS WRONG.

NOTE BIOTURBATION AROUND FEATURE.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

THIS CONTEXT (14006l) IS PRIMARY FILL OF PIT [14006Z].

IT DOES HAVE ~~some~~ diffused gravel in composition. but is not totally clay as it is also sandy. ONE RECOVERED POSSIBLE WORKED PIECE OF FLINT AND AN NOT CONVINCING NODULE OF FLINT that was Bulk bagged JUST IN CASE!
by could MEAN FILL IS MUCH earlier than (14005S9)

~~Fill~~ NOT frequent of charcoal so NOT likely EVEN PIT. (14006l) IS VERY NATURAL looking so unlikely dumped fill during USE → DISUSE.

Refer to context 14005S9, 60, 62

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

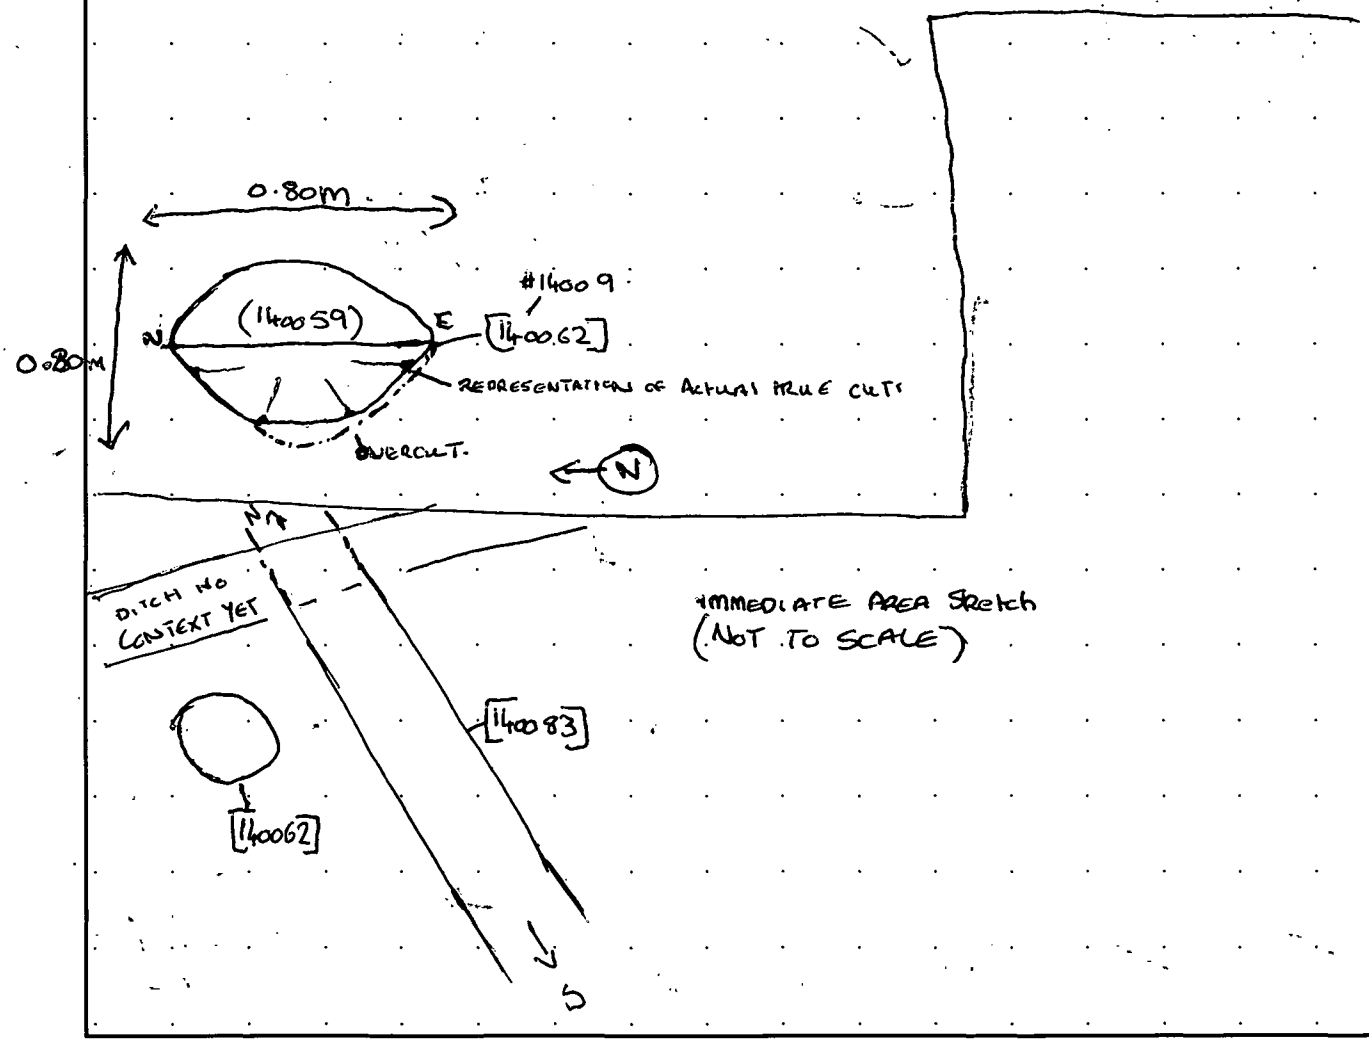

THIS CONTEXT [14062] CUT OF PIT PRIMARY FILL (14061) SECONDARY FILLS (14060) DEFINATE NATURAL PROCESS WIND FOR EXAMPLE AND (14059) LATER BACKFILL COULD BE RAIN WASH BUT TO COMPACT, FINDS SUGGEST RUBBISH DUMP.

NOTE FEATURE OVER CUT DUE DIFFICULTY OF DEFINING EXTENT AND INTERFACE BETWEEN CUT AND FILL (14060) (61) VERY SLIGHT AND DIFFICULT TO SEE DUE NATURE OF (14003) THE NATURAL. HINDERED AGAIN WITH WEATHER.

Refer to context 14059, 60, 61

SKETCHES

(E most ditch?)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

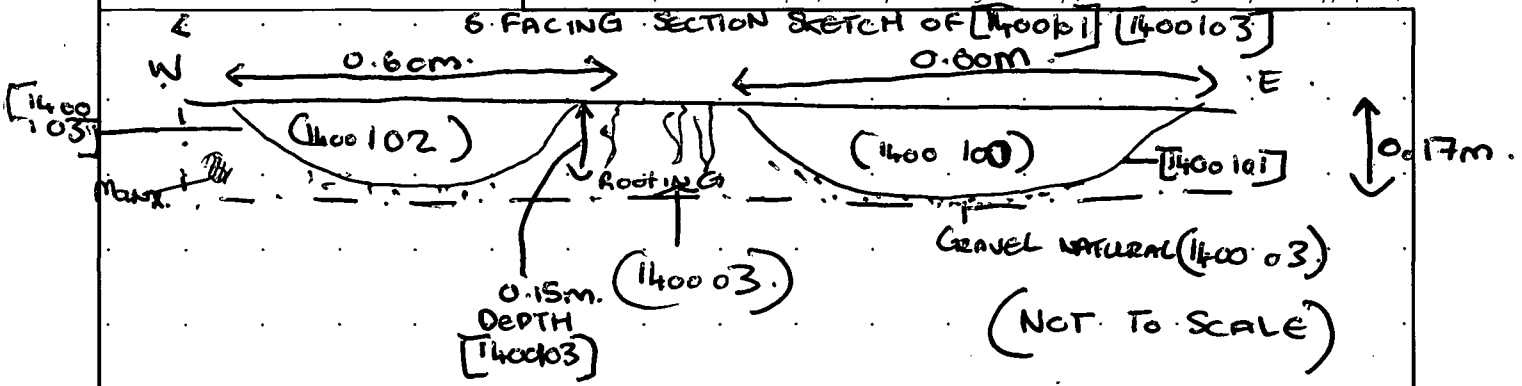

[1400 100] IS PRIMARY FILL OF (1400 100) - ONLY FILL.

IT VERY Similar Redeposited natural Supporting interpretation of a furrow from arguatural activity - churned natural through composition of base. Soil rolls into Solid ~~tin~~ cylinders so high percentage of clay moderate amount stones throughout note base variable difficult to differate between NATURAL AND fill → SUPPORTS idea its been MADE BY FARMING MACHINE. NO FINDS. UNCERTAIN OF PHASE. Colour IS LIGHTER THAN other features ~~Assigned~~. COULD SUGGEST IT IS NOT RECENT/MODERN.

- NOTE SLOT (1m) through both [1400 101] + [103] NOTE over CUT AT PARTS DUE ~~KATH~~ Similarity IN NATURAL AND fill + bioturbation.

Refer to context 1400-101, 102, 103

SKETCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

SLIGHTLY Different than Primary fill of [1400 101] See its sheet no INTERCUTTING relationship. This Deposit (1400 102) lighter and more gravelly mottled through base of CUT [1400 103] see DRAWING.

HARD To Differiate true extent of feature hence OVERCUTTING To ENSURE Full EXTENT BUT VERY Similar To redeposited natural → furrow.

L churned Gravelly natural AROUND BASE creating uneven base. from one event So NOT TREATED SEPERATELY.

Refer to context 1400100, 101, 103-

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This context could be a natural dug out depart due to its size although it contained a large amount of pottery.

Some burnt pottery & Bone.

Refer to context (140131)

1 wide shallow ~~[illegible]~~ pit with roughly concave base - slightly uneven.

Cuts through [140141] + [140143]

Cut was quarter sectioned

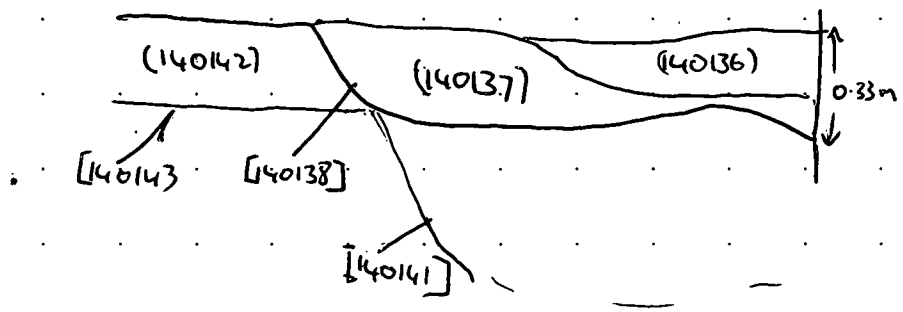

Pit cuts ditch [140169] to the north of the pit.

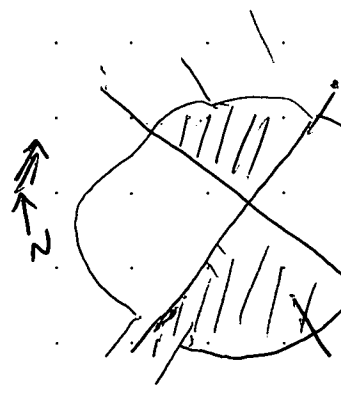

(NB - Post 140138 not a real cut - more representative of boundary between fills of 140141 - RB) - SEE PHOTOS

Refer to context [140169]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Plan view of quarter section taken to excavate this feature

//// Excavated quadrants.

Please see context [140169] for sketch plan re: pit [140138] cutting ditch [140169].

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

Due to its uneven base it could mean that the context was subject to natural formation processes. Or perhaps this could have come from deliberate banking.

