AN ARCHAEOLOGICAL EVALUATION

SUMMARY

In November 2013 Archaeological Solutions (AS) carried an archaeological evaluation at Barnet Court House, High Street, Barnet, Greater London (NGR TQ 2478 9629). The evaluation was commissioned by Mr Rajesh Patel of Regent Lodge Ltd and was undertaken in compliance with a planning condition attached to planning permission for the conversion of the court house to nine self-contained residential units and two commercial units, with new extensions, following demolition of existing rear and side extensions.

Barnet (formerly Chipping Barnet) is an historic roadside settlement, located on the former Great North Road between London and the North. The site had a potential for medieval and post-medieval remains associated with the historic core of Barnet. It also had some potential for earlier remains, in particular Romano-British.

In the event the evaluation revealed no archaeological features or finds. The ground within the area of evaluation was significantly disturbed, likely by construction of the court house.

1 INTRODUCTION

1.1 In November 2013 Archaeological Solutions (AS) carried an archaeological evaluation at Barnet Court House, High Street, Barnet, greater London EN5 5UJ (NGR TQ 2478 9629; Figs. 1 & 2). The evaluation was commissioned by Mr Rajesh Patel of Regent Lodge Ltd and was undertaken in compliance with a planning condition attached to planning permission for the to conversion of the court house to nine self-contained residential units and two commercial units, with new extensions, following demolition of existing rear and side extensions (London Borough of Barnet Planning Ref. B/03009/12).

1.2. The evaluation was undertaken in accordance with a requirement of the local planning authority as advised by English Heritage Greater London Archaeological Advisory Service (EH GLAAS; archaeological advisors to LB of Barnet) and a written scheme of investigation (specification) prepared by AS (dated 11/06/2011) and approved by EH GLAAS. The project conformed to the Institute for Archaeologists (IfA) *Code of Conduct* and *Standard and Guidance for Archaeological Field Evaluation* (revised 2008), as well as the EH (London Region) *Archaeological Guidance Papers* (revised 2009), in particular *Archaeological Guidance Paper No 3; Standards for Archaeological Fieldwork in London.*

1.3 The evaluation aimed to determine the location, extent, date, character, condition, significance and quality of any surviving archaeological remains liable to be threatened by the proposed development.

Planning policy context

1.4 The National Planning Policy Framework (NPPF 2012) states that those parts of the historic environment that have significance because of their historic, archaeological, architectural or artistic interest are heritage assets. The NPPF aims to deliver sustainable development by ensuring that policies and decisions that concern the historic environment recognise that heritage assets are a non-renewable resource, take account of the wider social, cultural, economic and environmental benefits of heritage conservation, and recognise that intelligently managed change may sometimes be necessary if heritage assets are to be maintained for the long term. The NPPF requires applications to describe the significance of any heritage asset, including its setting that may be affected in proportion to the asset's importance and the potential impact of the proposal.

1.5 The NPPF aims to conserve England's heritage assets in a manner appropriate to their significance, with substantial harm to designated heritage assets (i.e. listed buildings, scheduled monuments) only permitted in exceptional circumstances when the public benefit of a proposal outweighs the conservation of the asset. The effect of proposals on non-designated heritage assets must be balanced against the scale of loss and significance of the asset, but non-designated heritage assets of demonstrably equivalent significance may be considered subject to the same policies as those that are designated. The NPPF states that opportunities to capture evidence from the historic environment, to record and advance the understanding of heritage assets and to make this publicly available is a requirement of development management. This opportunity should be taken in a manner proportionate to the significance of a heritage asset and to impact of the proposal, particularly where a heritage asset is to be lost.

2 DESCRIPTION OF THE SITE

2.1 The site is located in the London Borough of Barnet which until 1965 was in the county of Hertfordshire. It is situated on the northern slope of the valley of the Dollis Brook, forming the north-west corner of Barnet on the northern periphery of the Greater London area. New Barnet is situated to the east, with High Barnet adjacent to the north. The main suburban areas are situated to the north and south of the A411, which converges with the A1000 as it enters London from the north.

2.2 The site lies at the eastern end of the High Street (A1000), and consists of a large rectangular corner plot of land created with Normandy Avenue, which extends south-west from the High Street (Fig. 1). It is occupied by the former Barnet Court House building, constructed in the early 20th century, which includes a main central range with attached lower ranges, with

the principal frontage facing High Street. Small yards flank the building and on the south-west side a high bank has a retaining wall.

