Interpretation and discussion PIT WAS 90% DUG WHEN HEAVY RAIN FLOODED IT FOR SEVERAL WEEKS. THE EDGES WERE UNDERLAIN WITH A LAYER OF NATURAL SAND AND COLLAPSED WHILE FLOODED. THE DARK SOIL AND CHARCOAL STAINED THE SAND SO I OVERCUT THE FEATURE TO THE NATURAL CLAY UNDERNEATH, THEN RE-ESTABLISHED THE EDGES IN THE SECTION.

Interpretation and discussion																																
cut of pit																																
relatively irregular in profile																																
no indication of date or function.																																
Natural in this half of 025122 is much more patchy. - irregular silt pockets throughout clay.																																
Excavated and date 2/6/21 J.S		Recorded and date 11/6/21 J.S		Site check

Interpretation and discussion																																
Fill of pit																																
Appears to be related to a burning event. - Inclusions of charcoal.																																
very irregular - fill does not extend across the entire diameter of feature, with occasional gaps.

Interpretation and discussion Fill of ditch [890]. This fill is cut, in its E part, by the ditch [891], so it's the oldest fill of this slot. No materials found, and by its composition and no finds, it looks to have been formed by a natural action.																																
Excavated NL and date 15-6-21																																
Recorded NL and date 18-6-21		Site check		Post-ex check

Interpretation and discussion Fill of ditch [892]. This is the oldest fill of this ditch, and it's a clean blueish grey clay, so probably it's due to a natural action of mix of natural and water. 3 fragments of Roman pottery found.

Interpretation and discussion Fill of ditch [892]. This fill has different kinds of finds (pottery, slag, animal bones, wood), so probably this fill is due to an human action, probably a waste accumulation.
