## Structure of this Report

*Section 1 serves as an introduction to the site, describing its location, archaeological background and the aims of the project. Section 2 summarises the methodology of the trial trenching and Section 3 summarises the results. Section 4 provides a synthesis of the results, and assesses their significance within the surrounding landscape. Section 5 is a bibliography.*

*Appendix 1 is an artefact and ecofact summary and Appendix 2 contains all trench summary information.*

## Key Terms

*Throughout this document the following terms or abbreviations are used:*

IFA	Institute of Field Archaeologists
GPS	Global Positioning System
HER	Historic Environment Record
MKAO	Archaeological Officer for Milton Keynes Council
PPG 16	Planning Policy Guidance 16: Archaeology and Planning

## **Acknowledgements**

*The project was commissioned by Darren Farmer of Gallagher Estates and monitored on behalf of the local planning authority by Nick Crank, Archaeological Officer, Milton Keynes Council. Albion Archaeology would also like to acknowledge the contributions of Lee Mould (Waterman CPM) and Emma Lane (Wardell Armstrong) with regard to ecological requirements at the site.*

*This report has been prepared by Wesley Keir (Project Officer) and Richard Gregson (Archaeological Supervisor). Fieldwork was carried out by Richard Gregson and Wesley Keir, together with Anthony Clifton-Jones (Assistant Archaeological Supervisor) and Iain Leslie (Archaeological Technician). Artefacts were reported on by Jackie Wells (Finds Officer). Joan Lightning (CAD Technician) digitised the plans and produced the report figures. The project was undertaken under the management of Wesley Keir and Robert Wardill (Project Manager). All Albion projects are under the overall management of Drew Shotliff (Operations Manager).*

## **Non-Technical Summary**

*Between April and June 2008 Albion Archaeology undertook an archaeological field evaluation (trial trenching) of land to the west of Milton Keynes, on behalf of Gallagher Estates.*

*Outline Planning Consent has been granted for the development of approximately 342 hectares of land to the west of Milton Keynes, adjacent to Watling Street (city grid V4). The current site, centred on grid reference SP8141 3784 and measuring around 62 hectares in area, forms the first phase of trial trenching and follows on from a geophysical survey undertaken in 2007. A previous Environmental Statement prepared by Albion Archaeology in 2005 identified the site to be within an area of archaeological interest with the potential for remains dating from the Neolithic period onwards to the present.*

*The results of the trial trenching identified archaeological remains dating from the early Iron Age to the medieval periods. Of most significance were two distinct areas of Iron Age settlement activity located on higher ground within the site. These areas comprised ditches and pits, as well as a sizeable amount of irregular shaped features more characteristic of tree rooting. The pottery from both areas predominantly dated from the middle-late Iron Age, with a small amount dating to the early-middle Iron Age and Roman periods.*

*Other remains included a series of broadly parallel ditches containing pottery suggesting a Roman date. These appeared to be on a similar alignment to Roman Watling Street located c. 300m to the north-east. The relative lack of artefacts and their character suggest they are associated with agricultural activity.*

*Medieval ridge and furrow earthworks survive in varying states of preservation throughout the site.*

## 1. INTRODUCTION

---

### 1.1 *Project Background*

Outline Planning Consent has been granted for the development of approximately 342 hectares of land to the west of Milton Keynes, adjacent to Watling Street (city grid V4) (Planning refs. 05/00291/MKPCO and 06/00123/MKPCO).

An Environmental Statement containing a Cultural Heritage and Archaeology Chapter (6) was issued in 2005 (Albion Archaeology 2005). This document identified a lack of previous intrusive archaeological fieldwork in the area as well as the potential for the survival of significant buried archaeological remains dating from the prehistoric and later periods.

As a consequence of this, and in line with government planning guidance (PPG16), the Archaeological Officer for Milton Keynes Council (MKAO) recommended that a programme of archaeological evaluation be carried out. Briefs were prepared by the MKAO (2007 a and b) detailing the requirements for the evaluation works comprising geophysical survey followed by trial trenching.

The geophysical survey was carried out during the summer of 2007 (Stratascan 2007). Albion Archaeology was commissioned by Gallagher Estates to undertake trial trenching and this report presents the results of the first phase of these works undertaken between April and June 2008.

The results of the trial trenching will be used to inform any subsequent mitigation strategy.

