Project details

Project name Lower Farm, Brettenham, Suffolk

In May 2015, Archaeological Solutions Ltd (AS) carried out a programme of archaeological monitoring and recording at Lower Farm, Brettenham, Suffolk IP7 7BS (NGR TL 965 551). The monitoring was undertaken during groundworks for a two-storey front extension and new rear single-storey extension. The monitoring was commissioned to comply with a planning / listed building condition attached to approval for the development (Babergh District Council Ref. B/14/00678/LBC/TH), based on the advice of Suffolk County Council Archaeological Service Conservation Team (SCC AS-CT).

The site lies on the south-western side of Lower Farm Road, on the edge of Brettenham parish. It comprises the existing dwelling of Lower Farm, which is within a farm complex which is partially enclosed by the remains of a moat. It is proposed to extend the dwelling to the front and rear, for which listed building consent has been obtained. The farmhouse is described as being timer-framed and plastered, dating to the 16<sup>th</sup>-17<sup>th</sup> century.

The Suffolk Historic Environment Record (HER) notes the archaeological importance of the site. It lies within a medieval moated site, recorded as HER BTT 003. The moat is partial, and is up to 5m wide, partially water-filled.

## PROPOSED EXTENSION, LOWER FARM, BRETTENHAM, SUFFOLK IP7 7BS

## ARCHAEOLOGICAL MONITORING AND RECORDING

## SUMMARY

In May 2015, Archaeological Solutions Ltd (AS) carried out a programme of archaeological monitoring and recording at Lower Farm, Brettenham, Suffolk IP7 7BS (NGR TL 965 551). The monitoring was undertaken during groundworks for a two-storey front extension and new rear single-storey extension. The monitoring was commissioned to comply with a planning / listed building condition attached to approval for the development (Babergh District Council Ref. B/14/00678/LBC/TH), based on the advice of Suffolk County Council Archaeological Service Conservation Team (SCC AS-CT).

The site lies on the south-western side of Lower Farm Road, on the edge of Brettenham parish. It comprises the existing dwelling of Lower Farm, which is within a farm complex which is partially enclosed by the remains of a moat. It is proposed to extend the dwelling to the front and rear, for which listed building consent has been obtained. The farmhouse is described as being timer-framed and plastered, dating to the 16<sup>th</sup>-17<sup>th</sup> century.

The Suffolk Historic Environment Record (HER) notes the archaeological importance of the site. It lies within a medieval moated site, recorded as HER BTT 003. The moat is partial, and is up to 5m wide, partially water-filled.

*In the event, the monitoring encountered only modern made ground layers and two modern pits.* 

## 1 INTRODUCTION

1.1 In May 2015 Archaeological Solutions Ltd (AS) carried out a programme of archaeological monitoring and recording at Lower Farm, Brettenham, Suffolk IP7 7BS (NGR TL 965 551; Figs. 1-2). The monitoring was undertaken during groundworks for a two-storey front extension and a new rear single-storey extension. The monitoring was commissioned to comply with a planning / listed building condition attached to approval for the development (Babergh District Council Ref. B/14/00678/LBC/TH), based on the advice of Suffolk County Council Archaeological Service Conservation Team (SCC AS-CT).

1.2 The archaeological monitoring was carried out in accordance with a brief prepared by Suffolk County Council Archaeological Service

Conservation Team (SCC AS-CT; dated 19/06/14) and a specification compiled by AS (dated 21/10/2014) and approved by SCC AS-CT and English Heritage. The project conformed to the Institute for Archaeologists' (2013) *Standard and Guidance for an Archaeological Watching Brief*, and Gurney's (2003) *Standards for Field Archaeology in the East of England*.

- 1.3 The objectives of the project were to:
  - ensure the archaeological monitoring of all aspects of the development programme likely to affect buried archaeological remains;
  - secure the adequate recording of any archaeological remains revealed by the development programme;
  - secure the full analysis and interpretation of the site archive and the appropriate publication of the project results, if required;
  - secure the analysis, long-term conservation and storage of the project archive

## Planning Policy Context

1.4 The National Planning Policy Framework (NPPF 2012) states that those parts of the historic environment that have significance because of their historic, archaeological, architectural or artistic interest are heritage assets. The NPPF aims to deliver sustainable development by ensuring that policies and decisions that concern the historic environment recognise that heritage assets are a nonrenewable resource, take account of the wider social, cultural, economic and environmental benefits of heritage conservation, and recognise that intelligently managed change may sometimes be necessary if heritage assets are to be maintained for the long term. The NPPF requires applications to describe the significance of any heritage asset, including its setting that may be affected in proportion to the asset's importance and the potential impact of the proposal.

1.5 The NPPF aims to conserve England's heritage assets in a manner appropriate to their significance, with substantial harm to designated heritage assets (i.e. listed buildings, scheduled monuments) only permitted in exceptional circumstances when the public benefit of a proposal outweighs the conservation of the asset. The effect of proposals on non-designated heritage assets must be balanced against the scale of loss and significance of the asset, but non-designated heritage assets of demonstrably equivalent significance may be considered subject to the same policies as those that are designated. The NPPF states that opportunities to capture evidence from the historic environment, to record and advance the

understanding of heritage assets and to make this publicly available is a requirement of development management. This opportunity should be taken in a manner proportionate to the significance of a heritage asset and to impact of the proposal, particularly where a heritage asset is to be lost.

# 2 DESCRIPTION OF THE SITE

2.1 The site is located within Lower Farm, on the south-western side of Lower Farm Road *c*.1km to the north of the centre of the village of Brettenham, which is 11km south-west of Stowmarket and 14km south-east of Bury St. Edmunds. The site comprises an L-shaped, 4 bedroom dwelling-farmhouse dwelling with a barn and complex of farm out-buildings to the south-east. The moat is partial, and is up to 5m wide, partially water-filled. The farmhouse is partially enclosed by a moat to the north-west and north-east, which runs parallel to those frontages of the house forming an L-shape. The farmhouse is a listed building (HER DSF5374) described as timber-framed and plastered, with a pantiled roof, casement windows, two dormers on the from and a ridge chimney stack. The building dates to the 16<sup>th</sup>-17<sup>th</sup> centuries but has been considerably altered and renovated century, with listed building consent obtained for the proposed development.

# **3 TOPOGRAPHY, GEOLOGY AND SOILS**

3.1 The site is located at c.87m AOD on the northern edge of the plateau on which the village of Brettenham is situated, with a shallow slope descending to the north towards the villages of Hightown Green and Rattlesden. The River Brett rises c.250m to the north-east of the site and flows on a south-western course to the west of the site towards Thorpe Morieux.

3.2 The site is situated on drift geology of Anglian glacial and fluvial silt and clay that typically give rise to heavy boulder clay soils in mid Suffolk. Bands of glacial sand and gravel may also be encountered immediately adjacent to local rivers.

