**An Archaeological Watching Brief
On land to the rear of 1 New Street,
Barlestone, Leicestershire
SK 427 056**

1. Summary

An archaeological watching brief was undertaken on behalf of Mr. P. Brewer by ULAS on land to the rear of 1 New Street, Barlestone, Leicestershire (SK427 056), during groundworks for a new residential dwelling. No archaeological deposits were identified, and finds were restricted to unstratified post medieval or modern pottery, clay pipe and a hone stone. The site archive will be held by the Historic and Natural Environment Team, Leicestershire County Council, accession no. XA.182 2007.

2. Introduction

This report presents the results of an archaeological watching brief, which was undertaken by ULAS on land to the rear of 1 New Street, Barlestone, Leicestershire (SK427 056). This work addressed the *Brief for Archaeological Attendance for Inspection and Recording (a watching brief) at land to the rear of 1 New Street, Barlestone, Leics.* issued on behalf of Hinckley and Bosworth Borough Council by Leicestershire County Council Historic and Natural Environment team as advisors to the planning authority (LCC, HNET 2006 hereinafter ‘The Brief 2007’). It followed the approved design specification (Appendix 4) and was carried out on behalf of Mr. P. Brewer during groundworks for a new dwelling. The site is on the street frontage within the historic core of the village.

3. Background

The proposed development site is located to the rear of 1 New Street, Barlestone, Leicestershire (SK427 056, figs. 1 and 2). It consists of an area of c.140sq. m., within which the proposals are to erect a detached dwelling with vehicular access. The geology comprises Boulder Clay with under and overlying sand and gravel (BGS Sheet 155). The site lies at a height of c.130 m above O.D.

The HER shows that the application area lies in an area of archaeological interest, and is sited on a street frontage (Newbold Road) within the historic settlement core of the village of Barlestone (The Brief 2007, Buckley 2006). Medieval pottery has been recovered within this village core, and further finds are reported from south of the village. Additionally, post-medieval archaeology is recorded in the village, including a 16th-century form of timber framing in a house on Main Street.