Refer to context

(140146) SECONDARY FILL OF PIT [140148] – CUTS [140151]
So (140146) IS MOST RECENT backfill activity/event.
IT is very clean composition orangish mottled
Suggests it is possible deliberate backfill of
Pit from surrounding subsoil. marks disuse of
PIT. No FINDS NOT even charcoal that would
suggest dump deposit.

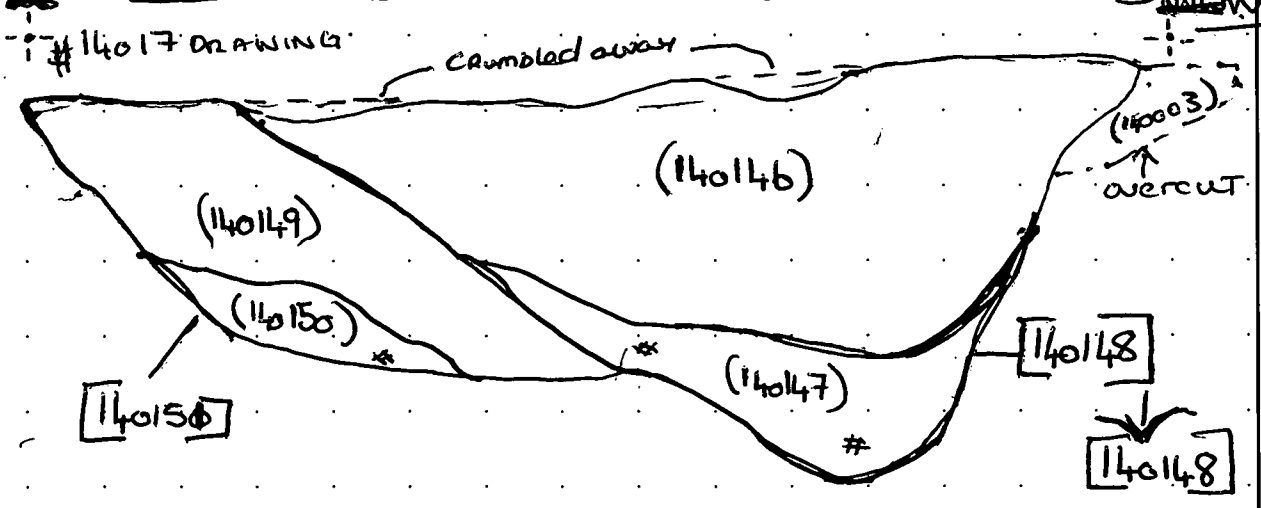

NOTE mottling occuring also due to bioturbation
whilst excavation certain patches more
friable hence uneven section surface
parts fell away during mattocking.

Refer to context 140146, 48, 49, 50, 51

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(1401 47) is Primary fill of PIT [14014B] which clearly cuts PIT [14015].

occasionally charcoal, moderate gravelly inclusions and larger pebble sized stones 2cm big matted through composition.

↳ ? Either disturbance by animals, rooting.
↳ Partly natural infilling lenses within fill.
↳ Charcoal suggests possible dump of from fire perhaps ashes mixed with the natural. Although would expect it to be darker nearly mistaken clay to be base because of its bluish.
↳ Charcoal could be from bioturbation.

Refer to context 1401 46, 48, 49 50, 51

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This context in this large pit showed signs of iron panning, this may suggest that the use of this particular pit was for storage of water due to being below the water table. Relatively deep, cut and sloping. Finds included various animal bones.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Due to this pit going below the water table it was difficult to find the real bottom of this feature. This context showed good water logging shown by the preservation of large pieces of wood that may have been used to back fill this potential water storage pit.

As well as the findings of well preserved wood, there was also a well preserved neck of a vessel, possibly Roman.

Refer to context

Cut for large circular pit.

Shape of base unknown, because cut goes deeper than modern water table

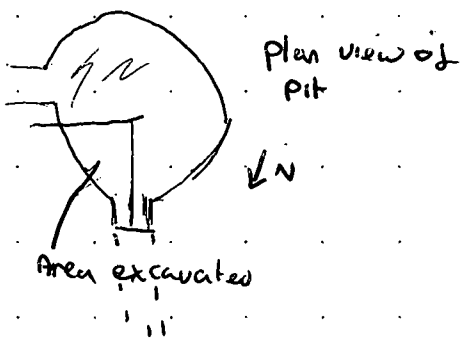

Quarter section of pit excavated.

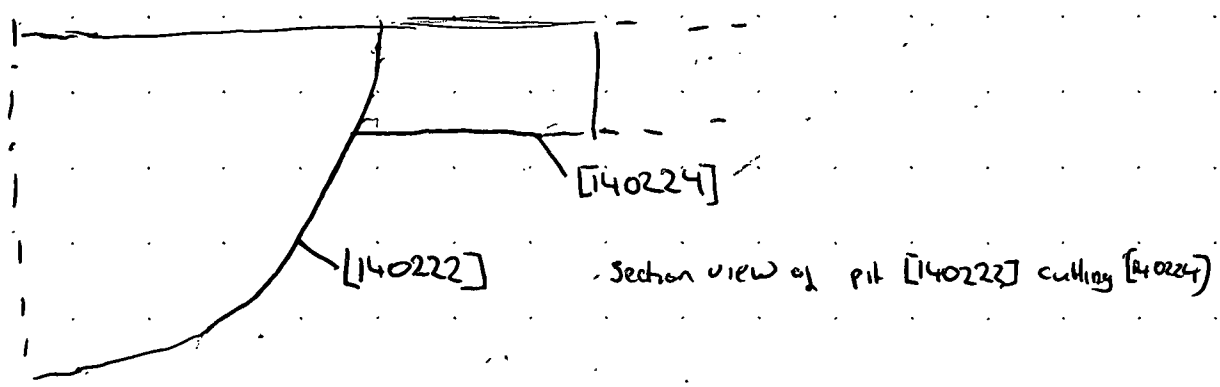

Likely cuts ditch [140224], however relationship not clear in section.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of Roman period boundary ditch, post dating, cutting and running parallel with two roman ditches, one on either side [4402?] to the South and [4402?] to the North. Shape is steep sided & 'V' shape to S. but very shallow and wide to north, possibly due to greater erosion on W. side caused by water which appears to have rested in a layer of stones along the line of it's northern side.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The cut of this feature was not uniform to a normal pit. The base was undulating and it was difficult to see where the true edge was. This could suggest that this is a natural feature or has been heavily disturbed.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

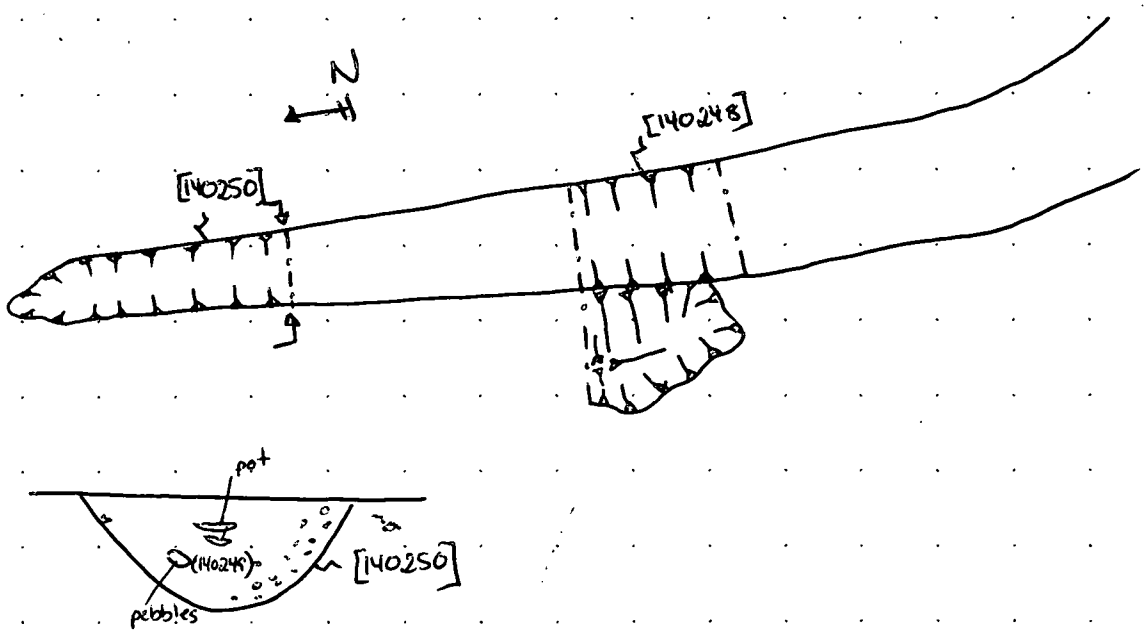

soft, mid- brownish grey sandy clay with inclusions of small pebbles and flint pebbles and lots of pottery; fill clearly distinguishable from natural

pottery fragments close to the surface seem to have been disposed of in pieces already
→ pottery looks like it came from at least three different vessels

pottery seems to be continuing as there are pieces sticking out of the profile still, although section has been taken back about 10cm already

Refer to context [140248][140250]

Shallow fill of pit.
High amount of pottery within fill ranging from small singular pieces up to almost entire broken vessel/pot

Some small pieces of chalk at base of fill
Small stones occasionally found throughout

