Interpretation and discussion This is a cut of a linear, which initially was thought to have been a canal. But after further investigation, it may be a boundary ditch. CBM was found in the top fill (08104), and worked Flint at the bottom of the first fill. This ditch has two fills. One secondary, (08104) and one primary (08105), which contained fragments of sea shells.

Interpretation and discussion This is a cut of roofing. As the base is irregular, it is most likely roofing. However, pot (a small shard) was found in this feature's only deposit (10804). It looks like Roman pot. As a bulk of this feature goes into the side of TN 108, this interpretation is limited. This roofing had been truncated by a field drain.

Interpretation and discussion					
DEPOSIT OF STONES IN TR 144 PRIOR TO EXTENSION. INITIALLY THOUGHT THIS DEPOSIT WAS A WALL BUT EXTENSION OF TRENCH APPEARS TO SHOW THAT IT AND (14440) ARE THE SAME AND IT IS LIKELY A DUMP OF STONES AND OTHER WASTE MATERIAL - IT MAY BE THAT A POST MED BUILDING IN THE NEAR VICINITY WAS DEMOLISHED AND DUMPED IN THIS LOCATION. ANOTHER THEORY IS THAT IT FORMED PART OF A SURFACE OR LEVELLING AREA DUE TO THE HIGH WATER TABLE AND SEVERE WATERLOGGING OF THE AREA. DUE TO POOR SORTAGE OF THE STONES THIS MAY BE UNLIKELY.