### 1.2 *Site Location and Description*

The proposed development area lies on the western edge of Milton Keynes, to the south-west of Roman Watling Street (now city grid road V4). For the purposes of the development, the area was divided in two and designated as Areas 10 and 11. The site of this first phase of trial trenching forms a part of Area 10 lying to the south-east of Calverton Lane (Fig. 1). The site measures around 62 hectares in area and is centred on grid reference SP8141 3784.

The site comprises farmland characterised by fields that are currently used for pasture enclosed by hedges and drainage ditches. A small watercourse bisects the site north-east to south-west and several ponds are located in the south-east half of the site. The farms of Shenley Hill, Common and Whitehouse are located within and around the perimeter of the site.

The height of the land fluctuates between 90m OD and 103m OD, the highest points tending to lie towards the south-west of the site. The underlying geology varies between Boulder Clay and Oxford Clay.

### 1.3 Archaeological Background

Existing archaeological and historical knowledge of the site was examined as part of the Environmental Statement prepared in 2005 (Albion Archaeology 2005). Below is a brief summary of the findings most pertinent to the current phase of trial trenching. The reference numbers in brackets in the following text are those used in the Environmental Statement.

There are no known remains of definite antiquity within the site. However, the area clearly had potential for exploitation in the past, with reliable water sources, clay deposits and, in all likelihood, extensive woodlands to supply fuel. The proximity to Watling Street would have enabled good access to markets, at least in the Roman period.

Recent development of nearby areas of land has revealed remains of all periods from the Neolithic onwards and it is therefore probable that the site will encompass remains that are as yet undetected.

Information available from land just outside the south-west edge of the development area indicates the potential for Iron Age occupation in the vicinity. Fieldwork over the last two decades has found that Iron Age occupation in the Milton Keynes area was generally much more widespread than previously thought.

The main Roman period feature of the area is the road on the line of Watling Street. As a main route from major urban centres at *Londinium* and *Verulamium* to the north-west of the country, this road is likely to have attracted occupation and/or way stations along its length. It is also likely that there were other, minor roads running off Watling Street that have not yet been identified.

Place-name evidence suggests that the heavy clay lands may well have reverted to woodland during the economic decline of the later Roman and early Saxon period. However, they also suggest re-establishment of settlement in the area in Saxon times and this is evidenced by archaeological finds from the region.

From the medieval period onwards the land within the development area is characterised by an essentially agricultural landscape. It lies between the main centres of medieval settlement and is dotted with farmsteads. The medieval open field system is evidenced by ridge and furrow that is still visible as undulations across the site. Map regression analysis demonstrated that many of the modern field boundaries largely retain the pattern of the fields established at Enclosure.

Just outside the boundary of the site, post-medieval brick making is attested to by a possible brickearth pit (33) and clay pits at Two Mile Ash Farm (50) (Fig. 2). The former site of Potash Farm (45) lies at the southern end of the site, the name of which possibly hints at pottery production (Fig. 2).

An undated circular earthwork (44) was first noted by the Oxford Archaeology Unit during a site visit in 1998. It was recorded as lying within Field 45 of the site (Figs. 2 and 4).

### **Geophysics**

A magnetic susceptibility survey of both development Areas (342ha) 10 and 11, followed by 30% detailed magnetometry (102ha) targeted on magnetically enhanced zones identified strong evidence for archaeological activity (Stratascan 2007) (Fig. 2). However, geophysical anomalies identified within the current site were restricted to a series of possible pit type features and two disjointed linear features, all located within the southern half of the site.

### **1.4 Project Objectives**

The general objectives of the trial trenching, as defined in the Project Design (Albion Archaeology 2008) comprised the following:

- Determine the location, extent, nature and date of any archaeological features or deposits that may be present in the development area;
- Obtain information on the integrity and state of preservation of any such remains;
- Provide a factual and interpretative report on the archaeological remains identified in order to inform any necessary further archaeological mitigation design.

More specific objectives included the testing of the earthworks noted in the Environmental Statement and of the results of the geophysical survey.

## 2. METHODOLOGY

---

### 2.1 Introduction

The trial trenching was undertaken between 9<sup>th</sup> April and 5<sup>th</sup> June, comprising 157 trenches in total. This included two extra trenches that were opened following consultation with the MKAO (and in accordance with the contingency sampling strategy in Albion Archaeology (2008)) in order to define the extent of archaeological remains revealed in Trench 225.

