ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Shallow ditch running roughly E-W across site located immediately to the south of ditch [140820]. Given the orientation of the ditch, it is likely the same as [140865] located to the West of the slot. The profiles of [140865] and [140905] are very similar

Refer to context (140904)

1400967-1400989

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140911) is clearly distinct from (140848) but may not be deliberate manmade fill. Character very natural so could be grassy bearder / bondary / animal activity, natural infilling of impression.

UNCERTAIN! See Sheet (140850) for Sketch.

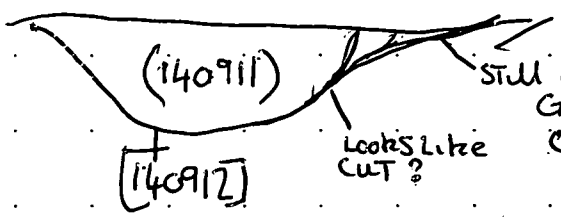
~~See~~ [140912] ~~Refers~~ Sketch shows Terminus Profile: Gravelly clayey Sand silting up of gully North of Linear [140851]

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

See [140912]

For ^ W Face Section of [140912] and associated features (Full) see Drawing # 14147.



Actual Cut. could be Still Fill but ~~Likely~~ Subsoil / Trample not as ~~Select~~ Gravelly. but must be ~~often~~ actual cut AND Soil interface more diffused? less gravel for certain could be composition of one fill or could be subsoil bioturbation

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140914) Primary fill of [140915] but not it corresponds only with the W face section of this slot.

- Could be Slump
- Could also relate to (140916) This can't be ruled out but would creat a strange profile of the truncating ditch. It is difficult in this section as contexts are diffused no clean distinction as in E face see (140916).
- ~~Note (140914) Could be~~

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

(140 916) is likely PRIMARY FILL of [140917].

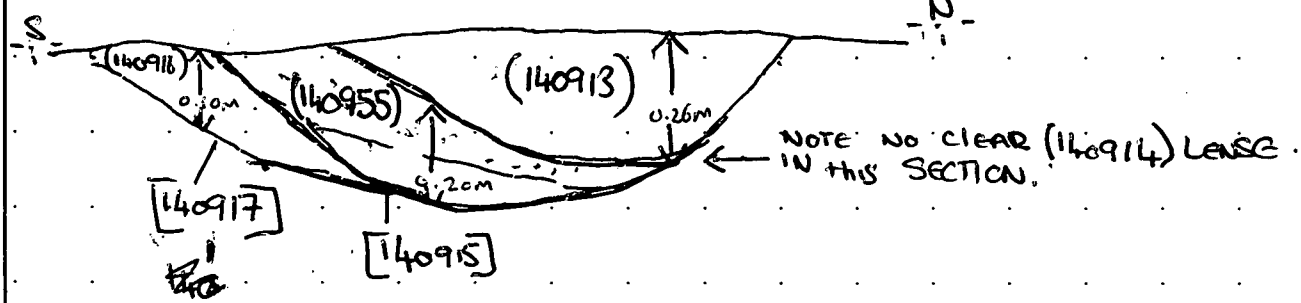
. IT differs in section FACES in thickness E FACE it is 0.1cm AND ~~AND~~ IN W FACE IT IS 0.7cm thick. This may be EXPLAINED IN PLAN. the SIDE ON EAST IS STEPPED LEDGE THAT DISSIPATES TOWARDS WEST SIDE which is MORE GRADUAL SUGGESTING A TURN (Slight) OR REFLECT THE TRUNCATION PROCESS by LATER DITCH [140915]

. Silty → Natural PROCESS but could be delibrate back fill.

Refer to context

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

E FACE SECTION Sketch. (NOT TO SCALE).



So Above Sketch MIRRORS E FACE SECTION IN CORRESPONDING 140811. #1420

SEE DRAWING 1419 FOR THIS SLOT. W FACING SECTION IT IS MORE DIFFUSED AND GRAVELLY SLUMP LAYERS MORE SPREAD OUT DIFFUSED WITH (140913) edges MAKING INTERPRETATION DIFFICULT.