3 TOPOGRAPHY, GEOLOGY AND SOILS

3.1 The London Borough of Barnet is characterised by a rolling landscape of valleys and ridges cut by the tributaries of the Thames. The Dollis Brook, a tributary of the River Brent, which is itself a tributary of the River Thames, passes the southern edge of Chipping Barnet before meandering southwards through North Finchley. The site is situated at *c*. 127m AOD at the crest of the northern slope of the valley of the Dollis Brook, *c*. 1km to the north of the river. The minor watercourse of the Monken Mead Brook also rises *c*. 500m to the north-east. The ground drops at a moderately steep gradient southward towards the river, while dropping and undulating only slightly to the north.

3.2 The geology of the site consists of a solid geology of the Eocene London Clay, overlain by drift deposits of boulder clay which underlie gravel deposits (British Geological Survey 1978). In the vicinity of the site are localised drift deposits of Dollis Hill Gravel, which occur throughout the borough, although the precise location of the site in relation to this deposit remains unclear.

3.3 Soils on the site are unsurveyed due to urbanised character of the area although soils to the north are those of the Fforest association described as slowly permeable seasonally waterlogged reddish fine silty and fine loamy soils, some with peaty surface horizon (Soil Survey of England and Wales 1983).

4 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND

Prehistoric

4.1 Evidence for prehistoric activity in the London Borough of Barnet is extremely limited and most finds are from sites in the valleys of Thames tributaries (Lewis 2000). Artefacts in the vicinity of the site are limited to an assemblage of flint cores and other objects, including arrowheads (HER MLO61070) *c*. 250m to the east that could potentially date between the earlier Neolithic and early Bronze Age periods.

Romano-British

4.2 In the landscape of Roman Britain, the site is situated a substantial distance to the east of Watling Street, which connected Londinium (London) to Verulamium (St. Albans), passing through Brockley Hill. The latter comprised a nucleated settlement associated with significant pottery industry as well as cremation burials and a watch tower. The site, however, is significantly removed from this centre of settlement and appears to have been situated in the hinterland, with only a Roman well (HER MLO16370) and sparse pottery

sherds (HER MLO25925 & MLO16398) recorded *c*. 200-300m to the northwest on High Street, suggesting limited settlement. However, the veracity of these finds must be questioned as the nature of 'a plain glazed Roman jug' is contradictory (glazed jugs are medieval), and the archaeological remains may in fact be associated with the subsequent medieval settlement.

Anglo-Saxon to Medieval

4.3 In the Saxon period Barnet was densely wooded, with the Saxon word 'baernet' translating as: 'a burning' – an area cleared in the forest by fire (Weinreb & Hibbert 1983) and it is not thought to have been settled until the late 11th or 12th centuries (Gover *et al.* 1938). Therefore, perhaps it is not unexpected that no Saxon archaeology has been recorded in the vicinity of the site.

4.4 The Abbot of St. Albans, the Lord of the Manor, exploited the woodland to build his Abbey, and as a result communities of woodmen and swineherds were formed, with chapels founded to serve them. The first to be consecrated by the Abbot was St. Mary the Virgin in East Barnet in 1080, shortly followed by St. John the Baptist (HER MLO79102), which is c. 250m north-west of the site and also in the same parish. The earliest elements of the existing church are 15th century (MLO 60608) and medieval floor tiles have also been found in the churchyard (HER MLO16304). The site is situated to the east of the core of the medieval village, which was situated around the church on the High Street (HER MLO71854). The affix of 'Chipping' denotes the presence of a market, which was held in this village since a charter was granted in 1199. The core of the medieval settlement appears focused to the north-west with burgage plots and rubbish pits recorded on Victors Way and Tapster Street (HER MLO78278, MLO67826 & MLO99133). Medieval yards and foundations have also been recorded along High Street (HER MLO98226 & MLO1629) in addition to numerous medieval artefacts, the closest of which to the site comprise sherds of South Hertfordshire grey ware pottery (HER MLO60186) and a steelyard weight (MLO16613) c. 100m to the north-west).

Post-medieval

4.5 The Dissolution of the Monasteries in 1539 transferred the patronage of the chapel of St. Mary the Virgin to the Crown, then Henry the VIII. The Manor was sold in the later 16^{th} century and in the post-medieval period the village was gradually redeveloped. Nearby buildings surviving from the early 17^{th} century development of the settlement include the Mitre Public House and No.56 High Street (HER MLO79007 & MLO78683), while a 17^{th} century well was found along High Street during archaeological investigations (HER MLO16615). A large number of early 18^{th} century buildings remain extant, for example on Wood Street (HER MLO78593 & MLO79103) as well as No.66 High Street (HER MLO79071), but the vicinity of the site appears to remain fairly undeveloped at this time, the closest evidence for post-medieval activity being a probable soakway containing pottery (HER MLO60187) *c*. 100m to the north-west.