ADDITIONAL INFORMATION

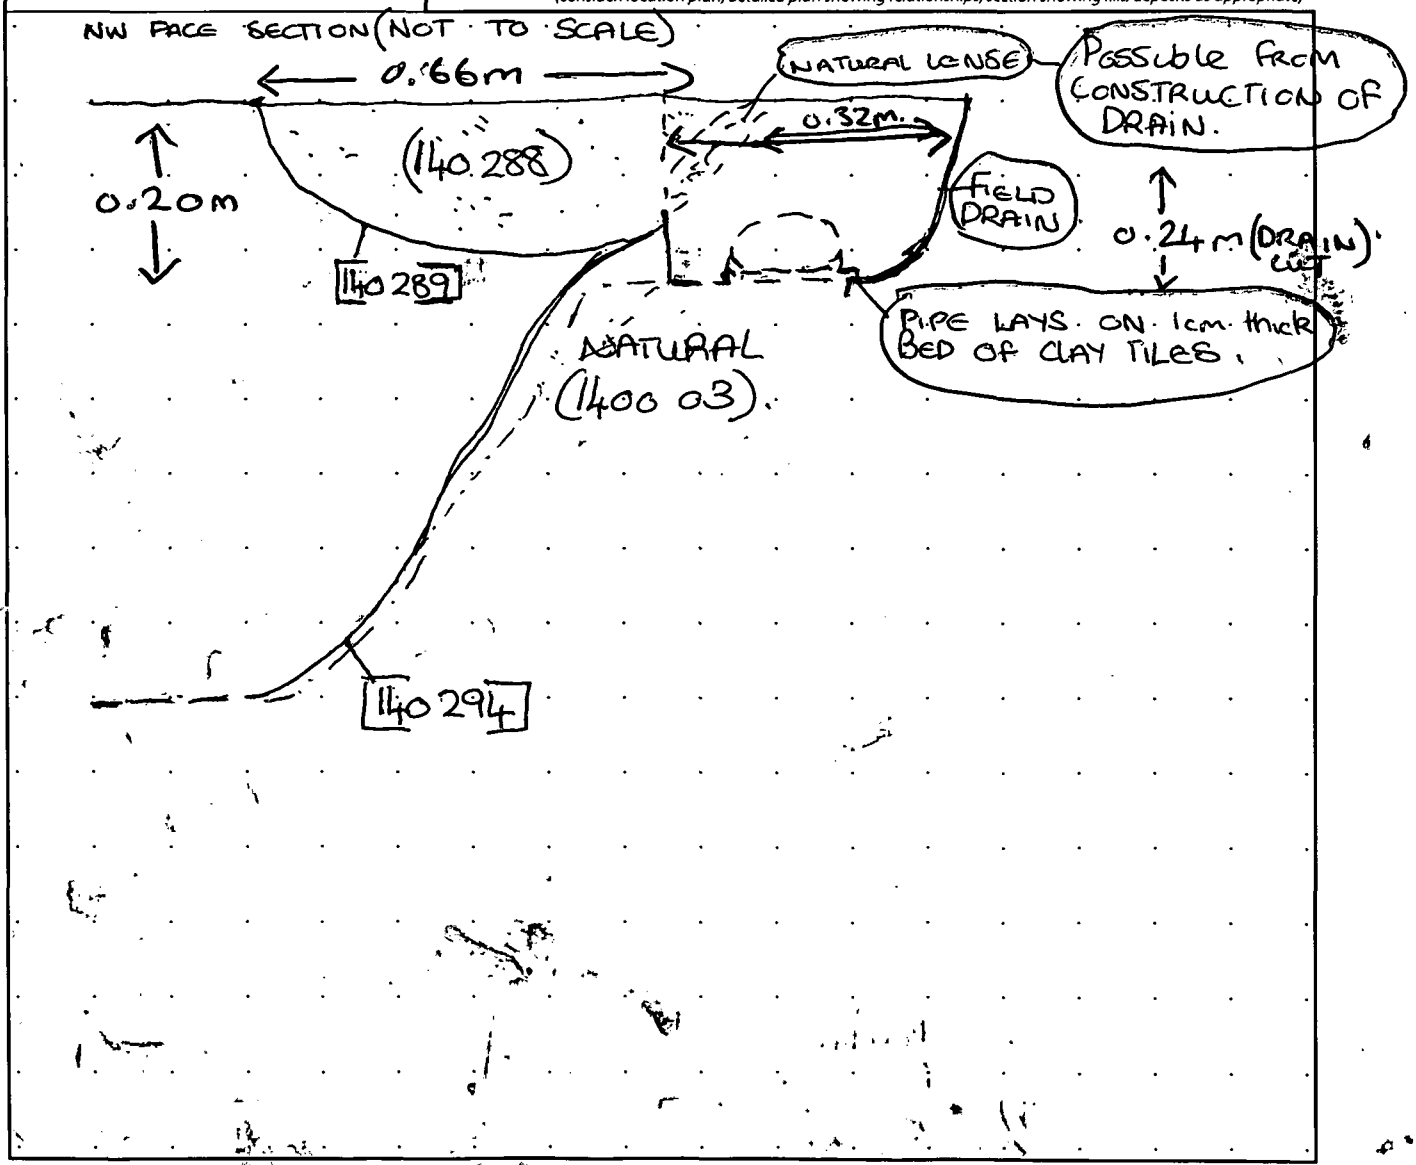

*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS CONTEXT (140288) IS PRIMARY FILL OF FURROW [140289]. IT IS TRUNCATED BY AN ORANGE CLAY FIELD DRAIN WHICH HAS NOT BEEN GIVEN NUMBER AS IT IS AN MODERN INTRUSION/TRUNCATION. NOTE FILLS OF both DRAIN CUT AND THIS FURROW (140288) similar difficult to see clear relationship IN Section but in PLAN IT IS Obvious FIELD DRAIN TRUNCATES FURROW [140289] BEEN ADDITIONAL DISTRUBATION BY BIOTURBATION WHICH CONTRIBUTES LACK of CLARITY IN SECTION.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 291) is 5th from top of PIT [140 294].

IT is very mottled redeposited fill from a period of possible periods of disuse. because of its mottled composition it was difficult to differate lenses. clearly so was given one number.

IT could mark end of use of PIT as covers (140 292) the very dark blueish black clay with pottery and animal bone deposition.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 292) is 6th from top of pit [140 294]
-1 +1

- ONLY fill that is clearly purposley dumped ontop of (11093) Grey gravelly fill.
~~SAT PARTS~~
- Treasure trove of finds, small finds and bulk has been photogramy.
- abundent charcoal. Suggesting possible fire, ashy dump of animal bone waste. although most bone didnt show signs burning. Due clay very hard to left in complete pieces.

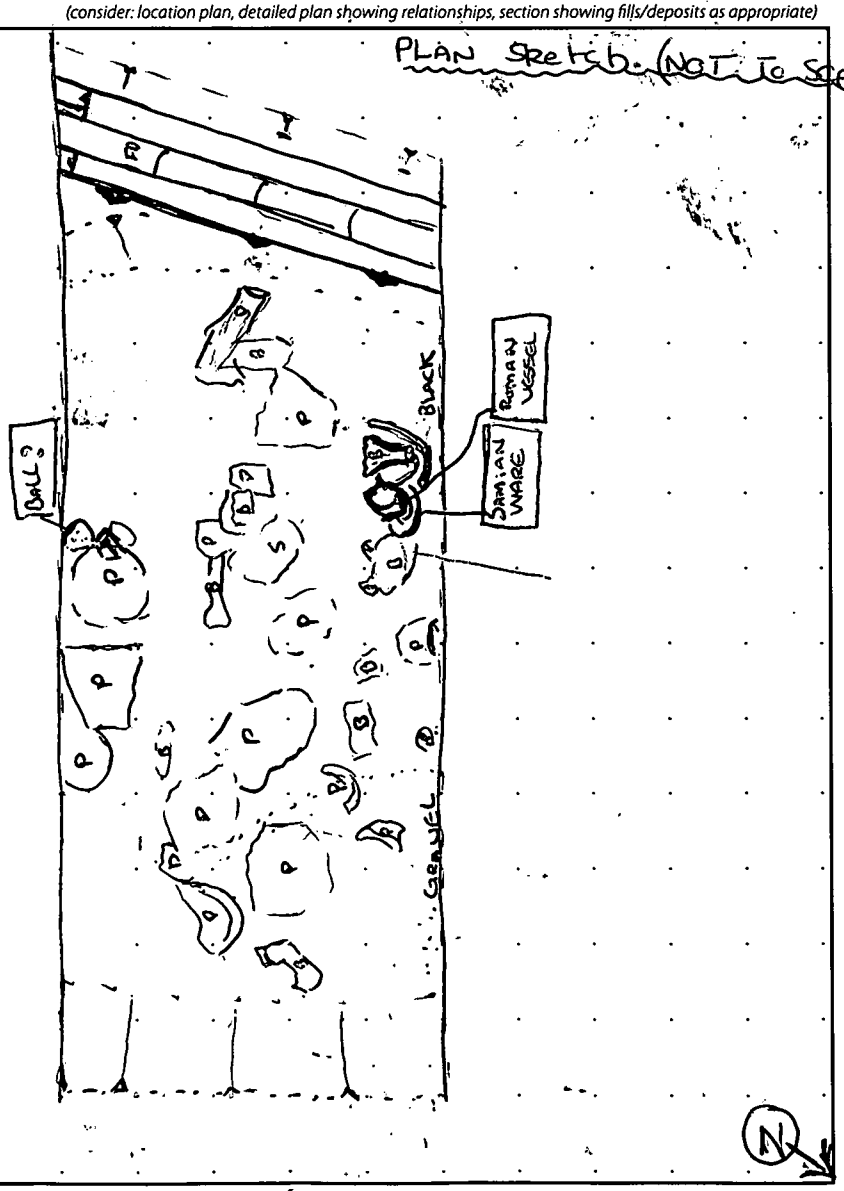

- 1 bucket worth of Sample collected during removal. unfortunately Hcl was not able to be collected Plus. it wasnt primary fill.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 293) is 7th fill from top of pit [140 294]

This fill mottled slightly in Section after exposure could actually be seperated into two Seperate fills (see hash Marks on Section drawing 140 41 on page 13. but whilst digging felt and looked same. perhaps used mattock and contributed to lack of differing of contexts and because of finds it has been kept as one. also Comsisency whilst digging felt same the EAST SIDE possibly more affected by blown in natural. ITS from this area the fossilized bone was found.

NOTE 0.47m Max thickness E SIDE.

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

See (140 383).

• AISO NOTE SURFACE IS slightly different in Section and (140 293) does look continus alot of contemporary backfills accumulating with slight differences, interfaces are blurred

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[140294] is the cut of a pit
- Fill numbers (140289), (140383), (140384) (140290) (140291) (140292), (140293), (140385) (140388).

- DEPTH STOPPED AT 1.03m. NEEDS STEPPED OUT.
- LOCATED SE AREA of OPEN AREA (4.11.16)
Similar features due WEST + EAST of IT.
- Could Be WATER PITS/wells so belong to occupation; phase uncertain. Based on (140292) finds Possibly Roman phase. Maybe slightly early.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

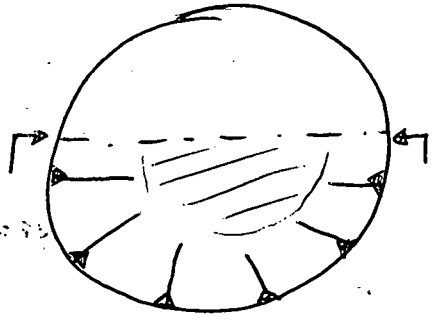

ADDITIONAL INFORMATION *(any further details that may be important for understanding the context, including items marked * overleaf)*

Steep sided ditch that intersects ditch [140306].

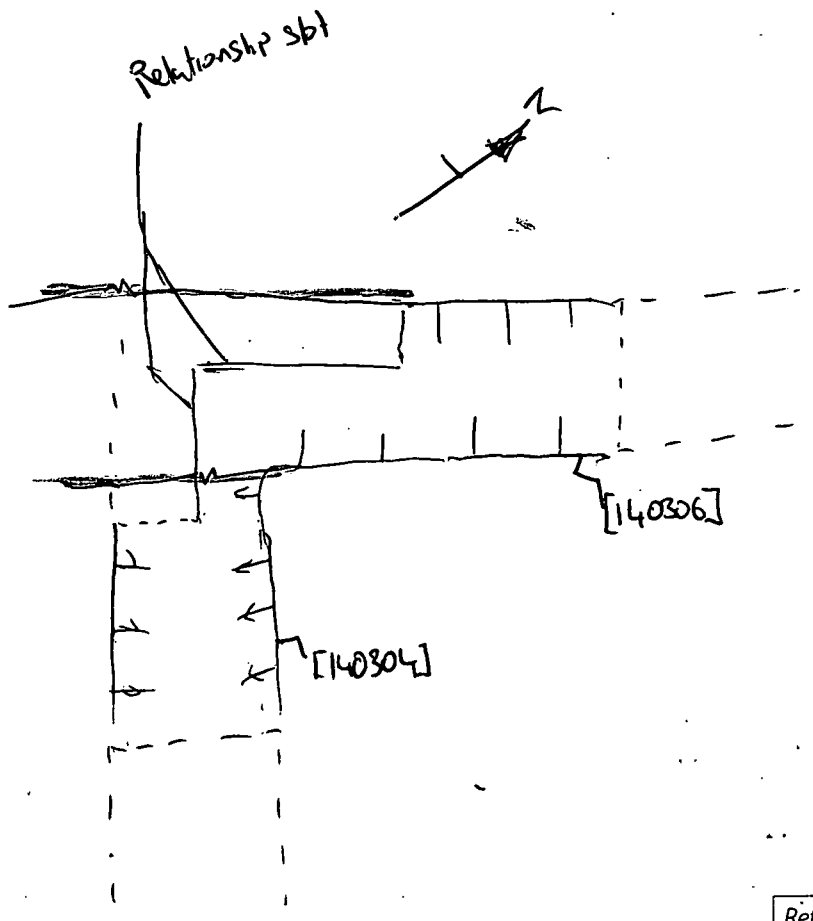

Relationship Slot put in to try and determine relationship, however no clear relationship was visable in either section.

