## **Summary**

Wessex Archaeology was commissioned by Infinis Wind to undertake an archaeological walkover survey at the Skirts of Foudland development area, near Huntly, Aberdeenshire. This work was undertaken in response to a planning condition for a walkover survey requested by Aberdeenshire Council prior to consenting the erection of a temporary meteorological mast (Planning Reference APP/2011/2611). The objective of the survey was to assess known cultural heritage assets recorded in the Aberdeenshire Sites and Monuments Record (SMR), the National Monument Record of Scotland (NMRS) and record previously unknown cultural heritage assets.

Of the six sites recorded within the Aberdeenshire Sites and Monuments Records and National Monuments Record Scotland only three were identified during the walkover survey (**WA 2001, 2002 & 2005**).

Seven previously unrecorded sites were located during the survey (**WA 1000-1006**) including a number of probable clearance cairns, two cairns located on the summit of Red Hill and two possible platforms.

# SKIRTS OF FOUDLAND, ABERDEENSHIRE

## Archaeological Walkover Survey Report

### 1 INTRODUCTION

#### 1.1 Project Background

1.1.1 Wessex Archaeology (WA) was commissioned by Infinis Wind through Terence O'Rourke Ltd to undertake an archaeological walkover survey of the Skirts of Foudland development area. This work was undertaken in response to a planning condition applied by Aberdeenshire Council stating that a walkover survey of the application area was required prior to the granting of full planning permission to erect a temporary meteorological mast on the summit of Red Hill, Aberdeenshire (Planning Reference APP/2011/2611).

1.1.2 Red Hill is located within the proposed development area of the Skirts of Foudland. The development area is approximately 150 hectares, located six miles south-east of Huntley, Aberdeenshire. The area is sloping upland moor, dominated by the summits of Red Hill (c. 380 m OD) and Stony Hill (c. 352 OD) and their slopes. The majority of the development area is heather heath with considerable areas of gorse located to the south and south-east of the area. The lower-lying north-western areas of the site below c. 300m OD are sphagnum bog.

#### 1.2 Aims and Objectives

1.2.1 Prior to granting full planning permission to erect a temporary Met mast at the summit of Red Hill, a condition was applied by Aberdeenshire Council to undertake an archaeological walkover survey of the proposed location of the met mast. This condition was applied due to its proximity to a previously recorded site of archaeological significance (Red Hill hut circle, field cairns and banks – **WA 2004**) and the potential for previously unrecorded sites to survive in the immediate vicinity. Following recommendation by Claire Herbert, Archaeologist with Aberdeenshire Council Archaeology Service, it was decided to undertake a walkover survey of the entire Skirts of Foudland development area to inform planning application APP/2011/2611 and any subsequent applications for development.

1.2.2 The methodology for undertaking the walkover survey and the subsequent reporting of its results were agreed with Claire Herbert in writing prior to commencement of the survey.

1.2.3 The aim of the walkover survey was to identify all cultural heritage assets identified in the Aberdeenshire Council Sites and Monuments Record (SMR) and the National Monuments Record of Scotland (NMRS) and to record any previously unrecognised cultural heritage assets with a surface expression within the development area.

1.2.4 The objective of the survey was to identify and record as far as possible the character, extent and condition of all cultural heritage assets located within the development area. If possible the date and significance of each cultural heritage assets would also be recorded. The results of the survey will be used to inform the design and layout of the proposed development at the Skirts of Foudland.

