Interpretation and discussion Top fill of pit [1225]. Manganese present heavily in fill. Appears to line the pit's outline, so possible human not not interference. Larger stones than below fill in the pit [1225]. Additionally, natural silting processes have occurred for the fill to accumulate in such a way.

Interpretation and discussion		
Fill of Post hole. Seems that the post was removed from the hole causing the stones to fall in. Pottery found were mostly large fragments of dense Pot so possibly helped with the packing. Soil may have naturally silted to fill once the post was removed, OR, could have been manually filled with the pot thrown in at the same time.

Interpretation and discussion uncut Fill which is consistent of packing stones. Although large fragments of Pot come out these are not included in this fill as not enough proof to work the say they were used for packing. I believe believe the pot after the pot was removed the stones were left in the hole which was then filled with the soil and pot.

Interpretation and discussion Cut of big ditch with N-S orientation. This ditch is running until the S limit of the excavation. Probably this ditch was part of a drainage system or as some kind of protection, since it's located between a flooding area and a high zone. It's the same ditch that 19187, located at S of the excavation. Roman pottery found. Ditch dugged in a colluvium layer 13713
