## **1 SUMMARY**

During January 2020, a programme of archaeological monitoring and recording was undertaken by Humber Field Archaeology in advance of the construction of a new dwelling and associated garage and services at Plot 1, College Road, East Halton, North Lincolnshire.

Monitoring of the site strip and the excavation of the foundation trenches for the new house plot and associated garage did not reveal any archaeological deposits, only naturally occurring clays underlying the current topsoil. No artefacts were recovered during this programme of work.

## 2 INTRODUCTION

### 2.1 Circumstances of the fieldwork

The report presents the results of a programme of archaeological monitoring and recording at Plot 1, College Road, East Halton, North Lincolnshire.

A planning application for this development (references PA/2016/704 & PA/2018/101) was submitted to North Lincolnshire Council (hereafter NLHER). Permission was subsequently granted, subject to the following archaeologically-related conditions:

Condition 3 stated:

No plant, machinery or construction materials shall be stored on the ridge and furrow grounds (to the north of the red dotted line as shown on plan LDC 2002-PL-01B) unless otherwise agreed in writing by the Local Planning Authority.

The original outline application was also approved subject to then following conditions relating to the archaeology

Condition 11

No development shall take place until an archaeological mitigation strategy, as defined in a brief prepared by North Lincolnshire's Historic Environment Record, has been submitted to and approved in writing by the local planning authority. The strategy shall include details of the following:

- (i) measures to ensure the preservation in situ, or the preservation by record, of archaeological features of identified importance
- (ii) methodologies for the recording and recovery of archaeological remains, including artefacts and ecofacts
- (iii) post-fieldwork methodologies for assessment and analyses
- (iv) report content and arrangements for dissemination, and publication proposals
- (v) archive preparation and deposition with recognised repositories
  
- (vi) a timetable of works in relation to the proposed development, including sufficient notification and allowance of time to ensure that the site work is undertaken and completed in accordance with the strategy
  
- (vii) monitoring arrangements, including the notification in writing to North Lincolnshire's Historic Environment Record of the commencement of archaeological works and the opportunity to monitor such works
  
- (viii) a list of all staff involved in the implementation of the strategy, including sub-contractors and specialists, their responsibilities and qualifications.

Reason

To comply with policy HE9 of the North Lincolnshire Local Plan because the site lies in an area of archaeological interest.

#### Condition 12

The archaeological mitigation strategy shall be carried out in accordance with the approved details and timings, subject to any variations agreed in writing by the local planning authority.

#### Reason

To comply with policy HE9 of the North Lincolnshire Local Plan because the site lies in an area of archaeological interest.

#### Condition 13

A copy of any analysis, reporting, publication or archiving required as part of the mitigation strategy shall be deposited at North Lincolnshire's Historic Environment Record within six months of the date of completion of the development hereby approved by this permission or such other period as may be agreed in writing by the local planning authority.

#### Reason

To comply with policy HE9 of the North Lincolnshire Local Plan because the site lies in an area of archaeological interest.

NLHER recommended that a programme of archaeological monitoring and recording was to be undertaken during the construction phase of this development.

The proposals are in line with the policies within section 16 'Conserving and enhancing the historic environment' in the National Planning Policy Framework (NPPF2019) and HE9 of the Local Plan

Humber Field Archaeology (HFA) were appointed to undertake the archaeological work and worked to the guidelines in the 'Brief for archaeological observation, assessment and recording' produced by NLHER

## **2.2 Site topography and geology**

The site of the proposed development lies towards the south end of the settlement and is bounded by College Road to the south, residential land to the west, pasture to the north and a public green space to the east.

The site lies at around 10mOD. The underlying superficial deposits consist of Devensian till over bedrock Chalk of the Burnham Chalk Formation (data from <http://mapapps.bgs.ac.uk/geologyofbritain3d/index.html>? – geology of Britain viewer). Overlying soils are described as slowly permeable seasonally wet slightly acid but base-rich loamy and clayey soils (<http://www.landis.org.uk/soilscapes/index.cfm>)

## **2.3 Archaeological background**

HFA commissioned a search of the data held by NLHER for the site and a 250m study area around it in October 2019 to ascertain if any heritage assets that exist in the vicinity of the site may be affected by the proposed development. HER Data are reproduced with the permission of North Lincolnshire Council (Licence 256 October 2019)

The site lies towards to southern end of the village on the north side of College Road. It was the subject of a desk-based assessment and earthwork survey in 2016 (Allen Archaeology Report no.AAL2016039) which detailed archaeological sites within a 1km radius and also recorded the extant ridge and furrow that survives on the site.

There is limited evidence for prehistoric and Roman activity in the surrounding area

The settlement of East Halton (MLS1602) is not mentioned on the Domesday Book of 1086 though there is clear evidence of medieval activity in the area with the shrunken medieval village of Lobingeham and moated enclosures to the north. The ridge and furrow (MLS10746) is part of an extensive area of medieval cultivation that survives as earthwork both within the settlement and also in the surrounding area.

To the north of the on the west side of Townside Road is the site of the Primitive Methodist Church (MLS2185) which was constructed in 1878. Also on Townside Road is the Blacksmith's workshop (MLS22319), now an outbuilding for 'Granby House'. On the corner of Townside Road and Kettlebridge Lane is a Methodist Chapel (MLS21876) which was constructed in 1805. The site of the Mission Room (MLS21877) lies to the southwest on Townside Road.