# 4 ARCHAEOLOGICAL AND HISTORICAL BACKGROUND

4.1 The archaeological record for the village of Brettenham presents a picture of an agricultural landscape with origins in the medieval period. The nucleus of village is situated around the 14<sup>th</sup> century church of St. Mary's (HER BTT006/DSF1882), with an archaeological investigation to the south at the Old Rectory School suggesting the presence of medieval house platforms in the vicinity (HER BTT018). Ryece Hall c.800m to the south-west may also have been a high status component of the medieval landscape, comprising a 15<sup>th</sup> century hall (HER BTT020). Surrounding the village are a network of farms, many with moated enclosures that suggest medieval origins, but containing farmhouses built in the 16<sup>th</sup>-17<sup>th</sup> centuries, potentially incorporating or superseding earlier structures. The site of Lower Farm is an example of this, presenting the partial remains of a moat (HER BTT003) containing a 16<sup>th</sup>-17<sup>th</sup> century timber-framed and plastered farmhouse (HER DSF804). A further destroyed trapezoid moat was present at Water Hill, close to the north of the site (HER BRR001); while other moats are present to the south at Spain's Plantation (HER BTT011), to the east at Fenn Farm and Fengate Farm (HER RAT029 & RAT030), to the north-east in Moat Field (HER RAT028). In addition to the moats, the local landscape also preserves the outline or remnants of ancient woodland, thought to have been present until at least the medieval period, including Rattlesden Wood (HER RAT022) and Ram's Wood (HER BTT016)

4.2 The continuity and relative prosperity of the agricultural landscape established in the medieval period into the post-medieval and early modern periods is highlights by the other farmhouses built or re-built in the 16<sup>th</sup> to 18<sup>th</sup> centuries. Including Lower Farm on the site (HER DSF804), Fengate and Fen Farmhouses to the east (HER DSF5374 and DSF4038), Charlie's and Cock Farms to the south (HER DSF1377, DSF806 & DSF1936); while Walnut Tree Cottage to the east also belongs to this period (HER DSF3055). Some diversification of post-medieval landscape exploitation is suggested by the name of 'Brick Field' to the south-east, but no evidence for brick works or clay pits has been recorded or depicted on historic maps (HER BTT Misc).

4.3 In 1942 RAF Rattlesden (USAF Station 126) was constructed as a Class A bomber airfield on the north-eastern side of Lower Farm Road (HER RAT039), on land adjacent to that of Lower Farm. Living and mess sites were on the eastern side of the air base, adjacent to the village of Hightown Green. The airfield was deemed inactive in 1945 when the combat units left; was used as a Ministry of Food depot in 1946, before being returned to the RAF in 1947 and used as a Bloodhound Missile station until the airfield was sold off in 1967/8. Subsequent clearance work salvaged most of the concrete and hard – standing, though one operation runway and control tower remain used by the Rattlesden Gliding Group.

# 5 METHODOLOGY

5.1 The programme of archaeological monitoring and recording encompassed the foundation trenches. Their excavation was undertaken using a 360° mechanical excavator fitted with a ditching bucket, and the excavated trenches were 0.90m wide and up to 0.32m deep.

5.2 Exposed sections (at a safely accessible depth) were cleaned by hand and examined for archaeological features. Deposits were recorded using *pro forma* recording sheets, drawn to scale and photographed as appropriate. Excavated spoil was searched for finds.

## 6 DESCRIPTION OF RESULTS

6.1 Sample sections of the encountered stratigraphy were recorded:

## Area 1

Sample Section	1	
0.00 = 87.87m A	OD	
0.00 – 0.07m	L1000	Concrete (Former pig houses)
0.07 – 0.18m	L1001	Made Ground. Dark greyish brown silt with small
		stones and rubble.
0.18m+	L1002	Natural. Firm, mid yellow orange silty clay.

Description: The floor of a former pig pen (L1000) was recorded overlying a layer of made ground (L1001) which in turn overlay the natural (L1002).

## Area 2

Sample Section 2 (Fig. 3; DP2) 0.00 = 87.43m AOD		
0.00 – 0.04m	L1003	Topsoil. Friable, dark brown sandy silt with sparse stones.
0.04 – 0.32m	L1004	Made Ground. Firm, mid yellow brown silt clay and rubble.
0.32m+	L1009	Natural. Dark yellow brown, firm, sandy clay with modern CBM

Description: Topsoil L1003 overlay Made Ground L1004 which in turn overlay the natural, L1009. Modern Pits F1005 and F1007 were revealed and they cut Made Ground L1004.

F1005 was sub-circular in plan (0.54 x 0.30 x 0.11m) with steep sides and a concave base. Its fill, L1006, was a friable, black silt and charcoal. Two modern rusty nails were present F1005 cut modern Made Ground L1004.

F1007 was sub-circular in plan (0.46 x  $0.23 \times 0.09m$ ) with steep sides and a concave base. Its fill, L1008, was a friable black silt and charcoal. No finds were present. F1007 cut modern Made Ground L1004.

# 7 CONFIDENCE RATING

7.1 Within the parameters of monitoring the groundworks it is not felt that any factors inhibited the recognition of archaeological features or finds.

# 8 DEPOSIT MODEL

8.1 Area 1 was overlain by concrete (L1000) (c. 0.07m thick) with made ground (L1001) below. The latter overlay the natural horizon, L1002.

8.2 Area 2 was within a lawned area (L1003) which overlay Made Ground L1004. The latter was above the natural horizon.

# 9 DISCUSSION

9.1 The development plot is located within a medieval moated site with a good potential for archaeological features and finds relating to the medieval and later use of the associated hall and its complex.

9.2 In the event, the monitoring encountered only modern made ground layers and two modern pits.

# 10 DEPOSITION OF THE ARCHIVE

10.1 The requirements for archive storage will be agreed with the Suffolk HER, and the archive deposited there within three months of the conclusion of fieldwork.

# ACKNOWLEDGEMENTS

Archaeological Solutions Ltd (AS) would like to thank Mrs Rachel Buckmaster for commissioning and funding the investigation, and Mr BJ Whymark of Whymark & Moulton Chartered Surveyors

AS would also like to acknowledge the input and advice of the Suffolk County Council Archaeological Service Conservation Team, in particular Ms Rachael Abraham.

## PROPOSED EXTENSION, LOWER FARM, BRETTENHAM, SUFFOLK IP7 7BS ARCHAEOLOGICAL MONITORING & RECORDING

# 1 INTRODUCTION

1.1 This specification (written scheme of investigation) has been prepared in response to a brief issued by Suffolk County Council Archaeological Service Conservation Team (SCC AS-CT, Rachael Monk, dated 19<sup>th</sup> June 2014). It provides for continuous archaeological monitoring/recording of groundworks associated with the construction of a new two-storey front extension and new rear single-storey extension to Lower Farm, Lower Farm Road, Brettenham, Suffolk IP7 7BS (NGR TL 965 551). The works are required to comply with a planning/listed building condition on approval for the development (Babergh District Council Ref. B/14/00678/LBC/TH). This WSI has been prepared for the approval of SCC AS-CT and the LPA.