1m long slot also taken to get full profile

~~The base depth of [140304] suggests it is later than [140306] but a similar cut~~ ~~though it is~~ not conclusive

More likely that [140306] cuts [140304] but difficult to confirm/

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION *(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of ditch (140309) which may have been truncated by later features as the full extent of this feature is difficult to see on the surface but clear in section.

The finds from (140309) was a lot of pottery, most Late Roman which appear to be made from the same material. As well as pottery there was also a concentration of snail shells in the ~~OVE~~ Corner of the section. From these finds and with them being mostly concentrated in certain areas would suggest backfill.

This is the only fill of this feature.

SKETCHES *(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)*

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION *(any further details that may be important for understanding the context, including items marked • overleaf)*

U-shaped profile. Sharp sides and sharp break of slope (BOS) top and base. Looked linear on surface - excavation proved it to be more irregular / curvilinear. Possible rooting in feature - irregular base. Initially thought to be ditch / gully remains. After excavation - remains unclear. Potentially remains of ditch. Irregular so more likely to be hedgerow or natural channel.

SKETCHES *(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)*

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION *(any further details that may be important for understanding the context, including items marked * overleaf)*

Natural infilling of ditch [140325]. Two fragments of pot and a highly fragmented / eroded mandible segment ~~[illegible]~~ (possibly ~~pig~~ Sheep or goat) were found along with fragmented mollusc shells. All items were in a poor state of preservation and appear to be from natural infilling rather than intentional deposition.

SKETCHES *(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)*

See [140325] for sketch.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Yellowish gray clayish soil, a lot of stones, few fragments of ceramic, one stone (flint?), possible tavorish things and on fossilized snail

The top part of the fill (first cm) is a little dryer than the bottom part (- cm) where fossilized snail was found, though because there is no other differences, same type of soil, same colour, same inclusiones the whole filling was recorded as one context.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

The edges seems straight, ~~[illegible]~~ steep sloped, brownish yellow with a high content of gravel, especially N. The cavity in the S edge was accidental and the original edge was straight too.

On the bottom of the ditch fill mix of gravel, brownish sand, and white-yellow ~~clay~~ and in some places gray clay.

Refer to context

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

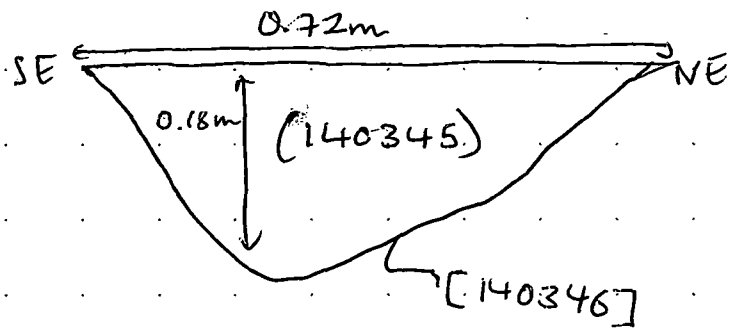

Possible part of a field boundary as this feature curves similar to the other slot in possibly the same feature (140323) [140324]. Both only had one similar fill and no finds. Perhaps this was a deliberate dumped layer with some redeposited natural.

Refer to context (140345)

Small rectilinear feature. Possible ditch. Truncated by large ditch [140360].
No finds were present. The feature is in a location of uneven gravely and silty natural. It could be a geological feature.
Full width/length/depth of feature not revealed in excavation due to L-Shaped excavation to determine relationship between [140358] and [140360].

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of long linear ditch. Truncates earlier feature [140358] (140357). Ditch has been heavily truncated by later ploughing at this location. Ditch was cut into an area of uneven gravel / silt natural so ditch edges on N/W side are very difficult to discern. and width
Full depth ^ of ditch at this location is not clear due to L-Shaped excavation to determine relationship between [140360] and [140358].

Refer to context | 140358

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of ditch [140364] with occasional inclusions of chalk, gravel and flint (sub-angular to sub-rounded). Fill probably formed by natural infilling of ditch.
Fill is likely cut by ditch [140362] although the relationship in section is inconclusive.

Refer to context

SKETCHES

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill likely formed by natural gradual infilling of ditch cut [140368]. Base of pot recovered of possible Roman date suggesting some dumping may have been associated with the infilling process.

(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch orientated E-W running across area of excavation. ~~Feature~~ is A linear feature is immediately adjacent to the ditch to the north and runs a course parallel to [140368]. The ditch may form part of a droveway or boundary ditch. To the south of [140368], a pair of ditches follow a similar E-W course and may be associated features. Pottery recovered from the ditch fill may be of Roman date.

Refer to context: 140367

On the surface (140379) was difficult to see, it was clear to an extent in section. The depth of the fill was easy to see but the extent of the fill was harder. This could be to do with natural processes or a dumped layer of redeposited natural.
There were a few sherds of pottery in this fill.
- Was overcut slightly.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch running E-W across area of excavation. Ditch [140368] runs a near parallel course immediately to the south of [140382] suggesting an association either as contemporary features or one of the ditches may be a later cut serving a similar purpose (given that the profiles of the two ditches are similar).
The ditch [140382] may form part of a droveway or ~~boundary~~ have acted as a boundary ditch

Refer to context: 140381

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Shallow ditch cut running E-W immediately to the south of ditch [140368]. Ditch is much shallower than [140368], however, as the cut is relatively well-defined it suggests that the feature may be part of the ditch system in this area of the site and is likely man-made rather than a naturally formed gully.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

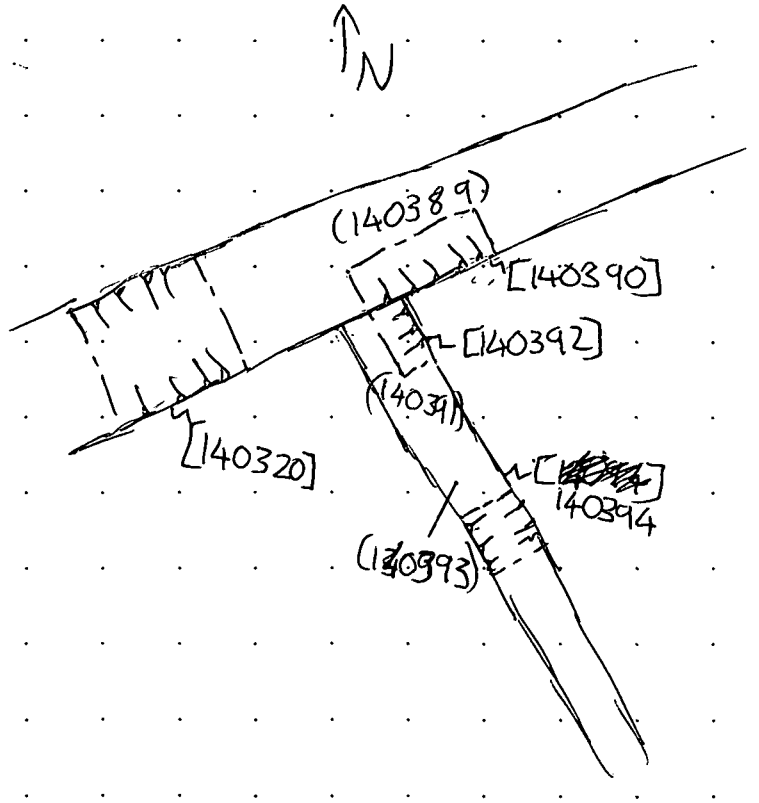

Fill of ditch [140390] likely formed by a combination of natural infilling and periodic dumping given the recovery of animal bone from the fill.
Fragments of animal bone might be parts of the long bones derived from Sus scrofa.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

FILL IS VERY GREY COMPARED TO OTHER FEATURES IN THE AREA. COULD BE AS A RESULT OF ORGANIC MATERIAL IN THE DITCH AS IT WENT OUT OF USE. NO SIGNS OF LAYERS + LENSES BUT THESE MAY HAVE LEACHED INTO EACH OTHER AFTER THE DITCH WENT OUT OF USE. THERE MAY BE THE FAINT SUGGESTION OF STONE LINES.

SIMILAR COMPOSITION / COLOUR TO (140367) TO THE NORTH OF THE DROVEWAY.

SINGLE, ~~SE~~ DAMAGED LAND SNAIL OBSERVED
STONES WERE A MIX OF ANGULAR + ROUNDED ~~SMALL~~ PEBBLES 0.01 - 0.03m IN SIZE

Refer to context 140397

[140408] CUT OF possible ditch RUNNING E-W IN NORTHERN AREA SITE; See SKETCH ON [140406] many linears including furrow, ditch in this area intercutting each other

Full length unable to attain.

[140406] CLIPS INTO [140408] but [140408] terminates AT THIS POINT which is ~~can~~ leads me to think [140406] is furrow AND [140408] could BE Ditch linear feature that terminus is truncated Slightly be [140406].

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Lowermost fill of ditch [140430]. Fill likely formed by waterlogging and gradual inwash of sediment. Very occasional gravel and flint present.
Single sherd of pot found at the base of the fill of possible Roman? date.

Refer to context

Fill of ditch [140430] likely formed by slumping of the sides of the ditch as indicated by the gravel ~~area~~ incorporated within the fill and orange ~~fill~~ clay more typical of the natural in this area of the site. Poor definition of horizon may be a result of bioturbation and leeching

Refer to context: 140426

Occasional flint and gravel present (sub-angular to subrounded).
Fill likely formed by gradual infilling of ditch following
the slumping episode reflected by (140428).
Bone fragments recovered probably of animal origin.

Refer to context 140426

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

cut of more N ditch (both of the presumably should meet in some point) it's only half of this ditch that was been excavated so can't be sure how the [redacted] base looks like its most like slightly concaved but might be as well sloped or V-shaped.

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

NOT IN SCALE

it seems like there might be slight connection between them.