4.6 The local area formed the outer limit of the established settlement in the later 19th century with what appears to be large urban houses with fields beyond to the south-east. The establishment of the railway in 1872 nearby appears to have driven a level of expansion to the south-east. The 1898 Ordnance Survey map depicts the south-east end of the High Street shortly after the establishment of the railway station but before development. A landmark building during this period was the Victoria Hospital, once located where a school now stands on the corner of High Street and Meadway. The High Street follows the same route as in the present, but the only street extending south-west from it comprises Victoria Lane, which only survives today for a short distance from High Street. The High Street to the north-west of the railway station and Victoria Hospital is lined by street frontage buildings, including a grammar school, police station, hotel and public house. These properties typically have long, elongate yards and plots of land extending to the rear, possibly representing a continuation of medieval land boundaries.

The site

4.7 The site is situated within a series of plots occupied by Lawn House, potentially as gardens or yards and possibly in the area of an earlier outbuilding. The tithe map and award for Barnet (HALS ref. PC677/681) identifies the owner and occupier of Lawn House in the 1840s as Benjamin Smith, although the occupier at the end of the 19th century is unclear. To the south-east of Lawn House is a pair of semi-detached house blocks, while numerous 19th century buildings remain as Listed Buildings in the nucleus of the town, notably on Wood Street, High Street and Moxon Street (i.e. HER MLO78595 & MLO78787).

4.8 During the period between the production of the 1898 and 1914 OS maps the area of the site was subject to systematic planned development and land re-organisation driven by the county and town councils. The 1914 OS map depicts the progress of this development, which necessitated the demolition of Lawn House and the truncation of Victoria Lane. In their place a series of parallel roads extending perpendicular (south-west) to the High Street has been established, including Normandy Avenue, Fitzjohn Avenue, Bedford Avenue and Milton Avenue. These streets are almost largely lined with semi-detached houses, although the site is depicted as a vacant plot on the corner of Normandy Avenue and High Street. A series of council papers and correspondence (HALS ref. Official D/EBz/O.5) record that the site of the new Court House had been fixed within this phase of development in January to February 1913. The courthouse was designed by Urban. A. Smith, the county surveyor for Hertfordshire, for which position an application dated 1875 is archived in HALS (HALS ref: QS/Misc/B/112/4/c), who designed Watford Police Station in 1888 (MHT13693) and is associated with works carried out at Hill End Asylum (HALS ref: HM1/PI/1/19). Urban A. Smith drew up draft plans by the 22nd February 1913, although subsequent correspondence indicates questions over capacity and facilities and the design was clearly altered to the surviving layout visible today. The court house is first depicted on the 1935 OS map, on a footprint closely comparable to the present day though small extensions have been added at a later date.

4.9 In June 2013 AS carried out a historic building recording of the Barnet Court House (Collins *et al* 2013). It concluded:

The court house is unusual being constructed in 1916, at a time when little building work was carried out due to wartime material shortages and the limited availability of a workforce. Stylistically it is typical of the period and anticipates the neo-Georgian style of construction which became prevalent in the 1920s. It is well-constructed with consistent and robust detailing common to institutional buildings which drew upon a standard repertoire of materials and styles.

The original layout of the building survives largely intact and reflects the judicial process with the private and public separated by the central hub of the principal court room, itself laid out in theatrical British court style. Alteration is evident in several areas consistent with the need to upgrade facilities and to keep pace with changing institutional standards, but in general remains a well preserved example of an early 20th century institutional building.

5 METHODOLOGY

5.1 One trench was excavated using a mechanical 180° excavator fitted with a toothless ditching bucket (Fig. 2). The trench was located within the south-east wing of the former court house after this part of the building had been demolished making space for new extensions. It measured 10 x 2m.

5.2 Undifferentiated overburden was mechanically excavated under close archaeological supervision. Exposed surfaces were cleaned by hand and examined for archaeological features. Deposits were recorded using *pro forma* recording sheets, drawn to scale, and photographed as appropriate. Excavated spoil was searched for finds and the trenches were scanned by a metal detector.

6 DESCRIPTION OF RESULTS

Trench 1 (Fig. 2, DP 3-4)

Sample section 0.00 = 127.50r	· ·	5): north-west end, facing north-east
0.00 – 0.80m	L1000	Made ground. Redeposited natural light yellowish brown clay with CBM rubble and dark grey, loose, sandy silt.
0.80m +	L1001	Natural light yellowish brown and light grey, compact, clay.

Sample section 1B (DP 6): south-east end, facing north-east				
0.00 = 127.20m AOD				
0.00 – 0.76m	.76m L1000 Made ground. As above.			
0.76m + L1003 Natural clay. As above.				

