# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

A charcoal layer found within ditch [161235], although it was not present in either sections. Photographed and sampled.

Dimensions: N-S 0.70 m. - E-W 0.35 m. Found at a depth of 0.60 m. and 0.80 m off from the west facing section.

See below

Deposition: Although it is likely to be a deliberate dump of material, it is certainly mixed in with the clayey fills above and below it. It is contained in a localised area near the west facing section.

Finds/Inclusions: Aside from the large amount of charcoal no other material was retrieved.

Stratigraphy Sits on top of Sill (161237) and is physically capped by (161238) +

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

This is a secondary fill of ?posthole cut [161287]. Surrounding the cut is a sandy layer or deposit, and it's highly likely that this represents a natural infilling of the posthole cut, as the fill is composed of a mix of sand (~70%) + charcoal (~30%). Any pot recovered appears to be degrading.

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

Probable dumped layer which puts the pit out of use. A fair amount of charcoal present, which was then sampled. Good amount of evidence for unapping activity. A flint core F16303 and some debitage and flakes. Likely to be Bronze-Age in date. Seemingly capped by one of the later fills of the ring ditch.

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

THIS IS THE FILL OF A PIT THAT IS A CREMATION. THE FILL IS A MIX OF CHARCOAL, CREMATED BONE, BONE FRAGMENTS AND ~~DISINTEGRATED~~ DEGRADED POT. THE BONE IS HUMAN AND MOST LIKELY ADULT. ~~THE~~ THE PIT IS ONE OF MANY CREMATIONS FOUND WITHIN A PREHISTORIC BURIAL MOUND. THERE ~~WAS~~ WAS A LOT OF BONE THAT HAD NOT BEEN CREMATED FULLY SO POTENTIALLY COULD BE MORE THAN ONE INDIVIDUAL. ~~ON~~ ON THE EDGE OF THE PIT THE MATERIAL IS RED SO THE CREMATED REMAINS WOULD HAVE BEEN PUT IN THE PIT HOT, CAUSING IN-SITU BURNING OF THE EDGES. NO OTHER FINDS

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

This is a ~~large~~ relatively concentrated + large deposit found toward the center of the pit - it wasn't originally visible when the section for (161110) was sketched. It ~~looks~~ seems to be organic material (wood, leather?) & has been collected (wrapped in cellophane & gauze) with some remnants collected in a bucket.

Refer to context (161104), (161110)

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

This is a charcoal deposit found toward the middle & east edge of ditch slot [61490], parent context [61303]. Lithics + pottery were collected prior to bulk sampling. The deposit is quite thin & seems to disperse toward the west & south, where charcoal fragments are found more dispersed (as opposed to the concentrated region in the center & east edge of the ditch slot).

# ADDITIONAL INFORMATION

(any further details that may be important for understanding the context, including items marked \* overleaf)

Cut of the N-S linear which ~~for~~ is truncated by the re-cut [161314] as the RING-PITCH.  
 It's edges rise up to 0.40m below the top of the slot and then flatten out, going underneath the E and W facing section.  
 Cuts through a possible-post-hole near the base of the feature.  
 Also represented in the SF facing section as [161318]  
 A pit was cut through it's top fill as well as a re-cut [1613~~24~~24] = [161316]  
 Lithic finds suggest a Bronze-Age date.
