# **Thewlis Lane, Huddersfield, West Yorkshire**

## **Archaeological Evaluation**

### **Summary**

Wessex Archaeology was commissioned by Silkstone Environmental Ltd (hereafter the 'Client') to undertake a programme of archaeological trial trenching on land adjacent to Thewlis Lane, Huddersfield, centred on NGR 412042 414467.

A geophysical survey carried out by Wessex Archaeology (2014) identified anomalies that were considered to be of possible archaeological interest.

The evaluation consisted of the excavation of 23 trenches targeted over anomalies identified by the geophysical survey, and to test 'blank' areas.

The evaluation revealed one posthole of unknown date and demonstrated that the other anomalies were variations in the natural geology.

# **Thewlis Lane, Huddersfield, West Yorkshire**

## **Archaeological Evaluation**

### **Acknowledgements**

The project was commissioned by Silkstone Environmental Ltd and Wessex Archaeology are grateful to Philip Sharland in this regard. Rebecca Remmer of WYAAS produced the written brief and Wessex Archaeology are grateful for her assistance.

The fieldwork was undertaken by Sam Fairhead and Matt Weightman with the assistance of Johnathon Buttery and Martina Tenzer. This report was compiled by Sam Fairhead with Illustrations by Chris Swales

The project was managed for Wessex Archaeology by Chris Swales.

# **Thewlis Lane, Huddersfield, West Yorkshire**

## **1 INTRODUCTION**

### **1.1 Project background**

1.1.1 Wessex Archaeology was commissioned by Silkstone Environmental Ltd. (hereafter the 'Client') to undertake a programme of archaeological trial trenching on land adjacent to Thewlis Lane, Huddersfield (hereafter 'the Site').

1.1.2 A geophysical survey carried out by Wessex Archaeology (2014) identified some anomalies that were considered likely to be of archaeological interest (**Figure 1**).

### **1.2 The Site**

1.2.1 The Site was located in fields immediately east of Thewlis Lane, opposite Johnsons Wellfield Quarry, centred on NGR 412042 414467, and bordered to the east, south and north by residential properties. The fields are currently pastureland.

1.2.2 The Site covered approximately 11 ha at 207m aOD. The underlying geology consisted of Crossland Hill Hard York Stone.

## **2 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND**

### **2.1 Introduction**

2.1.1 The following background is summarised from the specification prepared by West Yorkshire Archaeology Advisory Service (WYAAS, 2013).

2.1.2 The Site lies in an area of archaeological potential. 400m to the south of the Site, two enclosures were recorded in 1775. One of these enclosures is depicted on the 1st edition OS 6 inch map (1854) as a 'camp'. The enclosures were built over in the 1920s but it is possible that they were prehistoric in date, with remains of a similar date located in the area. To the west of the enclosures were further earthworks, thought to represent medieval agricultural features.

2.1.3 The Site was marginal moorland until the 19<sup>th</sup> century, when it was subdivided into fields and a farmhouse and associated farm buildings (now in ruins) were constructed. The Farm is marked and shown on the OS 1st edition 1854 map when it was known as 'Barley Misery'. By 1892, the farm had changed name and is labelled on the OS 25 inch 1892 map as 'Thewlis Lane Farm'. The farmhouse was designated as a Grade II Listed Building in 1978, however, it was delisted in June 2013. The farmhouse has undergone dramatic deterioration in the last 25 years. Photographs of the farmhouse taken in 1987 show the building in a ruinous condition, however it retained walls to roof height and approximately

a third of the roof structure. The farmhouse was delisted on the grounds that so little of the structure remained.

## **2.2 Recent investigations in the area**

- 2.2.1 A previous desk based assessment for the Site concluded that it did have potential to contain archaeological remains despite no known archaeological finds or features being located within the Site itself. The desk based assessment noted the presence of Mesolithic and Neolithic finds in the area, as well as the enclosures noted above.
- 2.2.2 A geophysical survey carried out by Wessex Archaeology (2014) identified some anomalies that were considered to be of possible archaeological interest.

## **3 METHODOLOGY**

### **3.1 Aims and objectives**

The general aims of the project were:

- *to identify the presence or absence of any archaeological deposits within the Site;*
- *to determine the extent, condition, character, significance and date of any archaeological deposits encountered;*
- *to accurately record any revealed archaeological deposits;*
- *to recover artefacts disturbed by the Site works;*
- *to prepare a comprehensive archive, record and report of any archaeological deposits disturbed by the Site works;*
- *to aid the production of a mitigation strategy for the Site (if necessary).*

### **3.2 Fieldwork methodology**

- 3.2.1 The evaluation comprised the excavation of 23 trenches (**Figure 1**). The trenches were located by means of a RTK GPS system and tied into the OS grid (within 0.1m). All trenches measured 40m by 1.8m except for two which both measured 20m by 1.8m (**Trenches 11 and 12**).
- 3.2.2 Trenches were targeted over geophysical anomalies and to test 'blank' areas.
- 3.2.3 All excavation and recording was undertaken by qualified archaeologists employed by Wessex Archaeology. Archaeological remains encountered were recorded, and where necessary excavated in accordance with current industry best practice (IfA 2008). Features of whatever origin requiring clarification were cleaned by hand and recorded in plan at an appropriate scale.