### 2.2 Methodological Standards

Throughout the project the standards and guidance in the following documents were adhered to:

- Albion Archaeology's *Procedures Manual: Volume 1 Fieldwork* (2<sup>nd</sup> edition, 2001)
- IFA's *Code of Conduct* (Revised edition 2006); the *Standard and Guidance for Archaeological Field Evaluation* (Revised edition 2001); and the *Standard and Guidance for the Collection, Documentation, Conservation and Research of Archaeological Materials* (2001)
- English Heritage's *The Management of Archaeological Projects* 'MAP 2' (1991)

### 2.3 Trial Trench Methodology

The trial trenching was carried out in accordance with the Project Design (Albion Archaeology 2008) and the MKAO's Brief (2007a). In summary:

- The trial trenches were set out using a differential GPS system to ensure accurate location;
- All machine excavation was supervised by an archaeologist and was undertaken using a mechanical excavator fitted with a toothless bucket;
- Cultivation soil and modern overburden were removed by machine down to the top of archaeological deposits, or undisturbed geological deposits, whichever was encountered first;
- The trenches were then cleaned by hand in order to define any archaeological features and deposits;
- Subsequently, each trench was recorded and photographed;
- Recording took place on pro-forma sheets in accordance with the Albion Archaeology *Procedures Manual* (2<sup>nd</sup> edition, 2001);
- The trenches were inspected by the MKAO prior to backfilling.

All archaeological deposits and features (known as 'contexts') were assigned an individual number. Within this report, numbers in brackets refer to these context numbers. Cut features (*i.e.* pits, ditches *etc.*) are expressed [\*\*\*], layers and deposits within cut features are expressed (\*\*\*). Detailed descriptions of all the contexts are contained within Appendix 2.

The locations of the trenches were as agreed in the Project Design, with the following exceptions:-

- Trench 304 was shortened to avoid an underground electric cable;
- Trenches 286, 563, 595 and 614 were moved slightly to respect a 5m stand-off away from hedge-line boundaries;
- Following consultation with the ecologist on site, Trenches 264 and 266 were not machined due to their proximity to ponds containing Great Crested Newts;
- Trench 424 was not machined due to its location beneath an overhead power-line.

### 3. RESULTS

---

#### 3.1 Introduction

This section summarises the archaeological remains revealed within their respective fields.

Detailed descriptions of the artefactual and ecofactual remains can be found in Appendix 1. Detailed technical information on all deposits and archaeological features can be found in Appendix 2.

#### 3.2 Geological Deposits and Overburden

The overburden was generally consistent in colour and composition throughout the site. It varied in thickness from 0.20m to 0.80m thick due largely to the topography and surviving depth of cultivation furrows. The topsoil consisted of a mid to dark brown clay silt, 0.16m to 0.45m thick. Apart from within a minority of trenches where topsoil directly overlay the undisturbed geology, the topsoil sealed a lighter hued brown clay silt or silty clay subsoil, 0.02m to 0.44m thick.

Undisturbed geological strata were reached at depths of between 0.20m and 0.80m below the ground surface (89.43m OD – 103.25m OD), dependent on the slope of the land. These deposits varied between Oxford Clays and Boulder Clays. Within trenches in the lower lying areas of Fields 70, 71 and 72 and in the adjoining corners of Fields 45 and 47, colluvial and alluvial deposits were also identified beneath the subsoil.

#### 3.3 Fields 27 and 37 – Trenches 147 to 152; 424 to 431; and 433 to 434 (Fig. 3)

Fields 27 and 37 were located within the north-western arm of the site which abutted Calverton Road and contained 16 trenches.

Three small ditches, [42703], [42509] and [42803] were revealed towards the north-western end of Field 27. All the ditches contained similar fills, consisting of mid brown silty clays and clay silts but contained no artefacts. The orientation of the ditches varied between NNW-SSE, N-S and NW-SE. The isolated nature of these ditches and lack of artefacts suggests they are most likely to be associated with field boundaries and/or field drainage.

Shallow traces of ridge and furrow earthworks orientated approximately NNW-SSE were visible in both fields, becoming most pronounced towards the south-east. The lower deposits of several furrows were visible in the bases of Trenches 147, 149, 151 and 425.