Description: No archaeological features or finds were present.

7 CONFIDENCE RATING

7.1 It is not felt that any factors inhibited the recognition of archaeological features or finds.

8 DEPOSIT MODEL

8.1 The area of evaluation was commonly overlain by modern Made Ground L1000, principally consisting of redeposited natural clay and CBM rubble. The natural clay, L1001, was present at 0.70 - 0.80m below existing ground level and comprised a light yellowish brown and light grey, compact, clay.

9 DISCUSSION

9.1 The site had a potential for archaeological remains, in particular for the medieval and post-medieval archaeology. The site is located in the centre of the historic town located along the main road from London to the north of the country.

9.2 In the event no archaeological features or finds were revealed. No indication of any previous development of the site was identified with an exception of modern ground disturbance. The latter may have been related to levelling during the construction of the court house in early 20th century. The area also contained rubble created during the recent demolition of the southwest part of the building. No residual finds were recovered.

10 DEPOSITION OF THE ARCHIVE

10.1 Archive records, with an inventory, will be deposited with any donated finds from the site at London Archaeological Archives and Resource Centre (LAARC). The archive will be quantified, ordered, indexed, cross-referenced and checked for internal consistency.

ACKNOWLEDGEMENTS

Archaeological Solutions would like to thank Mr Rajesh Patel of Regent Lodge Ltd for commissioning the project and for his assistance.

AS gratefully acknowledge the input and advice of Mr Sandy Kidd of English Heritage Greater London Archaeological Advisory Service (EH GLAAS).

APPENDIX 1 HISTORIC ENVIRONMENT RECORD DATA (HER)

The following sites are those that lie within a 500m radius of the site. The table has been compiled from data held by the Greater London Historic Environment Record (GLHER).

SMR	NGR SP	Description
Prehistoric		
MLO61070	Centroid TQ 2501 9639	High Street: Queen Elizabeth's Girls School. Excavation "to rear of school grounds" by R. Walker in 1972 produced nineteen flint cores and other objects including arrow heads which may have been discarded rejects. Identified by "an expert at Verulam Museum". Archaeological Report Form states that only information is a press cutting in Barnet Museum, and finds with HADAS.
Roman	I	
MLO16370	TQ 2460 9650 (point)	A Bricked up Roman well discovered during building extensions in 1931. * Natural not applicable *
MLO25925	TQ 2464 9645 (point)	High Street (No. 58). Roman pottery sherds were recovered during the course of the excavation.
MLO16398	TQ 2457 9649 (point)	High Street (No. 68). Excavation produced evidence of Roman occupation including a wall running from the shop premises across the yard, a plain glazed roman jug about 14inches in height and a bricked up Roman well. * No record of natural *
Medieval	•	
MLO71854	TQ 2450 9640 (point)	HIGH ST. The village lay around the church of St John the Baptist (SMR 222005) with the market held in front. Often refered to as Chipping Barnet.
MLO79102	TQ 24552 96465 (point)	1. 5004 WOOD STREET (north side) Church of St John the Baptist TQ 2496 10/25 1.2.50 (Formerly listed as Parish Church of Chipping Barnet) II* GV 2. Altered extensively in circa 1873-5 by William Butterfield, the Church incorporates the mid 15th century building as its double north aisle. Flint with stone dressings in bands and chequerwork. Imposing west tower. Timber fleche by Traylen. Interior plastered. Nave roof double framed collar-braced with closely spaced scissor-braced rafters. Roof to 15th century building shows a flat panelled ceiling. Font cover, altar and reredos of stone and Purbeck marble by Butterfield (1880-82). Elaborately carved pulpit and unique set of carved pew-ends by Traylen. Organ by Hill circa 1876. Ravenscroft Chapel in south aisle contains fine C17 alabaster effigy of Thomas Ravenscroft, a local benefactor. Glass in north and south aisles by Henry Holiday in good Arts and Crafts manner circa 1887-89. Listing NGR: TQ2455296465
MLO60608	TQ 2455 9645 (point)	ST JOHN THE BAPTIST The insertion of a doorway through the east wall of the C15 north aisle of the church was observed by members of Hendon and District Archaeological Society (HADAS) during September 1994. The work revealed a dressed sandstone wall with plaster rendering. This stonework (Reigate stone) was recessed to a depth of 23cm, a skim of plaster covering the rear of the recess, the whole having been later infilled with brick, chalk and stone rubble. This architectural feature may be part of the original C15 church.
MLO16304	TQ 2470 9640 (point)	Chipping Barnet [Unspecified Churchyard]. Decorated & Glazed Floortile Product Of Kilns At Penn, Bucks Found In Anunspecified Churchyard In Chipping Barnet. Possibly St John The Baptist ?See 222005 For Church, 091991 For Other Medieval Tiles From St Johns Church
MLO78278	TQ 24696 96477 (point)	Victors Way, Barnet {Medieval/post medieval burgage plots/rubbish pits}. Probable medieval and post medieval burgage plots, rubbish pits and external surfaces were found during an archaeological evaluation at Victors Way, carried out by Wessex Archaeology in 2004. Two evaluation trenches were excavated on land behind The Mitre public house, within the historic core of Barnet. The trenches revealed the presence of of probable medieval deposits associated with burgage plots to the rear of extant late medieval and post-medieval buildings fronting onto Barnet High Street. External surfaces and pits containing domestic rubbish were also recorded. (1)
MLO98226	Centroid TQ 24730 96416	High Street (36-38), High Barnet . A watching brief was carried out by Pre-Construct Archaeology between 19th - 24th May 2006. Chalk and