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is a section of a drainage gully which runs along the eastern side of the trench. Other areas of the gully were excavated (see below). Due to the confusing nature of the fill and base of the gully it was decided that a sondage should be cut into the feature to ascertain whether the base was fill or natural. The sondage proved that both soil compositions were natural and the change was the result of variation in the geology.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

- SINGLE FILL OF DITCH [140935] WHICH CUTS DITCH [140938]
- STANDS OUT FROM ADJACENT FILLS DUE TO ITS VERY SANDY CHARACTER COMPARED TO MEDIUM SILTY CLAYS
- IT IS ALSO A BROWN COLOUR COMPARED TO THE GREYS ADJACENT.
- MODERATE STONE CONTENT – MEDIUM SUB ANGULAR PEBBLES – MOSTLY FLINT. – FAIRLY WELL SORTED – IS ALSO A KEY FEATURE OF ITS CHARACTER.

Fill of pit [140586]. Dark colour indicates likely anthropogenic deposition of burnt material and CBM within the pit. Occasional gravel and flint.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION *(any further details that may be important for understanding the context, including items marked * overleaf)*

Part of a series of intercutting boundary ditches.

Cut from East to West, running North - South.

A small Cu Alloy fragment of what looked like a bracelet was discovered in fill (141021).

This slot was placed just before the canes, as they turn E-W they appear to became shallower.

7 ditches in total with the latest and outermost ditch containing a very dark fill.

All finds suggest these ditches are Roman in date.

SKETCHES *(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)*

See 141000 for Sect
141001 for Plan

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Possibly result of natural processes as the base is uneven, however the edges are clear and bone was recovered from the fill [141029].

Refer to context [141030]

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

As there are many boundaries it is possible they are being filled and replaced, they equally could be naturally filling overtime with the boundary re installed elsewhere.

No Sign of bank material in the ditch.

Refer to context 141035

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Gradual infilling, sterile leached fills.
No anthropogenic properties to the fill observed. Probably quite old (Pre-Roman) however seemingly entirely natural.

Refer to context

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Large posthole containing two fills. (141076) is mid brown grey, charcoally, silty clay which appears to be where the post would have been. (141077) is mid grey orange clayey gravel redeposited natural seemingly used as packing. Pottery looks potentially Roman, finds were only recovered from the upper fill (141076). Does not appear to be associated with other features - no other postholes in the vicinity only furrows and two pits: [141066] + [141068]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

An irregular linear cut running roughly N-S, but perpendicular to modern field boundary. Very shallow & ephemeral ditch.

Truncated by Roman ditch [141083].

No finds recovered.

Refer to context [141084]

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Pit containing 3 fills, a basal fill (141123) of grey silty clay which may be natural infilling, a middle fill of (141122) of charcoally silty clay containing Roman (?) pottery which seems to be deliberate backfill and an uppermost context (141121) of grey silty clay natural silting. This is cut by another pit [141113] containing similar fills. A basal fill (141127) of redeposited natural seemingly slumped in from the side, overlying (141127) is (141126) a grey silty clay of natural infilling, overlying (141126) is (141125) a charcoally silty clay probably deliberate backfill, and an uppermost fill (141124) of grey silty clay natural infilling. No obvious signs of occupation nearby but there are 2 other Roman pits immediately to the south and other Roman activity (field system) in the vicinity.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

The fill was difficult to distinguish from the surrounding natural soil. This made excavation difficult. A small piece of charcoal was discovered but nothing else. There are surrounding features of a similar size and shape to this pit but these are currently unexcavated. It may be that this pit is related to these other features and may aid in later analysis

Refer to context 141130

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Most lucrative fill of Roman Pit/well.

Deposit was getting more organic so sample was taken.

Extent unknown due to limitations of depth and water table.

Finds included animal bone, pottery and pudding quern stone.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Upper fill of ditch [141179] consisting of a sandy clay fill. Evidence of burning indicated by the frequent inclusion of charcoal in the fill and burnt clay. Finds included a small amount of animal bone and pottery. The pottery suggests the feature to be Roman in date. This fill was sampled because of the evidence of burning. The sample may contain a slight mix of fill ~~(1)~~ (141177) and (141178) because the clay was diffuse. The possible mixing of fills in the sample had to be avoided.

Lower fill of ditch [141179] consisting of a sandy clay fill with inclusions of charcoal although less frequent than in upper fill (141177). Burnt clay is still present indicative of some burning. The only finds were occassional pottery sherds possibly Roman in date.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [141179] containing two sandy clay fills with evidence of burning suggested by the burnt clay and frequent charcoal inclusions. Pottery indicates the feature to be Roman in date. Evidence indicating a use for the feature is limited however the finds including animal bone and pottery, and the evidence of burning possibly suggest the feature to have been used to discard waste material.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

A huge amount of natural slumping material from NW.
Some fragments of bone and a worked stone was recovered from fill.
Perhaps bank material?