#### 3.4 Field 45 – Trenches 218 to 232 (Fig. 4)

Fifteen trenches were excavated within Field 45 which abutted the south-eastern edge of Field 37.

### 3.4.1 Area of middle-late Iron Age settlement activity

A distinct concentration of archaeological remains was revealed within Trenches 221, 223, 225, 800 and 801 located on a slight crest towards the middle of the field. These comprised ditches, pits and several irregularly shaped features more characteristic of a tree throw or rooting (see Table 1). Though many were rather irregular in shape, they all contained a distinctive fill comprised of a mid to dark brownish blue or grey clay silt often with brown or orange sandy inclusions. Many of these features contained pottery dating to the middle-late Iron Age, though the majority of this was abraded suggesting it may have been re-deposited in the features.

Trench	Feature no.	Feature Type	Artefacts

	22576	Tree throw/rooting	

**Table 1:** Features associated with Iron Age activity in Field 45

Five ditches were revealed. Two of these, [22503/5] and [22533/5], were small curvilinear ditches that may be associated with structures. A larger ditch [22303/9/16] measuring up to 0.5m deep and 1m wide and orientated NW-SE was located to the east of the curvilinear ditches (Fig. 5). It truncated a similarly aligned smaller ditch [22313] which contained a unique deposit of small to large sub-rounded stones (22320). Further to the east a probable ditch terminus [22103] was revealed measuring up to 0.53m deep.

Fifteen features were revealed in the vicinity of these ditches, the majority of which were rather irregular in shape and more characteristic of tree rooting. However, several of these features contained middle-late Iron Age pottery, and all contained similar fills to those of the ditches described above. The more regular pit like features were sub-circular in shape with shallow concave profiles. Two of these, [22507] and [22551], were located adjacent to the curvilinear ditches and

measured up to 0.9m in length. A larger pit [22563] measuring up to 1.43m in length was located at the southern end of the area of activity (Fig. 5).

### **3.4.2 Other archaeological remains**

In the south-east corner of the field, away from the area of Iron Age activity, a small ditch [22703] was revealed aligned E-W. It was on a similar alignment to furrows in the vicinity and filled with a mid brown clay silt similar to that contained within the furrows and to the subsoil. It contained no artefacts, but its alignment and character suggest it is contemporary with the furrows and likely to be associated with field drainage.

Ridge and furrow survives as shallow earthworks orientated NNW-SSE in the north-west half of the field, and orientated ENE-WSW in the south-east half, indicating a medieval land division not demarcated in the landscape today. The lower deposits of several furrows were revealed in the bases of Trenches 217, 218, 222, 223, 225, 226, 228, 800 and 801.

The location of a circular earthwork (44) was noted as lying within the field (Albion Archaeology 2005) and was targeted by Trench 232. However, no earthwork was visible in this area and no archaeological remains were revealed. Instead, a circular patch of ground that was distinctively marshier and with healthier grass than elsewhere in the field was clearly visible. Manure rich topsoil within the trench mirrored this variation, indicating it is likely to be the result of an area where cattle were once fed or manure was stored.

### **3.5 Fields 46 and 47 – Trenches 233 to 252 (Fig. 6)**

Twenty trenches were opened within Fields 46 and 47 which bordered the western and southern boundaries of Field 45, but other than ridge and furrow, no archaeological remains were revealed. The ridge and furrow survived as earthworks orientated NNW-SSE, as well as a perpendicular ‘headland’ located at the northern end of Field 46. The bases of several furrows were visible within the trenches of both fields.

### **3.6 Field 48 – Trenches 510 to 513 (Fig. 6)**

As well as ridge and furrow, an undated ditch [51203] and small pit [51206] were revealed within the 4 trenches opened in this field. Though no artefacts were contained within the ditch, its different orientation suggests it is unlikely to be contemporary with the furrows. Its function is also unknown, but its relatively steeply sloping sides and flat base are similar to those of ditches that have been interpreted as bedding trenches. The small oval-shaped pit was located near to the ditch and also contained no artefacts.

Ridge and furrow earthworks were visible orientated NE-SW and the lower deposits of several were revealed within the base of Trench 510.

