Interpretation and discussion Ditch cut, which has four deposits: (02207) (02208) , (02209) , (02210) . This ditch truncates ditch (02211) , and is truncated by a land drain. Deposit (02210) and (02209) contained slag, and fill (02210) had Roman tile. This feature is a possible Roman boundary or drainage ditch, as fill (02207) has a lot of stone and is mottled, suggesting water rushing through it, and the stone may have lined the base of the ditch.

Interpretation and discussion Deposit of ditch (02206). The stone makes this feel high energy, suggesting they were intentionally placed, making this a primary deposit. No dating evidence, but is earlier in the matrix to a deposit that had Roman material recovered from it.

Interpretation and discussion The ditch might represent a boundary / enclosure ditch - however hard to interpret before mitigation. Roman pottery and slag suggest a Roman date of construction - possibly connected with Iron Smelting industry which appears to have been based close by - (due to frequency of slag).

Interpretation and discussion					
The fill most likely represents the first phase of natural infilling of linear [101106] - caused by weathering / slumping.

Interpretation and discussion					
The fill might represent a phase of deliberate backfilling, due to the frequency of Iron slag waste and Roman pottery - most likely slag and pot has washed into the pit gradually along with charcoal/mineral rich soils.