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Ditch running NE-SW into the baulk to the north. This ditch is cut into another, much larger ditch [141193]. They may be two phases of a Roman boundary ditch but there is little pottery from either. Below [141193] a feature with vertical side to the SE has been partly excavated [141217]. Excavation was stopped due to unsafe depth but the vertical side would indicate perhaps a watering hole, one of two this side of the water main but there are others closer to the water main on the north side. Articulated bone (possible ~~horse~~ deer) ~~bone~~ was found in the waterlogged clay (141219) in this possible watering hole.

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

Ditch cut - flat base and multiple fills - Truncates ditch [141199] to the SW, and possibly truncates natural feature [141207] to the NE.
- Not clear whether this ditch ~~was~~ cuts-dates the natural feature or not.

Refer to context [141207]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of natural feature. Part of a loose amorphous area of silty discolouration to N & E of ditches [141199] + [141204]. Could be a spread of material in some areas, but more centrally most likely to be result of natural processes – ie: a large tree-throw or hollow, which was then infilled. Excavated to a length of 1.80m, in a 1m slot → this is only ≤ 20% of whole feature, or less. Very uneven base.

(stopped at an arbitrary section.)

Refer to context: [141207]

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Circular steep sided cut. Appears to be lid 4 pits making a square shape.

Purpose is unclear. However, there is a concentrated charcoal clump in top fill.

No finds were recovered.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for ditch, curving from W to N.
- Possibly part of an enclosure-ditch bisected by a modern N-S furrow, & also associated with a NW-SE running channel (however their relationship is obscured by the furrow)

Refer to context [141320]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

posthole cut into ditch [14134 5]. Possible that it held a post in the ditch, not palisading as such (no evidence for this in other ditch slots) but maybe for a fence in the field system. Or, it may be associated with postholes [14124 8] and [14126 1] as part of a structure?

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

Substantial Roman boundary ditch dug in slots at 10m intervals across site. ~~A single ditch~~ The boundary comprises a single ditch in the NE up to just after this slot ~~where soon~~, thereafter 3 or more intercutting ditches form the boundary getting deeper and more substantial to the SW.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for large boundary ditch running NE-SW. Flat base. Slots inserted every 10m → apparently shallowing toward the SW. Part of 3 intersecting ditches - relationship difficult to determine, however, most likely that this boundary ditch truncates ditch [141389] and 3 then truncated by [141393] to East.

Refer to context [141391]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

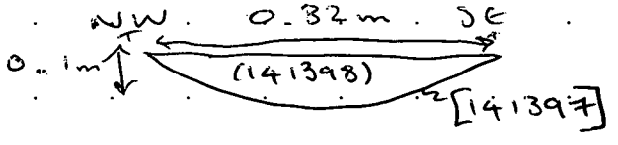
Shallow gully, very full of finds (burnt Roman pot). Seems to have been truncated by the machine, perhaps truncated completely away to the NE? Possibly associated with another gully to the NW very similar in profile, parallel, and also full of Roman burnt pot. No evidence of in situ burning or any other burnt material in the fills.

Refer to context

SKETCHES

(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)



see [141384] for sketch plan.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS FIRE IS THE RESULT OF AN "IN SITU" BURNING. WE MAY SUPPOSE THAT THE FIRE WAS MADE FOR FOOD PREPARATION EVIDENCE SUCH AS POSSIBLY BUTCHERED BONE FRAGMENTS AND A FAIR AMOUNT OF COOKWARE SHERDS POINT TOWARDS THIS INTERPRETATION. IN ADDITION THE FILL CONTAINS A VERY LOW AMOUNT OF CHARCOAL FLECKS AND ASH

Refer to context [14 14 70]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Second fill of [141483]
A really mixed fill, most likely due to the ~~coll~~ collapse of the S side of the pit. Its main component is the gravel that resembles the natural, only mixed with the other fills.

Refer to context

Cut of quarry pit.
The shape of the cut is ~~~~ irregular. Most likely two phases of use: the first one with the fill (141482), after they wanted to extend the sides of it the S side collapsed in the second phase. The reason for it most likely because they dug under the sides of the pit. Evidence of it can be found on the S, E, W sides were undercut is visible on the sides.