## 2 COMPLIANCE

2.1 The brief has been read and understood. If AS carried out the programme of archaeological works, AS would comply with SCC AS-CT's requirements.

## 3 SITE & DEVELOPMENT DESCRIPTION ARCHAEOLOGICAL BACKGROUND

3.1 The site lies on the south western side of Lower Farm Road, on the edge of Brettenham parish. It comprises the existing dwelling of Lower Farm, which lies within a farm complex which is partially enclosed by the remains of a moat. It is proposed to extend the dwelling to the front and rear, for which listed building consent has been obtained. The farmhouse is described as being timer-framed and plastered, dating to the 16<sup>th</sup>-17<sup>th</sup> century.

3.2 The Suffolk Historic Environment Record (HER) notes the archaeological importance of the site. It lies within a medieval moated site, recorded as HER BTT 003. The moat is partial, and is up to 5m wide, partially water-filled.

3.3 The detailed project background will be presented in the project report, with reference to the Suffolk Historic Environment Record.

## 4 BRIEF FOR ARCHAEOLOGICAL MONITORING ARRANGEMENTS FOR ARCHAEOLOGICAL MONITORING SPECIFICATION FOR MONITORING OF GROUNDWORKS

4.1 As set out in the brief (Sections 2 -4).

## 4.2 Research Design

4.2.1 The regional research frameworks are set out in Glazebrook (1997 and Brown & Glazebrook (2000) and updated by Medlycott and Brown (2008) and Medlycott (2011). Wade (in Brown & Glazebrook 2000, 23-26) identifies research topics for the rural landscape in the Saxon and medieval periods. These include examination of population during this period (distribution and density, as well as physical structure), settlement (characterisation of form and function, creation and testing of settlement diversity models), specialisation and surplus agricultural production, assessment of craft production, detailed study of changes in land use and the impact of colonists (such as Saxons, Danes and Normans) as well as the impact of the major institutions such as the Church. Ayers (in Brown & Glazebrook, 2000) discusses these research topics in more detail. For demography, issues include assessment of population structures, density and mobility, urban immigration rural colonisation sustainability, and and housing/provisioning. For social organisation, issues include assessment of the impact of royal vills, major institutions and the Church on urban settlement, territorial boundaries in proto-urban and urban settlements, the effect of national political developments, ranking and status in settlements, spatial analysis, wealth distribution, specialism, acquisition of raw materials, building form and function, markets and commercial/corporate activity. Economic issues of the above also need to be considered, particularly with regard to industrial zoning. The impact of culture and religion could include issues such as identifying characteristics of urban culture, its growth, complexity and values. The Church and its influence on the burgeoning towns must also be addressed. As Murphy notes in Brown and Glazebrook (2000, 31), urban environmental archaeology should be approached by of environmental 'events', processes analysis and study of relationships with producing sites in the rural hinterland.

4.2.2 Medlycott (2011, 57) states that he study of the Anglo-Saxon period still requires further cooperation between historians and archaeologists. Important research issues for this period comprise: the Roman/Anglo-Saxon transitional period; settlement distribution, which suffers from problems associated with the identification of Saxon settlement sites; population modelling and demographics, which has the potential to be advanced by modern scientific methods; differences within the region in terms of settlement type and economic practice and subjects related to this such as links with the continent, trading practices and cultural influences; rural landscapes and settlements,

including detailed study of the changes and developments in such settlements over time and the influence of Saxon landscape organisation and settlements on these issues in the medieval period; towns and their relationships with their hinterland; infrastructure, including river management, the identification of ports and harbours and the role of existing infrastructure in shaping the Saxon period landscape; the economy, based on palaeoenvironmental studies; ritual and religion; the effect of the Danish occupation; and artefact studies (Medlycott 2011, 57-59).

4.2.3 The issues identified by Ayers (in Brown & Glazebrook, 2000) and Wade (in Brown & Glazebrook, 2000) remain valid research subjects (Medlycott 2011, 70) for the medieval period. The study of landscapes is dominated by issues such as water management and land reclamation for large parts of the region, the economic development of the landscape and the region's potential to reveal information regarding field systems, enclosures, roads and trackways. Linked to the study of the landscape are research issues such as the built environment and infrastructure; the main communication routes through the region need to be identified and synthesis needs to be carried out regarding the significance, economic and social importance of historic buildings in the region (Medlycott 2011, 70-71). Also considered to be important research subjects for the medieval period are rural settlements, towns, industry and the production and processing of food and demographic studies (Medlycott 2011, 70-71).

4.2.4 The research subjects identified as important for the postmedieval and modern periods (see Medlycott 2011, 72-80) expand on those set out by Gilman et al (in Brown & Glazebrook, 2000) which focussed on the subjects of fortifications, parks and gardens and industrialisation and manufacture. Medlycott (2011) stresses the importance of the built and environment and the use of the Listed Buildings databases and thematic surveys in understanding this. The subject of industry and infrastructure, which is clearly of great importance for this period, remains a key research subject for the region with particular attention being paid to rural industries, the processing of food for urban markets and the development and character of the region's primary communication roots. Landscapes, and the effect of social changes, such as the Dissolution and the enclosure of greens and commons, on them are considered to be an area of research. The region's military sites and their impact on the development of eastern England, on its landscapes and on its appearance are also considered to be of importance. Towns, their development and their impact on the landscape, require further study. Issues such as economic and social influences of towns on their hinterlands and neighbours are identified as being of importance, as are the development of specific urban forms.

4.2.5 As set out above, the principal research objectives will be to identify any evidence associated with the medieval moated complex and the development of the site in the post-medieval period.

# 5 ARCHAEOLOGICAL MONITORING

5.1 The brief requires the recovery of a record of archaeological deposits that may be damaged or removed by any development (including services and landscaping). A Method Statement is provided (Appendix 2). The main objective surrounds the potential for the groundworks for the development to produce evidence for medieval and post-medieval occupation of the moated site.

- 5.2 The brief requires the continuous monitoring of all groundworks in order to provide a record of any archaeological deposits which might be damaged or removed by any development (including services and landscaping) permitted by the current planning consent. Any ground works, and also the upcast soil, are to be closely monitored during and after stripping in order to ensure no damage occurs to any heritage assets. Adequate time is to be allowed for archaeological recording of archaeological deposits during excavation, and of soil sections following excavation.
- 5.3 The programme of work will include the following stages:
- Initial clearance of soil/overburden under archaeological observation;
- Inspection of sub-soil deposits for archaeological features and

environmental deposits;

- The rapid investigation and recording of any archaeological features/deposits;
- Sub-soil stripping under archaeological supervision;
- Examination of any service and foundation trenches and subsequent recording of any exposed archaeological deposits;
- Rapid examination of spoil-heaps for archaeological material;
- A programme of post-fieldwork analysis, archiving and publication, as appropriate to the results of the project.