## 1.3 Methodology

- 1.3.1 The walkover was undertaken by Dr Andrew Bicket over a two day period from the 4th - 5th October 2011. The weather was dry and bright.
- 1.3.2 In order to cover the development area, where the density of vegetation cover allowed, broad transects were made across the summits, ridges and along the contours of the entire development area. Detailed surveys were undertaken at the recorded locations of cultural heritage assets from the NMRS and Aberdeenshire SMR and where previously unrecorded cultural heritage assets were identified.
- 1.3.3 The location of all cultural heritage assets and a position fix of each photograph were recorded using a handheld Garmin Etrex GPS (with a horizontal accuracy of generally  $\pm 5\text{m}$ ) and photographed using a Pentax W80 digital camera. Unless otherwise stated, all identified cultural heritage assets were located by a single 8-figure NGR taken on the centre point of the cultural heritage asset.
- 1.3.4 Each identified cultural heritage asset has been labelled with a unique identification number (WA 1000 etc). Previously unknown cultural heritage assets recorded during the walkover survey have been numbered WA 1000 onward. Previously known cultural heritage assets recorded within the SMR/NMRS have been numbered WA 2000 onward.
- 1.3.5 A gazetteer of all cultural heritage assets identified in the development area is located in Appendix 1. A register of photographs is located in Appendix 2. Selected photographs are shown within the main text and in Appendix 3.

## 2 SURVEY RESULTS

### 2.1 Known cultural heritage assets

- 2.1.1 Six cultural heritage assets are recorded by the SMR and NMRS located within the development area (**WA 2000 - 2005**). Five of these were previously recorded in the NMRS/SMR as single NGR points. Foudland quarry workings (**WA 2002**) are recorded within Aberdeenshire SMR by a polygon drawn around the visible extent of the workings.
- 2.1.2 The ruined cottage at Nether Lenchie (**WA 2000**) was not accessed during the walkover survey due to the burning of agricultural waste being undertaken adjacent to the cottage's recorded position. As a result the location of the cottage was not visited on health and safety grounds.
- 2.1.3 Numerous trackways which possibly relate to Red Hill Quarry (**WA 2001**) were identified on the north flank of Red Hill. The quarry and spoil heap activity identified in the NMRS was not observed. The trackways were all heavily overgrown and were located between c. 300 – 350m OD. They appear to follow the contours of the north flank of Red Hill and were observed running E – W along the slope of the hill. These paths could relate to the quarrying activity at Red Hill although, as many of the trackways have been reduced to sheep or deer paths, it is difficult to assess their origins or significance. One position fix was taken on a stretch of well-defined track which could be identified in places running west across the northern flank of Red Hill.

Photo ID No.24 – Looking west towards the north flank of Red Hill at the previously recorded position of features associated with Red Hill quarry (**WA 2001**).

- 2.1.4 The remains of Foudland Quarry (**WA 2002**) were observed as highly visible upstanding spoil heaps. Direct access to the quarry activity within the development area was obstructed by high barbed-wire fence. Visual observation of the quarrying activity from a distance suggests that the boundary of this activity, as defined by the polygon recorded by the Aberdeenshire SMR, appears to be fairly accurate. It is recommended that a 10m buffer be placed around the Aberdeenshire SMR polygon until close range inspection of the remains at Foudland Quarry can take place.

Photo ID No.57 – The spoil heaps of Foudland Quarries (**WA 2002**) viewed from the south-west.

- 2.1.5 Tully's Cairn (**WA 2003**) was not identified within the development area. The RCAHMS visits in 1961 stated that the cairn had been heavily disturbed and was reduced to footings. The Royal Commission's visit in 1996 did not find any trace of the cairn at its recorded location and suggested that it had been destroyed by the forestry plantation located immediately to the west of the development area.
- 2.1.6 Red Hill hut circle (**WA 2004**) was previously identified from aerial photographs taken of the summit of Red Hill under snow cover. The hut circle was located amongst field clearance cairns and field banks. No visible remains of the hut circle, cairns or banks were identified at the previously recorded location. Dense heather cover may have prevented identification.
- 2.1.7 The Well of Moneyroad (**WA 2005**) was recorded as a sub-circular low walled stone structure located approximately 130m to the north of its recorded position within the SMR/NMRS. It is likely that the previously recorded location of the well was taken from its position on the 1st Edition Ordnance Survey map and therefore may not have been accurate.

## **2.2 Previously unknown cultural heritage assets**

- 2.2.1 Seven previously unrecorded features were located during the walkover survey.
- 2.2.2 Three clusters or low mounds of stones were identified within the development area (**WA 1000 - 1002**). These have been identified as probable field clearance cairns of undetermined age.