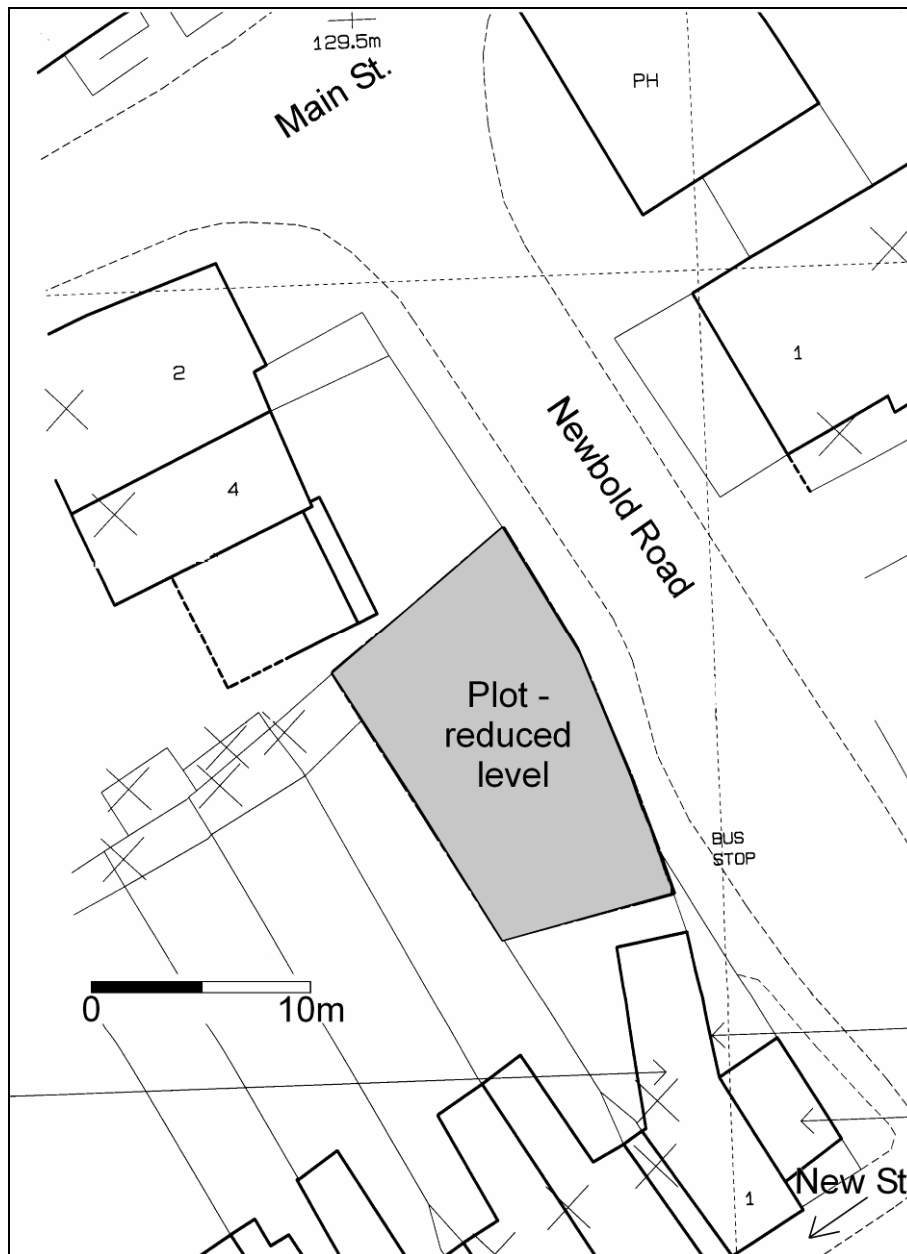

Figure 2 Plan location of development site, supplied by the developer

4. Aims and Methods

In response to a planning application (Plan App No.: 06/01277/FUL) the Senior Planning Archaeologist advised that planning be granted subject to a programme of archaeological work in the form of archaeological attendance (a watching brief) during the machine excavation of all groundworks. These groundworks include a reduced level strip of the site area, foundation trenches, an access ramp (vehicular access) and the provision of services.

5. Results

Fieldwork was carried out on 14-15/08/07, with groundworks being carried out using a 360° mechanical excavator with a ditching bucket for the stripping (see plate 1). Initial groundworks involved the reduction in level of the ground area by 1.25m, as the current ground level is considerably higher than the surrounding area. It was thought that this could represent made up ground of some antiquity, however there was no evidence for this during the machining. In fact the plot was relatively undisturbed, with only a large modern disturbance 3m in diameter and 3m from the frontage been observed. The ground consisted of 0.5m of turf and a dark and loamy sandy silt topsoil, pebbly at the base. This most likely reflects the former use of this plot as a vegetable garden. This layer sealed a light brown sandy clay subsoil 0.2-0.25m in depth, below which was an orangey-red gravelly clay natural. In the north of the site area i.e. the new vehicular access, a cobbled layer was seen below topsoil at a depth of 0.5m. This cobbling consisted of sub-rounded stones up to 7.5cm across and brick rubble, covering an area several metres square and most likely represents a surface associated with the modern outbuildings which survived just to the north-west (see plate 2). Further modern disturbance was noted in this area adjacent to the outbuildings. No archaeological features were observed over the stripped area, and only occasional unstratified finds were recovered of post medieval or modern date. These consisted of pottery, clay pipe and a hone stone.

Plate 1 General view of site area during reduced level stripping, looking south east

Plate 2 View of site during reduced level stripping, looking north west.

6. Conclusions

No archaeological features were identified during this watching brief. The plot appears to represent an area of relatively undisturbed higher ground on the frontage of Newbold Road, with activity of a modern date being associated with backyard activity from 1 New Street. Occasional finds of post medieval or later date would support the view of later settlement in this part of the village.

7. Archive

The site archive will be held by the Historic and Natural Environment Team, Leicestershire County Council, accession no. XA.182 2007. The archive consists of a watching brief record sheet, a contact sheet and CD of two digital photographs, a copy of this report, and finds of post medieval or modern date. The finds consisted of 4 sherds of pottery, 1 clay pipe fragment, and a hone stone.

