(from opposite)
looks Sam/101 (glaze within)
Amphora handle - fine-textured coarse
Fr. painted bowl. ? Roman
Fr Sung saucer/bowl

Above - plan of square cairn in Maʿajilayn field - cairn not clearing ochre but side of trench sides exposed at 2.70. Rt angles assumed

MAʿAJILAYN - Cairn I

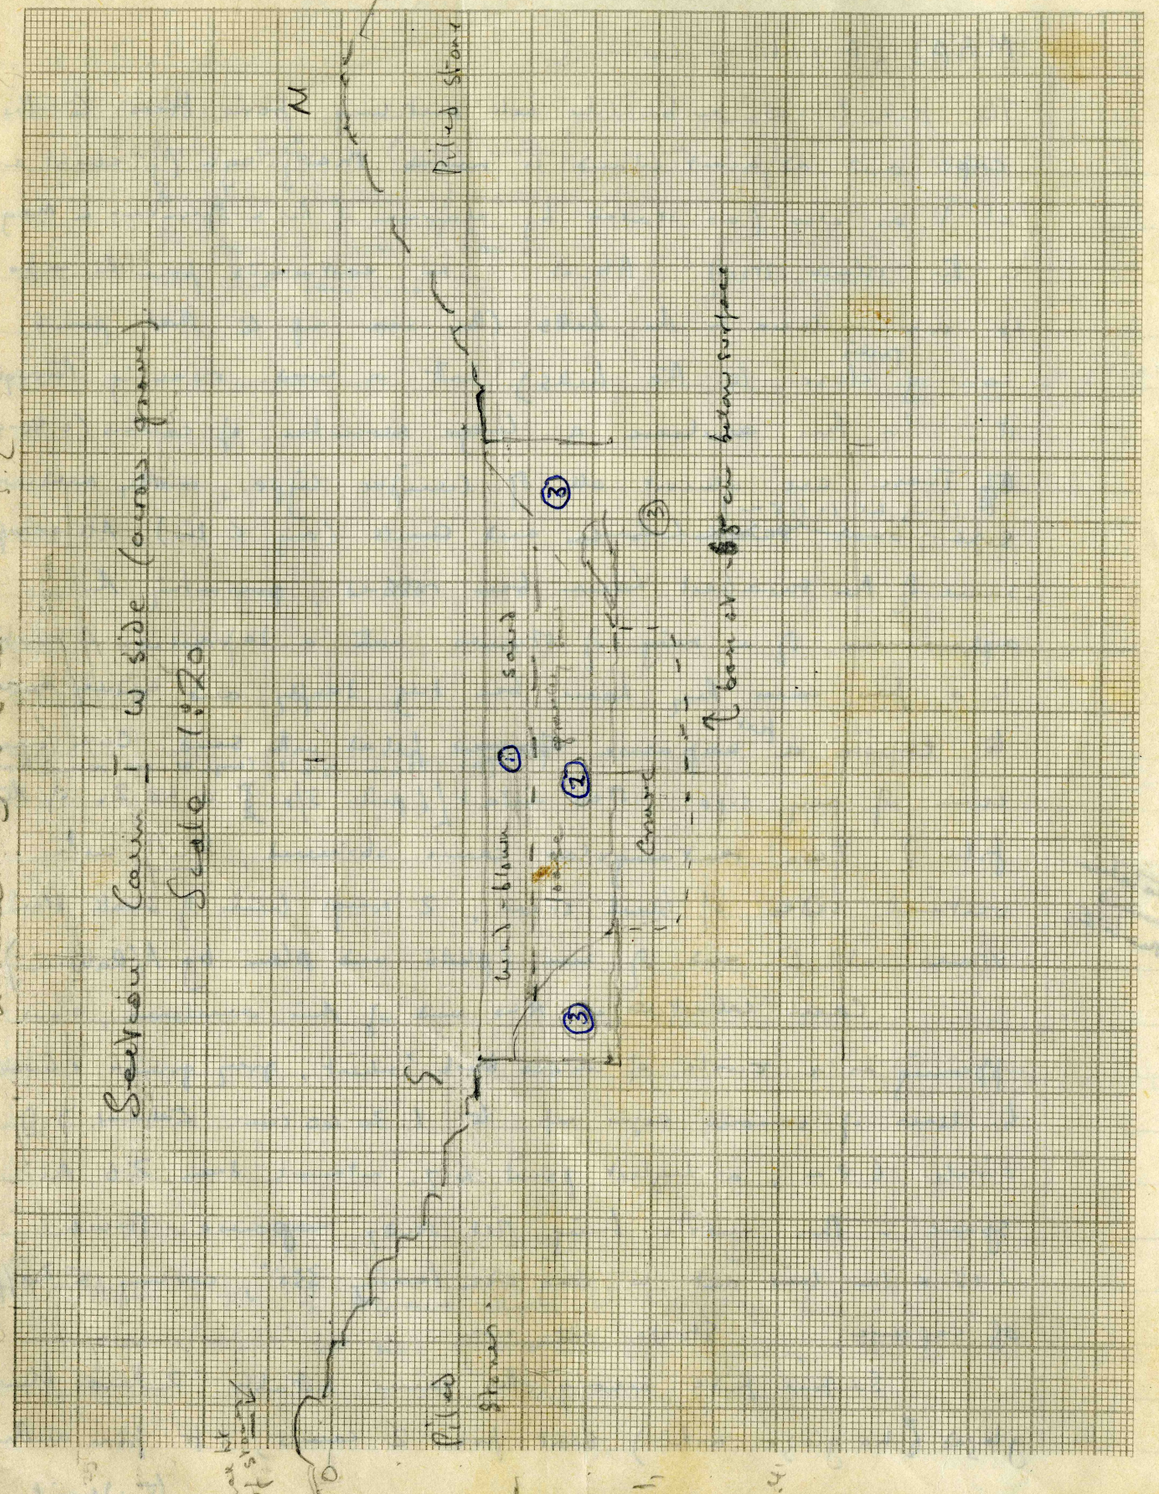

The flat-topped amba-like hill stretching from Ras Iʿ to the cape and adjacent island is named Maʿajilayn (j' almost as 'ch') as also (as stated by chairman of the cooperative in Magdh) is the island itself. About [illegible] eastwards from the cape is an enclosure in the hills (the sea up to that point coming [illegible] close to the hills) with a wadi running through it. In this enclosure a large number of cairns (c.80-90) These are almost all of [illegible] type, mostly small ~~size, some small~~ (long ht 1-1.5 m) and small (orig < 1 m). All except some of the smallest have been robbed, presenting the appearance of a ring of stones with a depression in centre. In a few cases they have been dug deeply and widely enough to expose a flat exposure filled with sand. Only one (Ht. 1.30 m, D 6.7; large stones round base cairn of any size visible intact (photo 5/X1 c. no 24 of film). Two rectangular cairns observed, built with vertical sides of black stone; 2 rough (with 1) small stand of stones at E end of one (photo and plan by A/Rahman).

Cairn selected at NW end of this enclosure, now appearing as a circle of mixed black ? schist, grey granite & limestone boulders of various sizes up to c. 30-60 cm. External D of circle 6.8 m; at highest point 4.7; internal diam 2.6, the space = the middle being flat sandy exposure. Trench 2.15 x 1m laid out w. long side bearing 335°, covering E half of exposure. Strata as seen.

Surface finds among the cairns notably ? Parthian blue-glazed (no glaze within) sherd from 2 cairns, 1 fr from another

to opposite

other late observed further to E

Madjilango Cave I

2

① Wind-blown sand and small pebbles. - ca 15 cm deep. [redacted]
Evidently blown and washed in after the robbing.
Finds: fr. yellowish-green clear glass, 1 mm thick, + another colour not clear, v. patinated, also charcoal (at bottom of layer)
Sm. fr. bone, including fr. ? human rib.

