Interpretation and discussion																											
Feature is clay lined which would suggest this was used to either fire or re-heat artefacts in an open furnace / hearth. Once clay lining was removed natural layer was exposed with signs of bioturbation of a particular fauna.																											
CLAY LINED STORAGE PIT

Interpretation and discussion Heard Clay lined pit poss used to back fill Dark material 2 fills / unable to spot date due to lack of finds. Feature has a shallow profile and fills like that of [91], and while it was stated [91] was a hearth, it appears to be more like a clay lined pit that was back filled with heated waste materials.

Interpretation and discussion			
Clay layer exposed to confirm feature was clay lined initially. Evidence of heated remains however clay layer lacks sign of being treated with heat. Hence this feature although appears to be an open hearth it now appears it was only used to backfill heated waste remains. 2 fills unable to spot date due to lack of archaeology. Although it has been suggested site is Iron age,

Interpretation and discussion					
Cut of pit. Pottery fragments throughout. Also Within circular ditches. If these ditches are a roundhouse it is unlikely this pit is from the same period. Some potential in situ burning to the east could suggest that [0114] and it's western immediate neighbour [0116] are waste pits. 100% excavated, see digi 718-724					
Excavated and date by 8/1/21		Recorded and date by 11/1/21		Site check

Interpretation and discussion					
Fill of large pit. Secondary. Inclusions and finds throughout the fill fairly regularly implying possible manual waste dumps from nearby industry. Whilst excavating to 100% registered find 0004 found towards the surface on the western edge of pit. Piece of worked stone, likely dumped as waste as has no clear relation to features

Interpretation and discussion Cut of ditch. Continues north with [164] and terminating with [371]. Terminates to the south with [223]. Part of structure. Much shallower than [164] and [223], this may have been to help drain into the deeper parts of the ditch, or or recut to remove an entrance.

Interpretation and discussion [138] is likely a large posthole cut. Its sides are near vertical or very steep and it has a flat base. It is located in the east central part of the site among other features such as pits & other postholes & lines. It is located about 0.25m East of [175] about 5m South of the clay lined pit [176]. 100% Excavated.

Interpretation and discussion (139) is the single fill of Cut [138]. It is a dark brown grey brown gravel. Loose compaction. A few mid-sized stones may have been used as packing stones to keep a potential host in place. Lots of small stones due to the fill being a gravel. The fill is very similar to (176). 100% Excavated.

Interpretation and discussion Finding a plastic pen top in this part of the fill of [0146] can be explained by a feature from the evaluation of 2003 being excavated then backfilled as shown by #49 a lot of the large stones were removed and the fill in this section was very loose.

Interpretation and discussion					
(0163) is the backfill of an exploratory excavation into a feature which must have shown up in the evaluation of 2003 This is the only way a plastic pen top could end up at the bottom of this ditch.

Interpretation and discussion					
Pit appears to have been used to backfill burnt waste materials. This includes burnt animal bone along with heat treated pebbles which could suggest domestic usage. A small gully cuts this feature and it is possible this gully was used to run off ground water. [0146] also has the gully [0146] cutting into the feature. I fill unable to spot date due to lack of finds. Although it has been said site is Kon age.

Interpretation and discussion					
(176) is the fill of the posthole cut [175]. It is a dark grey brown gravel, loose compaction. It had a relatively large number of mid-sized sedimentary pebbly stones (20%) and a large number of small sedimentary stones (45%). Located 0.25m west of [139] in the eastern central part of the site. 50% excavated.

Interpretation and discussion (00202)					
Deep pit which has large stones placed inside with possible fire damage. Large deposits of charcoal found in cut with pottery on right side of cut. Small stones ranging from rounded to sub angular. This suggests that this pit may have been use as a deposit or food cooking hearth. Post holes nearby [00196] possibly indicate this was inside an indged area. Broken pot near habitation location.

Interpretation and discussion																													
Charcoal found on, under and around stones as well as deposit of red sand / limestone. Pottery found in one location near Red sand / limestone. Large, possibly fire damaged stones indicate they were placed there. The large amount of charcoal also indicates fire burning possible in-situ. Possible fire pit or dump deposit

Curvi-linear ditch cuts [169] and seems to shallow out. This feature started out as [144] and cuts [146] a pit while it does increase in depth it does begin to shallow out but also seems to re-appear further across site and appears to enclose a large number of features yet to be excavated. Interpretation and discussion					
[193] Small circular pit. Located in SW corner of the Culling 10m from Baulk. The feature is isolated and there are no other features nearby. The cut has 2 fills. There is also the presence of a red/orange layer that appears in place that indicates burning activity. However, it is not strong enough to suggest frequent burning and may have just been a single event or a rare infrequent one. 100% excavated.

Interpretation and discussion					
(195) the lower fill of cut [193]. It contained a patchy presence of a red orange layer and a large amount of Charcoal indicates a large burning event. However, the red layer is too faint for frequent use, it could have been a one time event or a rarity. 100% excavated.