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Natural silty infilling of the ditch. Mid-dark brown in colour. Fairly clean - no finds recovered.

Other slot (dug 17/01/17 by Callum C.) contained either in-situ burning evid., or dumped burnt material. More patches of burnt material evident from surface. (To be investigated.)

Refer to context (141485)

SKETCHES

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

(But for shallow linear ditch (another slot assessed to N = [14142])

Truncated along W edge by ditch [14484].

Truncated W edge of ditch cornes [14489]. (This is less certain — this is only suggested by the fill of [14486] being slightly darker than that of [14488].)

Refer to context [14486]

SKETCHES

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Sub rectangular pit located in the southeastern area of TEA14B. Profile of ditch is well defined and steepsided and similar in character to the pit located to the west of [41524] suggesting a potential association. Concentration of degraded CBM in fill suggests use of pit as site of construction/burning episodes as does charcoal.

Refer to context (141521)

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of initial ditch.

A N-S oriented linear ditch that's been truncated on top by a later recut [141528].

Not likely backfilled at the same ~~time~~ time. Most probably the fill of the ditch (141525) and the fill of the recut are the same.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of cut [141528]
It is the fill of the recut of the initial ditch. A deliberate backfill, most likely the same as (141525). On the S side by the slot the charcoal content was higher, and the bigger part of the animal bones came from this area of the fill as well.

Refer to context 141525

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

(any further details that may be important for understanding the context, including items marked * overleaf)

Upper fill of ditch [14539] cut by the likely re-cut [14536] on the northnesbern side of the fill. The composition of the fill with moderate gravel and flint ~~was~~ suggests that it was likely formed by periodic slumping and washing of sediment into the cut given similarities to the natural.

Refer to context (14539)

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Top fill of [141548].
A deliberate backfill of the pit with a lot of charcoal as inclusions, most likely the remains of burning, few pieces of cremated bone were found as well. Frequent pottery fragments were found in this fill.
On the top it's been affected by ploughing.

Refer to context 141546

Fill of pit [141994] with moderate flint and gravel inclusion. Cut by [141992]. Mottled character of fill suggests bioturbation.
Fill also cut by later posthole located on western edge of the pit.

Refer to context (141991)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill of cut [141602]

Fine ~~grained~~ clay, most likely a deliberate backfill of the ditch. Inclusions were very occasional pottery fragments on various depths, this is one of the reasons why most likely is a deliberate backfill. A relationship slot was excavated to establish the relationship between [141602] and [141605]. Visible only on the S facing section.

Refer to context

Fill of cut [141605]
Most wholly a deliberate backfill of the ditch. The finds came out only from the ~~part~~ fill of the ditch.
A relationship slot was excavated to establish the relationship between [141602] and [141605]. Visible only on the W facing section of the slot. One of the evidence that its cut is in fact a ditch terminus.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of cut [141605].
The lower fill of the cut. Its a compact clay, ~~grainy~~ its colour being light grey, but with ~~and~~ orange grey patches.
Most likely a deliberate backfill of the ditch, because the orangey patches's composition ~~resembles~~ and colour resembles the surrounding natural, prabably mixed with the grey clay to fill up the ditch.

Refer to context 141601; 141603

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Fill located on northern side of the profile of ~~the~~ pit [41609]. Composition suggests formation via silting and incursion of sediment into the cut likely as part of the initial natural infilling episode.

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Lower fill of pit [141609] containing moderate charcoal inclusions. Pot sherds and occasional large fragments of animal bone. This may indicate a deliberate anthropogenic dumping was involved in the formation of the fill.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Pit located to the north of pit [141594] and to the north east of [141598]. Profile is ~~stepped~~ moderate in slope. The colour and composition of the fills (141607) and (141606) are similar to [141597]. The dimensions and shape of the pit in plan is similar to pit [141598] although [141609] is markedly deeper.

(any further details that may be important for understanding the context, including items marked * overleaf)

Fill of cut [141616]

Deliberate backfill. Mottled, mixed fill the ~~is~~ silty clay is light grey with orangey patches, most likely because the iron content of the fill is very high.