② Coarsely [redacted] stance in sand. Some of ③ dug with this ~~Apparently with bottom of grave~~ Loose sand-surface. 25 cm deep; at ~40 cm more compact, redder, 'subsoil' layer begins on N and S sides; stones after part ② is disturbed by robbers. Lower is fill of grave. Fr. wood etc. and bones appear including an articulated.

③. Compact pebbly in redder sand, as above.

grave floor reached at ~62 cm. being hard packed small stones - red sandy soil

Plan and Summary, p-4

Majdanek, camp II (S.A. Warsaw)

Similar in character to camp I, but bigger — Ext D 9.5/9.2.; flat space in centre D 3.6; Mass Ht 0.9. Trench I bears 360°; ~~distant~~ 90 m. centre to centre / Trench laid out ~~across~~ 2x 1m in centre of open space, longer side also bearing 240°

Strata of camp ~~entirely~~ buff-coloured ?limestone - the ~~country~~ rock with ~~white~~ sand

Strata etc.

① Wind blown sand as in I, but deeper (35-45 cm)

finds: fragments of Turkish clay pipe stems

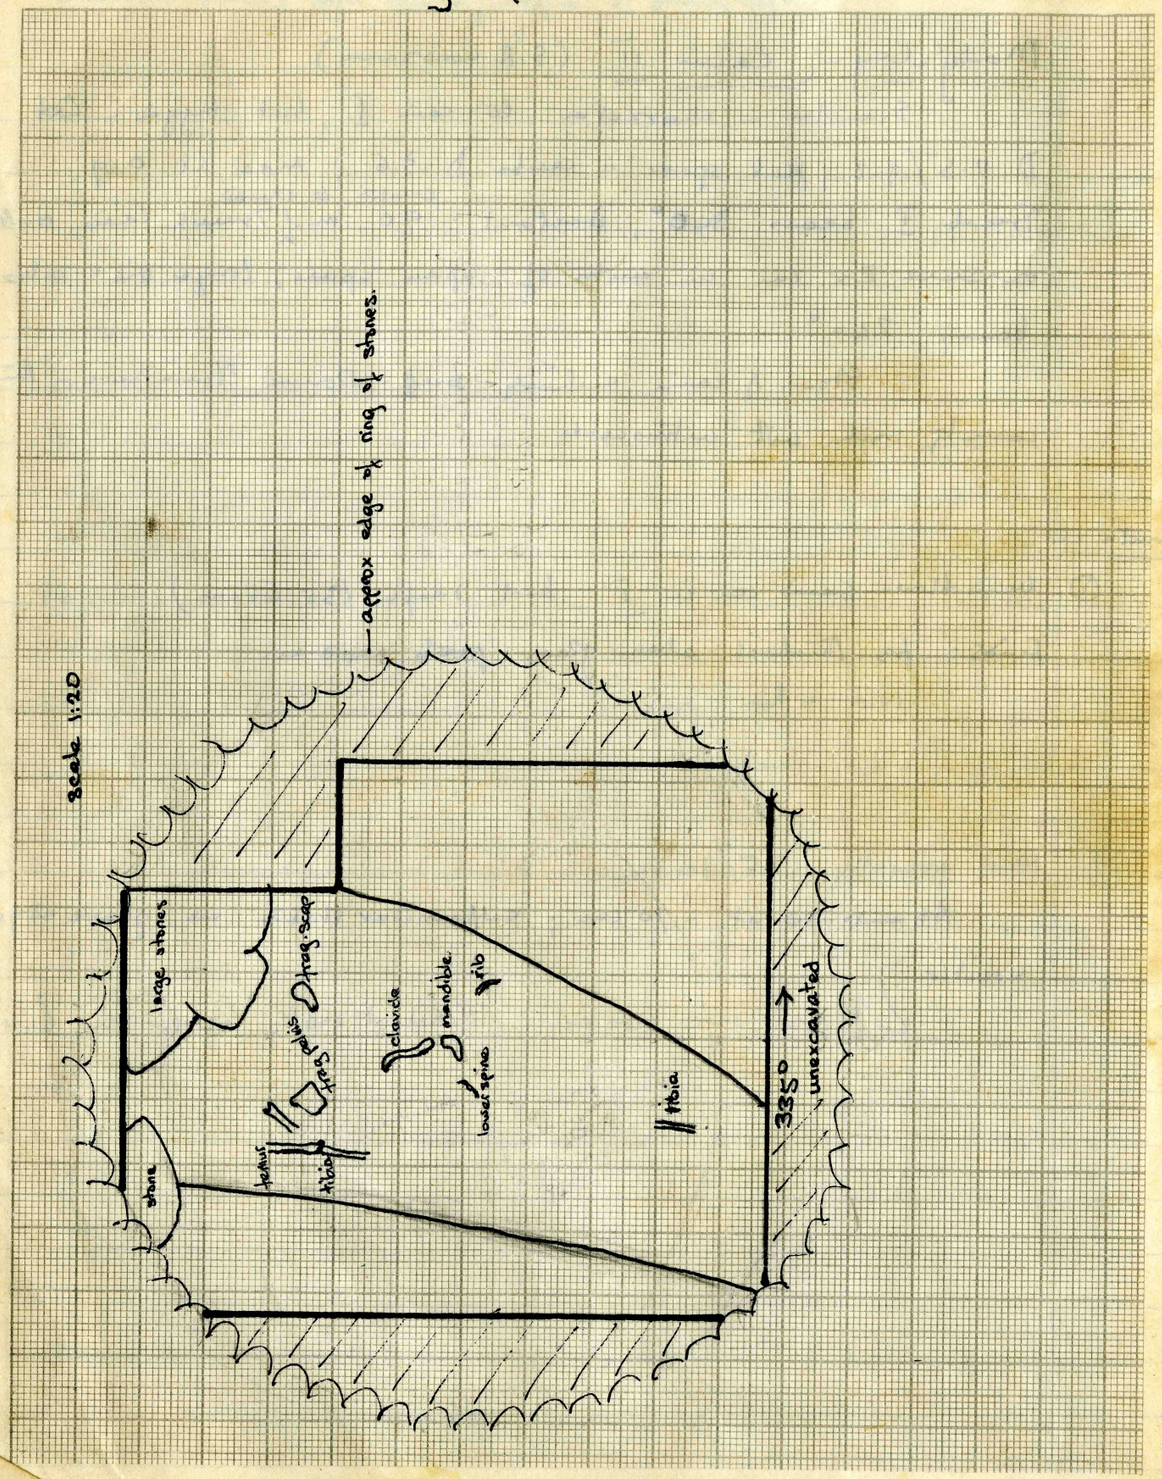

No other finds.

② Hard gravelly, 25-30 cm.