Ditch running parallel to ditch [140 430]

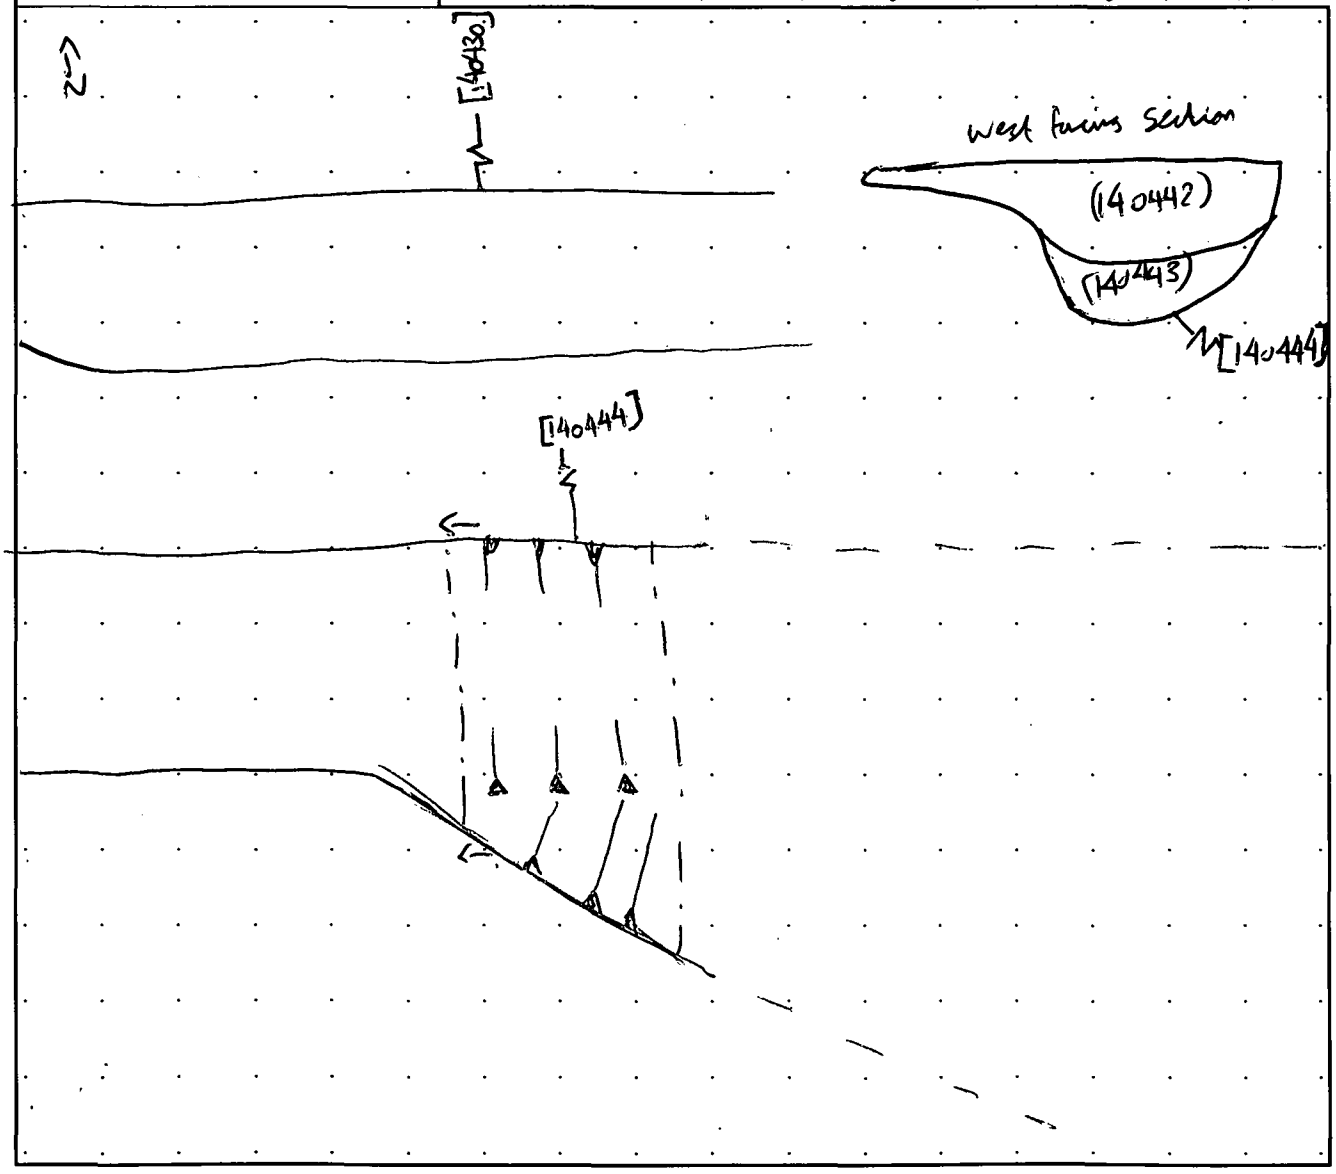

The ~~top~~ South side ~~of~~ flattens off near the ~~top~~ sides and comes ~~of~~ at a diagonal line to ~~the~~ the ditch which otherwise runs ~~East~~ - West. ~~This could just be~~

The fill in this triangle looks the same as across the top of the whole ditch but could be an intersecting ditch.

Lower fill of ditch [140487] cut by later ditch re-cut [140489]
Reddish hue of fill may indicate possible bioturbation and leaching of fill. May have formed by gradual infilling of cut by natural processes ~~including ~~ ~~of natural agents~~~~
Occasional flint and gravel (subangular to subrounded).
Pot recovered of possible Roman date?

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This fill at the end seems to be the same fill as [140504], it was a little less compact but it was top 5-8 cm same colours, same inclusions.

Few peaces of ceramic on this top part of the fill

Signs of high temperatures (brating stones, burned clay, etc)

Refer to context

FILL OF DITCH [140512]. NATURAL INFILLING OF DITCH [redacted]. DEPOSIT OF (140511) SITS WITHIN THIS FILL. THE DEPOSIT WAS A LARGE DUMP OF POT, BONE AND BURNT STONE THAT APPEARS TO HAVE BEEN DISTURBED AT A LATER DATE / AFTER DEPOSITION, CAUSING IT TO SPREAD THROUGH THIS FILL LAYER. SOME DISTURBANCE WAS CAUSED BY LATER PLOUGHING. THE DITCH IS TRUNCATED AT ITS NORTHERN END BY A PLOUGH FURROW (NOT RECORDED AT THIS LOCATION BUT IS THE SAME FURROW AS [140348] LOCATED NORTH OF THIS DITCH SLOT. STONE INCLUSIONS INCLUDE OCCASIONAL SMALL - MEDIUM SUB-ANGULAR FLINT/CHERT, CHALK AND SANDSTONE, 1 X MEDIUM FLINT AND 1 X MEDIUM UNBROKEN ROUNDED CHERT PEBBLE.
MOLLUSC SHELLS WERE FOUND THROUGHOUT THE FILL - THE SAME TYPE OF SHELLS AS FOUND IN THE FILLS FOR [140360] AND [140325]

Refer to context 140512

HOUSEHOLD WASTE DEPOSIT OF BURNT BONE INCLUDING JAW BONES OF PROBABLE CATTLE, BROKEN BURNT AND UNBURNT POT AND A BURNT STONE. ABUNDANT POT FRAGMENTS INCLUDE SOME BROKEN POTS THAT WERE DUMPED AND LATER DISTURBED WITH FRAGMENTS DISPERSED/SPREAD ON A NE-SW TRAJECTORY ALONG THE DITCH - POSSIBLY BY LATER PLOUGHING ASSOCIATED WITH THE PLOUGH FURROW THAT TRUNCATES THE DITCH SLOT AT ITS NORTHERN/EASTERN FACE (NOT VISIBLE IN PHOTOS AS NOT EXCAVATED BUT EVIDENCED ON PRE-EX PLAN/SKETCH BELOW AND PLAN ON [140512]). POT + BONE. BAGGED. WHERE POSSIBLE AS SINGLE ITEMS - ADDITIONAL FRAGMENTS BAGGED AS BULK FINDS. THE DEPOSIT WAS DUMPED DOWN THE EASTERN SLOPE/FACE OF THE DITCH.

NE/SW DITCH CUT. SAME AS CUTS [140297] [140360] [140330] [140325] AND ADDITIONAL CUTS IN THIS LINEAR FEATURE.

THE DITCH IS PARTIALLY TRUNCATED AT ITS NORTH/EAST FACE/END BY A LATER PLOUGH FURROW. THE FURROW WASN'T FULLY EXCAVATED AT THIS LOCATION BUT WAS EXCAVATED NORTH OF THIS CUT AT [140348].

THIS SECTION OF THE DITCH WAS USED TO DUMP WASTE MATERIAL (DEP 140511) INCLUDING BURNT POT, BONE AND STONE.

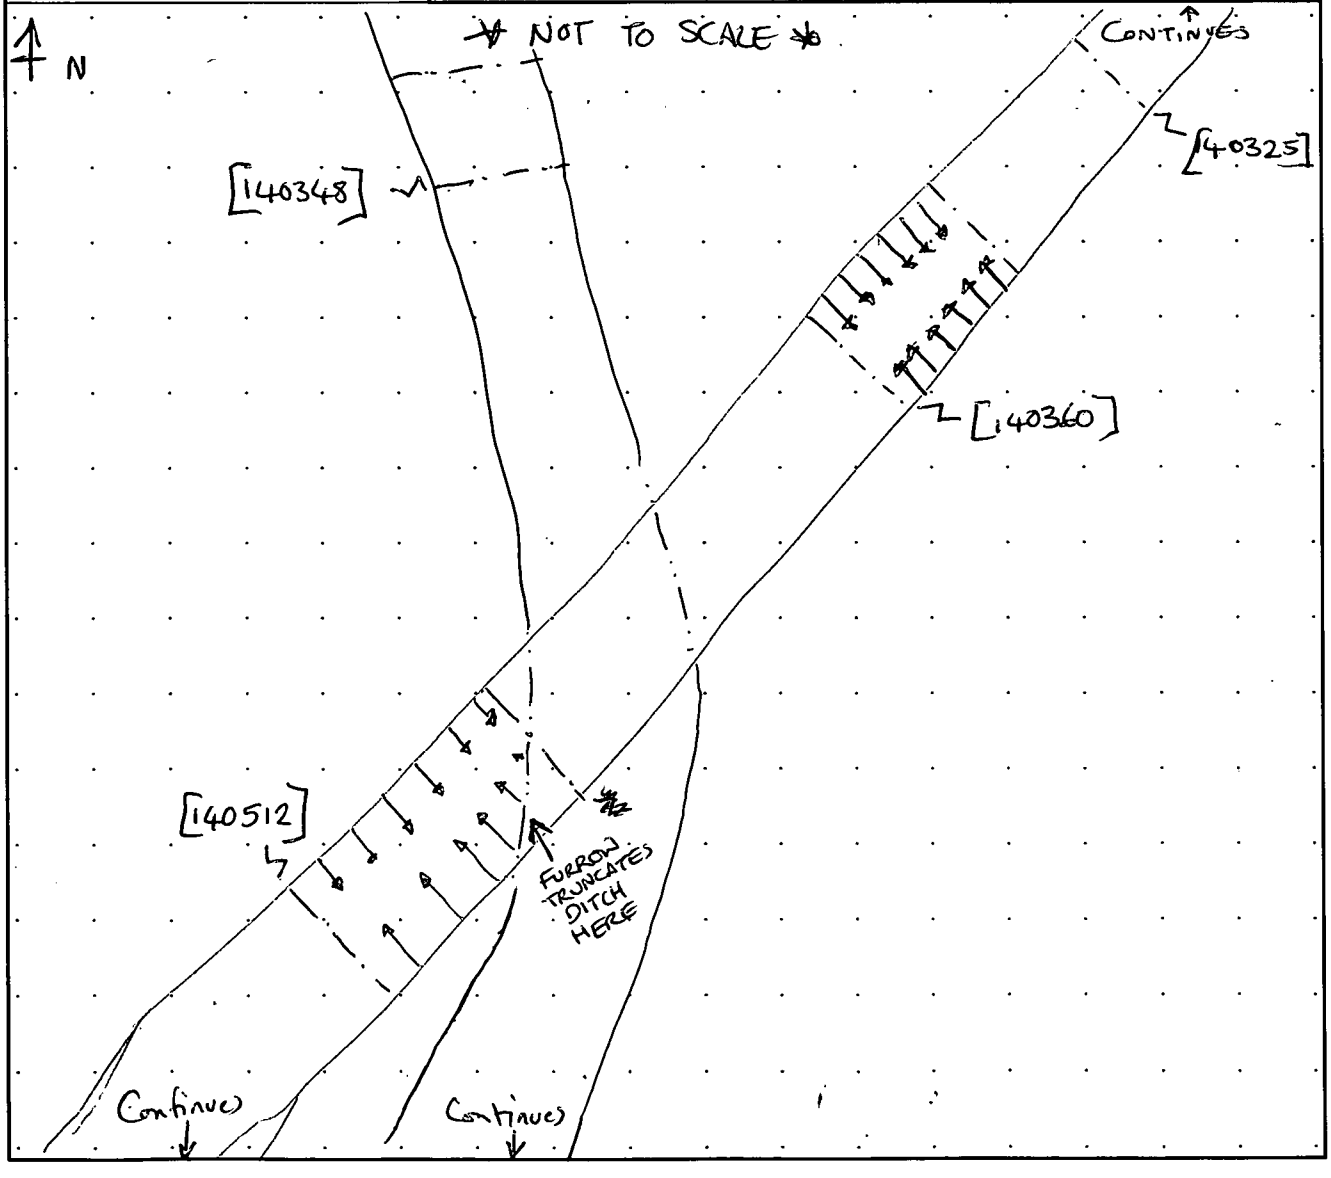

THE DITCH IS SHALLOWER HERE THAN AT [140297] AND DEEPER THAN AT [140360] and [140325].