Inclusions are coming from ~~the~~ various depths of the fill.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

compact, light orange - brown silty clay with inclusions of small pebbles

no archaeological finds

bottom fill of ditch terminus → quite similar to natural (just slightly more clayey) → might have silted into the ditch before the actual backfill

Refer to context [141623]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut for linear boundary ditch running NNW-SSE.
Concave base with relatively steep sides. (SE facing section was disturbed - as the NW facing section and part of the NE edge are truncated by an evd. trench.)
Part of Roman field system.
Silts have fairly diffuse edges - much natural mottling as the ditch was left open over a long time.

Refer to context: [141624]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

A small deposit of mid-dark brown-grey clay - natural inclusions. Very similar to (141627) above, but with slightly more charcoal inclusions. May be the result of setting w/in the same context?

A large-ish stone in section, & animal bone recovered.

Iron slag.

*This form is incomplete if fields marked with ▼ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Lower fill of cut [141632] which likely represents initial infilling of cut via slumping and water transport of ~~natural sediments~~ sediments into cut. Relatively intact portion of pottery vessel recovered from eastern side of fill which may be Roman (2nd/3rd century?). Single (pig?) phalange recovered from base of fill. Quantities of pot suggests sustained dumping episodes during infilling process.

Refer to context (141629)

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut located north of [141623] and east of [141640]. It is unclear on the surface whether this cut represents a ditch or a pit. The cut continues south and terminates in the sub-circular cut [141623], which is therefore either a ditch terminus of the southernmost extent of a large pit. Pottery recovered indicates a Roman date. The continuation of the feature to the north is unclear and poorly defined on the surface.

Refer to context (141629)

Cut of feature that ~~forms~~ truncates the eastern side of ditch [41636]. Surface continuation of the feature to the north is unclear therefore it is uncertain whether the cut represents the terminus of a shallow ditch orientated N-S or a shallow pit. ~~Most terminates~~

Upper fill of pit recut [141665]. Composition of fill suggests formation by gradual natural infilling likely by gradual inwashing of fine grained sediments

Fill of pit [141664]. Dark colour of fill suggests formation via accumulation of organic matter within cut. Occasional pot sherds recovered. ~~Very~~ Very small fragments of CBM located within the fill suggesting some deliberate backfilling involved in the formation of the fill. Due to the narrowness of the cut and the water table being reached. the fill could not be excavated any further beyond the depth indicated upon the section drawing.

Ref (141662) for plan and sectn.

Cut of deep vertically sided pit that could be a small well? The feature could not be excavated beyond >0.75m as the water table was reached and the cut was to narrow to proceed any deeper.
A possible re-cut [141666] is visible in section.

Ref (141662) for plan and secn.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Lower fill of [141676]
It is a mixed fill, light orangeish-brown with patches of mid grey, bath clay. Inclusions are frequent small pebbles, occasional charcoal flag, and very occasional pottery and animal bone fragments. Most likely a deliberate backfill. Apparently the sides collapsed at one point. Noted because of that reason as well.
Not fully excavated because the water was coming in. Reached the depth of 0.8 m. At one point gonna use the orga.

Refer to context: 141674

ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of irregular pit, most likely a well.
The W side is slaping steep. Most likely the E side was like that as well but ~~on~~ even the section drawing is visible that side collapsed at one point. Collapse was noticed on the S side as well. Most likely circular well at one point, but after disuse was backfilled with (141675) and on top of it was sprayed evenly (141674) to even out the surface. Evidence for been a well was the fact that clean water was filling it up, while excavating it.
On the SW side it was affected by animal tracks. Impossible ~~to~~ to decide, if during being in use or after disuse.

Refer to context

Fill of cut [141689].
Single fill of its cut, with frequent stones as inclusions of various sizes and types. Even metamorphic rock was found inside the fill, probably brought from quite a distance.
Other inclusions were moderate amount of pottery

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Single fill of cut [141709]

A light-brownish grey silty clay fill, with occasional pebble inclusions. Other inclusions were ~~as~~ very occasional chalk, charcoal and pottery frag. Animal bones were found as well, but too fragile to collect.

Relationship that was dug to establish the relationship between [141709] and [141711]. Not fully excavated

The finds were found at various levels, a deliberate backfill of its cut.

*Refer to context

cut of ditch-terminus.
Exposed the S side of it in the relationship slot, not fully excavated.
The base is unexcavated and the S side is narrowly down, evidence of it to be a ditch-terminus.
It truncates the SW side of cut [1417]

Refer to context

Single fill of [141711]

A light grey clay fill, with very occ. pottery fragments, that were found on the top part of the fill.