Abandoned at -.70 cm; ~~superior~~ stakes as grave edge visible

I believe however it must really have been here

Macajilayn Cairn I

MACAJILAYN CAIRN Bldg. – General Remarks. 34

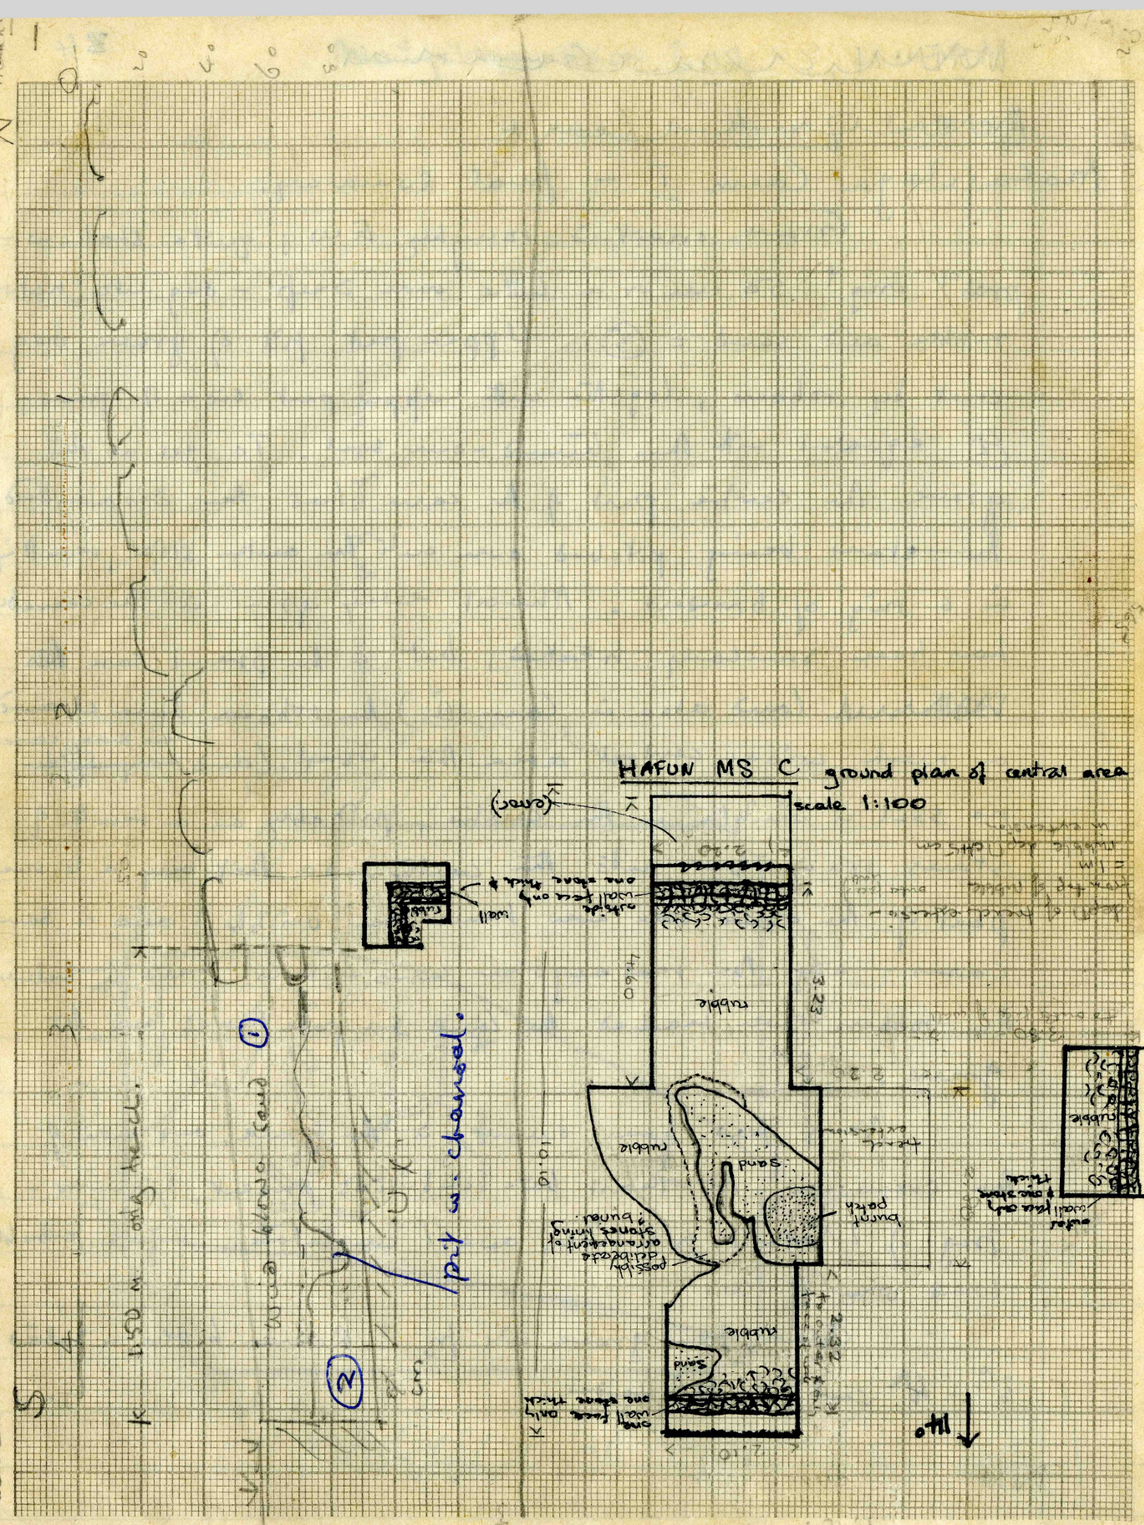

~~Method of work: Layout~~

Macajilayn Cairn I – final summary.

Grave oriented roughly E-W; quite shallow – prob^{y} orig^{l} 50 cm or a little more deep – dug into natural rubble and sand = (3). Upper part fill of grave dug out by robbers, together with upper part side of grave; (2) equated with this turned-over soil. To get at the grave the centre part of the cairn had been dismantled, stones being pitched over onto the outer slope, resulting in a ring of boulders. Almost every grave in the cemetery has been similarly treated, but in the present case (and also in Cairn II) the robbers have cleared a much wider central area than usual (and in many cases no soil is visible in the cavity – probably as a result of stones rolling back into the cavity – so that only a v. small part of the grave can ever have been visible; and in some cases – e.g. the most eastern cairn – it is hard to believe the robbers ever reached the land-surface level and the grave.

Very few bones survive in the grave, and none of the cranium. At least two individuals present, however – frag of 1 adult mandible, and 1 innominate. Bones probably had worn to W.

Glass from grave c/c fgs ? Roman bottle. – dated 3rd – 4th cent^{y} by DB Harden.

HAFUN, 'C' Blog. MS

At start of work: low (c. 50 cm) mound, E of main scatter of pottery. Not much else on visible surface; and about half way between blgs A & B and the sea. Mound about 18 m across as found; (line of wall of mostly sandstone slabs clearly visible on S side) mound given curved build in about 80 m square. Some modern bottle glass on surface

~~Trench 1½ m wide, 6 m long N-S, lying parallel to S side of [illegible] visible on surface~~

Trench 1½ m (N-S) by 2m (E-W) dug against visible face of S wall, and surface sand cleared on same N-S axis across the mound, revealing wall-face on N side. But no inner faces of this wall, and apparent that there are retaining walls only of platform or low mound. (8.35 m between wall faces across mound)

Strata ① Wind-blown sand, c. 20 cm deep (overlying sterile gravel/sand) shallow A central
Small pit containing charcoal near ~~centre~~ corner; another, B on extreme W side; insufficient charcoal for sample.
No artefacts whatever

② Sterile gravelly sand. 20 cm dug.

Subsequent summary clearance on E & W sides brought to light W wall, and confused unit of stones.

Pot. See pot book (inc 1 glazed gr/yel on buff glazed bds, and buff-bodied body sherd w. asphalt, as fr. upper levels trenches

Tr II Pot - Surface coll^{n}, made before excavation (one of more, but far most plentiful scatter)

150-200 sherds, of much same aspect as lower levels, some red wares, and sig- purple-red. Almost all of fair-size wheel-made jars, variously of (a) brick-red paste, dk-r out ourside blackish, (b) purple ware, sandy/soapy, (c) greenish/yellowish-buff, rather soft (but quite a few levels. a hard ware, mostly yel-buff, ocassn); roughly in proportions 2:2:1. All greatly sand-bleached, (c) most of all, being soft; some? this may have been glazed (no surviving glaze in all coll^{n}.

