SUMMARY

Between the 25th June and 3rd July 2012, Foundations Archaeology undertook a programme of archaeological evaluation on land at Trefinnick Farm, Bray Shop, Cornwall (NGR: SX 33584 74010 - centred).

The project comprised the excavation and recording of fourteen trenches across a proposed development area, in order to test and refine the results of a previous geophysical survey.

The evaluation revealed the presence of 32 ditches, one of which was re-cut, a pit, a possible dew pond and a possible stake-hole. However, at least two of the ditches represented late Post-medieval/Modern field boundaries and one was the result of Modern ploughing. In general, the features were fairly well distributed across the majority of the evaluated area and most likely represent relic field systems, which are at present undated due to the lack of artefactual evidence.

A total of four features appear archaeological in nature. Pit [102] may represent localised quarrying and is probably related to the small group of pits present in the northern part of the study area, which were highlighted during the geophysical survey. Ditch [404] was substantial in size and yielded a single sherd of 14th to 15th century pottery, but was not picked up by the geophysical survey. Ditch [1204] and re-cut [1206] was indicated in the geophysical survey and was definitely archaeological in nature, but remains undated. Possible stakehole [814] was also undated.

Due to a lack of artefactual material, the identified deposits remained poorly dated and the archaeological potential of the site is low to medium.

GLOSSARY OF ARCHAEOLOGICAL TERMS AND ABBREVIATIONS

Archaeology

For the purpose of this project, archaeology is taken to mean the study of past human societies through their material remains from prehistoric times to the modern era. No rigid upper date limit has been set, but AD 1900 is used as a general cut-off point.

CBM

Ceramic Building Material.

Magnetic Survey

Geophysical survey technique used to define areas of past human activity by mapping spatial variations and contrast in the magnetic properties of soil, subsoil and bedrock.

Medieval

The period between the Norman Conquest (AD 1066) and *circa* AD 1500.

Natural

In archaeological terms this refers to the undisturbed natural geology of a site, in this case *Tavy Formation* slate/shillet.

NGR

National Grid Reference from the Ordnance Survey Grid.

OD

Ordnance Datum; used to express a given height above sea-level. (AOD Above Ordnance Datum).

OS

Ordnance Survey.

Post-medieval

The period between *circa* AD 1500 and AD 1900.

Prehistoric

The period prior to the Roman invasion of AD 43. Traditionally sub divided into; Palaeolithic – c. 500,000 BC to c. 12,000 BC; Mesolithic – c. 12,000 BC to c. 4,500 BC; Neolithic – c. 4,500 BC to c. 2,000 BC; Bronze Age – c. 2,000 BC to c. 800 BC; Iron Age – c. 800 BC to AD 43.

Roman

The period between AD 43 and AD 410.

1 INTRODUCTION

- 1.1 This report presents the findings of an archaeological evaluation undertaken by Foundations Archaeology between the 25th June and 3rd July 2012 on land at Trefinnick Farm, Bray Shop, Cornwall (NGR: SX 33584 74010 – centred). The project was commissioned by Michael Minsky of Electro Green Power Ltd.
- 1.2 The project was undertaken in accordance with an approved Written Scheme of Investigation (Foundations Archaeology 2012) and the Institute for Archaeologists' *Standard and Guidance for Archaeological Field Evaluation* (2008).
- 1.3 The study area comprised five arable fields approximately 500m south-east of Bray Shop and is bounded by the B3257 to the north and north-east, by a stream to the east and by fields to the south and west (see Figure 1). The underlying geology predominantly consists of shillet with clay patches. At the time of the fieldwork, the land use comprised arable crop.

2 PROJECT BACKGROUND

- 2.1 A proposal has been submitted for the construction of a solar farm on land at Trefinnick Farm.
- 2.2 The proposed development area has been recorded on the Cornwall and Scilly Historic Environment Record (HER) as lying within land characterised as 'Farmland: Medieval' or 'Modern Enclosed Land'.
- 2.3 There are numerous archaeological sites in the vicinity of the development area, including two adjoining fields called 'Round Croft' 250m to the south-west of the study area (HER No. 10006) and a possible sub-circular, univallate enclosure, 43m in diameter shown on aerial photographs 400m to the east (HER No. 50094). Another Prehistoric enclosure may lie 100m to the west, where a cropmark feature measuring 200m by 80m (HER No. 173222) has been identified. A number of other sites are located within 600m of the site boundary.
- 2.4 An archaeological desk based assessment and geophysical survey (BaRAS 2012) has identified a number of possible archaeological features within the site (Figure 2). These include a number of linear and curving features, mainly interpreted as possibly of Medieval or Prehistoric date, although some maybe cultivation features. Two features [labelled 5-6] may represent a pound with an internal division in the corner of a field, a small enclosure or perhaps a building is suggested by two features [14 & 15].
- 2.5 The development area therefore contained the potential for the preservation of archaeological features and deposits, predominately dating to the Prehistoric

and Medieval periods. This did not prejudice the archaeological works against evidence related to other periods.