A natural infilling of its cut.

Truncated on the W side by cut [141709].

Not fully excavated.

Refer to context | 141708

*This form is incomplete if fields marked with ◤ are empty. PTO for additional information (and describing all items marked with *) and sketches.*

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

soft, mid grey-brown silty clay with inclusions of pebbles and stones

finds of animal bone

clearly distinguishable from natural and other fills

similar to top fill (141762) of ditch [141764], but continuing over pit [141769] cutting this ditch
⇒ seems like a fill/layer "overlaying" the whole conglomeration of features

Refer to context [141769]

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

Cut of linear feature [illegible] running NW - SE - Majority of fills appear almost natural, redeposited? Some patches of silt, possible rooty? Maybe caused by remnants of hedge row boundary.

Refer to context

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

- Upper fill of [14852]
- Pottery & animal bone found in fill <14031> & <14032> and other smaller sherds of pot under this context (labled)
- Due to finds being found it is safe to assume it was deliberately backfilled.
- Finds believe to be from the Roman period.

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

THIS CONTEXT CORRESPONDS TO A PIT. DUE TO AN ERROR IN THE EXCAVATION, IT WAS NOT POSSIBLE TO SHOW THE SECTION - IT WAS DUG 100%.
HOWEVER, IT IS POSSIBLE TO SAY THAT THIS PIT CUTS GULLY [ ]. IT'S DARK FILL WITH A MODERATE PRESENCE OF CHARCOAL SUGGESTS THAT THIS MIGHT HAVE BEEN USED AS A WASTE DEPOSIT. THE POTTERY RETRIEVED FROM IT MAKES POSSIBLE TO SPECULATE THE DATING OF THE FEATURE: IT SEEMS TO BE SOMEWHERE BETWEEN THE LATE IRON AGE AND THE ROMAN PERIOD.

POST PIPE FILL CONTAINING OCCASIONAL, BUT SOMETIMES LARGE PIECES OF CHARCOAL.

THE LOWER PART OF THE FILL IS MORE SANDY WITH FEWER STONES BUT NO CLEAR LINE OF DIFFERENCE CAN BE SEEN.

NOT IN SITU BURNT POST BUT RATHER BACKFILL BROUGHT IN.

AFTER 100% EXCAVATION MORE OF THE POST PIPE SURVIVED IN THE NW SIDE OF THE POST HOLE (SEE SKETCH BELOW)

*(any further details that may be important for understanding the context, including items marked * overleaf)*

ONE OF A SERIES OF POSTHOLES FORMING 2 PARRAL LINES. IT IS UNLIKELY THAT THEY FORM A STRUCTURE AS THEY ARE CLOSE TOGETHER BUT THEY MAY HAVE BEEN USED AS SOME FORM OF STOCK MANAGEMENT. THEIR PROXIMITY TO THE DROVEWAY COULD INDICATE THEY WERE USED TO FILTER OR SLOW CATTLE OR SHEEP BEFORE BEING SPLIT INTO PENS/PADDOCKS. THIS INTERPRETATION ONLY WORKS IF THEY ARE CONTEMPARY, BUT THEY ARE APPROXIMATELY 1M APART AND THERE IS A GAP ALONG THE SW SIDE

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Ø. Slumping of natral gravel.

the NW corner was augered and a new All was seen going beyond 0.5m from the excavated level. Therefore the watering hole is at least 1.40 m deep and the bottom of the cut [1915] was not excavated fully.

the fill identified with the auger was a dark bluish grey clayey silt with occ. pebbles and organic material (like wood/bark)

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is the cut for a probable watering hole. Blueish grey fill indicates silt settling in a wet environment. Finds of fills are limited, but include lithics, animal bone, worked stone, & pot (?Roman). The feature is cut into natural, consisting of sand & sandy gravel.

Not fully excavated at the bottom. ~~The~~ Due to ~~data~~ water ~~re~~ flooding in the feature the dug bottom was augered up to 0.5m deeper and the natural was not found therefore the cut must be deeper than 1.4m.