5.4 All of the above stages and operations will be carried out in accordance with MAP2 (EH 1991) and MoRPHE (2006).

# Stage Details

5.5 **Site clearance**: under archaeological observation

5.6 **Excavation and recording**: of those features which cannot be preserved and will be substantially disturbed. In accordance with the following standards:

- excavation of all discrete features
- all industrial features to be sampled for appropriate scientific analysis
- full written records of each context and all contexts to be planned
- sampling will adhere to the guidelines prepared by English Heritage (*Environmental Archaeology; A guide to the theory and practice of methods, from sampling and recovery to postexcavation*, 2011).
- 5.7 Archaeological Observation and Recording of all groundworks
- Observation of all groundworks, and subsequent recording of archaeological deposits
- Inspection of subsoil for archaeological features
- Investigation and recording of any exposed archaeological features/deposits
- Examination of spoil-heaps for archaeological material
- If significant remains are identified a meeting will be convened with the client and SCC AS-CT in order to agree an appropriate investigation
- A programme of post-excavation field work analysis, archiving and publication

5.8 Where possible effective **mitigation measures** will be devised according to the circumstances on site, in consultation with SCC AS-CT.

5.9 The resultant project report will follow the principles of MoRPHE (2006)

## 5.10 Staffing

Details of Archaeological Solutions Limited staff and specialist contractors are provided (Appendix 1).

## 5.11 *Method Statement*

The investigation will adhere to the IFA's *Standard and Guidance for Archaeological Excavations* and *Watching Briefs* and (revised 2008), in addition to the ALGAO East of England Standards for Field *Archaeology in the East of England* (Gurney 2003). A Method Statement for dealing with archaeological remains, where present, is presented (Appendix 1).

## 6 HEALTH AND SAFETY

## 6.1 Risk Assessment

A risk assessment will be completed before the work on site commences

## 6.2 Advice

Archaeological Solutions Limited is a member of FAME, formerly the Standing Conference of Archaeological Unit Managers (SCAUM) and operates under the `Health & Safety in Field Archaeology Manual'.

## 6.3 Insurances

Archaeological Solutions Limited is a member of the Council for British Archaeology and is insured under their policy for members.

# 7 REPORT REQUIREMENTS

- 7.1 The report will include, as appropriate:
- a) The archaeological background
- b) A consideration of the aims and methods adopted in the course of the recording

- c) A detailed account of the nature, location, extent, date, significance and quality of any archaeological evidence recorded
- d) A section/s drawing showing the depth of deposits including present ground level with Ordnance Datum, vertical and horizontal scale
- e) Excavation methodology and detailed results including a suitable conclusion and discussion
- f) Plans and sections of any recorded features and deposits
- g) Discussion and interpretation of the evidence. An assessment of the project's significance in a regional and local context and appendices
- h) All specialist reports or assessments
- i) A concise non-technical summary of the project results
- j) A HER/OASIS summary sheet as required

7.2 Draft hard and digital PDF copies of the report will be submitted to SCC AS-CT and EH for approval. If any revisions are required, final hard and digital PDF copies will be supplied to SCC AS-CT for deposition with the HER, and EH.

7.3 The project details will be submitted to the OASIS database, and the online summary form will be appended to the project report.

7.4 A summary report will be submitted suitable for inclusion in the annual roundups of *Proceedings of the Suffolk Institute of Archaeology and History*, dependent on the results of the project.

# 8 ARRANGEMENTS FOR ACCESS

8.1 Access to the site is to be arranged by the client.

## 9 SERVICES & CONSTRAINTS, SECURITY

9.1 The client is to advise AS of the position of any services which traverse the site and any constraints which are present e.g. Tree Preservation Orders, Rights of Way.

9.2 Throughout all site works care will be taken to maintain all existing security arrangements and to minimise disruption.

## 10 FINDS

10.1 As set out in the brief (Section 5) and below (Appendix 1).

## 11 ARCHIVE

11.1 The requirements for archive storage will be agreed with the Suffolk HER, and the archive deposited there.

11.2 The archive will be deposited within three months of the conclusion of the fieldwork.

11.3 The archive will be prepared in accordance with the UK Institute for Conservation's *Conservation Guideline No.2* and according to the document *Deposition of Archaeological Archives in Suffolk* (SCC AS Conservation Team, 2010). A unique event number will be obtained from the County HER Officer.

11.4 The full archive of finds and records will be made secure at all stages of the project, both on and off site. Arrangements will be made at the earliest opportunity for the archive to be accessed into the collections of the HER; with the landowner's permission in the case of any finds. It is acknowledged that it is the responsibility of the field investigation organisation to make these arrangements with the landowner and Museums Service. The archive will be adequately catalogued, labelled and packaged for transfer and storage in accordance with the guidelines set out in the United Kingdom Institute for Conservation's *Conservation Guidelines No.2* and the other relevant reference documents.

11.5 Archive records, with inventory, are to be deposited, as well as any donated finds from the site, at the HER and in accordance with their requirements. The archive will be quantified, ordered, indexed, cross-referenced and checked for internal consistency. In addition to the overall site summary, it will be necessary to produce a summary of the artefactual and ecofactual data.

## 12 MONITORING

12.1 It is understood that the project will be monitored by SCC AS-CT.

## 13 OASIS PROJECT REPORTING

13.1 The results of the project will be reported to the OASIS Project.

#### **APPENDIX 1**

#### ARCHAEOLOGICAL SOLUTIONS LIMITED: PROFILES OF STAFF & SPECIALISTS

#### DIRECTOR Claire Halpin BA MIfA

*Qualifications*: Archaeology & History BA Hons (1974-77). Oxford University Dept for External Studies In-Service Course (1979-1980). Member of Institute of Archaeologists since 1985: IFA Council member (1989-1993)

*Experience*: Claire has 25 years' experience in field archaeology, working with the Oxford Archaeological Unit and English Heritage's Central Excavation Unit (now the Centre for Archaeology). She has directed several major excavations (e.g. Barrow Hills, Oxfordshire, and Irthlingborough Barrow Cemetery, Northants), and is the author of many excavation reports e.g. St Ebbe's, Oxford: *Oxoniensia* 49 (1984) and 54 (1989). Claire moved into the senior management of field archaeological projects with Hertfordshire Archaeological Trust (HAT) in 1990, and she was appointed Manager of HAT in 1996. From the mid 90s HAT has enlarged its staff complement and extended its range of skills. In July 2003 HAT was wound up and Archaeological Solutions was formed. The latter maintains the same staff complement and services as before. AS undertakes the full range of archaeological services nationwide.