Not a base v. heavy dk red coarse hard jar, fr. this red paste jar, this ?. Fr. mod g.com. dk Thasian

NB. There has been erosion from s/e of this site - evidence: upper and shista running out at s/e & E, E.a; eroded cliff of rocks on E side site. 6

HAFUN MAIN SITE TR II

Initial trench 6M x 2M on western side of site about 100 M from the tip of the ridge. Pottery scattered over surface and beyond; pretty thick scatter, but not as concentrated as on E side of ridge.

Pot - surface coll^{n} - see opposite

① light brown, hard, packed, windswept sand (difficult to dig) fragments of pots sticking out of upper [redacted], including a grindstone, D 21 cm (½ only) Ht 10 cm held by stones in place 15 cm deep, 25 cm from the middle of the SE face of the trench much pottery.

Finds: Chert flake; tooth goat/sheep; [redacted]; ½ Grindstone, vesicular volcanic.

Pot (see pot book also - Nina Crummy Newport): 60-70 sherds, mostly hard gr/buff paste (jars); some red; some have asphalt (?) on interior. Near vert-sided jar [redacted] gr-buff, hard (s.o.); rim wide-bulged jar [redacted] asphalt & [redacted] (s.o.). 2 body sherds (1 purplish, 1 brick-red) [redacted] dec- oooo, o oo; rim sm. jar, purplish red (s.o.); [redacted] hard v. thin, deep red, blk without (s.o.); body fr., ? sm bottle, [redacted] ware, r/b. Knob amphora base

② sand / softer with black patches. quantities of pottery - mostly amphoras and other pots visible from ③

Finds: Chert flake

Pot. (see also pot 6K) Not catalogued: c. 50 sherds, almost all body. Sm body fr., yel (now) glaze on buff. Rest mostly hard buff paste, some purplish (? amphora); 2 or 3 sherds w. asphalt within (inc one soft buff). Jar rim, buff (without)/purplish (s.o.), smooth buff, some size (s.o.); shoulder, dk red paste, flat rounded rim ((oooo

③ Patches of ash in sand

marks broken upright in sand with remains of a second, in same context nearby. Evidence of fire beside it; a few (10 cms away) crab ~~fires~~ legs

Pottery. c. 38 sherds. Mainly thin (and base belonging?) ov v lge red-paste jar frgs, inc base, thin, lge hard-grey wall-sided jar, buff exc (f.d.) ——— Fr (just below rim) jar, finger impressions ||| , + another similar. Fr. thin red bowl, as in ②

④ under marks soft sand and patches of remains of fire at 50 cms - in SE face grey sherd at -48cm and also at -54cm. Stratum slopes down to N Pit in SW corner dug into ⑤ & contains ash, sand, few scattered frags charcoal & several stones (max dim. c12cm).

⑤ Yellow sand; marked division in W. ¢, which overlies it through circular Post hole? visible through ⑤ ~~at~~ 170 cm S of N section & 20 cm from W section ~ 7 cm diam. Another larger pit/post hole at 270cm S of N section & 15 cm from W section ~ 17 cm diam.

HAF MS TR III

~~At~~ a ~~high~~ saddle on the ridge to the west where a scatter of pottery lay on the surface a 2m×2m trench was dug. one side heavy 28°

Pot. Surface coll. Surface coll, 25 sherds mostly or above. All thrown.

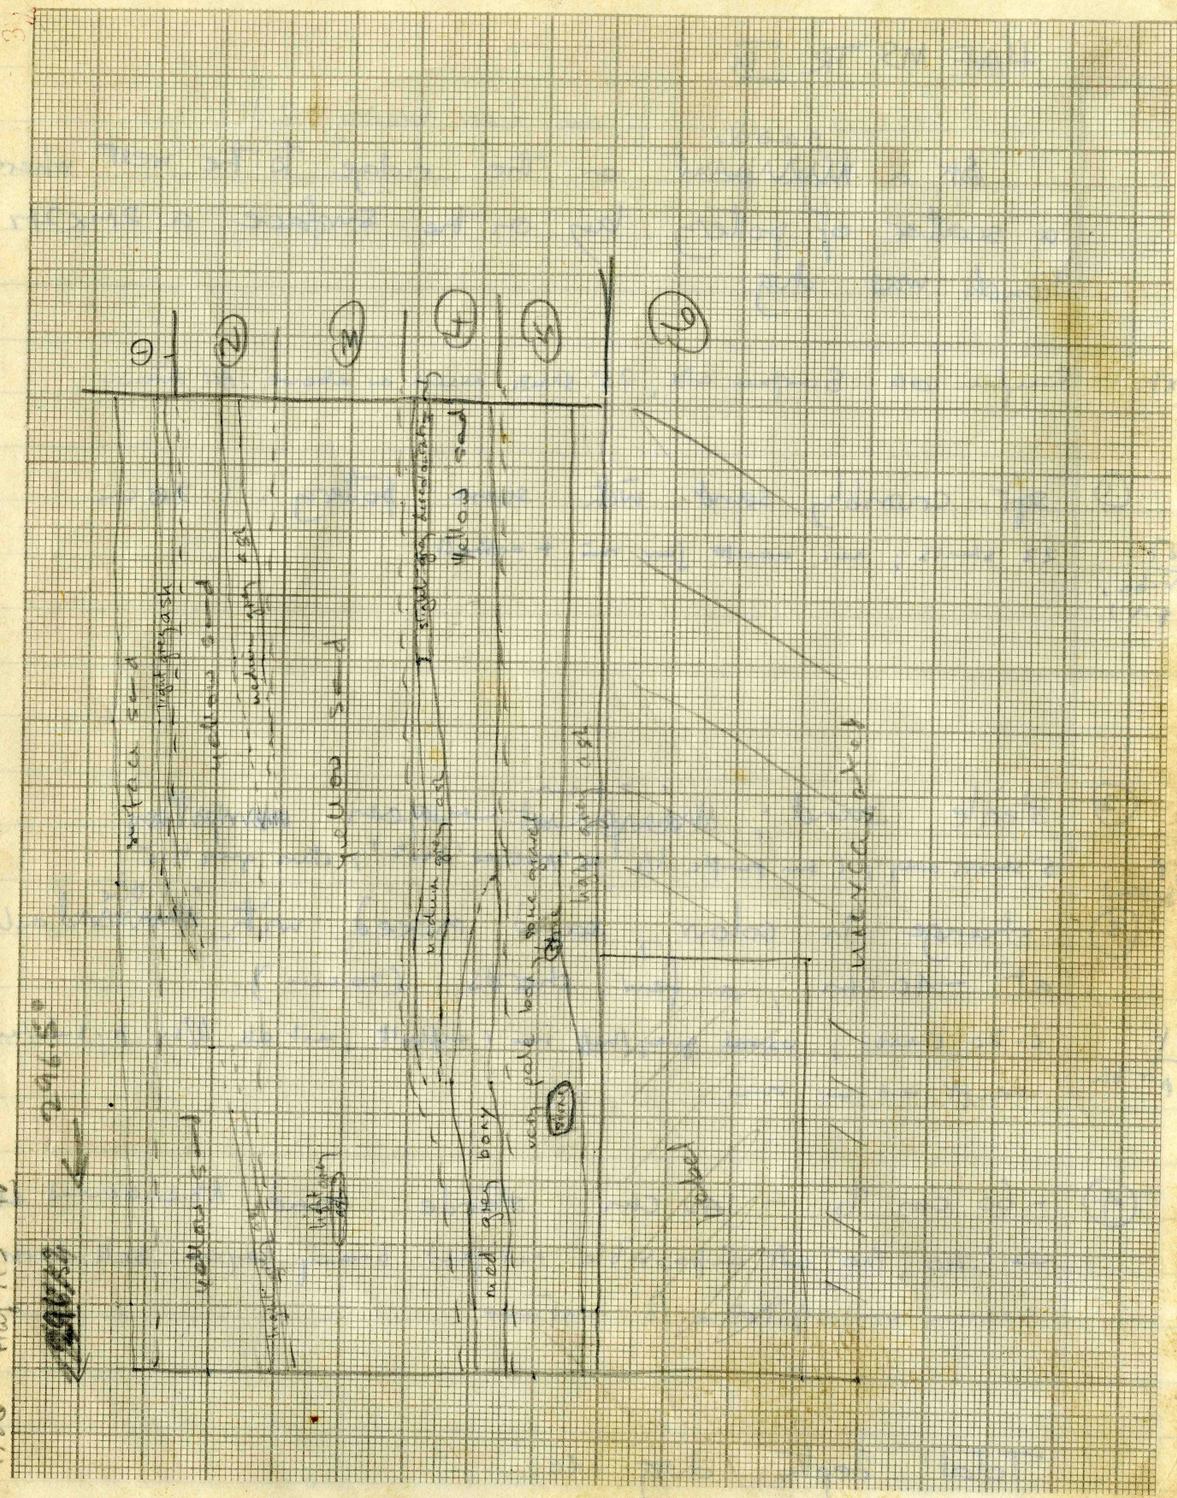

① sqft crumbly sand with some pottery. c.20 cm
Pot. (see pot-bk, q.v.). 22 sherds; hoi ~~except~~ jar rim + asphalt