8. Publication

A summary of the work will be submitted for publication in the *Transactions of the Leicestershire Archaeological and Historical Society*.

9. Acknowledgements

I am grateful to the client for assistance in this fieldwork. The project was managed by Richard Buckley of ULAS. I am also grateful to Heidi Addison and Deborah Sawday, also of ULAS, for finds identification.

2. The Finds

APPENDIX: THE POST ROMAN POTTERY AND OTHER FINDS FROM A WATCHING BRIEF AT BARLESTONE, LEICESTERSHIRE

Deborah Sawday

The Pottery was examined and recorded with reference to the ULAS fabric series (Sawday 1989), (Davies and Sawday 1999), (Davies and Sawday 2004). A fragment of clay pipe and part of a hone stone were also present.

The results are listed below. All the material was from unstratified contexts,

3. Design Specification

UNIVERSITY OF LEICESTER ARCHAEOLOGICAL SERVICES

Design Specification for archaeological work

Client:	Mr. P. Brewer
Site:	Rear of 1 New Street, Barlestone, Leics.
Development:	detached dwelling with access

Planning App No:	06/01277/FUL
Project:	Archaeological Watching Brief
Planning Authority:	Hinckley and Bosworth Borough Council

1. Introduction

1.1 Definition and scope of the specification

- 1.1.1 This document constitutes a written scheme of archaeological investigation for the above site, which ULAS proposes to implement on behalf of the Client in mitigation of any potential damage to buried archaeological deposits. This specification has been prepared in accordance with Planning Policy Guidelines 16 (PPG16, Archaeology and Planning, para.30).
- 1.1.2 All archaeological work will adhere to the Institute of Field Archaeologist's (IFA) Code of Conduct and Standard and Guidance for Archaeological Watching Briefs.

2. Background

2.1 Context of the Project

- 2.1.1 The site is located to the rear of 1 New Street, Barlestone, Nuneaton, Warks (SK 427056 Planning Application: 06/01277/FUL).
- 2.1.2 Planning permission has been granted for the erection of a detached dwelling with vehicular access., with archaeological conditions.
- 2.1.3 Leicestershire County Council, as archaeological advisors to the planning authority have requested that a watching brief is undertaken during the groundworks for the development.

2.2 Archaeological and Historical Background

- 2.2.1 The following background information has been taken from 'A Brief for Archaeological attendance for Inspection & Recording (a watching brief) issued on behalf of Hinckley and Bosworth Borough Council by the Historic and natural Environment Team, Leics. County Council:
- 2.2.2 The Leicestershire Sites and Monuments Record (SMR) shows that the application area lies in an area of archaeological interest. It is situated on a street frontage within the historic settlement core of the village of Barlestone (HER Ref: MLE2703). Medieval pottery has been recovered from the vicinity of the Three Tuns public house and further finds have been reported from an area to the south of the village (MLE 6783). The presence of early post-medieval archaeology in Barlestone is highlighted by a house in Main Street, where a rare 16th-century form of timber framing has been recorded (MLE 9248). Additionally, the 19th-century parish records for Barlestone and a map of 1841 refer to a pound being in New Street (MLE 9493) and the late post-medieval round house lockup still survives in the village (MLE 9492).
- 2.2.3 Groundworks are to comprise the excavation of footings for a 2-storey dwelling, the creation of access and the provision of services. The site is currently 1m higher than surrounding land and is to be reduced accordingly.

3. Archaeological Objectives

- 3.1 The main objectives of the excavation and watching brief will be:
 - To identify the presence/absence of any archaeological deposits.
 - To establish the character, extent and date range for any archaeological deposits to be affected by the proposed ground works.

- To record any archaeological deposits to be affected by the ground works.
- To produce an archive and report of any results.

4. Methodology

4.1 General Methodology and Standards

- 4.1.1 All work will follow the Institute of Field Archaeologists (IFA) Code of Conduct and adhere to their *Standard and Guidance for Archaeological Excavations* (1999) and *watching briefs*.
- 4.1.2 Staffing, recording systems, health and safety provisions and insurance details are included below.
- 4.1.3 Internal monitoring procedures will be undertaken including visits to the site by the project manager. These will ensure that project targets are met and professional standards are maintained. Provision will be made for external monitoring meetings with the Senior Planning Archaeologist, the Planning authority and the Client.