THE TRUNCATION IS VISIBLE IN THE EAST FACE OF THE DITCH AS SHOWN ON THE SKETCH PLAN BELOW.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Similar in depth to [1] post hole [140533] to the east but has no evidence of packing to indicate it was a post hole. Lies east of an apparat entrance to the ring ditch formed by two large pits cut into the ring ditch terminus. This pit may be a post hole forming some structural entrance with the potential post hole to the south.

Error!

Ditch ~~containing~~ containing two fills. Fill [redacted] (140561) only appears to slope / down the western side suggesting it was formed by natural in filling. Fill (140560) had some red staining possibly from fired clay and several fire damaged stones were also found along with some charcoal suggesting burning.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 574) Diffused mottled fill affected by Possible rooting very varied AND difficult to define BASE AND EDGES. THEREFORE AFTER DIGGING AND LIGHT CHANGED IT CAN BE SEEN ON DRAWING FEATURE [140575] IS Probably OVER CUT RATHER than AN ADDITIONAL PRIMARY redeposited natural Fill. of eroded Blown INFILL.

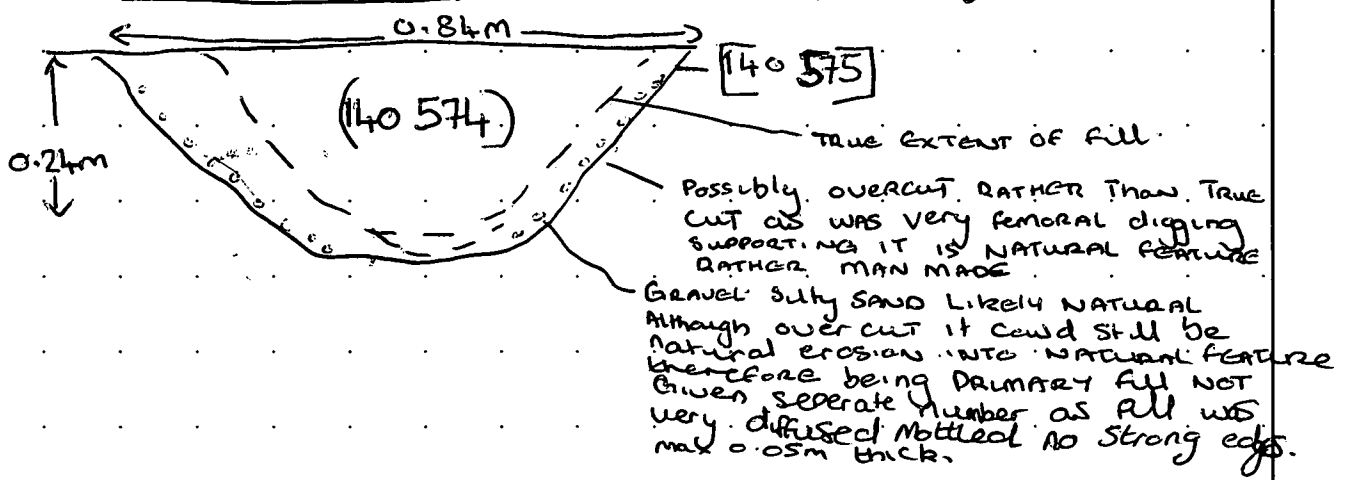

NOTE FRAGMENT POT FOUND IN Possible terminus. Pocket that ~~Suggest~~ felt like rooting. therefore it Phase is dubious.

NOTE Similar to fill (140578) could mean both infilled (Silted up AT SAME Time).

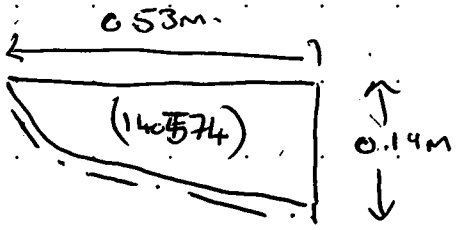

Refer to context [140575] [140580]

(140578) APPEARS To be Possible PRIMARY fill of LINEAR [140580]. Similar to that of (140574). Seems both sulted up AT SAME Time. → NOTE (140578)

NOTE AGAIN Guilty of OVER CUTTING AS All WAS very diffused AND NATURAL GRAVEL very DIRTY Looking Compared else where but Stopped when Patches Clear pure grey clay appeared but base of linear is not very distinct in this slot. which is only a relationship slot between [140575] + [140580].

Refer to context

SKETCHES

OVOID FEATURE NEAR TO RING DITCH [140539]. FEATURE HAS MODERATELY SLOPING FACES ON NTH + STH. ~~East~~ East face slopes VERY GENTLY. IT IS NOT CLEAR IF THIS IS AN IMPRESSION MADE IN THE NATURAL BY THE WEIGHT OF SOMETHING WHICH THEN NATURALLY INFILLED. OR IF IT IS AN ACTUAL CUT. NO FINDS WERE PRESENT IN THE FILL. BURNED-STONES AND CHARCOAL ARE PRESENT IN THE BASE OF THE 'CUT'/ FEATURE AND THE SURROUNDING NATURAL.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF DITCH TERMINUS [140641]. FILL CONTAINED POORLY PRESERVED CBM FRAGMENTS (VERY SMALL) AND MEDIUM - LARGE HEAT CRACKED STONES. THE STONES WERE LOCATED AT OR NEAR THE BOTTOM OF THE FILL AND APPEAR TO HAVE BEEN DELIBERATELY DUMPED THERE. THE CBM IS SIMILAR TO THE CBM/POT FRAGMENTS FOUND IN OTHER FEATURES IN AND AROUND THE RING DITCH. THE CBM & HEAT CRACKED STONES WERE ALSO PRESENT IN OTHER EXCAVATED SECTIONS OF THE DITCH INCLUDING [140628] - SEE PLAN BRETCH ON 140641.
THE REST OF THE FILL APPEARS TO BE NATURAL INFILLING FROM LATER DIS-USE.

Refer to context 140641

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

The ditch was silty · a layer of natural soil has been removed in order to check if the ditch doesn't go deeper.
There was a test section ~~near the~~ on the NW ~~no~~ edge because the soil seemed to be slightly clayey, ~~which is~~ though nothing came up.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 657) Primary fill of LINEAR FEATURE [140658] IN SLOT 1 SE MOST EXPOSED END. (ADDITIONAL RELATIONSHIP SLOT DUE NE of this SLOT. See Sheet [140 658] for PLAN Sketch).

This fill fairly COMPACT whilST mattocking but equally friable once do the cylinder test of rolling Soil in hand.

Likely natural Silting up of a ditch. mottled with rooting. occasional lenses of gravel.

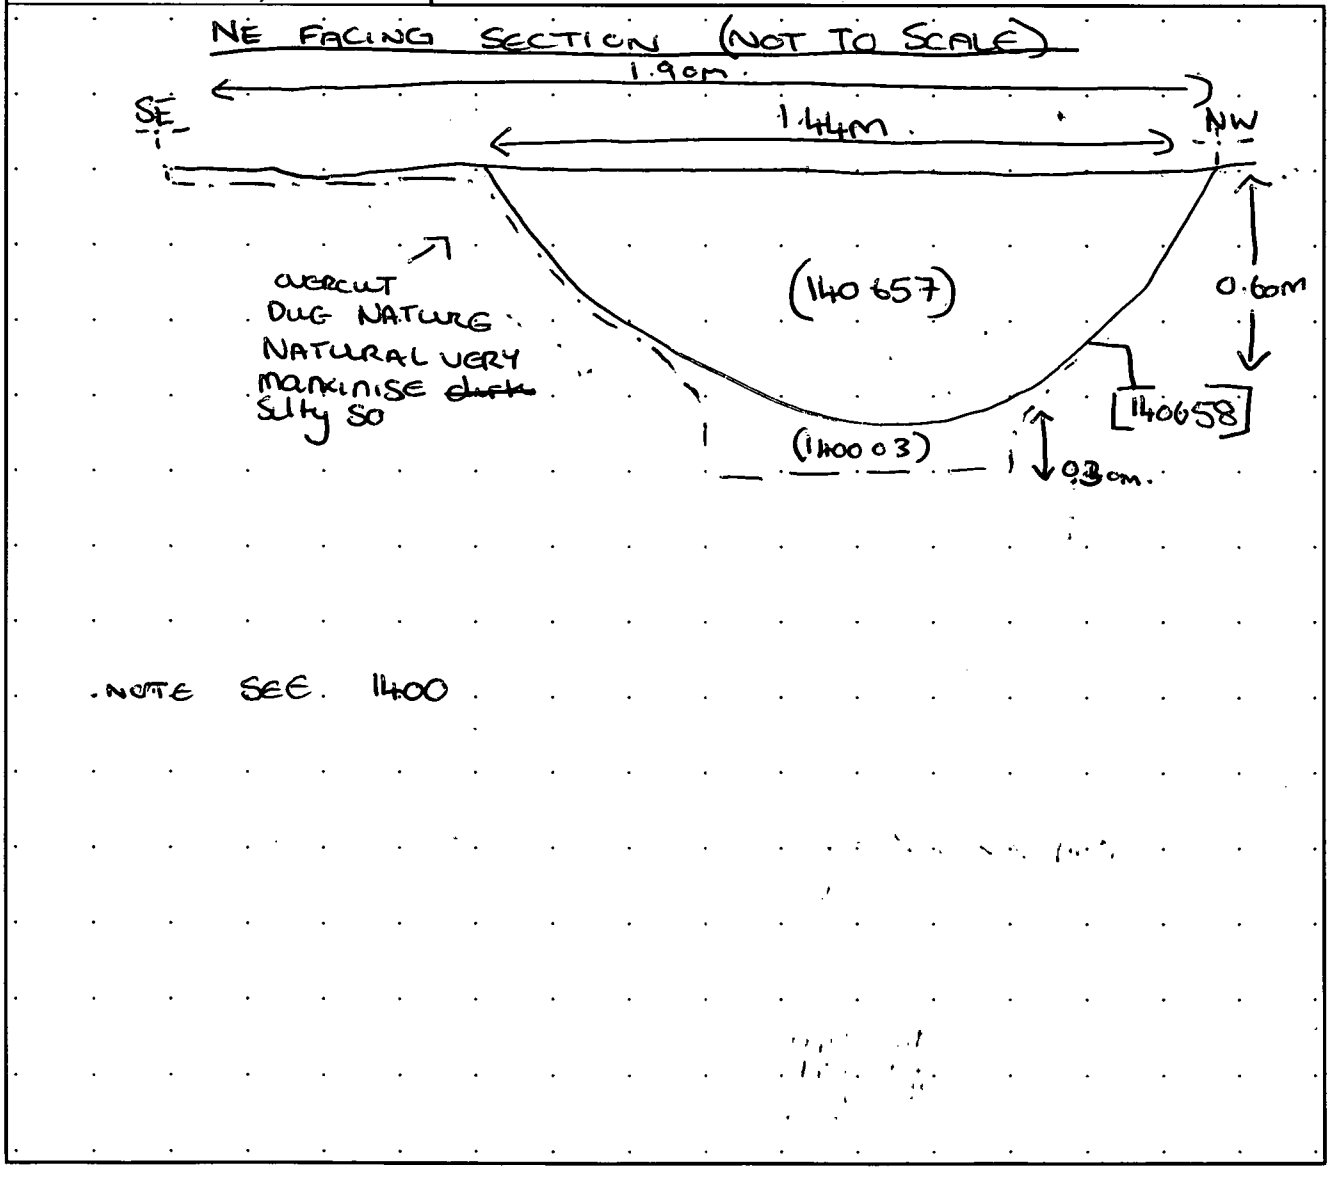

NOTE Roman POTTERY Rim fragment with a near base therefore SUPPORTS DITCH is ROMAN in Phase.