② sterile sand; c.20 cm ~~transition~~. ~~non~~pottery
Pot (see pot-bk) 5 sherds only; 1 sm purple b/s w 'pressed' deco; others grey b/ss

③ change in colour, sand mixed with ~~charcoal~~ little ash at -40 cm; a few sherds. (20 cm).
Pot. (see pot-bk). c.20 sherds; usual grey/buff rim + asphalt, not all b/ss fr. same jar except red-w. rim

④ -60 cm to -140 cm sterile sand. Abandoned at -1.40, tho' not impossible artifact bearing layers still lower, seems unprofitable to continue

Total depth dug 1.40...

Tr IV cont^{d} -

(3) to −105 cm. yellow sand. few sherds.

Pst. (ex pits).

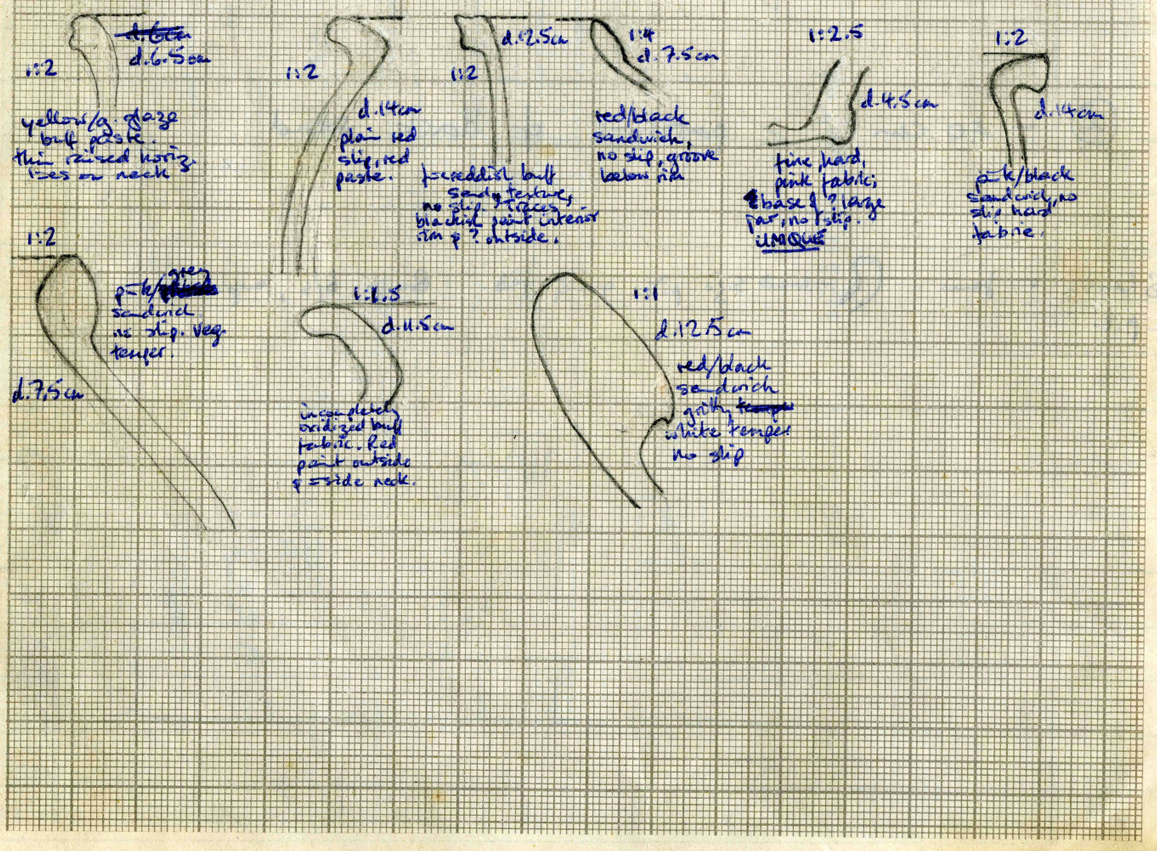

(4) thick dark ash patches; much pottery (relatively)

Pot. c. 120 sherds, c. 30 bearing of red-buff. Thin jars (no rim or base) (sample kept) (no. of sherds from Tr I ⑤). Wide cambered (f-d; cf another in Tr I ⑤); 2 sherds wide rim, yel/gr glazed, buff paste (s-o) neg bases, red-buff (s.o.); [illegible] jars red buff jar rim (s-o). Rest mainly reddish buff.

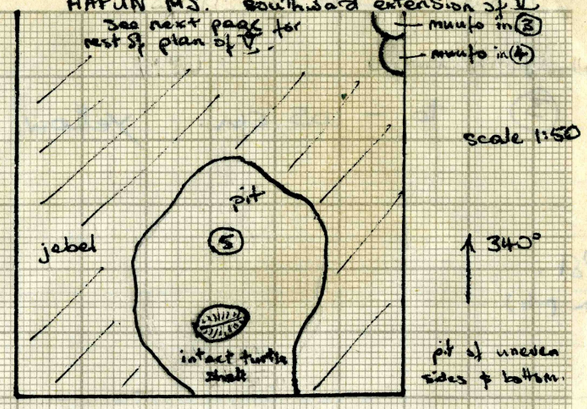

Bivalve shells, a scallop, serpula

(5) As above, less ash

(6) ~~Shell area~~? Yellow sand, no ash, some gravel. no finds. ie, subsoil

HAFUN MS. southward extension of V

HAF MS TR V

At a point near TR II, top of two pots, one fully buried, one half buried, containing ash, faced with worfas, on the ground, a trench was dug initially 2 x 1½, extended at right angles to the worfas to 2x3, bisecting (larger of the worfas 60 cm; smaller 34 cm.)

Sherds - c.12, mixed buff/red, 2 w. asphalt within (1 pink, 1 green-buff paste), flat base, red-purple gritty paste (s.o.).

surface collection - (c. 10) grey/buff/pinkish body sherds, 2 with asphalt lining.

① sand, windblown and hard-caked, dark id, 20 cm.

Longer morfa (which cylindrical, no base, found to extend to — cm only

Sherds. C.12. mixed buff/red, 2 (1 pink, 1 yellow/buff paste) w. asphalt within)

1st Lot flat base, red-purple gritty paste (s.o.). Otherwise n.o.i. 2nd Lot, 24 sh. (see pot sherds): Glazed rim of jar as for A; flat base, grey ware thick jar.

Some b/ss, buff-red, jars, some + asphalt

Fr Ost. - egg shell

② darker sand, getting softer 20 cm (to -60) Alternating bands of lighter & darker ashy sand, occasionally ashless.