r	- 1	
MI 01020	Outtoil TO	stone medieval foundations were recorded as well as pottery dated to the mid 14th to mid 15th century. Post medieval foundations were also recorded as well as a well and soakaway. *the natural was recorded at an upper height of 124.90m OD* Updated by R Leggett (3rd May 2007)(1)
MLO1629	Centroid TQ 2472 9634	High Street (Nos 19-25), Chipping Barnet {Medieval yard, medieval/post medieval building}. A hard pebble surface of probable medieval date and the foundation of a medieval to post medieval building were found through excavation at 19-25 High Street, Chipping Barnet, by the Hendon and District Archaeological Society in 1990. The surface was interpreted as being a back-yard for cattle and horses. The layer produced a large number of medieval pottery sherds datable to AD 1150 – 1400. Further pottery sherds were recovered across the site. A mortared flint and tile wall footing, thought to represent a foundation base for a timber building, of a style datable to AD 1400 -1700, was also recorded. A concentration of similar flint nodules to those found in the wall footing * Natural London clay was recorded but no depth is cited in the sources *
MLO67826	TQ 2461 9654 (point)	Tapster St (No. 10-12). Natural gravel was cut by a rubbish pit dated to the mid C12th. Several large quarry pits cut the natural gravel, one of
MLO16303	TQ 2450 9650 (point)	which was dated to the 14th Century. High Street. Medieval cooking jar with everted rim in a buff ware with a green slip. Found some time prior to 1965, exact date not known. * Natural does not apply *
MLO16613	TQ 2470 9640 (point)	High Street (Beneath). Medieval steelyard weight with lead core. *Natural not applicable*
MLO16341	TQ 2456 9649 (point)	High Street (No 70). Wattle And Daub Found During Restoration Work And Probably Associated With The Medieval Red Lion Inn
MLO17504	TQ 2459 9648 (point)	High Street (No 74). Lower part of late medieval jug found during digging of shop foundations.
MLO14813	TQ 2460 9647 (point)	High Street (No 76). Base of Medieval red ware jug found in 1960.
MLO60186	TQ 2471 9636 (point)	High Street (No. 29). Several sherds of South Herts Greyware pottery were recovered from the topsoil. * Natural level not quoted *
MLO16342	TQ 2461 9647 (point)	High Street (No. 66). Globular Jug found in 1934 under the foundation of an inn at No. 66 High Street. NB. Source now defunct, no other written source available for further information.
MLO16415	TQ 2450 9651 (point)	High Street (The Bottleneck). Early 14th century shoe dated by the British Museum.
MLO16414	TQ 2456 9646 (point)	Wood St (Chancel Of St Johns Church). A Medieval Decorated Glazed Floortile With A Slip Painted Paschal Lamb Within Two Intersecting Squares. Found In The Chancel During Alterations In 1875.
MLO99133	Centroid TQ 24696 96477	Victors Way, High Barnet, {medieval to post medieval occupation}.An archaeological excavation was undertaken in 2005 by AOC Archaeology following the identification of remains in earlier watching briefs and evaluation prior to a development including ground reduction of 2m. Site code VWA05. The earliest evidence on the site were ditches and a post hole dating to the medieval period. One of the ditches may have formed a property boundary. Post medieval features recorded included brick and ceramic drainage systems, a large east to west running ditch, pits of varying size, postholes, stakeholes, garden or yard deposits and a gravel path. In addition there was a 15th to 16th century structure. Occupation was particularly dense during the post medieval period, with extensive numbers of features recorded. Please see (1) for further information.
MLO59181	Centroid TQ 2429 9640	Wood Street, [Victoria Maternity Hospital], Barnet, {medieval ditch and site of Georgian house}. An archaeological evaluation was undertaken by Hendon and District Archaeological Society prior to planning consent for proposed new hospital buildings on the site. Site code VMH93. Three trial trenches were excavated within the footprints of the proposed structures. An early medieval linear feature was recorded in two trenches, identified as a probable ditch. Medieval pottery sherds, pits and garden features dating to the 18th to 20th century, and remnants of a wing of the Georgian mansion previously on this site, were also recorded. *natural clay and gravel at 128.75m OD* Fore more information see (1-5).
MLO79104	TQ 24368 96470 (point)	1. 5004 WOOD STREET (north side) No 32 TQ 2496 10/16 II GV 2. Possibly a mid 16th century timber framed tenement house. Rendered. Two windows. Two storeys. Canted bay to ground storey. Two light wooden casements above. Old tile roof with tall brick stack. Listing NGR: TQ2436896470
MLO78994	TQ 24554 96415 (point)	TUDOR HALL (PART OF BARNET COLLEGE OF FURTHER EDUCATION). 1. WOOD STREET 5004 (south side) Tudor Hall (Part of Barnet College of Further Education) TQ 2496 10/36 II GV 2. 16th century altered 19th century. Red brick Hall. Three large modern mullioned windows, 4 lights with one transom. Hexagonal tower at each end. Tile roof behind parapet. Dormer.

