Abstract

This report presents the results of an archaeological evaluation undertaken by AOC Archaeology Group at the Renaissance Golf Club, Archerfield, East Lothian in advance of the construction of new residential lodges, associated access and gardens.

No structures, features, deposits or artefactual material of any archaeological significance were found by the evaluation. No further works are considered necessary.

1 INTRODUCTION

1.1 Development Background

- 1.1.1 An archaeological evaluation was required by YM Architects on behalf on their client, The Renaissance Golf Club at Archerfield, to address the potential archaeological impact of a proposed development involving the construction of two residential lodges with associated access and gardens at Archerfield, East Lothian (Planning Application No. 11/00874/P).
- 1.1.2 The area lies within the administrative jurisdiction of the East Lothian Council (ELC), who are advised on archaeological matters by the East Lothian Council Archaeology Service (ELCAS). ELCAS required an intrusive archaeological evaluation of the development area. The works were conducted under the terms of a *Written Scheme of Investigation* (AOC 2012), approved by ELCAS on behalf of the Council and carried out in accordance with *Scottish Planning Policy* (2010) and *PAN 2/2011 Planning And Archaeology* (2011), in order to determine the nature, extent, condition, date and significance of any archaeological remains within the proposed development area.

1.2 Location

1.2.1 The proposed development site is located in the Archerfield Estate, situated to the north-west of Dirleton village, two miles west of the town of North Berwick. It is centred at NGR: NT 4999 8514, and occupies an area of approximately 0.8 ha. To the immediate south of the development is the historic site of Elbottle (Figure 1).

1.3 Archaeological Background

- 1.3.1 A desk-based assessment carried out by AOC Archaeology Group (AOC 2004), as part of the development of the Archerfield Estate identified a number of sites of archaeological significance. A walkover survey was subsequently carried out adding to the number of known or possible sites and thereby informing the approach, scope and scale of a designed landscape survey, later evaluation, and restoration or conservation works. The designed landscape survey (DLS) (AOC 2005) recorded and also added to the sites previously identified in the walkover survey in more detail.
- 1.3.2 The evaluation found remains of a wall not seen during the initial walkover survey or the designed landscape survey (DLS) and was noted and recorded. Post-medieval boundary wall remains forming further extensions to walls recorded during the DLS were uncovered and duly recorded. One 20th century feature in the form of an infilled ditch forming a ridge which crossed the 18th Green and may relate to World War II coastal defences was recorded. Trenches placed across the supposed path of the old beech lined avenue drive to Archerfield House failed to find any evidence of the old drive although traces of a late track were seen cutting across the western end of the avenue (Hindmarch 2006).
- 1.3.3 More substantial remains were exposed during the evaluation in the vicinity of the 16th green, spreading over the extent of the 17th hole. Open area excavation of these areas revealed the remains of up to eight buildings of medieval date with associated enclosures and field boundaries possibly dating from the 15th century or earlier up to the 18th century. The building remains stood up to a metre in height and contained internal divisions, occupation deposits, flagged floors and

yards. It is presumed that these remains formed part of the lost medieval village of Eldbotle (Hindmarch 2006).

1.3.4 In 2001 trenches dug by Headland Archaeology just south of Eldbotle Wood and approximately 100 m to the east of the AOC excavation revealing stratified midden deposits, ephemeral stone structures, drain culverts and a variety of medieval ceramic sherds. All this material indicated occupation in the immediate area although no clear domestic structures were found.

2 OBJECTIVES

- 2.1 The objectives of the evaluation, as set out within the *Written Scheme of Investigation* (AOC 2010) and approved by ELCAS, were:
 - i) to determine the character, extent, condition, quality, date and significance of any buried archaeological remains within the proposed development area
 - ii) to advise and implement an appropriate form of archaeological mitigation, such as excavation, post-excavation analyses and publication, given the infeasibility of preserving the archaeological material *in* situ, should significant archaeological remains be encountered.