NOTE BAGGED LITHIC IAM 99.9% it is not true worked lithic but has Slight edging that IS SUSPECIOUS SO BAGGED INCASE IAM WRONG.

~~OGET SAMPLE SHEET~~

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

[140658] is cut of linear very characteristic of a ditch. Located SW corner of site ~~[illegible]~~ running NE - SW it runs along side [140643] and intersects with it See sheet (140686) for info on relationship slot Due NE where both intersect.

Roman pot rim suggests Roman phase ditch. the strong character of profile also supports This note unfortunately slightly overcut on purpose To ensure based and there was no redeposited primary fill but it was found natural very silty and Marxinise.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Full composed of very thick black clay. Remains of decomposed wood and what appeared to be the corner of a modern day sweet wrapper recovered from pit along with many pieces of chalk. Probably of post-medieval origin

Refer to context [140660]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

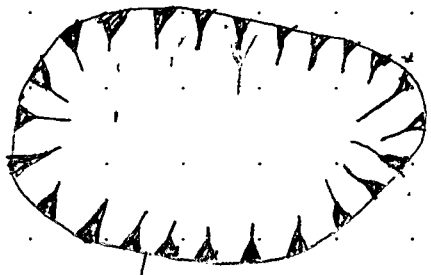

Cut Feature is of uncertain use but is probably of post-medieval origin. Sides are particularly steep and the feature itself is relatively small making it difficult to excavate. ~~Its of result~~ The feature is also very deep and as such has not been fully excavated. It seems to be out of place on a Roman site and doesn't appear to be related to any other feature.

Refer to context

CUT SHOWN IN SECTION OF N-S ALIGNED DITCH, CUT IS SHOWN ALONG THE LENGTH OF THE DITCH AND THEREFORE THE BASE IS SHOWING AS UNEVEN, THE SIDES ARE NOT DETERMINED AS THEY ARE CUT ~~IN THIS SECTION~~ BY A PARALELL DITCH, WHICH MUST BE OF LATER CONSTRUCTION. THIS DITCH HAS BEEN REEVALUATED AND IS NOW SEEN TO CONTINUE ROUND AND CUT SMALLER DITCH [140766] BUT IS THEN CUT BY DROVEWAY DITCH [140949]. THIS APPEARS TO BE PART OF A RING DITCH WITH DOUBLE DITCH STRUCTURE. THE OUTER DITCH [140669] IS DEEPER THAN ITS PARALLEL

Refer to context 140669

(any further details that may be important for understanding the context, including items marked * overleaf)

F/O DITCH [140708] FILL APPEARS TO BE A MIX OF NATURAL SLUMPING ON THE DITCHES SOUTH FACE AND DUMPED MATERIAL INCLUDING POTTERY. IT APPEARS TO BE CONTEMPORARY WITH THE OTHER SLUMPING/ ~~FILL~~ ARTEFACT DUMP FILLS (140705) AND (140706) DUE TO SIMILAR NATURE OF ARTEFACTS. THE FILLS ~~ARE~~ HAVE DIFFERENT COLOURS AND COMPOSITION DUE TO THE NATURAL ~~BEING~~ CHANGING FROM GRAVELLY SILT TO CLAY-SILT AT AROUND 40CM DEPTH.
~~(~~ (140706) AND THIS FILL (140707) ARE RICHER IN FINDS THAN (140705) INDICATING THAT MOST FINDS WERE DUMPED ON THE SOUTH SIDE OF THIS DITCH - OCCUPATIONAL AREAS ~~WERE~~ MAY HAVE BEEN SOUTH OF THE DITCH.

Refer to context 140708

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

SUB-RECTANGULAR FEATURE ADJACENT TO DITCH [140708]. APPEARS TO HAVE BEEN CREATED BY AN 'IMPRESSION', POSSIBLY A FALLOW AREA WHERE LIVESTOCK WERE/TROD THE GROUND DOWN. THERE IS NO CLEAR CUT OR STRUCTURAL FEATURES. RELATIONSHIP TO DITCH IS NOT CLEAR BECAUSE BOTH FEATURES WERE CUT BY THE GULLY [140703]. IT MAY BE CONTEMPORARY WITH THE DITCH BUT LACK OF FINDS SUGGEST IS FROM PERIOD OF DIS-USE.

Refer to context: 140709 FOR PLAN SKETCH

ADDITIONAL INFORMATION

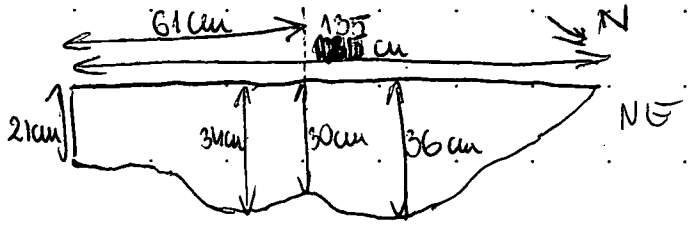

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of light gray sandy layer, becoming darker about 12 cm deeper where possibly pit overcut the ring ditch but it might be also caused by the depth.
Hole fill seemed to be same, light to mid gray colour, with charcoal, small pices of ceramics, and some stones.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

pit cutting into ring ditch, with moderately to gentle sloping edges, the natural layer underneath is mix of yellowish clay and brownish sand with gravel, the SE side was boxed to catch relation between pit, ring ditch and pipe trench. It seems like pit cut into ring ditch, and pipe trench cut into pit.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ditch running E-W across area of excavation. Ditch cuts [140731] and [140729] immediately south of [140734]. The fill of [140734] is cut by [140731]. May form part of doorway or boundary ditch system. If [140731], [140729] and [140735] reflect episodic renewal of similar ditch course, [140734] would represent the earliest alineation of the boundary.

Refer to context (140729)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

No finds, as with all the other slots put into the other ditches that surround this slot.
Slightly more clay in this layer than the one below.
Also gravel/sand edges to the ditch.

Refer to context

EVEN LOOKING - VERY SIMILAR IN COLOUR + TEXTURE TO (140794) SO IT'S DIFFICULT TO SEE WHERE ONE END + THE OTHER BEGINS

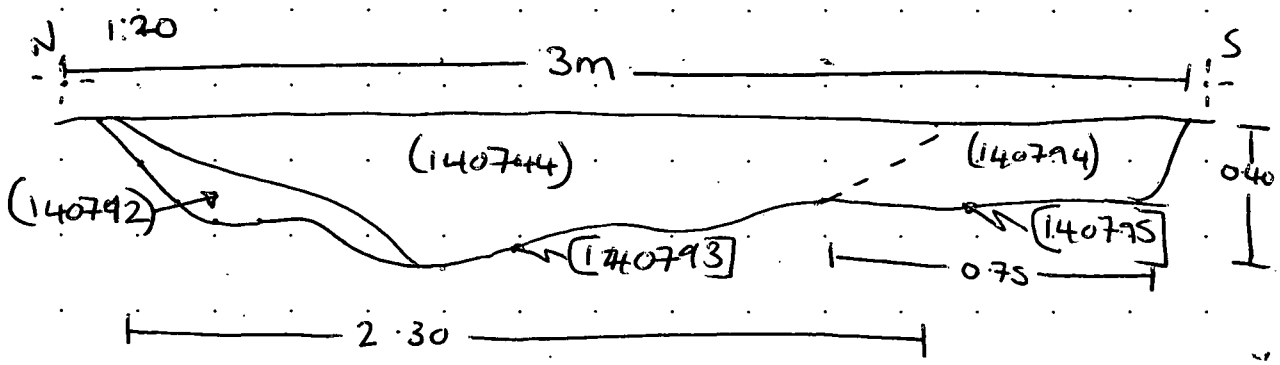

SANDY LENS AT BASE OF FILL COULD BE DUE TO SETTLING WHEN FIRST DEPOSITED

STONES TENDED TO BE A MIX OF ANGULAR + ROUNDED, SOME LARGE (OVER 0.15M) MAY HAVE BEEN THROWN IN AS THE DITCH WAS FILLING. POSSIBLE FIELD CLEARANCE

SOME IRON PANNING IN THE NORTH OF THE DITCH AT BASE

Refer to context 140744

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

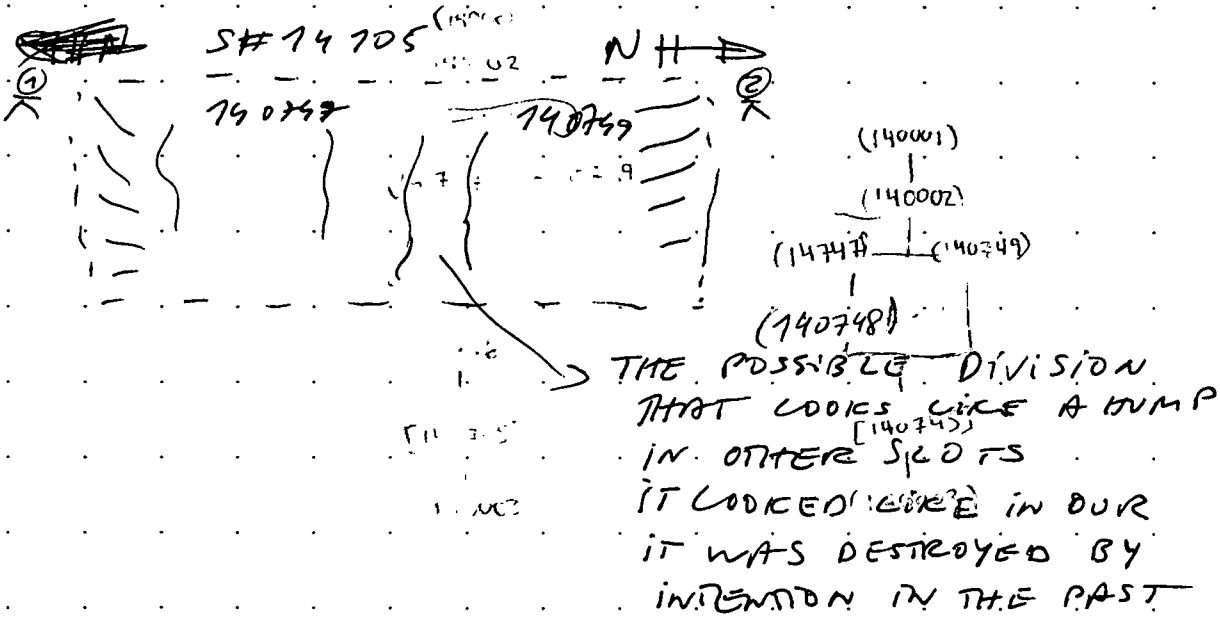

Cut of a ditch. Contained possibly ~~four~~ four fills in total. Closest to the bottom is (140746) which is a fill that is noticeably lighter and less clayey than the fill above called (140747)

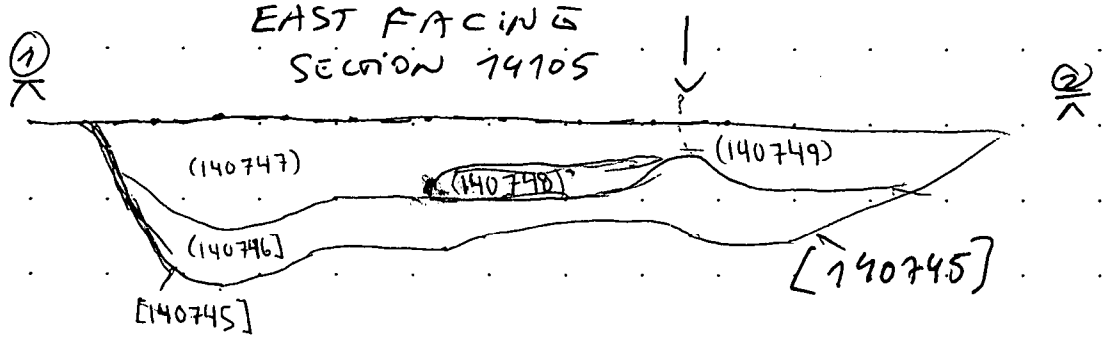

In the middle of the feature there is a small darker area that could be its own fill. In the northern part of the feature it is possible that (140747) cuts off to form a second ditch (140749).