4.21 Archaeological Supervision and Recording

- 4.2.1 The project will involve the presence on site of an experienced professional archaeologist during groundworks.
- 4.2.2 During these groundworks, if any archaeological deposits are seen to be present, the archaeologist will record areas of archaeological interest. In the event of significant archaeological deposits being located there may be the need for additional time and resources to record these.
- 4.2.3 The archaeologist will co-operate at all times with the contractors on site to ensure the minimum interruption to the work.
- 4.2.4 Any archaeological deposits located will be hand cleaned and planned as appropriate. Samples of any archaeological deposits located will be hand excavated. Measured drawings of all archaeological features will be prepared at a scale of 1:20 and tied into an overall site plan of 1:100. All plans will be tied into the National Grid using an Electronic Distance Measurer (EDM) where appropriate.
- 4.2.5 Archaeological deposits will be excavated and recorded as appropriate to establishing the stratigraphic and chronological sequence of deposits, recognising and excavating structural evidence and recovering economic, artefactual and environmental evidence. Particular attention will be paid to the potential for buried palaeosols and waterlogged deposits in consultation with ULAS's environmental officer.
- 4.2.6 All excavated sections will be recorded and drawn at 1:10 or 1:20 scale, levelled and tied into the Ordnance Survey datum. Spot heights will be taken as appropriate.
- 4.2.7 Any human remains encountered will be initially left in situ and only be removed under a Home Office Licence and in compliance with relevant environmental health regulations. The owner, Leicestershire County Council, Heritage Services and the coroner will be informed immediately on their discovery.

5. Recording Systems

- 5.1 The ULAS recording manual will be used as a guide for all recording.
- 5.2 Individual descriptions of all archaeological strata and features excavated or exposed will be entered onto pro-forma recording sheets.
- 5.3 A site location plan based on the current Ordnance Survey 1:1250 map (reproduced with the permission of the Controller of HMSO) will be prepared. This will be supplemented by a trench plan at appropriate scale, which will show the location of the areas investigated in relationship to the investigation area and OS grid.

- 5.4 A record of the full extent in plan of all archaeological deposits encountered will be made. Sections including the half-sections of individual layers of features will be drawn as necessary, at an appropriate scale. The OD height of all principal strata and features will be recorded.
- 5.5 A photographic record of the investigations will be prepared illustrating in both detail and general context the principal features and finds discovered. The photographic record will also include 'working shots' to illustrate more generally the nature of the archaeological operation mounted.
- 5.6 This record will be compiled and fully checked during the course of the watching brief.
- 5.7 All site records and finds will be kept securely.

6. Finds and Samples

- 6.1 The IFA Guidelines for Finds Work will be adhered to.
- 6.2 All antiquities, valuables, objects or remains of archaeological interest, other than articles declared by Coroner's Inquest to be subject to the Treasure Act, discovered in or under the Site during the carrying out of the project by ULAS or during works carried out on the Site by the Client shall be deemed to be the property of ULAS provided that ULAS after due examination of the said Archaeological Discoveries shall transfer ownership of all Archaeological Discoveries unconditionally to the relevant Museum for storage in perpetuity.
- 6.3 Before commencing work on the site, a Site code/Accession number will be agreed with the Planning Archaeologist that will be used to identify all records and finds from the site.
- 6.4 During the fieldwork, different sampling strategies may be employed according to the perceived importance of the strata under investigation. Close attention will always be given to sampling for date, structure and environment. If significant archaeological features are sample excavated, the environmental sampling strategy is likely to include the following:
- A range of features to represent all feature types, areas and phases will be selected on a judgmental basis. The criteria for selection will be that deposits are datable, well sealed and with little intrusive or residual material.
 - Any buried soils or well sealed deposits with concentrations of carbonised material present will be intensively sampled taking a known proportion of the deposit.
 - Spot samples will be taken where concentrations of environmental remains are located.
 - Waterlogged remains, if present, will be sampled for pollen, plant macrofossils, insect remains and radiocarbon dating provided that they are uncontaminated and datable. Consultation with the specialist will be undertaken.
- 6.5 All identified finds and artefacts are to be retained, although certain classes of building material will, in some circumstances, be discarded after recording with the approval of the Senior Planning Archaeologist. The IFA Guidelines for Finds Work will be adhered to.
- 6.6 All finds and samples will be treated in a proper manner. Where appropriate they will be cleaned, marked and receive remedial conservation in accordance with recognised best-practice. This will include the site code number, finds number and context number. Bulk finds will be bagged in clear self sealing plastic bags, again marked with site code, finds and context numbers and boxed by material in standard storage boxes (340mm x 270mm x 195mm). All materials will be fully labelled, catalogued and stored in appropriate containers.