Sherds C.15, equal pink and red buff; bit seen in asphalt within; rim

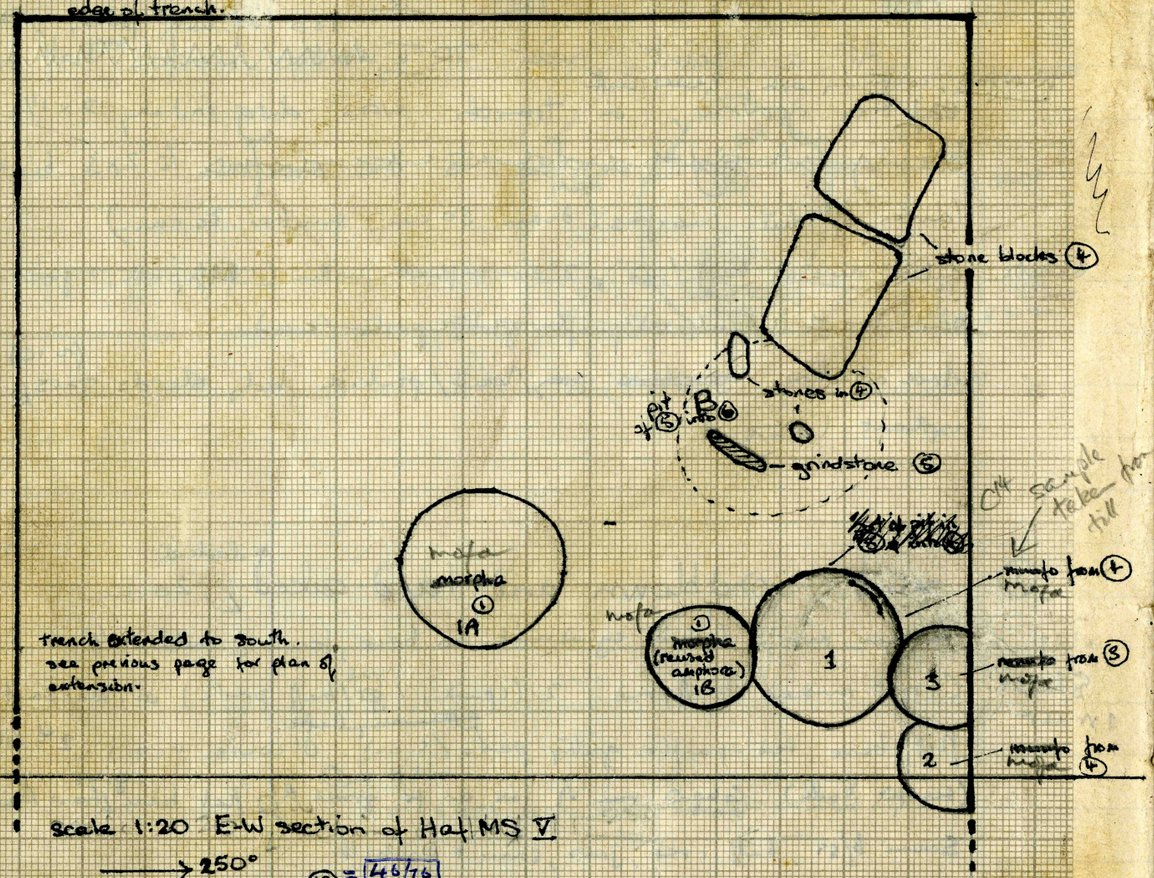

1st Lot - sherd, red, yel slip (s.o.). Lost only keeper. 2nd Lot, mostly sherds jars,

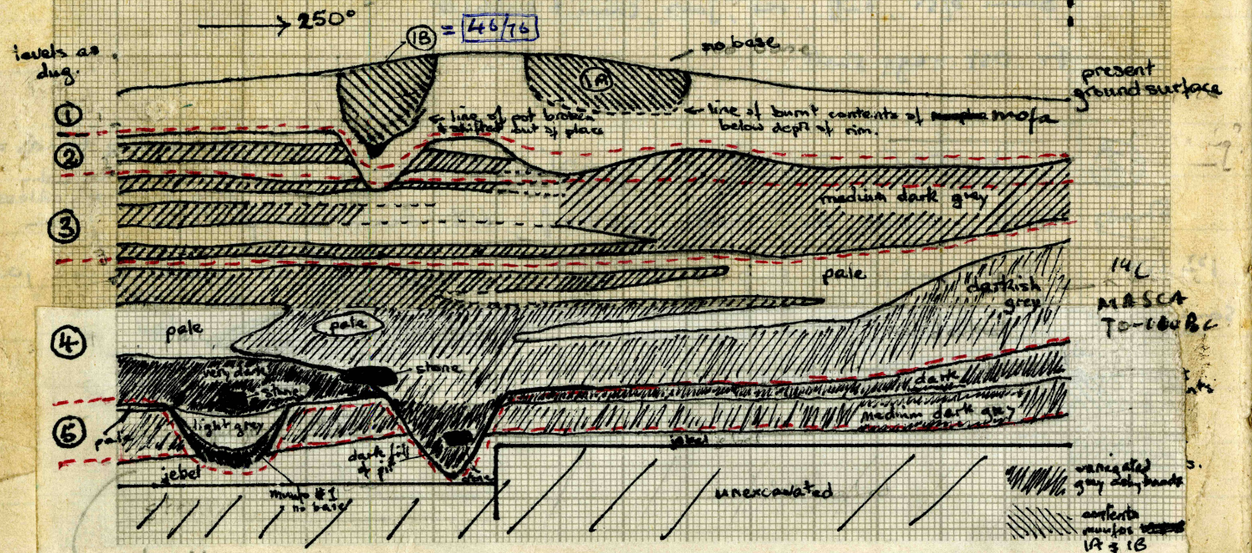

Some w. asphalt - b/ss (almost all Nimrud), Flat base, gritty dk red. Rim utility grey ware (L/no.)

Frdst largish frag iron slag (max dim. 3 cm)

Glazed Neck, base jar as for A, but buff paste

scale 1:20 Hafun MS V ground plan. morphas in level ① and stones & blocks in level ④. grindstone in ⑤ ← 250°

12

③ evidence of fires. dark bands on the sand

40 cm. (6 - 80)

Sherds 1st ⑥ 2 wh lot (see pot book) almost all red/buff jar w/ss (sauce & asphalt) rim of red bowl*
6 only: 5 red, body jar (3 w. asphalt, same pot); 1 yel-buff w. asphalt

All brown. ~~large pit into~~ signs of burning on outside - E section with edge ~~c 220 cm E dian N 35 cm. top at 160 cm~~ below surface, dug into ⑥ see plan opp. Rimless & baseless pot mmpto in E section ④ in part on edge of (and damaged) a larger mmpto of ④. Dark band associated with this mmpto (#3 see section opp. p 20) seals a third mmpto (#2) below it. Signs of burning on outside of mmpto #3.

④ As ③ but generally darker with fewer pale bands. southern extension
V. large patch of ash in SE corner extending 80 cm into
2 blocks sandstone, c. 40 x 30 cm, appear at E end
The large patch black ash mentioned above is semicircular - plan extending in the eastern section (radius approx 90 cm). ~~Pit on top of pit at 100 cm E side overlapping top of pit ⑥ (jebel) another larger mmpto of ④ which has been sunk - a pit dug through ⑤ & slightly into ⑥ (jebel).~~ Baseless & rimless pot mmpto #2 sealed by, dark band at base of ③. see plan & section. Another large mmpto pot with base sunk - pit dug through ⑤ & into ⑥ (jebel). This pot rimless but upper edge damaged by mmpto #3 sitting on it (being forced down on it). Fill of light to red grey ashy sand but with a thick black layer of carbonized material coating the sides. A sample of this material recovered. #3 mmpto also baseless. Sample taken from fill #1
<=P 2611 2030 ± 60 BP
(MASCA corr 70-160 BC

⑤ Sand, lens, ashy, dirty yellow.
Quite stone effects near stone blocks. Pottery & bones, latter particularly on W. side of large blocks. Some (irrelevantly is jebel) ⑥ dug into this level. Pit dug into ⑤ from ④ s.o. (A on E-W section). Fill of soft brown sandy soil + 1 stone (max diam 11cm) + 1 very large land snail shell.
Pit dug into ⑥ approx 140 cm south of N. section & its centre at N 50 cm west of east section. diam (although sub circular) N 50 cm.
~~large pit sunk into pit at 155 cm below ground surface~~
pit mentioned above ~~at depth~~ lower edge at Frag ash stone lying vertically 117 cm & upper at 99 cm by 3 on point D horiz.