### **3.7 Fields 73 and 74 – Trenches 253 to 259 (Figs. 6 and 7)**

The only archaeological features revealed within the 8 trenches in Fields 73 and 74 were the remains of ridge and furrow. Ridge and furrow earthworks in Field 73 were clearly visible orientated NNE-SSW, whilst those in Field 74 were less

perceptible and orientated approximately NE-SW. The lower deposits of one furrow were visible in the base of Trench 255.

Geophysical survey within Field 73 identified 2 possible pit like features (Fig 2), but no archaeological remains were revealed in the area.

### **3.8 Fields 70, 71 and 72 – Trenches 280 to 290, 579 to 580, 582, 609 and 611 to 617 (Figs. 7 and 8)**

Located at the southern-most tip of the site, the only archaeological features revealed within the 22 trenches in Fields 70, 71 and 72 were the remains of ridge and furrow. Ridge and furrow earthworks were visible orientated NE-SW in Fields 70 and 72, and orientated NW-SE in Field 71. The lower deposits of furrows were visible in the bases of several trenches.

### **3.9 Field 75 – Trenches 588 to 596 (Fig. 7)**

Field 75 was located between Fields 72 and 73 near the southern end of the site and contained 9 trenches. In addition to ridge and furrow, an isolated ditch and post-hole were revealed.

A shallow ditch [58803] was revealed in Trench 588 orientated NW-SE (Fig. 15). It contained no artefacts, but its orientation suggests it may be contemporary with the furrows. An isolated post-hole [59403] was revealed at the north-western end of Trench 594, but also contained no artefacts.

Shallow traces of ridge and furrow earthworks were visible orientated NW-SE, parallel with the northern edge of the field. The lower deposits of one furrow were visible in Trench 590.

A mid blue-grey silty clay deposit [58903] / (58904), measuring at least 8.5m across, was sealed beneath the subsoil at the south-east end of Trench 589. Its character and proximity to a stream, which forms the natural boundary between Fields 72 and 75, suggest it is a remnant of a previous stream course.

### **3.10 Fields 76 and 77 – Trenches 260 to 279 and 291 to 312 (Fig. 9)**

Forty trenches were excavated within Fields 76 and 77 which lay to the south-west of Shenley Hill Farm. Figure 9 illustrates the distribution of archaeological remains within these fields.

#### **3.10.1 Area of Iron Age settlement activity (Figs. 11 and 12)**

A distinct area of archaeological remains, similar in character to that revealed in Field 45, was revealed on higher ground straddling the north-east corner of Field 76 and north-west side of Field 77. It consisted of ditches and pits, together with more irregular features likely to be the result of tree rooting (see Table 2). All of these contained similar distinctive deposits comprised of a mid to dark brownish blue or grey clay silt often with brown or orange sandy inclusions. The majority of pottery recovered from these deposits dated to the middle-late Iron Age, with a smaller amount dating to the early-middle Iron Age and Roman periods. It is likely that a scatter of discrete anomalies detected by the geophysical survey in this area of Field 77 reflect this area of activity (Fig. 2).

**Table 2:** Features associated with Iron Age/Roman activity in Fields 76 and 77

Ditches [27407], [27605] and [30607] were orientated either E-W or NW-SE, and tended to be relatively shallow with concave profiles (Fig 14). Ditch [31003] (Fig. 13, Section 10; Fig. 14) appeared to be curving slightly and had a steeper profile. A narrower ditch [27603] was located at the northern end of Trench 276. This was for the most part orientated N-S, but turned to the west at its northern end, suggesting it may form a type of enclosure.

Pit [31203] was oval in shape and measured at least 0.75m across, being only partially revealed in the trench. A small but well defined pit [27303] (Fig.13, Section 7) located in Trench 273 contained 130g of middle-late Iron Age pottery, a distinctly larger amount of pottery than elsewhere.

The remaining features containing similar deposits were more irregular in shape, though several contained pottery, and were more characteristic of tree rooting (see Table 2 above).

Three parallel ditches, [27704], [27706] and [27708] containing slightly darker fills than in the features described above, were revealed within Trench 277 (photo of [27706] see Fig. 14). They were spaced c.7m apart and orientated NW-SE, similar to ditches revealed in Field 78. They had U-shaped profiles with slightly concave sides and flat or slightly concave bases (Fig. 13, Section 8). They varied in width from 0.50m to 0.79m and were 0.22m to 0.30m deep. Though their

profiles are not particularly characteristic of the type, their narrow regular parallel spacing suggests they may be bedding trenches.