7. Report and Archive

- 7.1 The full report in A4 format will usually follow within eight weeks of the completion of the fieldwork and copies will be dispatched to the Client, Senior Planning Archaeologist; SMR and Local Planning Authority.
- 7.2 The report will include consideration of:-

- The aims and methods adopted in the course of the evaluation.
- The nature, location, extent, date, significance and quality of any structural, artefactual and environmental material uncovered.
- The anticipated degree of survival of archaeological deposits.
- The anticipated archaeological impact of the current proposals.
- Appropriate illustrative material including maps, plans, sections, drawings and photographs.
- Summary.
- The location of the archive.

7.3 A full copy of the archive as defined in The Guidelines For The Preparation Of Excavation Archives For Long-Term Storage (UKIC 1990), and Standards In The Museum: Care Of Archaeological Collections (MGC 1992) and Guidelines for the Preparation of Site Archives and Assessments for all Finds (other than fired clay objects) (Roman Finds Group and Finds Research Group AD 700-1700 1993) will usually be presented to within six months of the completion of fieldwork. This archive will include all written, drawn and photographic records relating directly to the investigations undertaken.

8 Publication and Dissemination of Results

- 8.1 The evaluation and watching brief report will be submitted to Leicestershire County Council for inclusion in the Sites and Monuments Record. A summary of the work will be submitted to the Transactions of the Leicestershire Archaeological and Historical Society. A larger report will be submitted for inclusion if the results of the works warrant it.
- 8.2 ULAS and the Leicestershire County SMR support the Online Access to the Index of Archaeological Investigations (OASIS) project. ULAS will complete the online OASIS form at <http://ads.ac.uk/project/oasis> on completion of the project and report if required. ULAS will contact Leicestershire County Council SMR prior to completing the form. Once a report has become a public document following its incorporation into Leicestershire County Council SMR it may be placed on a web-site. The Client should agree to this procedure in writing as part of the process of submitting the report to Leicestershire County Council SMR.

9. Acknowledgement and Publicity

- 9.1 ULAS shall acknowledge the contribution of the Client in any displays, broadcasts or publications relating to the site or in which the report may be included.
- 9.2 ULAS and the Client shall each ensure that a senior employee shall be responsible for dealing with any enquiries received from press, television and any other broadcasting media and members of the public. All enquiries made to ULAS shall be directed to the Client for comment.

10. Copyright

- 10.1 The copyright of all original finished documents shall remain vested in ULAS and ULAS will be entitled as of right to publish any material in any form produced as a result of its investigations.

11. Timetable

- 11.1 No start date has yet been provided for the groundworks. The duration of the watching brief will be dependent upon the time taken for the groundworks and the quantity and significance of the archaeological deposits revealed.
- 11.2 The report will be ready within three months of the completion of fieldwork. The on-site director/supervisor will carry out the post-excavation work, with time allocated within the

costing of the project for analysis of any artefacts found on the site by the relevant in-house specialists at ULAS.

12. Health and Safety

- 12.1 ULAS is covered by and adheres to the University of Leicester Archaeological Services Health and Safety Policy and Health and Safety manual with appropriate risks assessments for all archaeological work. A draft Health and Safety statement for this project is attached as Appendix 1. The relevant Health and Safety Executive guidelines will be adhered to as appropriate. The HSE has determined that archaeological investigations are exempt from CDM regulations.
- 12.2 A Risks Assessment form will be completed prior to work commencing on-site, and updated as necessary during the site works.

