| Trench measurements. Typically measurement starts at the western end of a trench, except when trenches are directly NS in alignment. In this case start measuring from the northern end. |                                                                                                                                 |                                                                                     |                                                                                     |                                                                                      |   |

## Trench records

Trench records

### Trench details

Specify the trench length and this will both present the number of measurement you should take on such a trench, and an appropriately sized trench sketch proforma to fill out. At each measurement point (MP) you will now be prompted for the depth to natural, and then the thickness of any horizons present. All depths are recorded in meters. When recording the main horizon thicknesses, at each measurement point, context numbers are assigned to these horizons in case finds are encountered. The numbers are based on the trench number, so the 1st and 2nd context in trench 77 would be 7701 and 7702 respectively.

### Trench length and sketch

30m

Photo 6

### Speed up your sketch using colour

Use colour to differentiate features

- Furrows
- Drainage complete/broken
- Archaeology
- Other modern

### Trench sketch

### 1st MP depth to natural

0.26

### 1st MP Horizon thicknesses

#### 1st MP Horizon thicknesses 1

|                                      |          |
|--------------------------------------|----------|
| Horizon type                         | Top soil |
| Thickness of this horizon in meters. | 0.26     |
| Context number                       | 7901     |
| 2nd MP depth to natural              | 0.30     |

### 2nd MP Horizon thicknesses

#### 2nd MP Horizon thicknesses 1

|                                      |          |
|--------------------------------------|----------|
| Horizon type                         | Top soil |
| Thickness of this horizon in meters. | 0.30     |
| Context number                       | 7901     |
| 3rd MP depth to natural              | 0.30     |

### 3rd MP Horizon thicknesses

#### 3rd MP Horizon thicknesses 1

|                                      |          |
|--------------------------------------|----------|
| Horizon type                         | Top soil |
| Thickness of this horizon in meters. | 0.30     |
| Context number                       | 7901     |

### Trench bucket sampling

All trenches are bucket sampled at the start and end. For those more than 50m, a third sample is taken at a mid point too. This section records any bulk artefacts, ecofacts or small find recovered from these sample points and the horizon from which those finds came.

#### First sample point

##### First sample point 1

|                        |                           |
|------------------------|---------------------------|
| Was this sample taken? | Yes but nothing recovered |
|------------------------|---------------------------|

##### Second sample point

##### Second sample point 1

|                        |                           |
|------------------------|---------------------------|
| Was this sample taken? | Yes but nothing recovered |
|------------------------|---------------------------|

##### Third sample point

##### Third sample point 1

**Was this sample taken?**

Yes but nothing recovered

Nature of geology in trench. Brief description of the predominant geology of the trench, noting anything unusual, e.g.  
"Predominantly sandy gravels, with a 2m wide band of silt at c. 14m"

**Geological description**

Silty Clay

**Land drains**

Not encountered

**Date of trench completion**

2 Feb 2021 09:58 GMT
