Data Structure Report

Summary

represents the This report results of an archaeological watching brief undertaken by AOC Archaeology Group on ground within the Scheduled Ancient Monument of Grey Stanes Stone Circle, Scone. The work was undertaken to monitor the potential impact on the archaeological resource during groundwork associated with the repair of malfunctioning communications equipment within the former area of the Scheduled stone circle. The work was commissioned by Openreach.

All of the excavations undertaken was within ground previously disturbed during the insertion of the existing apparatus that was being replaced by these works. No features relating to the stone circle were identified and no other significant archaeological features or artefacts were recorded.

1 INTRODUCTION

1.1 **Project Background**

- 1.1.1 Openreach commissioned AOC Archaeology Group to undertake an archaeological watching brief on the excavation of a single test-pit to house a BT joint box, during works associated with the repair of malfunctioning communication equipment, within the Scheduled Ancient Monument Grey Stanes Stone Circle (NMRS: NO12NW28).
- 1.1.2 The scheduled ground around Gray Stanes Stone Circle site affords it statutory protection under the Ancient Monuments and Archaeological Areas Act (AM & AAA 1979). As such, Scheduled Ancient Monument Consent was applied for and granted (4th July 2009) and works were carried out according to these standards.

1.2 Location

1.2.1 The single test-pit was excavated within a private residential garden, within the Scheduled Ancient Monument of Grey Stanes Stone Circle, Scone, Perth and Kinross (NGR: NO 1327 2646).

1.3 **Archaeological Background**

- 1.3.1 The Grey Stanes Stone Circle (NMRS N012NW 28; NGR: NO 1327 2646) lies on the west of New Scone, Perthshire. It originally comprised six rounded boulders, with another barely protruding from the ground. The stones were temporarily removed and then re-reacted (set in concrete) during the course of building a housing estate in the early 1960s (Stewart 1965). The circle comprised seven stones on an original internal diameter of about 5.4 m. Many of the stones had been 'keeled' to aid their stability and they were graded with the largest stones on the western and south-western arcs. An urn containing a token cremation (dated 3150 +/- 150 bp) had been set upright in a pit at about the centre of the circle (Stewart 1965).
- 1.3.2 The scheduled ground around Gray Stanes Stone Circle site affords it statutory protection under the Ancient Monuments and Archaeological Areas Act (AM & AAA 1979).

2 **OBJECTIVES**

- 2.1 The objectives of this work were:
 - i) to safeguard the archaeological resource from any adverse impacts created by ground-works necessitated the repair works;
 - to report on the results of the watching brief. ii)

Plate 1 Showing existing apparatus exposed and extent of ground disturbance

3 **METHODOLOGY**

- All ground-breaking works associated with the repair works will be monitored by an 3.1 experienced field archaeologist. Ground-breaking works will amount to an area of approximately 0.65 m by 0.45 m by 0.35 m deep.
- 3.2 All monitoring was undertaken according to AOC Archaeology Group's standard operating procedures (Appendix 21). The palaeoenvironmental sampling strategy is detailed in Appendix 7, Section 7.11. All excavations were by hand.
- 3.3 A black and white print and digital photographic record of the archaeological works was taken (Appendix 1).

4 **RESULTS**

- The ground breaking works were excavated over a single day on 7th October 2009 in 4.1 variable weather conditions. Archaeological visibility was good throughout.
- 4.2 The single area of excavation measured approximately 0.65 m in length by 0.45 m in width by 0.35 m in depth. The top of the communications cable was also exposed. The test-pit was excavated through topsoil. The occurrence of a concrete foundation at the base of the test-pit demonstrates that the ground had been previously disturbed.

Plate 2 Showing excavations reinstated

4.3 No features relating to the Grey Stanes Stone Circle were identified and no other significant archaeological features or artefacts were recorded.

5 CONCLUSION

- 5.1 The archeological watching brief has demonstrated that all of the excavations undertaken was within ground previously disturbed during the insertion of the existing apparatus that was being replaced by these works.
- 5.2 No other significant archaeological features nor artefacts were identified and no further works are necessary.