To the west lies the primary school (MLS22321) which is shown on the 1st and 2nd Edition Ordnance Survey Maps of 1887 and 1908. To the northwest is the site of a corn mill (MLS22320).

## **3 THE EXCAVATIONS**

### **3.1 Methodology**

The work associated with this project was carried out by staff from HFA, in accordance with the written scheme of investigation for archaeological monitoring and recording, produced by HFA, (Atkinson, D. October 2019), HER Reference: PA/2016/704 & PA/2018/101 and with reference to the Chartered Institute for Archaeologists 2014 (a) Standard and Guidance for archaeological field evaluation and (b) Standard and Guidance for archaeological excavation

The scheme of works comprised the monitoring of the site strip and the excavations associated with the development: the house plot and garage foundation trenches. This work was undertaken. Four visits were made to site on the 13<sup>th</sup>, 16<sup>th</sup>, 20<sup>th</sup> and 21<sup>st</sup> January 2020 for these purposes.

Standard Humber Field Archaeology recording procedures were used throughout; each identified feature was allocated a context number, with written descriptions recorded on pro forma sheets. Plans and sections were drawn to scale on pre-printed permatrace sheets. A digital photographic record was maintained. No artefacts were recovered during this programme of work.

### **3.2 Results**

Context numbers allocated to deposits recorded are referred to in the text below and Figure 2 shows them as recorded in plan. A selection of photographs has also been included (Plates 1-8).

#### **SITE STRIP**

A shallow site strip was undertaken in the immediate area of the new house plot. The procedure used a small, tracked machine excavator with a flat, wide ditching bucket with spoil removed from the area by a wheeled dumper.

The site strip covered an area measuring 32.35m NNW-SSE, 20.60m WSW-ENE covering an area of 683.73m<sup>2</sup> with a perimeter of 107.02m. The depth of the strip averaged 0.05m – 0.10m, removing only, as much as possible, the overlying turf to expose the topsoil proper 101, leaving a level surface for the excavation to proceed.

#### **PLOT 1 HOUSE FOUNDATIONS**

The plot was L-shaped, with its excavation limits being 17.35m NNW-SSE and 10.20m WSW-ENE. The average width of the trenches were 0.60m, and the depth up to 0.80m. During this work, ground water ingress was an issue, with parts of the trenches being up to 0.20 – 0.30m deep in water.

The basal deposit exposed was 102, dark orange brown clay, at least 0.30m thick and continuing below the level of excavation. This was sealed by the topsoil deposit 101, dark orange brown silt clay, which was generally 0.50m thick.

## **PLOT 1 GARAGE FOUNDATIONS**

The garage was almost square in plan, its excavation limits being 6.00m NNW-SSE and 6.60m WSW-ENE. The average width of the trenches were 0.60m, and the depth up to 0.80m. As with the house foundations, ground water ingress was an issue, with parts of the trenches being up to 0.20 – 0.30m deep in water.

The basal deposit exposed was 102, dark orange brown clay, at least 0.30m thick which continued below the level of excavation. This was sealed by the topsoil deposit 101, dark orange brown silt clay, which was around 0.50m thick.

New connecting services trenches were due to be excavated in the future, however, given the lack of below ground archaeological features, and the nature of the intended services (narrow and shallow), the current programme of archaeological work was concluded.

## **DISCUSSION AND RECOMMENDATIONS**

### **3.3 Discussion**

The current programme of archaeological observation, assessment and recording did not identify any additional features to that which were recorded during the previous earthwork survey (Johnson *et al* 2016).

The limit of the site strip conformed to the dashed red line limit depicted on approved drawing no. LDC2002-PL-01B (Lincs Design Consultancy). That is, the turf to the SE of that line was removed only, with very, very little of the underlying topsoil affected. The use of a smaller, tracked machine facilitated the work and also provided a more minimal impact upon the soil. This, however, left the area relatively flat for a working platform. At the time of writing this report, no further disturbance *outside* this stripped area has occurred.

The house and garage foundation trenches, which cut through topsoil 101, only just exposed the underlying naturally occurring clays 102. Access into the trenches, at the time of monitoring, was very problematic due to water ingress and slippery surfaces, so the foundation trench section sides could only really be examined from ground level. This prevented cleaning of the section faces, unfortunately. What could be determined, however, was that there were no features cutting into the clay beneath the topsoil.

It is therefore probable that the only archaeological features present in this area relate to the ridge and furrow – (Johnson *et al* 2016, pp 12, para 7.6)

### **3.4 Recommendations**

The following is solely the opinion of HFA, and may not reflect that of NLHER, archaeological advisor to the Local Planning Authority.

It is recommended that similar programmes of archaeological mitigation, monitoring and recording be implemented should further work be taken in around this archaeologically sensitive area to preserve the ridge and furrow earthworks.

## **ACKNOWLEDGEMENTS**

Thanks are accorded to Mr. A Whitehead for their help and co-operation during the course of this project.

The site recording was undertaken by D.P Rawson

Report text, figure and plates by Doug Jobling and was edited and approved by Dave Atkinson

Administrative support was provided by Georgina Richardson.

### Summary of work.

During January 2020, a programme of archaeological monitoring and recording was undertaken by Humber Field Archaeology in advance of the construction of a new dwelling and associated garage and services at Plot 1, College Road, East Halton, North Lincolnshire.

Monitoring of the site strip and the excavation of the foundation trenches for the new house plot and associated garage did not reveal an archaeological deposits, only evidence for naturally occurring clays underlying the current topsoil. No artefacts were recovered during this programme of work.