Post-mediev		
MLO67828	TQ 2461 9654 (point)	Tapster St (No's 10-12). Medieval pitting on the site was sealed by post- medieval dumping to raise the ground level. This was concentrated to the E of the site suggesting backyard activity behind houses along the Tapster St frontage.
MLO76528	Centroid TQ 2460 9664	Tapster Street,Barnet, EN5. A linear cut greater than 2.3m in width, orientated north to south and running for more than 9.0m. It had a highest level of 121.12m OD, a maximum recorded depth up to 1.65m and was filled by a dark brown grey sandy silt with occasional finds. It probably represents the a Post- Medieval fill. * Natural sand and gravel was recorded at 122.33m OD *
MLO99126	Centroid TQ 24617 96379	Wood Street, [Barnet College], Barnet, {early post medieval property boundary}. An archaeological evaluation was carried out in 2008 by Archaeology South-East. Site code BCV08. Four trenches were excavated but only one feature of archaeological interest was discovered, which was identified as a possible early post medieval property boundary. This linear feature was aligned with the current and historical property boundaries. There it is probable that this feature is demarcating a tenement to the rear of the street frontage. *Stanmore Gravels recorded at 127.331mOD* For more information see (1).
MLO16615	TQ 2450 9668 (point)	High Street (Midland Bank). A 17th century well with a timber frame and containing some Rhenish glass and stoneware. (1-2) * Natural not applicable *
MLO75802	TQ 2454 9650 (point)	High Street (No 72). The watching brief produced evidence for an 18th century brick cellared building, which was truncating the natural sandy gravel. The building had been repaired with yellow stock bricks and internal partition walls appear to have been built in the 19th century within the cellar. The curvature of the former vaults in the cellars was still visible and the base of the cellar was 2m bellow street level. In a section to the rear of the site a demolition layer was visible, although it was largely truncated away by the building. The layer dates to the 16th or early 17th century and it contained roof tile, green-glaze pottery, clay tobacco pipe and pebble inclusions.
MLO60187	TQ 2471 9636 (point)	High Street (No. 29). An unusual-shaped pit may have been a soakaway. Finds within it included Borderware, Redware and Cistercian Ware sherds. A brick, tile and flint wall was probably associated with a demolished section of the Red (now Dandy) Lion pub. * Natural level not quoted *
MLO25926	TQ 2464 9645 (point)	High Street (No. 58). An excavation to the rear of The Mitre at Number 58 High Street produced the remains of a Victorian building with earlier construction debris, dated by associated pottery sherds to 17th – 18th centuries. Earlier Medieval and Roman pottery sherds were also recovered.

