1C20WRBTT / 46 / 29 / 2903 / Furrow

Complete

Score	10.1% Failed items	0 Actions	0
Site			1C20WRBTT, HS2-C, Northamptonshire
Field number			46
Trench number			29

In the following provide a very brief descrption of the feature, eg, pit, grave, linear transect cut. This will be used in the archaeological report

Feature description

Furrow

FeatureID= This is the parent context number of the feature, for example the pit which contains the pit fills, the grave cut that contains the coffin, fills and skeleton. A feature may comprise a single context for example un-bounded spread, in which case the Feature ID and the single context number recorded below would be the same. FEATUREID IS A WHOLE NUMBER DO NOT USE DECIMALS

Feature ID (Parent context)

2903

Feature sketch plan

Private & Confidential 1/12

Sketch plan: This should be broadly representative of the feature and any relevant surroundings. You may sketch the feature and/or its relation to other notable features on the site. If a sketch is done, indicate on the scale area (top right of sheet) the rough scale of your drawing and add a north arrow, but remember this is a sketch not a measured plan. Press the 'Annotate' button to begin a drawing

Section photos

Private & Confidential 2/12

Sketch of section: This drawing should represents an accurate profile of a cut feature or elevation of an upstanding feature and the relative depth, or height, along with the relationships of cuts, fills layers and structures. A simple example section is shown here with attention drawn to the vertically measured points to draw profile and fill surfaces.

Use the Arrette drawing app installed on this iPAD to make the drawing. Ensure that the ends of your section line and their alignment are shown, and please use a thicker lines for the parent context profiles and/or structures (e.g. facing of a wall), and thinner ones for other context divisions. Once you have finished your drawing in the Arrette app, Click project > Click on current doc, and set document name to be that of the parent context (s)shown, separated by a space e.g. 123 134. Finally click 'Share'>'JPEG to your photos', to add the images to the photo roll on that iPAD. Once done come back to this audit and upload your newly created JPEG

Upload section sketch

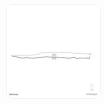

Photo 2

Comments

It was dug just a section of the furrow to avoid hitting the bulk.

Context type Fill or deposit

Private & Confidential 5/12

Context composition 9.88%

This section has three components, a) The soil matrix of which the context comprises and it's degree of compaction, b) major inclusions and c) minor inclusions.

Soil matrix. Choose the composition of the soil present. example. refer to the diagram if necessary. For contexts almost entirely composed of find or environmental material, choose other, and note the material in the succeeding sections.

Soil composition Silty clay

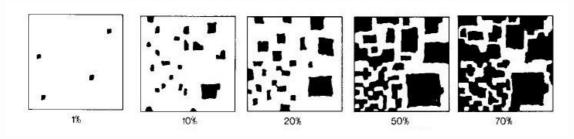

Soil consistency describes properties of the deposit when handled. Sandy deposits are cemented, compact or loose, while more clayey and silty deposits are typically firm, plastic or friable.

- ▶ A deposit which is **cemented** requires a mattock to excavate and clumps cannot be broken by hand once they have been removed.
- ▶ A deposit which is **compact** requires a mattock to excavate but clumps can be broken by hand once they have been removed.
- A deposit which is loose can be excavated with a trowel or hoe.
- A deposit which is **hard** cannot be moulded and a clump will break, rather than bend, when enough force is applied.
- ▶ A deposit which is **firm** can be moulded by hand under strong pressure.
- A deposit which is **plastic** can be easily moulded and bent.
- A deposit which is **friable** cannot be moulded and will crumble under pressure.

Soil consistency Friable

Private & Confidential 6/12

Major inclusions are finds and environmental materials which make up make up more than 10 % of the context and will typically be bagged up as bulk finds. Tick all that apply and if necessary add a note to the inclusion description.

Major artefactual inclusions

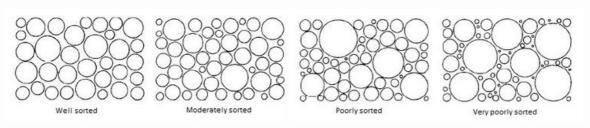

Major environmental or natural inclusions

Minor Inclusion are find or environmental elements that make up less than 10% tick all that apply, and if necessary add a note to the inclusion description.

Minor artefactual inclusions	СВМ
Minor environmental or natural inclusions	Charcoal

Degree of sorting 8.98%

Sorting is a measure of the frequency with which particles of the same size occur.

Sorting

Very poorly (Little similarity in particle size)

Mid

Sizing - use the sliders to indicate the diameter in mm from the smallest to the largest

Smallest stone size(mm)	5	
	From 5 to 200	
Largest stone size(mm)	30	
	From 5 to 200	
Colours	100%	
Main colour	Grey	
Colour hue	Brownish	

Other colour notes

Colour tone

Boundary to the next horizon. This should always refer to the lower bourndary of the deposit that is described, and not the upper, since the latter may have been truncated

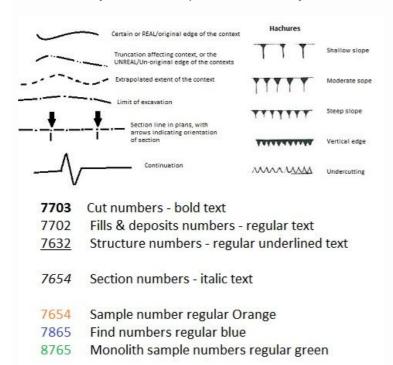

Private & Confidential 7/12

Boundary edge	Sharp -change occurs within 25mm
Boundary character	Wavy - boundary surface has broad shallow relatively regular pockets

If a cut does not have it's original form and is truncated by later feature(s), tick this box and record something in the further notes field a note to say where and if possible, what is truncating it

Truncated No No

Further notes

Furrow wasn't fully excavated due to the bulk being there. Furrow was caught at an oblique angle. Full profile is visible in Tr23.