- 2.2.3 A pair of cairns were recorded at the summit of Red Hill (**WA 1003**). These appear to be summit markers and are of unknown date.
- 2.2.4 A large low stony mound c.10m in diameter was located to the south-east of the summit of Red Hill (**WA 1004**). Situated approximately 100m south-west of the possible hut circle (**WA 2004**), it is possible that this is an archaeological feature associated with this settlement activity.
- 2.2.5 One circular stony platform and one sub-circular hollow (**WA 1005 & 1006**) were identified on the more sheltered plateaus within the development area. **WA 1005** is located on the south of the Red Hill summit plateau overlooking Lenchie. **WA 1006** is located on the south-east flank of Stony Hill overlooking Nether Lenchie. Both are heavily overgrown with gorse and further identification or archaeological potential is difficult to assess. However, as this area is pock-marked by quarrying from the 19th century it is possible that these features are associated with this activity.

### **3 CONCLUSION**

- 3.1.1 The development area has been the location of slate quarry activity during the 19th century. Elements of this activity can be seen in the north-east of the development area at Foudland Quarry. Red Hill Quarry workings recorded in the NMRS on the north flank of Red Hill were not observed during this survey, possibly due to dense vegetation cover.
- 3.1.2 Six cultural heritage assets have been previously recorded by the NMRS or Aberdeenshire SMR as being located within the development area. Of these only three were identified during the walkover survey undertaken by WA Heritage.
- 3.1.3 Seven previously unrecorded cultural heritage assets were identified within the development area during the walkover survey including a number of possible clearance cairns, two summit cairns at Red Hill and a number of possible platforms.
- 3.1.4 Due to the dense vegetation cover over the majority of the development area, locating and recording of cultural heritage assets is likely to be difficult to achieve. It is recommended that any further survey work is undertaken when the vegetation is dying down in the late autumn or winter months.

## APPENDIX 1: CULTURAL HERITAGE ASSETS LOCATED WITHIN THE DEVELOPMENT AREA

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
1000	N/A	N/A	Possible clearance cairn	N/A	Low mound of rough stones. Approximately 4m in length and 2 m in width. Exposed through heather and peat cover. Positioned towards summit of ridge. Possible clearance cairn	359226	832312	7 & 8
1001	N/A	N/A	Possible clearance cairn	N/A	Cluster of rough stones, some present under peat. Visibility of the extent of feature is difficult due to dense vegetation cover. Approximately 1m in diameter visible.	359183	832275	9 & 10
1002	N/A	N/A	Possible clearance cairn – Red Hill	N/A	Low mound of stones. Approximately 4m in diameter. Down slope of summit of Red Hill. Possible clearance cairn.	358597	832361	13 & 14

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
1003	N/A	N/A	Red Hill Cairns	N/A	Pair of cairns at summit of Red Hill. Each approximately 1m in diameter and upstanding to $\leq$ 1m. These appear to be cairns constructed by walkers/visitors to the summit of the hill and, although of unknown date, are likely to date to the 20 <sup>th</sup> century.	358579	832367	15 & 16
1004	N/A	N/A	Mound	N/A	Low earth and stone mound. Visibility difficult due to dense vegetation cover. Approximately c 10 m diameter visible.	358833	832128	37
1005	N/A	N/A	Platform (Possible)	N/A	Sub-circular hollow approximately 10m in diameter. Glacial erratic boulder identified in the north-west edge.	359734	832477	55

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
1006	N/A	N/A	Platform (Possible)	N/A	Roughly circular platform, c. 10m in diameter on south-east facing flank of Stony Hill. Heavily covered in gorse, some stone visible in undergrowth	359749	832392	58

