<p>Linear linear feature emerging from the NE facing bank of Trench 47. feature was extremely shallow and thinned out to nothing as it ran NW to its 'terminus'. Seen above it in section was a dark dark layer that may be associated, possibly a plough mark / ridge and furrow? A fragment of post med pot was found within the surface of fill (47034). Unknown</p>

Interpretation and discussion:			Internal	<input checked="" type="checkbox"/> External	Structural	Other				
Upper fill of pit [47054]. Maybe the result of deliberate backfilling due to its mixed appearance of clay and natural sandstone. The function of this possible event remains unknown. A fragment of flint flint was recovered from deposit.										
Provisional date: prehistoric?

		Internal	External	Structural	Other				
Fill of pit [47051] lying above sand layer (47052) and below clay sand layer (47050). Again this may be the result of silting/wash, it appears slightly siltier than the deposits below but does not show any obvious signs of backfilling. It does not appear that this deposit exists in any of the other slots that have been taken for the large pit.