THE CUT RECORDS THE JUNCTION OF TWO DITCHES RUNNING E-W ON THE SITE. IN THE SLOT

Refer to context 140745

SKETCHES

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

The lower fill of gully [140776]. An accumulation of silty sandy clay at the base of the gully. It is lighter - an orange-brown colour, similar to the natural and therefore probably a re-deposited natural fill in the base. There are occasional angular flints within the fill which are probably stones that have eroded in from the sides when the soil was dumped on either edge of the gully.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

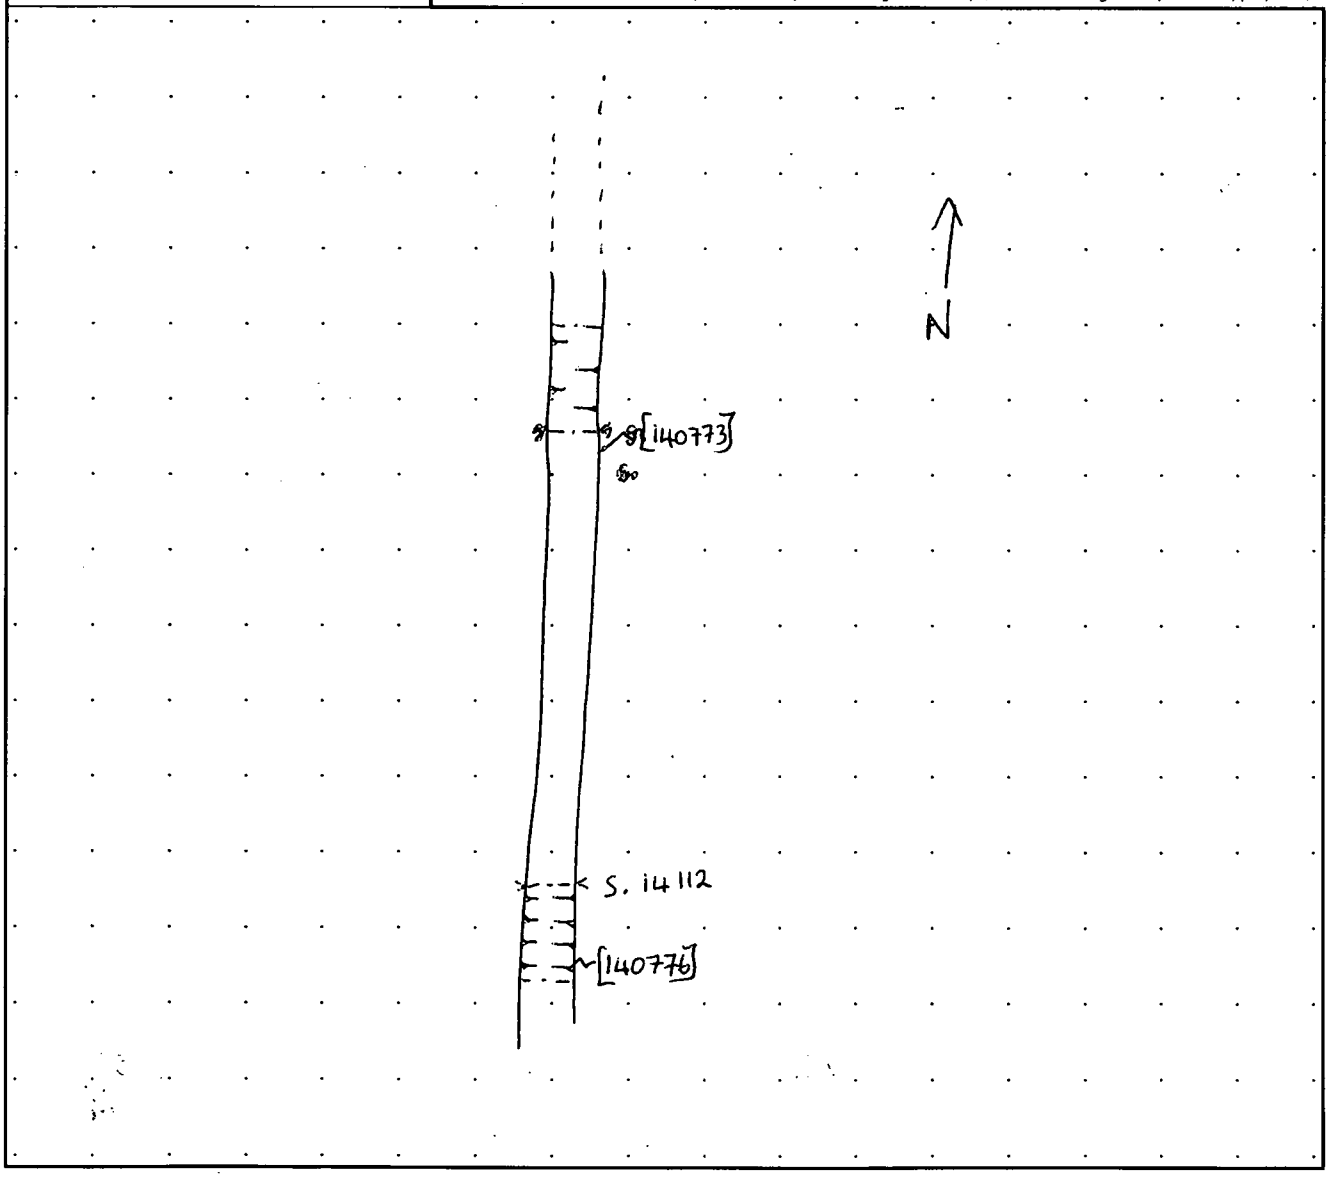

Cut of a small gully, aligned north - south which continues north and south beyond the limit of excavation. Function unclear but it lies parallel to gullies to the east and west, also aligned N-S.

This section of gully contains two fills and is located 10m to the south of [140773] which is much lower and therefore only contains the lower fill.

The long length of the gully may suggest some sort of field boundary.

Refer to context

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

A very gently sloping cut which is irregular at the S-side. This irregularity could actually be one or two other features/ditches but these would be unclear. Hence this irregularity was included in the interpretation of only one cut on the S-side of the section. Looking at the neighbouring slot a few metres away, there did not seem to be such an irregularity. Also, the fill (140780) appeared to be continuous.

Overall, this section/slot was very difficult to be certain over as all the fills are mostly only different in terms of clay or stone content. If there were colour differences, they were too subtle.

Refer to context (140779)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Oval shaped pit located to the east of ditch [140776] and near the limit of excavation. The cut of the pit is relatively well defined suggesting the feature is likely anthropogenic in origin.

Refer to context (140814)

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

A CUT OF A DITCH, PART OF THE SAME DITCH AS CONTEXT [140743], [140825] AND [140768].

FOUR DIFFERENT TYPES OF NATURAL SOIL PRESENT AT THE BASE OF THE CUT.

THE SOUTHERN EDGE OF THE CUT MERGES INTO 5-8 CM DEEP DEPOSITS WHICH ARE PROBABLY THE RESULT OF PLOWING.

Refer to context

ADDITIONAL INFORMATION
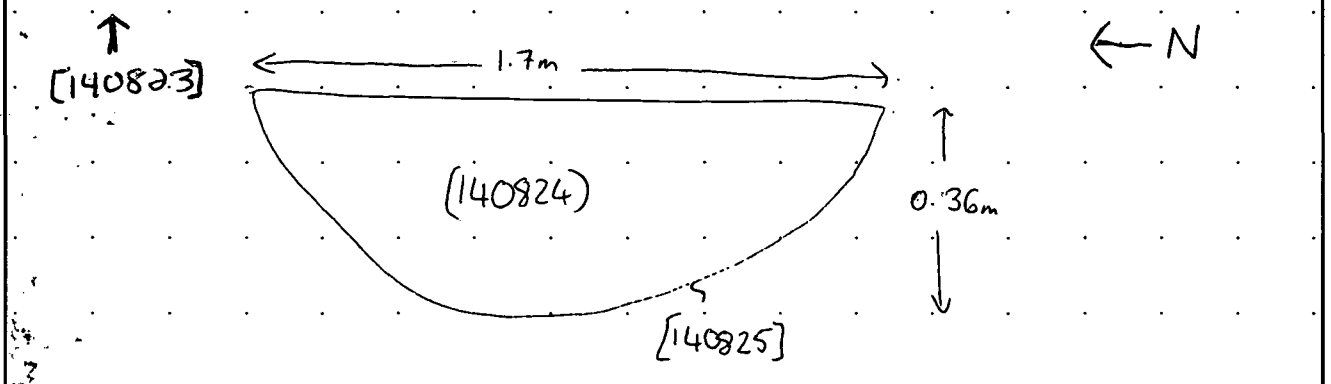

*(any further details that may be important for understanding the context, including items marked * overleaf)*

[140 849] Possible cut.
→ INITIALLY IT SEEMED TO CORRESPOND WITH WESTERN EDGE OF POSSIBLE FURROW SHOWN BELOW.
→ AFTER EXTENSIVE CLEANING THIS IS NOW UNLIKELY, AS 'FURROW' TERMINATES AT NORTH EDGE OF [140915]
→ WHILST DIGGING MORE NORTH INTO FEATURE THE INTERFACE WITH NATURAL CHANGED INTO MORE SANDY CLEAN PURE NATURAL. BASE SLIGHTLY IRREGULAR AS PLAN SHOWS.
→ UNCERTAIN IF IT IS MAN MADE OR NATURAL MUST BE MAN MADE DUE IT CLEARLY CUTTING [140 85]
→ FILL (140 848) DISTRUBED BY ROOTING BUT SEEMS FAIRLY SOLID SO MUST BE BACKFILL RATHER SILTING UP.
→ IT SEEMS TERMINATE WITHIN DITCH [140851].
→ LIGHT CHANGED AND BOUNDARY AND INTERPRETATION CHANGED [140849] IS NOW EDGE OF E-W LINEAR OF DRIVEWAY CORRESPONDS WITH [140851] MAY BE SAME AS (CHANGE IN PASTE).