#### DIRECTOR Tom McDonald MIfA

#### Qualifications: Member of the IfA

*Experience*: Tom has twenty years' experience in field archaeology, working for the North-Eastern Archaeological Unit (1984-1985), Buckinghamshire County Museum (1985), English Heritage (Stanwick Roman villa (1985-87) and Irthlingborough barrow excavations, Northamptonshire (1987)), and the Museum of London on the Royal Mint excavations (1986-7)., and as a Senior Archaeologist with the latter (1987-Dec 1990). Tom joined HAT at the start of 1991, directing several major multi-period excavations, including excavations in advance of the A41 Kings Langley and Berkhamsted bypasses, the A414 Cole Green bypass, and a substantial residential development at Thorley, Bishop's Stortford. He is the author of many excavation reports, exhibitions etc. Tom is AS's Health and Safety Officer and is responsible for site management, IT and CAD. He specialises in prehistoric and urban archaeology, and is a Lithics Specialist.

#### OFFICE MANAGER Rose Flowers

*Experience:* Rose has a very wide range of book-keeping skills developed over many years of employment with a range of companies, principally Rosier Distribution Ltd, Harlow (now part of Securicor) where she managed eight

accounts staff. She has a good working knowledge of both accounting software and Microsoft Office.

#### OFFICE ADMINISTRATOR Sarah Powell

*Experience:* Sarah is an experienced and efficient administrative assistant with more than ten years experience of working in a variety of office environments. She is IT literate and proficient in the use of Microsoft Word, particularly Microsoft Excel. She has completed NVQ 2 & 3 in Administration and Office Skills. She recently attended and completed a course in Microsoft Excel – Advanced Level.

#### SENIOR PROJECTS MANAGER Jon Murray BA MIfA

Qualifications: History with Landscape Archaeology BA Hons (1985-1988). Experience: Jon has been employed by HAT (now AS) continually since 1989, attaining the position of Senior Projects Manager. Jon has conducted numerous archaeological investigations in a variety of situations, dealing with remains from all periods, throughout London and the South East, East Anglia, the South and Midlands. He is fluent in the execution of (and now projectmanaes) desk-based assessments/EIAs, historic building surveys (for instance the recording of the Royal Gunpowder Mills at Waltham Abbey prior to its rebirth as a visitor facility), earthwork and landscape surveys, all types of evaluations/excavations (urban and rural) and environmental archaeological investigation (working closely with Dr Rob Scaife), preparing many hundreds of archaeological reports dating back to 1992. Jon has also repared numerous publications; in particular the nationally-important Saxon site at Gamlingay, Cambridgeshire (Anglo-Saxon Studies in Archaeology & History). Other projects published include Dean's Yard, Westminster (Medieval Archaeology), Brackley (Northamptonshire Archaeology), and a medieval cemetery in Haverhill he excavated in 1997 (Proceedings of the Suffolk Institute of Archaeology). Jon is a member of the senior management team, principally preparing specifications/tenders, co-ordinating and managing the field teams. He also has extensive experience in preparing and supporting applications for Scheduled Monument Consent/Listed Building Consent

#### PROJECT OFFICER Zbigniew Pozorski MA

*Qualifications:* University of Wroclaw, Poland, Archaeology (1995-2000, MA 2003)

*Experience*: Zbigniew has archaeological experience dating from 1995 when as a student he joined an academic group of excavators. He was involved in numerous archaeological projects throughout the Lower Silesia region in southwest Poland and a number of projects in old town of Wroclaw. During his university years he specialized in medieval urban archaeology. He had his own research project working on an early/high medieval stronghold in Pietrzykow. He was a member of a University team which located and Excavated an unknown high medieval castle in Wierzbna, Poland. Zbigniew has worked for archaeological contractors in Poland on several projects as a supervisor where he gained experience in all types of evaluations and excavations in urban and rural areas. Recently he worked in Ireland where he completed two large long-term projects for Headland Archaeology Ltd. He joined AS in January 2008 as a Project Officer. Zbigniew is qualified in the Construction Skills Certification Scheme (CSCS) and is a qualified in First Aid at Work (St Johns Ambulance).

#### SUPERVISOR Gareth Barlow MSc

*Qualifications:* University of Sheffield, MSc Environmental Archaeology & Palaeoeconomy (2002-2003)

King Alfred's College, Winchester, Archaeology BA (Hons) (1999-2002) *Experience:* Gareth worked on a number of excavations in Cambridgeshire before pursuing his degree studies, and worked on many archaeological projects across the UK during his university days. Gareth joined AS in 2003 and has worked on numerous archaeological projects throughout the South East and East Anglia with AS. Gareth was promoted to Supervisor in the Summer 2007. Gareth is qualified in the Construction Skills Certification Scheme (CSCS) and is a qualified in First Aid at Work (St Johns Ambulance).

#### PROJECT OFFICER Kamil Orzechowski BA, MA

Kamil Orzechowski joined AS in 2012, as an experienced field archaeologist after spending five years in various commercial archaeology units working on large-scale construction projects including railways and pipelines. Before becoming a field archaeologist, Kamil graduated from the Institute of Ethnology and Cultural Anthropology, Adam Mickiewicz University, Poznan, Poland. Kamil is qualified in the Construction Skills Certification Scheme (CSCS).

#### SUPERVISOR

#### Julie Walker BSc MA PIfA

*Qualifications:* Queens University Belfast: BSc Archaeology (2007-2010)

University of Southampton: MA Osteoarchaeology (2010-2011) *Experience:* Julie is a member of the Institute for Archaeologists (PIfA grade) and the British Association for Biological Anthropology and Osteoarchaeology. Professionally, Julie has worked for organisations including Albion Archaeology (2014) and Oxford Archaeology East (2014). Julie has a thorough knowledge and experience of archaeological fieldwork and post-excavation practice. Julie's personal research interests include congenital and developmental defects in the Romano-British and Anglo-Saxon periods and she has made several conference presentations on this subject.

#### SUPERVISOR

#### Matthew Baker BA MA

*Qualifications:* Cardiff University: BA Archaeology (2008-2011) Cardiff University: MA Archaeology (2012-2013)

*Experience:* Since concluding his higher education, Matthew has worked for a number of archaeological projects and organisations including GeoArch (Cardiff), the Damerham Archaeology Project and Cambridge University. He

has a gained a varied experience of archaeological fieldwork and postexcavation practice including geophysical survey/ interpretation and isotopic analysis.

#### SUPERVISOR

#### Vincent Monahan BA

*Qualifications:* University College Dublin: BA Archaeology (2007-2012) *Experience:* Professionally, Vincent has worked for various archaeological groups and projects including the Stonehenge Riverside Project (Site Assistant/ Supervisor; 2008), University College Dublin Archaeological Society (Auditor; 2009-2010) and the Castanheiro do Vento Research Project (Site Assistant/ Supervisor; 2009-2010 (seasonal)). Vincent has gained good experience of archaeological fieldwork including excavation, various sampling techniques and on-site recording. He also gained experience of museum-grade curatorial practice during his undergraduate degree.

#### SUPERVISOR

#### Kerrie Bull BSc

*Qualifications:* University of Reading: BSc Archaeology (2008-2011) *Experience:* During her undergraduate degree at the University of Reading Kerrie worked on the Lyminge Archaeological Project (2008), the Silchester 'Town Life' Project (2009) and the Ecology of Crusading Research Programme (2011). Through her academic and professional career, Kerrie has gained good experience of archaeological fieldwork and post-excavation techniques.