MLO103640	Centroid TQ 24481 96355	Manor Close off Wood Street/Orchard Road/Marys Lane, [Old Court House Recreation Ground], Chipping Barnet, Barnet, EN5 4ND, 19th Century area used for pasture, a brewery and stables. Recreation ground since 1924. At one time Barnet was part of Middlesex Forest. Throughout the C19th, the land that is now the Recreation Ground and the houses fronting onto Wood Street were owned by the Rumball family. When Sampson Rumball died in 1827 ownership passed to his son Samson Augustus Rumball who leased the plots for pasture, two houses, a brewery and stables. The Barnet Brewery Company traded here intermittently from the C18th until its closure in 1909, and in 1911 the brewery site was offered to Barnet Urban District Council for council offices, who in 1912 purchased the site for £1,000. The Council then purchased the freehold of the old Court House Estate in 1923 and opened the recreation ground on the south side of the gardens in 1924; Barnet Bowls Club was founded here in 1926. The building on Wood Street, which has been Barnet Museum since 1938, was also one of the Rumball properties; for a time it was a private school, Barnet College for Girls, which had closed by 1911. The park has a pond, shrub and flower beds and a fine variety of trees which are marked as a tree trail including black mulberry, honey locust, Persian ironwood, dawn redwood, paper- bark maple, Brewer's weeping spruce, false acacia, Monterey pine, Scots pine, English and red oak, willow-leaved pear. P Taylor and J Cordern, 'Barnet, Hadley and Totteridge: a pictorial history' (1994); LB Barnet leaflet (1)
MLO75359	TQ 24626 96576 (point)	Moxon Street (No. 13-15) and Tapster Street (No. 18-20). A frogged red brick and concrete foundation pad (0.15m thick) was found in Pit 1, along with an earlier foundation composed of frogged 19th or 20th century redbrick (0.47m thick), which stood on top of the foundation pad. To the west of the modern foundation pad was a 0.5m thick pale greyish yellow mortar layer, starting and finishing at the same level, and which is probably the backfill of a foundation trench. * The lowest observed deposit was a soft greyish-brown sandy clay with occasional brick dust inclusions, this may have been a disturbed natural deposit, recorded at a

		depth of 0.85m - 1.15m OD *
MLO75803 MLO75874	TQ 24626 96576 (point)	Moxon Street (No. 13-15) and Tapster Street (No. 18-20). Three brick cellars that fronted onto Tapster Street frontage were recorded in trench 1. The brick work is all thought to be 19th century in date, although there were several different phases of activity present. A cellar in the north west part of the trench was infilled with demolition rubble and it had a brick drain to the north, which was cut by a later bricklined cesspit. Another brick-lined cellar in the north east corner of the trench had a tile floor and reused the wall of the cesspit. To the south west there was another brick cellar which was infilled with demolition rubble. It was probably in use at the same time as another brick-lined cesspit to the east of the trench and this was truncated by a brick well. A 19th century brick-lined well was recorded in trench 1. Two brick-lined cesspits were found in trench 1. The brick work indicates they are 19th century in date, but there are clearly different phases of activity. * Natural gravel was recorded between 125.0m – 125.50m OD *
	2400 9004	towards the west of the site. A dump layer was present on the eastern side of the middle of the site. A dump layer was present on the eastern side of the middle of the site, also of unknown date. 19th c and 20th c building/ occupation debris was present on both the western and eastern sides of the site. A chalk floor surface was found to the west of the site and it is thought to be of 19th c or early 20th c date. A masonry basement wall made of pink and yellow brick and concrete foundations indicate a 20th century building on the eastern side of the site. A 20th century construction deposit and hardcore base was also found. 19th and 20th century garden soils was present on both the western and eastern sides of the site. In the middle area of the site a 19th c brick drain and its cut were exposed. The drain was constructed of orangy red slightly frogged brick of 230x100x70mm bonded by beige mortar. It was circular in cross-section with a diameter of 0.5m and an excavated length of 4.5m, running from south-west to north-east. * Natural sand and gravel was recorded at 122.33m OD *