13. Insurance

- 13.1 All employees, consultants and volunteers are covered by the University of Leicester public liability insurance, £20m cover with St. Paul Travellers (policy no. UCPOP3651237). Professional indemnity insurance is with Lloyds Underwriters 50% and Brit Insurance 50%, £10m cover (policy no. PUNIO3605). Employer's Liability Insurance is with St. Paul Travellers, cover £10m (policy no. UCPOP3651237).

14. Monitoring arrangements

- 14.1 Unlimited access to monitor the project will be available to both the Client and his representatives and Planning Archaeologist subject to the health and safety requirements of the site. At least one weeks notice will be given to Leicestershire County Council Planning Archaeologist before the commencement of the archaeological investigations in order that monitoring arrangements can be made.
- 14.2 All monitoring shall be carried out in accordance with the IFA Standard and Guidance for Archaeological Field Evaluations.
- 14.3 Internal monitoring will be carried out by the ULAS project manager.

15. Contingencies and unforeseen circumstances

- 15.1 In the event that unforeseen archaeological discoveries are made during the project, ULAS shall inform the site agent/project manager, Client and the Planning Archaeologist and Planning Authority and prepare a short written statement with plan detailing the archaeological evidence. Following assessment of the archaeological remains by the Planning Archaeologist, ULAS shall, if required, implement an amended scheme of investigation on behalf of the client as appropriate.

Appendix 1

Draft Project Health and Safety Policy Statement

Watching Brief on groundworks at rear of 1 New Street, Barlestone, Nuneaton, Warks

1 Nature of the work

1.1 This statement is for an archaeological watching brief.

1.2 The work will involve observation of groundworks, and recording of any underlying archaeological deposits revealed. Works will comprise minimum removal of topsoil and a hand dug trench for drainage beneath the building. Overall depth for this is unknown. Where archaeological deposits are revealed they will be examined and excavated with hand tools (shovels, trowels etc). All work will adhere to the University of Leicester Health and Safety Policy and follow the guidance in the Standing Committee of Archaeological Unit Managers manual, as revised in 1997, together with the following relevant Health and Safety guidelines.

1.3 HSE Construction Information Sheet CS8 Safety in excavations.

HSE Industry Advisory leaflet IND (G)143 (L): Getting to grips with manual handling.

HSE Industry Advisory leaflet IND (G)145 (L): Watch Your back.

CIRIA R97 Trenching practice.

CIRIA TN95 Proprietary Trench Support Systems.

HSE Guidance Note HS(G) 47 Avoiding danger to underground services. HSE Guidance Note GS7 Accidents to children on construction sites

1.4 The Health and Safety policy on site will be reassessed during the evaluation.

1.5 All work will adhere to the contractors' health and safety policy.

2 Risks Assessment

2.1 Working within a building site

Precautions. No work will be undertaken beneath section faces. Loose spoil heaps will not be walked on. Protective footwear will be worn at all times. Hard hats will be worn at all times. A member of staff qualified in First Aid will be present at all times. First aid kit, vehicle and mobile phone to be kept on site in case of emergency.

2.2 Working with plant.

Precautions. Hard hats, protective footwear and hazard jackets will be worn at all times. No examination of the area of stripping will take place until machines have vacated area. Observation of machines will be maintained during hand excavation. Liaison will be maintained with the contractors to ensure programme of machine movement is understood.

2.3 Working within areas prone to waterlogging.

Protective clothing will be worn at all times and precautions taken to prevent contact with stagnant water which may carry Vialls disease or similar.

2.4 Working with chemicals.

If chemicals are used to conserve or help lift archaeological material these will only be used by qualified personnel with protective clothing (i.e a trained conservator) and will be removed from site immediately after use.

2.5 *Other risks*

Precautions. If there is any suspicion of unforeseen hazards being encountered e.g chemical contaminants, unexploded bombs, hazardous gases work will cease immediately. The client and relevant public authorities will be informed immediately.