#### PROJECT OFFICER (DESK-BASED ASSESSMENTS) Kate Higgs MA (Oxon)

*Qualifications:* University of Oxford, St Hilda's College Archaeology & Anthropology MA (Oxon) (2001-2004)

*Experience:* Kate has archaeological experience dating from 1999, having taken part in clearance, surveying and recording of stone circles in the Penwith area of Cornwall. During the same period, she also assisted in compiling a database of archaeological and anthropological artefacts from Papua New Guinea, which were held in Scottish museums. Kate has varied archaeological experience from her years at Oxford University, including

participating in excavations at a Roman amphitheatre and an early church at Marcham/ Frilford in Oxfordshire, with the Bamburgh Castle Research Project in Northumberland, which also entailed the excavation of human remains at a Saxon cemetery, and also excavating, recording and drawing a Neolithic chambered tomb at Prissé, France. Kate has also worked in the environmental laboratory at the Museum of Natural History in Oxford, and as a finds processor for Oxford's Institute of Archaeology. Since joining AS in November 2004, Kate has researched and authored a variety of reports, concentrating on desk-based assessments in advance of archaeological work and historic building recording.

#### ASSISTANT PROJECTS MANAGER Andrew Newton MPhil PIFA (POST-EXCAVATION)

*Qualifications:* University of Bradford, MPhil (2002-04) University of Bradford, BSc (Hons) Archaeology (1998-2002)University of Bradford, Dip Professional Archaeological

Studies (2002)

*Experience:* Andrew has carried out geophysical surveys for GeoQuest Associates on sites throughout the UK and has worked as a site assistant with BUFAU. During 2001 he worked as a researcher for the Yorkshire Dales Hunter-Gatherer Research Project, a University of Bradford and Michigan State University joint research programme, and has carried out voluntary work with the curatorial staff at Beamish Museum in County Durham. Andrew is a member of the Society of Antiquaries of Newcastle-upon-Tyne and a Practitioner Member of the Institute for Archaeologists. Since joining AS in early Summer 2005, as a Project Officer writing desk-based assessments, Andrew has gained considerable experience in post-excavation work. His principal role with AS is conducting post-excavation research and authoring site reports for publication. Significant post-excavation projects Andrew has been responsible for include the Ingham Quarry Extension, Fornham St.

Genevieve, Suffolk – a site with large Iron Age pit clusters arranged around a possible wetland area; the late Bronze Age to early Iron Age enclosure and early Saxon cremation cemetery at the Chalet Site, Heybridge, Essex; and, Church Street, St Neots, Cambridgeshire, an excavation which identified the continuation of the Saxon settlement previously investigated by Peter Addyman in the 1960s. Andrew also writes and co-ordinates EnvironmentalImpact Assessments and has worked on a variety of such projects across

southern and eastern England. In addition to his research responsibilities Andrew undertakes outreach and publicity work and carries out some fieldwork.

#### PROJECT OFFICER (POST-EXCAVATION) Antony Mustchin BSc MSc DipPAS

*Qualifications:* University of Bradford BSc (Hons) Bioarchaeology (1999-2003) University of Bradford MSc Biological Archaeology (2004-2005) University of Bradford Diploma in Professional Archaeological Studies (2003)

*Experience:* Antony has 11 years' experience in field archaeology, gained during his higher education and in the professional sector. Commercially in the UK, Antony has worked for Archaeology South East (2003), York Archaeological Trust (2004) and Special Archaeological Services (2003). He has also undertaken a six-month professional placement as Assistant SMR Officer/ Development Control Officer with Kent County Council (2001-2002). Antony is part-way through writing up a PhD on Viking Age demographics, a long-term academic interest that has led to his gaining considerable research excavation experience across the North Atlantic. He has worked for projects and organisations including the Old Scatness & Jarlshof Environs Project, Shetland (2000-2003), the Viking Unst Project, Shetland (2006-2007), the Heart of the Atlantic Project/ Føroya Fornminnissavn, Faroe Islands (2006-2008) and City University New York/ National Museum of Denmark/

Greenland National Museum and Archives, Greenland (2006 & 2010). Shortly before Joining Archaeological Solutions in November 2011, Antony spent three years working for the Independent Commission for the Location of Victims Remains, assisting in the search for and forensic recovery of "the

remains of victims of paramilitary violence ("The Disappeared") who were murdered and buried in secret arising from the conflict in Northern Ireland". Antony has a broad experience of fieldwork and post-excavation practice including specialist (archaeofauna), teaching, supervisory and directing-level posts.

#### POTTERY, LITHICS AND CBM RESEARCHER Andrew Peachey BA MIfA

*Qualifications:* University of Reading BA Hons, Archaeology and History (1998-2001)

*Experience:* Andrew joined AS (formerly HAT) in 2002 as a pottery researcher, and rapidly expanded into researching CBM and lithics. Andrew specialises in prehistoric and Roman pottery and has worked on numerous substantial assemblages, principally from across East Anglia but also from southern England. Recent projects have included a Neolithic site at Coxford, Norfolk, an early Bronze Age domestic site at Shropham, Norfolk, late Bronze Age material from Panshanger, Hertfordshire, middle Iron Age pit clusters at Ingham, Suffolk and an Iron Age and early Roman riverside site at Dernford, Cambridgshire. Andrew has worked on important Roman kiln assemblages, including a Nar Valley ware production site at East Winch Norfolk, a face-pot producing kiln at Hadham, Hertfordshire and is currently researching early Roman Horningsea ware kilns at Waterbeach, Cambridgeshire. Andrew is an enthusiastic member of the Study Group for Roman Pottery, and also undertakes pottery and lithics analysis as an 'external' specialist for a range of archaeological units and local societies in the south of England.

#### POTTERY RESEARCHER Peter Thompson MA

*Qualifications:* University of Bristol BA (Hons), Archaeology (1995-1998) University of Bristol MA; Landscape Archaeology (1998-1999)

*Experience:* As a student, Peter participated in a number of projects, including the excavation of a Cistercian monastery cemetery in Gascony and surveying an Iron Age promontory hillfort in Somerset. Peter has two years excavation experience with the Bath Archaeological Trust and Bristol and Region Archaeological Services which includes working on a medieval manor house and a post-medieval glass furnace site of national importance. Peter joined HAT (now AS) in 2002 to specialise in Iron Age, Saxon and Medieval pottery research and has also produced desk-based assessments. Pottery reports include an early Iron pit assemblage and three complete Early Anglo-Saxon accessory vessels from a cemetery in Dartford, Kent.