(any further details that may be important for understanding the context, including items marked * overleaf)

FILL OF SHALLOW DITCH. IT IS THOUGHT THAT THIS SLOT IS LOCATED IN CLOSE PROXIMITY TO THE DITCH TERMINUS. THE VERY LIMITED THICKNESS OF THE DITCH FILL IN THIS SLOT LIKELY STRENGTHENS THIS ASSUMPTION

OTHER THAN THE INCLUSIONS OF MODERATE, SMALL SUB-ANGULAR PEBBLES, THE MATERIAL IS QUITE STERILE.

SAME AS FILL (141916)

Refer to context

CUT FOR CURVE-LINEAR SHALLOW DITCH. 2nd OF TWO SLOTS EXCAVATED ALONG THE E-W AXIS OF THE DITCH.
MORE SHALLOW THAN SLOT FURTHER WEST [141917], LIKELY DUE TO THE CLOSE PROXIMITY OF WHAT IS THOUGHT TO BE THE DITCH TERMINUS

LIKELY SAME AS [141917]

[redacted] ON SOUTHERN EDGE, OVERCUT IN ORDER TO OBTAIN TRUE EXTENT

Refer to context

ADDITIONAL INFORMATION
*(any further details that may be important for understanding the context, including items marked * overleaf)*

Ditch longer than 5m but edges uncertain. A slot of 1m was dug to establish shape/depth of cut.

this cut runs NW-SE alongside with cut [141929] on the NE side.

On the SE corner of the slot a poss. tree root/bore hole was found. It was investigated but the lack of cut allowed to established it is not a man-made feature.

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is the cut of a ditch running NE-SW ↓, at this area of excavation, is parallel to the NE of [141927]. It is filled with a ~~sandy~~ clayey silt fill (141928) & may represent a boundary or drainage ditch. It is to the SW of several postholes [141880 → 141900] & is to the SW of the doorway. There are no finds to date the ditch.

CUT FOR MEDIUM SIZED SUB ROUNDED PIT / POST-HOLE. LOCATED IN CLOSE PROXIMITY TO RING DITCH [141807], WHICH SUGGESTS POSSIBLE RELATIONSHIP

ALSO SIMILAR IN SHAPE AND SIZE TO [141855], LOCATED ON OPPOSITE SIDE OF RING DITCH, APPROX. TO THE NW.

LIKELY CUT FOR STRUCTURE / COMPONENT ASSOC. WITH CURVE-LINEAR RING-DITCH.

Refer to context: 141932, 141933

SKETCHES

~~Ditch~~ ~~fill~~, ~~truncated by ditch cut [141979]~~
This is the fill of the most recent ditch, one of 3 excavated in the slot. The ~~fill~~ fill is a clayey silt & varies from light greyish blue to light greyish brown. In the fill were occ - mod prehistoric pot as well as one ?mudstone that was collected with finds. The fill also contained mod charcoal, which is likely an artefact of the ditch being dug into a pit [141942] that contained frequent charcoal. The upper region of the fill, particularly toward the SW, had mod - freq pebbles included, likely incorporated from the surrounding natural (140003). The ditch curves toward the SE ~~ditch~~ at the southern end of the slot.

Pot suggests premed - ?bronze age? / early roman?

CUT OF A DITCH, TRUNCATING PIT CUT [141942]

This is the cut of a ditch, running NW-SE & curving towards the SE as it runs southward. This is the most recently constructed ditch in the slot, & it truncates pit cut [141942]. The fill (141939) suggests that the cut was gradually filled in after disuse. This was likely a drainage or boundary ditch, cut into gravel on the western edge, & the fills of previous pits [141942] & ditches [141980], [141984] on the Eastern side

Refer to context

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

This is the fill of a pit, truncated by ditch cut [141940]. The fill is dark blackish grey & contains v. frequent charcoal, as well as burned pot & animal bone. Occ stones also present - including fairly flat stones v 5cm & length & width. This appears to be a dump of burned material, the cut of which [141942] is made into an earlier ditch [141980]. Subsequently, this pit was truncated by ditch cut [141940]

pot suggests pre-med - ?bronze age/early Roman?

Cut of a ~~ditch~~ pit ~~ditch~~, truncated by ditch cut [141940].

This is the cut of a pit that contains fill with v. freq. charcoal, a burned pot a animal bone. It was likely constructed to dump this waste. It truncates ditch cut [141980] / fill (141979) & is truncated by later ditch cut [141940]. The cut appears to have followed the NW-SE edge of ditch cut [141980].