### **3.3 Recording**

- 3.3.1 All archaeological features and deposits encountered were recorded using Wessex Archaeology pro forma recording sheets and a continuous unique numbering system. A stratigraphic matrix was compiled to record the relationships between features and deposits (including those within 'blank' trenches).
- 3.3.2 All trenches were located in relation to the OS grid, and other plans, sections and elevations of archaeological features and deposits were drawn as necessary at 1:10, 1:20 and 1:50 as appropriate. All drawings were made in pencil on permanent drafting film.

3.3.3 The spot height of all principal features and levels was calculated in metres relative to Ordnance Datum, correct to two decimal places. Plans, sections and elevations were annotated with spot heights as appropriate.

3.3.4 Photographs were taken of archaeological features to produce a photographic record consisting of 35mm monochrome prints and digital images (at least 10 megapixel) to supplement the photographic record.

### **3.4 Specialist strategies**

#### *Artefact*

3.4.1 Finds were treated in accordance with the relevant guidance (UKIC 2001; English Heritage 2005).

## **4 ARCHAEOLOGICAL RESULTS**

### **4.1 Introduction**

4.1.1 Only one feature was revealed by the evaluation, a small posthole in Trench 19. Other geophysical anomalies were shown to be variations in the natural geology.

### **4.2 Summary**

4.2.1 The topsoil across the Site was a very dark grey silty sand, typically 0.25-0.3m in depth. Where subsoil was encountered it consisted of dark greyish-brown silty sand and typically existed between 0.25m and 0.35m below ground level. The natural geology consisted of mid brownish-yellow sand with common large cobble inclusions (**Plates 1 and 2**).

4.2.2 The posthole, **1903**, was located at the north end of Trench 19 (**Figure 2**). It was 0.42m in diameter and 0.15m in depth, filled by **1904**, a greyish-brown silty sand secondary fill. No dateable material was recovered from the fill.

## **5 ARTEFACTUAL EVIDENCE**

### **5.1 Summary**

5.1.1 A small amount of post-medieval ceramic and clay pipe stem fragments were recovered from the topsoil. No further assessment is recommended.

## **6 DISCUSSION**

### **6.1 Summary**

6.1.1 The evaluation found little evidence for archaeological remains within the proposed development area. Post-medieval finds were recovered from the topsoil and a single shallow posthole was observed in Trench 19.

## **7 STORAGE AND CURATION**

### **7.1 Museum**

- 7.1.1 It is recommended that the project archive resulting from the excavation be deposited with Kirklees Museum. The Museum has agreed in principle to accept the project archive on completion of the project. Deposition of any finds with the Museum will only be carried out with the full agreement of the landowner.

### **7.2 Archive**

- 7.2.1 The complete site archive, which will include paper records, photographic records, graphics, artefacts, ecofacts and digital data, will be prepared following the standard conditions for the acceptance of excavated archaeological material by Kirklees Museum, and in general following nationally recommended guidelines (MGC 1991; SMA 1995; IfA 2009; Brown 2011; ADS 2013).
- 7.2.2 All archive elements will be marked with the site/accession code, and a full index will be prepared.

### **7.3 Discard policy**

- 7.3.1 Wessex Archaeology follows the guidelines set out in Selection, Retention and Dispersal (SMA 1993), which allows for the discard of selected artefact and ecofact categories which are not considered to warrant any future analysis. Any discard of artefacts will be fully documented in the project archive.

### **7.4 Security Copy**

- 7.4.1 In line with current best practice (e.g. Brown 2011), on completion of the project a security copy of the written records will be prepared, in the form of a digital PDF/A file. PDF/A is an ISO-standardised version of the Portable Document Format (PDF) designed for the digital preservation of electronic documents through omission of features ill-suited to long-term archiving.

## 9.2 Appendix 3: OASIS form

OASIS ID: wessexar1-172555

### Project details

Project name Thewlis Lane, Huddersfield, West Yorkshire

Short description of the project Excavation of 23 evaluation trenches targeted over geophysical anomalies and to test 'blank' areas.

Project dates Start: 28-01-2014 End: 05-02-2014

Previous/future work Yes / No

Any associated project reference codes 102890 - Sitecode

Type of project Field evaluation

Site status None

Current Land use Cultivated Land 1 - Minimal cultivation

Monument type POST HOLE Uncertain

Significant Finds CLAY PIPE Post Medieval

Methods & techniques "Targeted Trenches"

Development type Mineral extraction (e.g. sand, gravel, stone, coal, ore, etc.)

### Project location

Country England

Site location WEST YORKSHIRE KIRKLEES KIRKLEES Thewlis Lane, Huddersfield