#### PROJECT OFFICER (OSTEOARCHAEOLOGY) Julia Cussans PhD

*Qualifications*: University of Bradford, PhD (2002-2010) University of Bradford, BSc (Hons) Bioarchaeology (1997-2001) University of Bradford, Dip. Professional Archaeological Studies (2001)

*Experience*: Julia has c. 12 years of archaeozoological experience. Whilst undertaking her part time PhD she also worked as a specialist on a variety of

projects in northern Britain including Old Scatness (Shetland), Broxmouth Iron Age Hillfort and Binchester Roman Fort. Additionally Julia has extensive field experience and has held lead roles in excavations in Shetland and the Faroe Islands including, Old Scatness, a large multi-period settlement centred on an Iron Age Broch; the Viking Unst Project, an examination of Viking and Nerse houses on Britain's most pertherly islo; the Laggan

Viking and Norse houses on Britain's most northerly isle; the Laggan Tormore Pipeline (Firths Voe), a Neolithic house site in Shetland; the Heart of the Atlantic Project, an examination of Viking settlement in the Faroes and Við Kirkjugarð, an early Viking site on Sanday, Faroe Islands. Early on in her career Julia also excavated at Sedgeford, Norfolk as part of SHARP and in Pompeii, Italy as part of the Anglo-American Project in Pompeii. Since joining

AS in October 2011 Julia has worked on animal bone assemblages from Beck Row, a Roman villa site at Mildenhall, Suffolk and Sawtry, an Iron Age, fen edge site in Cambridgeshire. Julia is a full and active member of the International Council for Archaeozoology, the Professional Zooarchaeology Group and the Association for Environmental Archaeology.

#### ENVIRONMENTAL ARCHAEOLOGIST Dr John Summers

*Qualifications:* 2006-2010: PhD "The Architecture of Food" (University of Bradford)

2005-2006: MSc Biological Archaeology (University of Bradford) 2001-2005: BSc Hons. Bioarchaeology (University ofBradford)

*Experience:* John is an archaeobotanist with a primary specialism in the analysis of carbonised plant macrofossils and charcoal. Prior to joining Archaeological Solutions, John worked primarily in Atlantic Scotland. His research interests involve using archaeobotanical data in combination with other archaeological and palaeoeconomic information to address cultural and economic research questions. John has made contributions to a number of

large research projects in Atlantic Scotland, including the Old Scatness and Jarlshof Environs Project (University of Bradford), the Viking Unst Project (University of Bradford) and publication work for Bornais Mound 1 and Mound 2 (Cardiff University). He has also worked with plant remains from Thruxton Roman Villa, Hampshire, as part of the Danebury Roman Environs Project (Oxford University/ English Heritage). John's role at AS is to analyse and

report on assemblages of plant macro-remains from environmental samples and provide support and advice regarding environmental sampling regimes and sample processing. John is a member of the Association for Environmental Archaeology.

#### SENIOR GRAPHICS OFFICER Kathren Henry

*Experience:* Kathren has twenty-five years experience in archaeology, working as a planning supervisor on sites from prehistoric to late medieval date, including urban sites in London and rural sites in France/Italy, working for the Greater Manchester Archaeological Unit, Passmore Edwards Museum, DGLA and Central Excavation Unit of English Heritage (at Stanwick and Irthlingborough, Northamptonshire). She has worked with AS (formerly HAT) since 1992, becoming Senior Graphics Officer. Kathren is AS's principal photographer, specializing in historic building survey, and she manages AS's photographic equipment and dark room. She is in charge of

AS's Graphics Department, managing computerised artwork and report production. Kathren is also the principal historic building surveyor/illustrator, producing on-site and off-site plans, elevations and sections.

# HISTORIC BUILDING RECORDING

#### Tansy Collins BSc

*Qualifications:* University of Sheffield, Archaeological Sciences BSc (Hons) (1999-2002)

Experience: Tansy's archaeological experience has been gained on diverse sites throughout England, Ireland, Scotland and Wales. Tansy joined AS in 2004 where she developed skills in graphics, backed by her grasp of archaeological interpretation and on-site experience, to produce hand drawn illustrations of pottery, and digital illustrations using a variety of packages such as AutoCAD, Corel Draw and Adobe Illustrator. She joined the historic buildings team in 2005 in order to carry out both drawn and photographic surveys of historic buildings before combining these skills with authoring historic building reports in 2006. Since then Tansy has authored numerous such reports for a wide range of building types; from vernacular to domestic architecture, both timber-framed and brick built with date ranges varying from the medieval period to the 20th century. These projects include a number of regionally and nationally significant buildings, for example a previously unrecognised medieval aisled barn belonging to a small group of nationally important agricultural buildings, one of the earliest surviving domestic timberframed houses in Hertfordshire, and a Cambridgeshire house retaining formerly hidden 17th century decorative paint schemes. Larger projects include The King Edward VII Sanatorium in Sussex, RAF Bentley Priory in London as well as the Grade I Listed Balls Park mansion in Hertfordshire.

#### FINDS AND ARCHIVE ASSISTANT Adam Leigh

*Experience:* Adam joined AS in January 2012. In his time with the company he has helped process hundreds of finds from a variety of sites going on to concord them. Adam has helped prepare a large number of sites for deposition with museums making sure that the finds are prepared in strict accordance with the guidelines and requirements laid out by the receiving museum.

#### ASSISTANT ARCHIVES OFFICER Karen Cleary

*Experience:* Karen started her administrative career as Youth Training Administrator for a training company (TSMA Ltd) in 1993, where she provided administrative support for NVQ Assessors' of trainees and apprentices on the youth training scheme and in work placements they'd helped set up. Amongst her administrative duties she was principally in

charge of preparing the Training Credits Claims and sending off for government funding. She gained NVQ's Level's 2 and 3 in Administration whilst working in this role. Karen started out with AS as Office Assistant in February 2009 and within a few months was promoted to Archives Assistant. Principally her role involves the preparation of Archaeological archives for long term deposition with museums. She has developed a good understanding of the preparation process and follows each individual museum's guidelines closely. She has a good working knowledge of Microsoft Office and is competent with *FileZilla*- Digital File Transfer software and *Fastsum*-Checksum Creation software.

CONSERVATION

# APPENDIX 2 METHOD STATEMENT

Method Statement for the recording of archaeological remains

The archaeological evaluation will be conducted in accordance with the project brief, and the code of the Institute of Field Archaeologists.

## **1** Mechanical Excavation

1.1 Mechanical excavation will be monitored by an experienced archaeologist.

## 2 Site Location Plan

2.1 On conclusion of the mechanical excavation, a `site location plan', based on the current Ordnance Survey 1:1250 map and indicating site north, will be prepared. This will be supplemented by an `area plan' at 1:200 (or 1:100) which will show the location of the area(s) investigated in relationship to the development area, OS grid and site grid.

## 3 Manual Cleaning & Base Planning of Archaeological Features

3.1 Exposed areas will be hand-cleaned to define archaeological features sufficient to produce a base plan.

# 4 Full Excavation

## Excavation of Stratified Sequences

The trenches will be excavated according to phase, from the most recent to the earliest, and the phasing of features will be distinguished by their stratigraphic relationships, fills and finds.

