Interpretation and discussion Fill of gully [315]. This gully is very similar to the gully (314) of the gully [313], and we can't see the relationship between them, so it's possible that both gullies was abandoned and at the same time and filled at the same time. No materials found

Interpretation and discussion																																
Cut of small linear ditch containing one single fill (321). No finds. Feature quite ephemeral at interface. Natural also had sandy clay patches in some spots as opposed to the usual sterile clay. Feature probably affected by alluvial activity at some point and has been resilted through this process. (which could explain the ephemeral edge). Feature = fill is the same as [337] = [338] which had similar/same characteristics = clearly met one another in plan.

Interpretation and discussion					
Single Fill of small small linear ditch [320]. No finds. Fill heavy w. stones & gravel. Interface quite ephemeral. Fill had some small amounts of charcoal specks & burnt clay in the top portion of fill, but otherwise quite sterile. Fill & feature probably water/alluvial activity affected causing resulting processes which could explain the ephemeral interface & look & texture of fill.

Interpretation and discussion									
Cut of pit next to the edge of excavation.									
Quite shallow so perhaps it is just bioturbation or a spread of fill.

Interpretation and discussion																																
Cut of shallow gully containing one All (331). No finds. Gully continues into = is the same as [339] = (340). An Ephemeral edge at interface probably due to repeated alluvial activities causing resulting processes to muddle the All with the natural. Natural also changed texture from sterile soft clay to a sandy clay in some patches.

Interpretation and discussion					
Single fill of shallow gully [330]. No Ands. Continues & is the same as [330] [331] = (340). Feature had very ephemeral edge at interface which could be a result of continuous alluvial activity and resitting processes over time. This is not a, See context sheet [330] for an overview of the area!

Interpretation and discussion Fill of ditch [353] with a few height. In some parts this fill was mixed with natural, probably due to the most of the ditch disappeared and only a small part of the fill, that was close to natural, is preserved. This is the most modern fill of this slot, and a few Roman pottery found.

Interpretation and discussion

- CUT OF DITCH, WHICH IS CUTTING ANOTHER DITCH [368] ALONG. BOTH DITCHES COME FROM A SINGLE ONE THAT APPARENTLY IT SPLIT IN TWO LINEAR SHAPE.

- IT IS BEING CUT BARELY BY A MODERN FURROW 0.05m DEEP.

- ITS FUNCTION WAS PROBABLY A BOUNDARY OR FOR DRAINING.

- ROMAN CHRONOLOGY DUE TO THE POTENTIAL ROMAN ACTIVITY IN THE AREA

Excavated E.C. and date 6-5-20	Recorded 11-5-20 and date E.C.	Site check	Post-ex check

Interpretation and discussion					
Cut of linear ditch containing 2 fills (410) & (409). Ditch part of a relationship slot to figure out relationship with linear ditch [397]. Conclusion that [396] is a cut within the fills of [397]. (411) is probably the interface of the cuts as implied by the gleying in (411). Could not locate the true relationship between the linears, as it probably lies further towards W. Land drain also complicated being able to see the relationship.

Cut of linear ditch containing 5 AUs (411-415). Could not locate true relationship w. [396]. (411) within [397] is possibly the interface between the cuts, as (411) has evidence of alluvial activity / gleying which possible came from cut [396] being made. True relationship sits probably more towards W. Land drain (modern) cutting into S facing section (undercut around this area). Land drain also complicated being able to see the relationship between the cuts.

Interpretation and discussion																													
Cut of ditch. It's W side it's cutting the gill (405) of the ditch [399], and the whole ditch is excavated inside the gill (403) of the pit [400], cutting it, so this ditch is the most modern feature of this slot. Late Iron Age or early Roman pottery found in 1 of its gills. This is the same ditch that [396], located at W, and the same that [75] located at S

Interpretation and discussion cut of ditch with N-S orientation. This ditch is cut, in its E part, by the ditch [398]. Its W side and the base are cutting the fill (403) of the pit [400], so it's posterior to this. The terminus of this ditch is located 0'65 m to the N, and the E half of that terminus is cut by the ditch [398], it's the same ditch that [737] located at S.
