			Structure group		

Description

1) Cut of E-W linear located in trench 1070 of field H.

2) Linear
3) E-W
4) Moderate break of slope, with Concave sides and a Concave base - Cut terminates towards the East.
5) The Cut had a maximum depth of 0.30m, a width of 0.84m> and was excavated to a length of 1.17m.
6) Very diffuse - due to extensive bioturbation
7) Dry but Sunny excavation Condition - Poor visability
8) The Cut represents a terminus of a small gully or ditch.

Interpretation and discussion

Cut of gully / ditch terminus [107004]. Roman pot / slag / CBM might indicate the Cut was of Roman Construction. Drainage gully? The linear appears to terminate into the eastern bulk of trench 1070.

Description

1) Fill of linear [101004] located in TR 1010 in field H

2) The fill was composed of a firm mid brownish grey Clayey silt

3) Small to Very large flint nodules, moderate amount of angular stone inclusions and small sub rounded stone

4) Very disturbed

5) 7.17m x 0.30m x 0.84m

6) Trowel, Spade

7) Moderate conditions

8) Moderately overcut due to bioturbation.

Interpretation and discussion

The fill Contained a moderate amount of Iron Slag, CBM and pottery most likely Roman in date - Possible backfill (deliberate) - Very large flint nodules 0.30m in width found in the Cut would have been deliberately deposited in the ditch Cut.

Interpretation and discussion

Slot dug through possible heat-affected area. ~~AHA~~ Burning activity was indicated by a small patch of red soil on the surface but the red soil (appearing to be possible heat-affected natural) extends underneath the ~~surrounding~~ non-affected surface. Area seems to continue for at least half a meter in each direction.
