

Marine shell from OXPETE14

Author: Rebecca Nicholson

Four contexts included small amounts of oyster (*Ostrea edulis*) shell, all hand recovered during the excavation. Most valves are fragmented and not measurable. A single left valve in good condition (20g) and a shell fragment (5g) came from context 12. Context 13 included 5 valve fragments (13g) and a single partial right valve (6g) came from context 14. Context 20 includes 3 degraded left valves (20g) and a complete, fairly small, right valve (7g) in good condition.