### **3.10.2 Other archaeological remains**

Further to the east a more isolated, shallow gully [29318] was revealed in Trench 293 (Fig. 11). Whilst it was on a similar orientation to many of the Iron Age ditches revealed further to the west, its fill was markedly different consisting of a lighter hued clay silt. Though it contained no artefacts, it pre-dated the furrows, one of which it was truncated by.

Well preserved ridge and furrow earthworks were visible orientated WNW-ESE throughout Fields 76 and 77. The lower deposits of furrows were visible in the bases of many of the trenches in both Fields 76 and 77.

Tree throws were identified in Trenches 293, 297 and 301, one of which, [29707] contained a small sherd of early-middle Iron Age pottery.

Variations in the geological strata, as observed at the south-west end of Trench 265, probably account for geophysical anomalies recorded in this area of Field 76 (Fig. 2).

### **3.11 Field 78 – Trenches 313 to 326 (Figs. 10 and 11)**

Fourteen trenches were opened within Field 78 which bordered the northern edge of Field 76.

Five, broadly parallel, NW-SE orientated ditches, [31303/31503], [31505/31603], [31804], [31810] and [31903] were revealed towards the southern end of Field 78 (Fig. 15, photo of [31903]). They varied between 0.8m and 1.75m wide and 0.24m and 0.52m deep with profiles varying between 'V'-shaped and 'U'-shaped (Fig. 13, Sections 11 and 12). They generally contained a mid-brown silty clay fill, markedly different from that of the Iron Age deposits located in Field 76 to the west. Two of the ditches contained Roman pottery, whilst one contained a small amount of mid-late Iron Age pottery, tending to suggest by association that the series of ditches dates to the Roman period.

Shallow ridge and furrow earthworks were visible orientated WNW-ESE across the field. The lower deposits of several furrows were visible in a number of the trenches.

### **3.12 Field 79 – Trenches 756 to 758 (Fig. 10)**

Only 3 trenches were opened in Field 79 which was located at the eastern most point of the site and adjacent to Watling Street (now city grid road V4). The only archaeological features revealed were the remains of ridge and furrow. The surviving ridge and furrow was most pronounced in the south-western half of the field and orientated NW-SE, parallel with the north-eastern and south-western boundaries of the field. The lower deposits of furrows were visible in the base of Trench 756.

A modern pit containing brick and other general construction debris was revealed in the south-west half of Trench 756 and corresponded with a hollow previously visible on the ground surface. The pit appeared to be associated with a large bore land drain, aligned NW-SE, which it overlay. A further similar hollow was observed to the north-west.

### **3.13 Field 80 – Trenches 327 to 330 (Figs. 10 and 12)**

Four trenches were opened within Field 80 which was located between Field 78 and Watling Street. Other than ridge and furrow, a small isolated ditch was the only archaeological feature encountered.

Ditch [33004] (Fig. 13, Section 13; Fig. 15) was orientated NW-SE and terminated at its south-east end within the trench. It contained no artefacts, but contained a similar fill to that of the Roman ditches in Field 78. It was also on a similar alignment to these ditches and to Watling Street, all tending to suggest it may be Roman in date.

Ridge and furrow was barely perceptible on the ground in this field, but appeared to be orientated ENE-WSW. The lower deposits of furrows were visible in the bases of Trenches 328, and 329.

A small sherd of mid-late Iron Age pottery was found in a tree throw in Trench 327.

## 4. SYNTHESIS

---

### 4.1 *Summary of Archaeological Remains*

#### 4.1.1 Introduction

The site contained archaeological remains dating from the early Iron Age to the medieval periods. The remains from across the site are described below in chronological order.

#### 4.1.2 Iron Age

Two distinct areas of activity were revealed on higher ground in Field 45 and either side of the boundary between Fields 76 and 77 (Figs. 4 and 11). The features in both these areas contained distinctive deposits of mid to dark brownish blue or grey clay silt. These comprised of ditches and pits, as well as a sizeable amount of irregular shaped features characteristic of tree throws/rooting disturbance.

