1C20WRBTT / 43 / 75 / 7504 / Furrow

Complete

Score	3.94% Failed items	0 Actions	0
Site			1C20WRBTT, HS2-C, Northamptonshire
Field number			43
Trench number			75

In the following provide a very brief descrption of the feature, eg, pit, grave, linear transect cut. This will be used in the archaeological report

#### Feature description

Furrow

FeatureID= This is the parent context number of the feature, for example the pit which contains the pit fills, the grave cut that contains the coffin, fills and skeleton. A feature may comprise a single context for example un-bounded spread, in which case the Feature ID and the single context number recorded below would be the same. FEATUREID IS A WHOLE NUMBER DO NOT USE DECIMALS

# Feature ID (Parent context)

7504

# Feature sketch plan

Private & Confidential 1/13

Sketch plan: This should be broadly representative of the feature and any relevant surroundings. You may sketch the feature and/or its relation to other notable features on the site. If a sketch is done, indicate on the scale area (top right of sheet) the rough scale of your drawing and add a north arrow, but remember this is a sketch not a measured plan. Press the 'Annotate' button to begin a drawing

#### Sketch

# **Section recording**

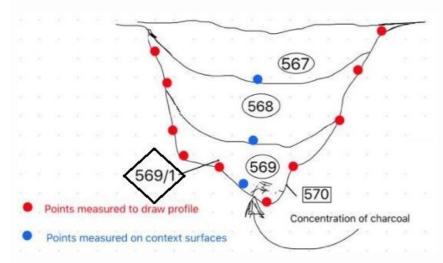

Section sketch

Record here the direction the section is facing

Section facing	W
Levels OD Top	
Levels OD Bottom	
Section photos	

Private & Confidential 2/13

Sketch of section: This drawing should represents an accurate profile of a cut feature or elevation of an upstanding feature and the relative depth, or height, along with the relationships of cuts, fills layers and structures. A simple example section is shown here with attention drawn to the vertically measured points to draw profile and fill surfaces.

Use the Arrette drawing app installed on this iPAD to make the drawing. Ensure that the ends of your section line and their alignment are shown, and please use a thicker lines for the parent context profiles and/or structures (e.g. facing of a wall), and thinner ones for other context divisions. Once you have finished your drawing in the Arrette app, Click project > Click on current doc, and set document name to be that of the parent context (s)shown, separated by a space e.g. 123 134. Finally click 'Share'>'JPEG to your photos', to add the images to the photo roll on that iPAD. Once done come back to this audit and upload your newly created JPEG

#### **Description and interpretation**

Your interpretation is a simple elaboration on the basic interpretation if absolutely necessary.

### Your interpretation

Fill of furrow

Your discussion. Here you can explain why you have come to this conclusion, if the rationale is not self evident. It is the most important of your responses

#### Your discussion

Primary fill of furrow, significant disturbance with natural. Not fully excavated to the N margin due to flooding.

#### **Context dimensions**

Record this only if the context's dimensions differ markedly from those of the features a whole. As a minimum, record the depth of fills

#### Length

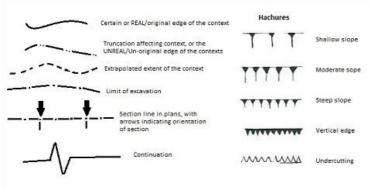

Width 0.9

Depth 0.35

#### Diameter

Context type Fill or deposit

Context composition 3.7%

This section has three components, a) The soil matrix of which the context comprises and it's degree of compaction, b) major inclusions and c) minor inclusions.

Soil matrix. Choose the composition of the soil present. example. refer to the diagram if necessary. For contexts almost entirely composed of find or environmental material, choose other, and note the material in the succeeding sections.

Soil composition Silty clay

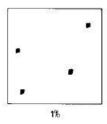

Private & Confidential 6/13

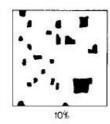

Soil consistency describes properties of the deposit when handled. Sandy deposits are cemented, compact or loose, while more clayey and silty deposits are typically firm, plastic or friable.

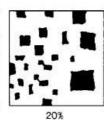

- A deposit which is cemented requires a mattock to excavate and clumps cannot be broken by hand once they have been removed.
- A deposit which is compact requires a mattock to excavate but clumps can be broken by hand once they have been removed.
- A deposit which is **loose** can be excavated with a trowel or hoe.
- ▶ A deposit which is **hard** cannot be moulded and a clump will break, rather than bend, when enough force is applied.
- ▶ A deposit which is **firm** can be moulded by hand under strong pressure.
- A deposit which is **plastic** can be easily moulded and bent.
- A deposit which is **friable** cannot be moulded and will crumble under pressure.

Soil consistency Firm

Major inclusions are finds and environmental materials which make up make up more than 10 % of the context and will typically be bagged up as bulk finds. Tick all that apply and if necessary add a note to the inclusion description.

### Major artefactual inclusions

#### Major environmental or natural inclusions

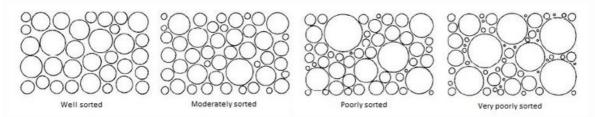

Minor Inclusion are find or environmental elements that make up less than 10% tick all that apply, and if necessary add a note to the inclusion description.

#### Minor artefactual inclusions

#### Minor environmental or natural inclusions

Degree of sorting 2.74%

Sorting is a measure of the frequency with which particles of the same size occur.

Sorting Moderately Moderately

#### Your interpretation

Cut of furrow

Your discussion. Here you can explain why you have come to this conclusion, if the rationale is not self evident. It is the most important of your responses

## Your discussion

Shallow furrow with significant mixing with natural. Clear base with true natural.