3 METHOD

- 3.1 The evaluation was achieved through the excavation of linear trenches using a tracked 360° excavator equipped with a 2 m wide toothless ditching bucket. Initially it was proposed to evaluate an 8% sample of the 0.8 ha site. This would have resulted in a total of 640 m² (combined trench basal dimensions) being excavated. However the presence of trees reduced this figure resulting in a total of 600 m² (combined basal dimensions) being actually dug (Figure 2).
- 3.2 Excavation was undertaken in shallow units/spits until the first significant archaeological horizon or natural drift geology was reached. All machine excavation was supervised by an experienced field archaeologist. All potentially significant archaeological features were cleaned and defined prior to sample excavation to determine their significance.

4 RESULTS

4.1 Introduction

- 4.1.1 The evaluation was conducted on 8th February 2012. The weather conditions during the evaluation were dry and clear allowing for good archaeological visibility..
- 4.1.2 The various data gathered from the evaluation are presented as a series of appendices:

Appendix 1: trench descriptions; Appendix 2: photographic register; Appendix 3: reproduces the 'Discovery & Excavation in Scotland' entry.

4.1.3 Eleven trenches of varying length and orientation were opened across the site and all showed similar profiles comprising of a topsoil of soft dark brown sand varying in depth between 0.2 m and 0.3 m. This overlay a clean soft yellow sand, (presumably wind blown) up to 0.4 m in depth overlying natural compact yellow sand. No archaeological features or deposits were found within any of the trenches nor were any significant small finds noted (Plates 1, 2 and 3.)

Plate 1: Trench 1 from north-east

Plate 2: Trench 5 from North

Plate 3: Trench 11 from north-west

5 CONCLUSION

5.1 No significant archaeological structures/features or deposits were identified by the evaluation. Scanning of the spoil arisings from the evaluation trenches failed in identifying any residual artefactual material. The significant balance of probability is that the development area is archaeologically sterile.

6 **RECOMMENDATIONS**

6.1 As no significant archaeological features or artefacts were identified it is recommended that no further archaeological works are required. This recommendation will require confirmation confirmation by ELCAS on behalf of East Lothian Council

Section 2: Appendices

APPENDIX 1: Trench Descriptions

Trench 1

Dimensions	30 m x 2 m
Orientation	NW – SE
Depth of trench	0.5 m
Depth of topsoil	0.3m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 2

Dimensions	18 m x 2 m
Orientation	NW – SE
Depth of trench	0.6 m
Depth of topsoil	0.3 m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 3

Dimensions	22 m x 2 m
Orientation	NNW – SSE
Depth of trench	0.6 m
Depth of topsoil	0.3 m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 4

Dimensions	30 m x 2 m
Orientation	NNW – SSE
Depth of trench	0.8 m
Depth of topsoil	0.3
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 5

Dimensions	20 m x 2 m
Orientation	WNW – ESE
Depth of trench	0.8 m
Depth of topsoil	0.3 m
Features	None
Significant Features	None
Sub Soil	Compact yellow sand
Finds	None

Trench 6

Dimensions

30 m x 2.0 m

Orientation	WNW – ESE
Depth of trench	0.5 m
Depth of topsoil	0.25 m to 0.3 m
Features	None
Significant Features	None
Sub soil	Compact yellow sand
Finds	None

Trench 7

Dimensions	30 m x 2.0 m
Orientation	WNW-ESE
Depth of trench	0.6 m
Depth of topsoil	0.3 m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 8

Dimensions	30 m x 2.0 m
Orientation	NW – SE
Depth of trench	0.6 m
Depth of topsoil	0.3 m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 9

30 m x 2.0 m
WNW – ESE
0.6 m
0.2 m to 0.3 m
None
None
Compact yellow sand
None

Trench 10

Dimensions	30 m x 2.0 m
Orientation	WNW – ESE
Depth of trench	0.6 m
Depth of topsoil	0.2 m to 0.3 m
Features	None
Significant Features	None
Subsoil	Compact yellow sand
Finds	None

Trench 11

Dimensions	30 m x 2.0 m
Orientation	E - W
Depth of trench	0.7 m
Depth of topsoil	0.3 m
Features	None

Significant Features	None
Subsoil	Compact yellow sand
Finds	None