⑥ Very yellow extremely compacted sand, quite hard.

HAF MS TR VI

On a height of land overlooking the sea about 10 m from TR I of last year where the scatter of pottery on the surface was thick a trench was laid out 2 M x 1.5 M.

Note Iron slag in most strata this site.

① Loose wind blown sand with occasional sherds.

Pot c.30. Mostly red-buff; dressy LOT. 1 fr flat base, 0 c.core only one w. asphalt

② Black (early) sand patches in E half.

Pot. c.30 sherds. Glazed yel (now) flat rim, open bowl (s.o.). 2/3 markedly out-curved pot rim red 1/3

Iron slag

③ Shell band, E end; black patches sand below

Pot c.30, mostly reddish, but usual LOT. Blk pot base

④ Black sandy patches in E half.

④ more black patches - mark on ③

Pot. 6. Sherds only; one body sherd, another fr same pot fr. ⑤

Iron slag

Tr VI contd

(5) Mixed as (4) ; more sand

Pot (3) c. 20 sherds, half grey, half red. Inc 2 jar rims (s.c.).

(6). Thick black sand — extends to all over trench (NB all strata above this seen to be sliced off by at c. 20° by wind action? or pit? is SW quadrant. The latter tying with (2) to (5)., but as the latin sand is sterile no completion results).
Fair quantity bones & pottery, also Frags iron.

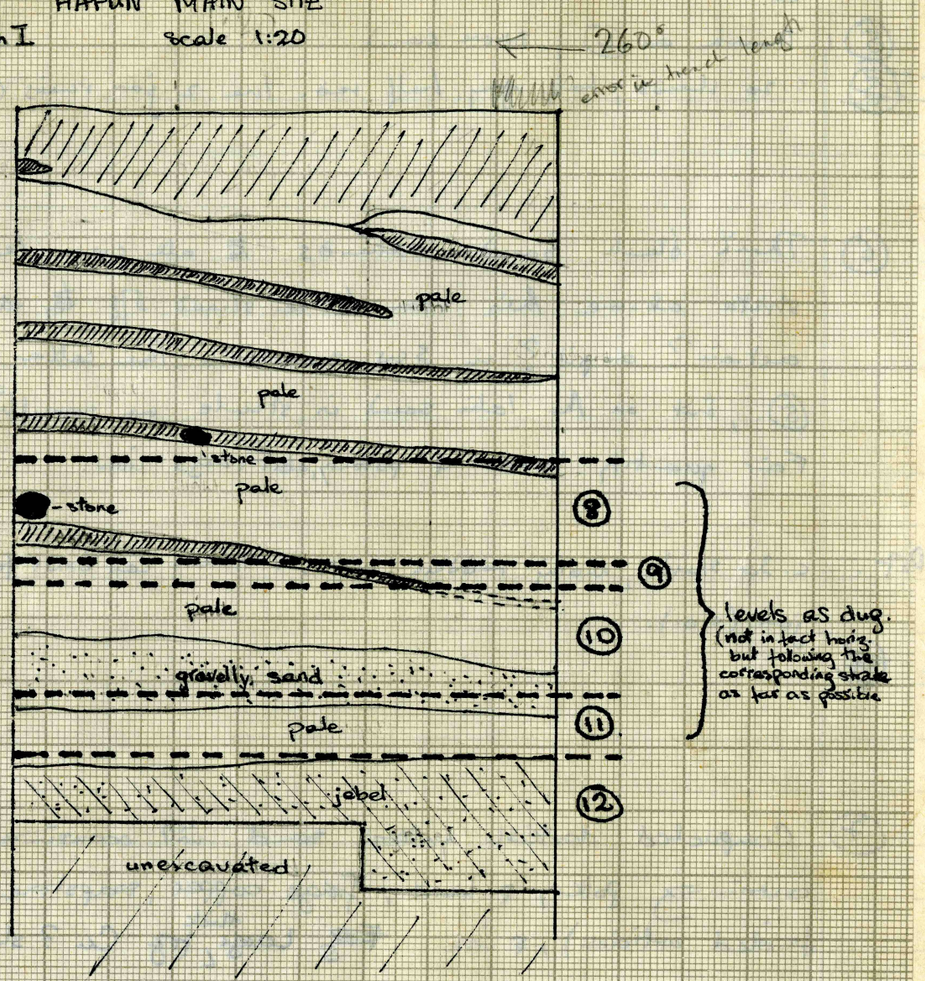

Pot. c. 30 sherds, mostly reddish-buff, v. heavy cooking pot fr (s.c.).; mi pink jar (s.c.).

(7) Compacted darkish yellow sand with occasional dark patches containing pottery & bone, frags copper, soapstone (apparently lathed articles), & iron. Large thick frg Cu ? sheet, v. corroded (risk)

G p 17

HAFUN MAIN SITE

Trench I Scale 1:20

HAF MS TR I (1975) re-opened 1976

Beneath the ridge facing east the fill from last years trench was removed. (7 levels) 1.50 x 1 m.

At −110 cm .. w. [redacted]

(8) A new level of yellow sand revealed 2 ?post holes of dark colour D: c. 13 & 9 cm. little pottery, many animal bones embedded in the floor, carnelian bead - iron & slag -

Pot. Note 'candlestick' similar to one from Tr. IV (4).
c. 60 sherds, 50% red, 40%, 40% reddish brown / pinkish buff - grey - only 3 buff (2 w. asphalt., also 2 pink-buff w. asphalt (1 v. v. base asphalt. & Perhaps 5% hand made ? coarse-pots (misc)

(9) — [redacted] 142 cm. ~~Yellow sand and bones~~ Dark ashy band with bones. v. little pottery.

Pot
c. 30 sherds
Glazed fr. base of jar (+ B/S), greenish turquoise glaze
Other mostly red, much as 8, many blackened w/in (used as vessels?) . Rim thin grey pot, wiped w/in

Facts. 1 frg Cu sheet (ash)

over

Tr I cont^d

(10) – 151 cm

Fairly loose pale sand containing bone, few sherds pottery, few frags iron, frag glass

Pot c. 75 sherds, all small, equal red/grey, only 1 or 2 buff. earthen q.v.