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
2000	NJ63SW 213 NMRS ID - 165601	N/A	Nether Lenchie	The remains of this cottage are situated in rank moorland about 340m N of Nether Lenchie farmsteading (NJ63SW 61) at around 360210 E, 832210 N). The cottage has been reduced to its footings, but accurate measurements could not be obtained because of the dense cover of gorse and broom. The cottage is depicted on both the 1st and 2nd editions of the OS 6-inch map (Aberdeenshire, 1873, sheet xxxv and 1901, sheet xxxv.NW respectively).	Fire in close proximity to stated location of the cottage prevented further assessment.  No NGR recorded.			71, 72

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
2001	NJ53SE 95 NMRS ID - 242889		Red Hill, Quarry	This disused quarry, which is situated on the steep N flank of Red Hill, is visible on a vertical aerial photograph (OS 73 190, 238) taken in 1973. Measuring about 10m in diameter, there is a spoil-tip about 15m to the N. A path between the quarry and the spoil-tip is crossed from ENE to WSW by a heather grown track, one of a number in the vicinity.	Numerous trackways are visible running E-W, north of Red Hill. It is not clear if any are associated with the previous quarry remains identified in the area by the NMRS. The quarry and spoil heap were not observed, potentially due to dense vegetation cover.  The NGR given was taken on a short stretch of well defined trackway located some distance to the east from the NGR given in the NMRS.	359071	832637	20, 21, 24 & 25

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
2002		NJ53SE0009	Foudland Quarries	<p>This disused slate quarry is situated on the NW flank of Foudland Hill; it lies within a conifer plantation and both the quarry-pit and the spoil-tips immediately to the N and W are overgrown with heather and broom.</p> <p>The quarry is first depicted on the 1st edition of the OS 6-inch map (Aberdeenshire, 1874, sheet xxxiv). It is annotated 'Old Quarry' on the 2nd edition of the map (1901, sheet xxxiv.SE), but it must have been reworked in the present century to attain its present elongated shape, which is depicted on the 1993 edition of the OS 1:10,000 map.</p>	<p>Access was obstructed by barb-wire fencing along the stream-bed in front of the spoil heaps and by dense gorse at the summit of unmetalled road leading to Hill of Foudland. The polygon recorded by the SMR appears to be accurate bounding the spoil heaps at about 359265 E 832811 N; 359453 E 832747 N; and, 359269 E 832712 N within the development area.</p> <p>It is recommended that the Aberdeenshire SMR polygon be used to define the area of quarrying activity within the development area.</p> <p>No NGR recorded.</p>			22 & 23

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
2003	NJ53SE 4 NMRS ID - 17773	NJ53SE 0003	Tully's Cairn	<p>Most of the stones from the cairn have been removed and only a low stone-and-turf mound, partly heather-covered, remains. The mound is 2.5m in diameter and 0.3m high. Visited by OS (EGC) 28 September 1961.</p> <p>No trace of this cairn was visible on the date of visit. Most of it had been removed prior to the last OS visit in September 1961, and the rest may have been destroyed when the adjacent forestry plantation was laid out. Visited by RCAHMS (JRS, IF), 2 April 1996.</p>	<p>Tully's Cairn was not located within the development area. It is likely to be present (if still extant) within the forestry land immediately outside the boundary of the development area.</p> <p>No NGR recorded.</p>			N/A

WA ID	NMRS Site Number	Aberdeenshire SMR Reference Number	Site Name	NMRS & Aberdeenshire SMR Description	Survey observations	Easting	Northing	Photographic ID Number
2004	NJ53SE 13 NMRS ID - 107477	NJ53SE 0022	Red Hill	Air photography (AAS/95/03/G6/1-3, dated 9 March 1995) has recorded a possible hut-circle among field clearance cairns and field banks on the E shoulder of Red Hill. There is no evidence of a hut-circle, clearance cairns or field banks on the E flank of Red Hill, nor are they visible on RAF vertical aerial photographs taken in 1946 (106.G/SCOT/U K.130, prints 1245-6).	No visible remains identified at this location. Dense gorse may be obstructing the upstanding remains of the hut circle, clearance cairns and field banks.  No NGR recorded.			N/A