- 2.6 In light of the potential for the presence of archaeological features within the proposed development area, the Cornwall Council HEPAO required that an archaeological evaluation was undertaken in order to inform any future planning application.

3 AIMS

- 3.1 The aim of the archaeological evaluation was to gather high quality data from the direct observation of archaeological deposits, in order to allow the characterisation of the on-site archaeological resource.
- 3.2 This aim was achieved through pursuit of the following specific objectives:
- i) to identify and define the nature of archaeological deposits on site and date these, where possible;
 - ii) to attempt to characterize the nature of the archaeological sequence and recover information about the spatial patterning of features present on the site;
 - iii) where possible, to define a well dated stratigraphic sequence and recover coherent artefactual and environmental evidence;
 - iv) a specific objective of this project was to establish the depths of archaeologically non-significant overburden within the site; in order to facilitate potential future mitigation of archaeological deposits, with a view to preservation *in-situ*. The archaeological evaluation, therefore, sought to minimize its impact upon archaeological deposits, whilst still achieving a coherent resource characterization.

4 METHODOLOGY

- 4.1 A total of fourteen trenches were excavated across the survey area, as shown in Figure 2.
- 4.2 Topsoil and non-significant overburden was removed to the top of the archaeological deposits or natural, whichever was encountered first. This was achieved by use of a 360° mechanical excavator, equipped with a toothless grading bucket. All mechanical excavation was conducted under the direction of a suitably experienced archaeologist. Thereafter, all additional excavation was conducted by hand.
- 4.3 A number of features in Trenches 1 and 8 could not be excavated due to severe flooding.

- 4.4 All excavation and recording work was undertaken in accordance with the Written Scheme of Investigation and the Foundations Archaeology Technical Manual 3: Excavation Manual.

5 RESULTS AND DISCUSSION

- 5.1 A full stratigraphic description of all contexts identified in the course of the project is detailed in Appendix 1. A summary discussion is given below. Plans and sections of features are shown in Figures 3 to 13.
- 5.2 Trenches 1 and 8 were located in slight hollows in the fields and were partly flooded upon excavation.
- 5.3 The site stratigraphy generally comprised natural slate/shillet and clay shillet directly overlaid by ploughsoil.
- 5.4 The evaluation revealed the presence of 32 ditches, one of which contained a re-cut, a pit, a possible dew pond and a possible stake-hole. However, at least two of the ditches represented late Post-medieval/Modern field boundaries and one was the result of Modern ploughing. In general, the features were fairly well distributed across the majority of the evaluated area and most likely represent relic field systems, which are at present undated due to the lack of artefactual evidence. However, the ditches appear to follow two different orientations (north-south and east-west/northwest-southeast and northeast-southwest), which may indicate two separate agricultural phases.
- 5.5 A total of four features appear archaeological in nature. Pit [102] may represent localised quarrying and is probably related to the small group of pits present in the northern part of the study area, which were highlighted during the geophysical survey. Ditch [404] was substantial in size and yielded a single sherd of 14th to 15th century pottery and animal bone, but was not picked up by the geophysical survey. Ditch [1204] and re-cut [1206] were indicated in the geophysical survey and were definitely archaeological in nature, but remain undated. Possible stakehole [814] was also undated.
- 5.6 There was a good correlation with the geophysical survey results in Trenches 1, 2, 3, 5, 6, 7, 8, 10, 11 and 12; however, the survey did not locate the ditches in trenches 3, 6, 8, 11 or 12 and also missed the substantial late Medieval ditch ([404]) in trench 4.
- 5.7 The fact that all the features were directly sealed beneath the ploughsoil, (with the exception of Modern feature [1104]), indicated that the site has been subjected to a high degree of plough truncation.
- 5.8 The evaluation has identified evidence for undated relic field systems, along with a possible Medieval ditch, an undated ditch with two phases of activity, probable quarrying and a possible stakehole. The archive is currently located at the offices of Foundations Archaeology but will be deposited, in due course, with the Royal Cornwall Museum. A short note will be submitted for

publication in the relevant local archaeological journal and an OASIS form will also be submitted to ADS.