PRIMARY FILL OF CUT FOR DITCH [141972].
MATERIAL IS QUITE MIXED, AND ALSO CONTAINS AN OCCASIONAL AMOUNT OF SMALL SUB-ANGULAR PEBBLES.
LARGE QUANTITY OF POTTERY SHERDS PRESENT, WITH SOME LATER ROMAN POTTERY IDENTIFIED.
LATER DISTURBED BY RECUT FOR DITCH [141973]

LIKELY REPRESENTS DELIBERATE BACKFILL.
RISING WATER MADE EXCAVATION DIFFICULT.

FINDS ALLOCATED TO THIS CONTEXT. ALTHOUGH SOME MAY BE ASSOCIATED WITH EARLIER/LATER EVENTS
ANIMAL BONE (DISARTICULATED) AND POTTERY SHERDS

Refer to context 141972

CUT FOR LINEAR DITCH RUNNING APPROX E-W. GENERALLY APPEARS "U" SHAPED IN FORM, WITH FLAT BASE COMING ONTO BEDROCK.
APPEARS TO BE EARLIER THAN LINEAR TO THE NORTH [141961], WHICH LIKELY TRUNCATES THIS DITCH.
LIKELY THE SAME AS CUT [141950]
2nd OF TWO SLOTS INSERTED TO INVESTIGATE THIS DITCH, ALONG WITH A FURTHER RELATIONSHIP SLOT [141966]

Refer to context: 141972

SKETCHES

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is what appears to be the natural infilling of ditch [141980]. Only patches of the fill are present in the slot, as the fill was largely truncated by a pit [141942] & a later ditch [141940]. Overall, few finds were recovered from the ditch. It was likely a boundary or drainage ditch. The fill toward the southern end has more charcoal in it, likely due to some mixing with the fill of [141940] during construction of the pit &/or ditch [141940].

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

This is the cut of a NW-SE ditch, that predats pit [141940] & ditch [141940]. In the sides a large portion of this ditch is truncated by the pit, although a ~~small deep feature~~ remained & formed the base of the pit. This was also likely a boundary or drainage ditch, & it yielded few finds, including animal bone & pot.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Redeposited brick earth located between ditches [141940] & [141980]. The deposit is similar to ~~[illegible]~~ (141982), ~~However, it is likely not the same as (141982), as the cut [141984] appeared to terminate~~ further toward the ~~E~~ edge of the slot. Based on the section (see D. 14392), this is most likely slumping of redep. brick earth into ditch [141940].

* ~~It~~ Ditch [141984] appeared to terminate (it was partially truncated) toward the ~~E~~ edge of the pit. However, the alignment of (141981) & (141982) indicate that they could be the same deposit, suggesting that ditch [141984] originally extended further westward into the slot, prior to truncation by ditch(es) [141980] ~~[illegible]~~ [141940].

Redeposited ~~hard earth~~ natural.

(141982) is a redeposited natural fill, the top layer in ditch [141984]. It is likely the same as (141981) – see ✓s for reasoning. The layer is void of cultural finds & ~~topsoil~~ is relatively thick ~~in~~ (up to 30 cm). It seals in the primary fill (141983) of the ditch, & it formed the ~~overall~~ upper half of the E wall for ditch [141980].

Refer to context | 141981

This is a fill of a large ditch running E-W, identified in the E wall of the slot. The fill of the ditch [141984] was cut by [141980], a ditch running NW-SE. One animal bone was recovered from the fill. The ditch & its associated fills (141982, 83) extend beyond the NW, SE, & E LOEs of the slot.

pot suggests pre-med... bronze age/ Roman?

ADDITIONAL INFORMATION

*(any further details that may be important for understanding the context, including items marked * overleaf)*

this is the cut of a ditch running NE-SW & truncated by ditch cuts [14180] ~~& pit cut~~. The ditch is the earliest in the sequence of features in the slot. It contains 2 fills – (14182), which is redeposited natural, and (14183), which is the primary fill. Finds thuss far are only animal bone. It is possible that this is a boundary ditch, based on its large size.

ADDITIONAL INFORMATION
(any further details that may be important for understanding the context, including items marked * overleaf)

Cut of ditch [141988].
Similar to [141978].
Running N - S and terminated on the S (c. 6m) cut → of W - E. Cuts by furrow.
Moderated curving sides, U-shape base
Sides clear with natural (140003).

Refer to context [141988]

SKETCHES
(consider: location plan, detailed plan showing relationships, section showing fills/deposits as appropriate)