headers, laid in English bond; lighter red brick dressings; stone dressings; clay tile roof. PLAN: Rectangular plan; 2 storeys high. Interior comprises ground floor vestibule with offices to either side, leading to entrance hall, with stair to left hand side, two further offices to rear. EXTERIOR: Symmetrical front (N) elevation of five bays. Stone plinth. Stone doorcase with attached lonic columns and broken- base segmental pediment bearing carved relief coat of arms. Doorhead with swept moulding, inscribed 'BARNET' UD COUNCLI OFFICES' beneath. Recessed grons to first-floor windows. Timber modilion eaves cornice broken by semi-circular pediment with oculus. Panelled entrance doors. Hipped roof, four tall chimney stacks, one to each side and two to rear, with recessed semi-circular headed panels. Windows to all elevations have gauged brick arches, those to front with keystones; timber multi-pane sashes with exposed boxes. Side (W) elevation has pair of keyed oculi lighting the upper-floor council chamber. Cupola to roof. INTERIOR: Internal porch leads through timber glazed doors to vestibule with wood boards to either side bearing names of civic digitaries up to 1965; that to the left for Barnet UDC, Elliptical arch through to entrance hall. Timber well stair with close-string and twisted balusters. Panelled double doors with moulded architrave to council chamber. Council chamber has oak dado panelling, moulded plaster wall panels and deep coved plaster ceiling, double doors to ante- room. Ante-room finished in similar manner. Most internal joinery original. Some simple chimneypieces in the lesser to anterfors. Barnet Urban District Council, formed in 1894, then in Hertfordshire. A competition was held for the design in 1913; the winning entry was that of Henry Arthur Cheers who designed a number of public buildings. However, WB Chancellor of Lichfield was selected as surveyor in 1914 and produced plans for the final scheme. The building became a registry office after 1965 when Barnet UDC, along with four neigh	WILU101417		
dressings; clay tile roö. PLAN: Rectangular plan; 2 storeys high. Interior comprises ground floor vestibule with offices to either side, leading to entrance hall. Council chamber and ante-room on upper floor with further offices to rear. EXTEROR: Symmetrical front (N) elevation of five bays. Stone plinth. Stone doorcase with attached lonic columns and broken- base segmental pediment bearing carved relief coat of arms. Doorhead with swept moulding, inscribed 'BARNET UD COUNCIL OFFICES' beneath. Recessed aprons to first-floor windows. Timber modillion eaves cornice broken by semi-circular pediment with oculus. Panelled entrance doors. Hipped roof, four tall chimney stacks, one to each side and two to rear, with recessed semi-circular pediment with oculus. Panelled entrance doors. Hipped roof, four tall chimney stacks, one to each side and two to rear, with recessed semi-circular peper-floor council chamber. Cupola to roof. INTERIOR: Internal porch leads through timber glazed doors to vestibule with wood boards to either side bearing names of civic dignitaries up to 1965; that to the left for Barnet UDC, that to the right relocated from the former borough offices of East Barnet UDC. Elliptical arch through to entrance hall. Timber well stair with close-string and twisted balusters. Panelled double doors with moulded architrave to council chamber. Council chamber celling, double doors to ante- room. Ante-room finished in similar manner. Most internal joinery original. Some simple chimeppieces in the lesser rooms, which are otherwise without features of interest. HISTORY: Originally the municipal offices for Barnet Urban District Council, formed in 1894, then in Hertfordshire. A competition was held for the design in 1913; the winning entry was that of Henry Arthur Cheers who designed a number of public buildings. However, WB Chancellor of Lichfield was selected as surveyor in 1914 and produced plans for the final scheme. The building became a registry office after 1965 when Barnet UDC, along with four neighbouring boroughs, were merged into the present London Borough of Barnet. SUMMARY OF IMPORTANCE: Of special interest as a handsome, well- detailed municipal building in the neo-Baroque style. It is one of only a few unaltered surviving examples of the smaller purpose-built local government headquarters which were built to serve the expanding suburban fringes of late C19 and early C20 London. SOURCES: Pevsner, The Buildings of England, London 4: North, p 170; English Heritage, London's Town Halls, 1999 Barnet Local Studies and Archives (1-2) This building is listed under the Planning (Listed Buildings and Conservation Areas) Act 1990 as amended for its special architectural or historic interest. (3)			
relocated from the former borough offices of East Barnet UDC. Elliptical arch through to entrance hall. Timber well stair with close-string and twisted balusters. Panelled double doors with moulded architrave to council chamber. Council chamber has oak dado panelling, moulded plaster wall panels and deep coved plaster ceiling, double doors to ante- room. Ante-room finished in similar manner. Most internal joinery original. Some simple chimneypieces in the lesser rooms, which are otherwise without features of interest. MLO78372	Centroid TQ 24806 96380	High Street (No. 16-20a), High Barnet . An archaeological evaluation was conducted by T.Bradley on behalf of PCA between the 4th and 9th May 2005. The evaluation consisted of 5 trenches spread over the area of the proposed development. Maximum depth of excavation was c. 1.4m below ground level. The evaluation found evidence for natural gravels (grading upwards to subsoil) across the steeply inclined site at heights between 125.60m OD and 131.09m OD. Underlying pale clays were exposed in places with heights from 125.05m OD to 131.24m OD. The evaluation found extensive evidence of truncation, disturbance and levelling, in many places removing all or most of the original soil profile. Made ground, frequently with abundant brick and tile fragments was found over most of the site. Only a few archaeological features were present, or have survived, and these are considered to be post-medieval in date, relating to boundaries and outbuildings.
MLO16403	TQ 2458 9648 (point)	High Street (No. 68). Excavation undertaken by HADAS in the Garden of the Old Bull Public House in 1982. This report identifies the absence of archaeological remains within the study area. Updated by R Cummings (4th July 2006)
MLO77415	TQ 24462 96636 (point)	LAND ADJACENT TO 3-5 SALISBURY ROAD, BARNET. No significant archaeological features or finds were discovered
