Interpretation and discussion					
Cut of pit which has been heavily truncated by Bioturbation [810127]. This pit has one secondary deposit, (810123). Iron Age pot + Animal bone was recovered. This pit is likely to be Iron Age. It might have been a rubbish pit, given how close it is towards areas of production.

Secondary deposit of potential Nabish pit 810122.					
Would have formed through ^{backfill} natural deposition, likely washed in from the surrounding site hence how bone + pot would up in the feature.

Interpretation and discussion This is a cut of a pit. This pit has two fills. One Primary (810126), and one Secondary (810124). This may have been a stone pottery pit due to the vast quantity of pot sherds found in (810126), which may have been dumped intentionally by humans in the local area Iron Age, as this feature had iron age pot recovered from its Primary deposit.

Interpretation and discussion Cut of Disturbance, which cuts into (810123) . One secondary deposit (810128) . Recorded as this feature is apart of a blob of multiple features. This feature is potentially later than the iron age, as it cuts over deposits with iron age material.

Interpretation and discussion This is a cut of a Root hollow/Bioturbation, which truncates both pit [810125] and Bioturbation [810127]. This was sectioned to investigate how many features it intersected with and there relationship As it cuts an iron age pit, this Root hollow is likely to be later than the iron age. Possible same as 810125, Split for unknown reason

Secondary deposit of Bioturbation [810129]. This most likely formed as a result of natural deposition. Animal bone may have washed in from the surrounding area. This was sampled because of the high quantities of charcoal (Dating) and fragmentary animal found in this deposit. It may have been disturbed by rootage. Silting Possible top fill of pit [810125]

CUT SUBOVAL PIT NEARBY TWO OTHERS PITS. PROBABLY ITS FUNCTION WAS FOR STORAGE AND NOT AS A BURIAL PIT. IT IS LOCATED ON THE NE SIDE OF THE CHANTRY WALL. SOME ORANGE COLOURED POTTERY FRAGMENTS OF BROWN GLAZED WARE ARE FOUND ON THE NE SIDE STORAGE IN AN AGE PERIOD BECAUSE OF THE POTTERY FOUND AND I.A. ACTIVITY SURROUNDING IT.