IRON SLAG: c. 1½ kg; shows poured or pressed in channel cavity in sand

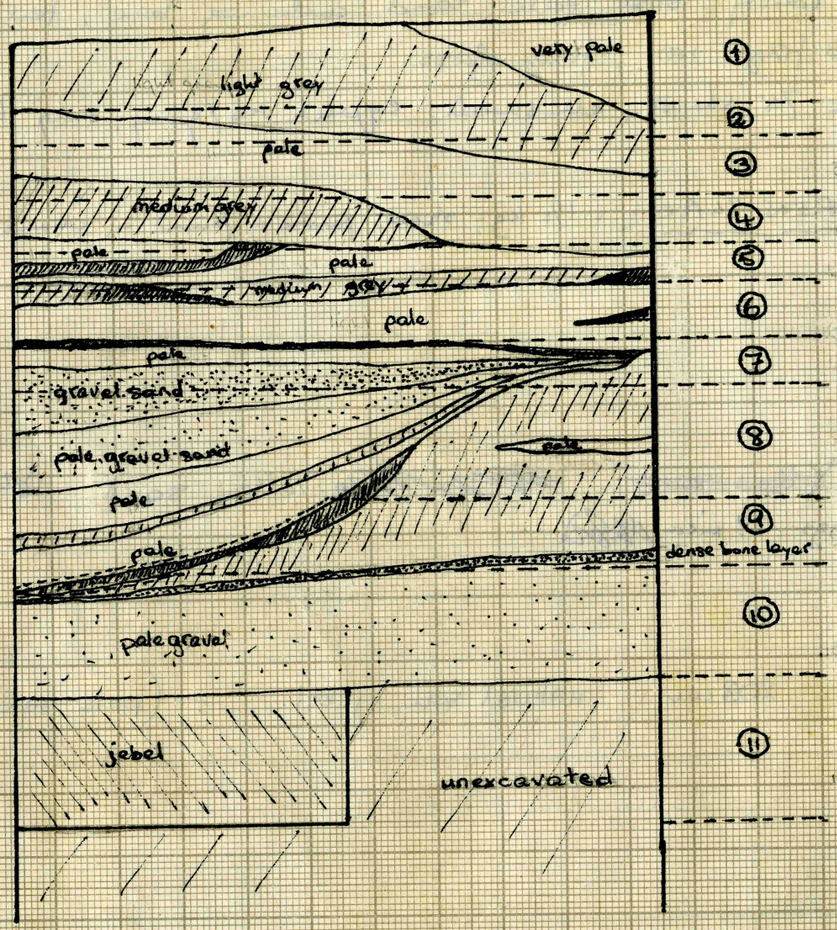

(11) ~~Yellow sand~~. ~~184 cm~~. Yellow sand. 184 cm

Finds Frgs ?? mica

(12) 203 cm natural soil - jebel. – (pale sandy gravel)

HAFUN MAIN SITE

TRENCH VI scale 1:20 → 265°

ashy grey deposits. Density of lines varies according to darkness of layers.

HAF MS TR. VI cont.

⑧ ~~loose pale sand~~ greyish sand with ash sometimes concentrated in very dark patches. The level slopes down to the SE corner of trench from the NE & SW corners & also slopes down (although less) to the NW corner. Quantity bones & pottery & ~~lump~~ iron slag ~~layer~~ Deposit consists of alternating dark & light soft sand with more or less ash content. (Zone ⑨ was erroneously dug with this layer in the west half of the trench)

Roots ~~exposed by q.v.~~ c. 80 sherds, 50% red, 40% red-brown/pink-buff/grey, only 3 buff

= I ⑧ also 2 pink/buff w. asphalt (one from base? amphora or Fr. Tr II ⑥, but thumb not sooning; perhaps 5% cook-pot.; conch-shell base

Glazed 2 sm frs yel (now) b/s.

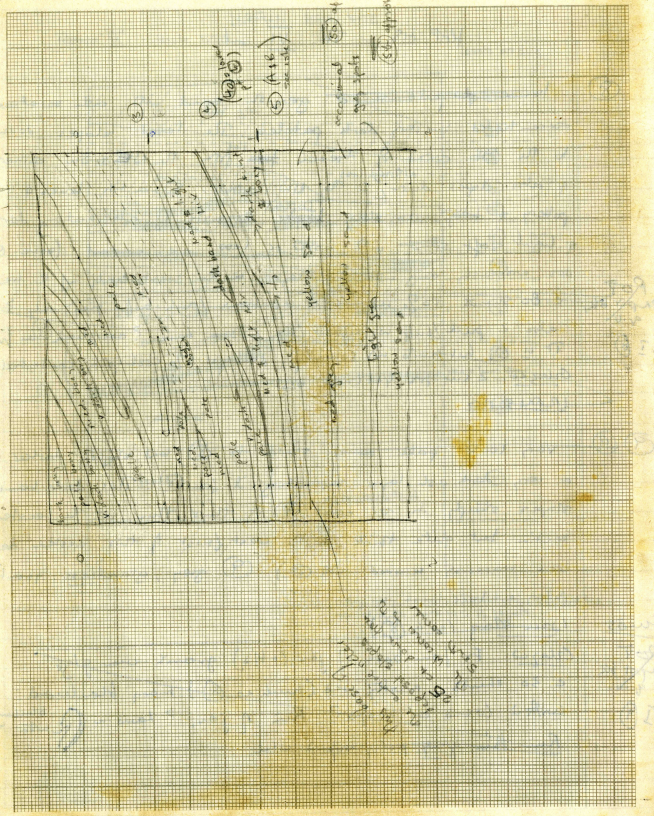

~~IRON SLAG~~

⑨ ⑨ ~~Very loose pale sand~~ similar to ⑧ but slightly darker with a very dark ash layer separating it from ⑧. This dark band slopes steeply to the east. ⑨ is thus thin at the easter section but quite thick to the west (most of this western deposit was erroneously removed with ⑧.) ⑨ grey, gravelless, quantity pottery & bone

Finds ~~Iron slag~~ (as in ⑧).

Roots ~~exposed by q.v.~~ Glazed Fr from base of jar (+ b/s) greenish-cream glaze c. 30 sherds, mostly red (much as ⑧) many blackened with traces of wipe? Rim of jar, ? handle

= I ⑨ ~~Rim thin grey pot, wiped slip~~ blackened with traces of slip

Haf HS IA

2×2m trench opened 50cm to the west of I and extending further to the south. Pottery scattered over surface.

July 21, 1980

To: Ministry of Culture and Higher Education

From: Hilarie Kelly
Research Associate
British Institute in Eastern Africa

It is with deepest regret that I must inform you of an unfortunate accident which occured at the archaeological pit south of the Jumaa Mosque in Hamar Weyn on Monday, July 14. A portion of the northern side of the pit collapsed at 9:00AM, just as clean-up operations at the bottom were being completed. Loose sand completely buried one worker, but the rest of the crew immediately cleared the sand away from his head, saving his life. The quick action of these men must be commended: Said Muki (foreman), Aweys Maye, Xasan Cilmi Xebe, Cabdullahi Cilmi Xebe, and Cusman Axmed Suleiman.

The buried man, Quraysh Cusman, then proceeded to dig himself out of the sand, with the assistance of the other crew members. This was slow and difficult work, because he was pinned down within a trench, between rock and the wall face that had just collapsed on top of him. The rescue took about one hour. During this time, great assistance was provided by Hussein Suleiman of the Miyusyamka Ummadda, and Yusuf Abdi Ibrahim of the Ministry of Culture and Higher Education. The local police also helped tremendously by keeping back the crowd. I am deeply grateful to all of these people for their help.

When Quraysh Cusman was finally taken out of the pit, he was suffering from nervous exhaustion and shock. Yusuf Abdi and I took him to Dikfer Hospital immediately. He was treated there and released by the afternoon. Thanks are due to the hospital staff who handled the situation with efficiency and kindness. Yusuf Abdi and I took Quraysh Cusman to his home to recover. I will continue to monitor his condition for several days. Compensation has been arranged with the British Institute in Eastern Africa, so that Quraysh Cusman will have adequate time to rest and recuperate without the necessity of working.

I would like to applaud the courage of Quraysh Cusman. He is a valuable and conscientious worker who demonstrated great presence of mind in terrifying circumstances.

The pit has been filled in to remove any danger to the public. This has been done under the direction of the foreman, Said Muki.

The reason for the collapse of a portion of the north wall of the pit is probably related to the presence of a pocket of apparently unstable sandy soil just below a visible old floor level. The ground level of the pit was entirely unaffected.

Finally, I would like to thank the Ministry of Culture and Higher Education, and officials of the First Congress of the Somali Studies International Association for extending their sympathy and support throughout the period following this accident.

Sincerely,

Hilarie Kelly