Deep features e.g. quarry holes, may incorporate stratified deposits which will be excavated by hand-dug sections and recorded.

## Excavation of Buildings

Building remains are likely to comprise stake holes, post holes and slots/gullies, masonry foundations and low masonry walls. Associated features may be present e.g. hearths.

The features comprising buildings will be excavated in plan/phase where revealed, as appropriate to the project

## Full Excavation

Industrial remains and intrinsically interesting features e.g hearths, burials will clearly merit full excavation where revealed. Discrete features associated with the possible structure and/or settlement will be fully excavated.

## Ditches

The ditches will be excavated in segments up to 2m long, and the segments will be placed to provide adequate coverage of the ditches, establish their relationships and obtain samples and finds.

# 5 Written Record

5.1 All archaeological deposits and artefacts encountered during the course of the excavation will be fully recorded on the appropriate context, finds and sample forms.

5.2 The site will be recorded using AS's excavation manual which is directly comparable to those used by other professional archaeological organisations, including English Heritage's own Central Archaeological Service.

# 6 Photographic Record

An adequate photographic record of the investigations will be 6.1 made. It will include black and white prints and colour transparencies (on 35mm) illustrating in both detail and general context the principal features and finds discovered. It will also include 'working and promotional shots' to illustrate more generally the nature of the archaeological operations. The black and white negatives and contacts will be filed, and the colour transparencies will be mounted using appropriate cases. All photographs will be listed and indexed.

# 7 Drawn Record

7.1 A record of the full extent, in plan, of all archaeological deposits encountered will be drawn on A1 permatrace. The plans will be related to the site, or OS, grid and be drawn at a scale of 1:50 or 1:20, as appropriate. In addition where appropriate, e.g. recording an inhumation, additional plans at 1:10 will be produced. The sections of all archaeological contexts will be drawn at a scale of 1:10 or, where appropriate, 1:20. The OD height of all principal strata and features will be calculated and indicated on the appropriate plans and sections.

# 8 Recovery of Finds

## GENERAL

The principal aim is to ensure that adequate provision is made for the recovery of finds from all archaeological deposits.

The Small Finds, e.g. complete pots or metalwork, from all excavations will be 3-dimensionally recorded.

A metal detector will be used to enhance finds recovery. The metal detector survey will be conducted on conclusion of the topsoil stripping, and thereafter during the course of the excavation. The spoil tips will also be surveyed. Regular metal detector surveys of the excavation area and spoil tips will reduce the loss of finds to unscrupulous users of metal detectors (treasure hunters). All non-archaeological staff working on the site should be informed that the use of metal detectors is forbidden.

## WORKED FLINT

When flint knapping debris is encountered large-scale bulk samples will be taken for sieving.

## POTTERY

It is important that the excavators are aware of the importance of pottery studies and therefore the recovery of good ceramic assemblages.

The pottery assemblages are likely to provide important evidence to be able to date the structural history and development of the site. The most important assemblages will come from `sealed' deposits which are representative of the nature of the occupation at various dates, and indicate a range of pottery types and forms available at different periods.

'Primary' deposits are those which contain sherds contemporary with the soil fill and in simple terms this often means large sherds with unabraded edges. The sherds usually have been deposited shortly after being broken and have remained undisturbed. Such sherds are more reliable in indicating a more precise date at which the feature was `in use'. Conversely, 'secondary' deposits are those which often have small, heavily abraded sherds The sherds are derived from earlier lacking obvious conjoins. deposits.

## HUMAN BONE

Should human remains be discovered, which is possible on this site, and be required to be removed, the coroner will be informed and a licence from the Ministry of Justice sought immediately; both the client and the monitoring officer will also be informed. Any excavation of human remains would only be carried out following advice from SCC AS-CT. Excavators would be made aware, and comply with, provisions of Section 25 of the Burial Act of 1857 and pay due attention to the requirements of Health & Safety.

#### ANIMAL BONE

Animal bone is one of the principal indicators of diet. As with pottery the excavators will be alert to the distinction of primary and secondary deposits. It will also be important that the bone assemblages are derived from dateable contexts.

## ENVIRONMENTAL SAMPLING

The sampling will adhere to the guidelines prepared by English Heritage (2011) and the specialist will make his results known to Zoe Outram who co-ordinates environmental archaeology in the region on behalf of English Heritage. If important environmental remains are present a visit to the site by an environmental specialist will be arranged

Environmental sampling will follow guidelines outlined in *Working* papers of the Association for Environmental Archaeology, No. 2: Environmental archaeology and archaeological evaluation (1995) and Environmental Archaeology; a guide to the theory and practice of methods, from sampling and recovery to post-excavation, Centre for Archaeology Guidelines (2011).

## FINDS PROCESSING

The project director will have overall responsibility for the finds and will liaise with AS's own finds personnel and the relevant specialists. A person with particular responsibility for finds on site will be appointed for the excavation. The person will ensure that the finds are properly labelled and packaged on site for transportation to AS's field base. The finds processing will take place in tandem with the excavations and will be under the supervision of AS's Finds Officer.

The finds processing will entail first aid conservation, cleaning (if appropriate), marking (if appropriate), categorising, bagging, labelling, boxing and basic cataloguing (the compilation of a Small Finds Catalogue and quantification of bulk finds) i.e. such that the finds are ready to be made available to the specialists. The Finds Officer, having been advised by the Project Officer and relevant specialists, will select material for conservation. AS's Finds Officer, in conjunction with the Project Officer, will arrange for the specialists to view the finds for the purpose of report writing.

#### **Project details**

· · · · · · · · · · · · · · · · · · ·	
Project name	PROPOSED EXTENSION, LOWER FARM, BRETTENHAM, SUFFOLK IP7 7BS
Short description of the project	In May 2015, Archaeological Solutions Ltd (AS) carried out a programme of archaeological monitoring and recording at Lower Farm, Brettenham, Suffolk IP7 7BS (NGR TL 965 551). The monitoring was undertaken during groundworks for a two-storey front extension and new rear single-storey extension. The monitoring was commissioned to comply with a planning / listed building condition attached to approval for the development (Babergh District Council Ref. B/14/00678/LBC/TH), based on the advice of Suffolk County Council Archaeological Service Conservation Team (SCC AS-CT). The site lies on the south-western side of Lower Farm Road, on the edge of Brettenham parish. It comprises the existing dwelling of Lower Farm, which is within a farm complex which is partially enclosed by the remains of a moat. It is proposed to extend the dwelling to the front and rear, for which listed building consent has been obtained. The farmhouse is described as being timer-framed and plastered, dating to the 16th-17th century. The Suffolk Historic Environment Record (HER) notes the archaeological importance of the site. It lies within a medieval moated site, recorded as HER BTT 003. The moat is partial, and is up to 5m wide, partially water-filled. In the event, the monitoring encountered only modern made ground layers and two modern pits.