Remains of particular note include three curvilinear ditches, [22503/5] and [22533/5] in Field 45, and [31003] in Field 77, that could be associated with structures, though the confines of the trench make their overall interpretation less certain. A possible enclosure ditch [27603] was also revealed in Field 76.

The pottery from both areas predominantly dates to the middle-late Iron Age, with a small amount recovered from Field 77 dating to the early-middle Iron Age and Roman periods. However, much of the pottery was abraded, suggesting it may have been derived from elsewhere.

Although a substantial amount of the features appear to be the result of tree rooting, the moderate amount of pottery and animal bone recovered, and the nature of some of the remains, suggest both areas are associated with settlement activity. Certainly the slightly higher topographical locations of both areas could be considered as attractive for settlement. It is also possible the tree rooting disturbance is evidence of deliberate tree and shrub clearance for settlement of these areas.

#### 4.1.3 Roman

A series of broadly parallel ditches were revealed within the southern end of Field 78 (Figure 11). Though close to the area of Iron Age activity in Fields 76 and 77, their fills were markedly different. The pottery recovered, and their alignment with Watling Street *c.*300m to the north-east, suggests they are Roman in date. The relative lack of artefacts and the character of these features suggest they are associated with agricultural activity and may represent field boundaries, drainage or bedding trenches.

An isolated ditch was located at the northern end of Field 80. It contained no artefacts, but contained a similar fill and was on a similar alignment to that of the series of ditches in Field 78, all suggesting it too was Roman in date.

#### **4.1.4 Medieval**

Ridge and furrow earthworks survive in varying states of preservation throughout the site. Ridge and furrow field systems were used throughout the medieval period, and were often retained and extended in the post-medieval period. The lower deposits of furrows were revealed in the majority of trenches across the site. The fact that the ridge and furrow survives as visible earthworks indicates that the land has predominantly been used for pasture since its enclosure in the 18<sup>th</sup> century.

#### **4.1.5 Undated**

Several ditches were revealed across the site that, due to a lack of artefacts and their rather isolated nature, are more likely to be associated with agricultural land management such as drainage or boundary ditches.

### **4.2 Significance of Archaeological Remains**

The two areas of Iron Age settlement activity in Field 45 and Fields 76 and 77 are likely to be of regional archaeological significance. Themes for research regarding Iron Age settlement, including location and land-use, have been highlighted within the Solent Thames research framework (Oxford Archaeology 2008) which is currently in preparation. The clearance of woodland and settlement of the clay lands has been noted as being of particular interest.

The presence of the probable Roman agricultural activity in Field 78 is likely to be of local significance. The apparent lack of associated settlement activity leaves little potential for addressing research aims regarding themes of agricultural development, settlement and social change.

The ridge and furrow field systems are considered to be of local significance. The ridge and furrow within the eastern half of the site (within Shenley Church End parish) has been mapped and recorded by Ivens (1993). The rest of the site has also largely been mapped in sketch form (contained in the Milton Keynes HER) (Albion Archaeology 2005).

## 6. APPENDIX 1: ARTEFACT AND ECOFACT SUMMARY

### 6.1 Artefacts

#### 6.1.1 Introduction

Fifteen trenches within the evaluation area produced a finds assemblage comprising pottery, animal bone and a single worked flint (Table 3). The material was scanned to ascertain its nature, condition and, where possible, date range.

Field	Tr.	Feature	Feature type	Context	Spot date*	Finds Summary
45	221	22103	Ditch	22104	-	Animal bone (29g)
		22103	Ditch	22105	Mid-late Iron Age	Pottery (79g)

\* - spot date based on date of latest artefact in context

**Table 3:** Artefact summary by trench and feature

#### 6.1.2 Pottery

One hundred and fifteen pottery sherds, weighing 498g were recovered. These were examined by context and quantified using minimum sherd count and weight. Sherds are small, with an average weight of 4g, and the majority are abraded. Seventeen fabric types were identified using common names and type codes in accordance with the Ceramic Type Series, currently maintained by Albion Archaeology on behalf of Bedfordshire County Council. Fabrics

are listed below (Table 4) in chronological order. Where possible, concordance with the Milton Keynes Roman and Belgic pottery type series (Marney 1989) has been made (bracketed fabric groups).

### 6.1.2.1 Iron Age

The majority of the assemblage is of mid to late Iron Age date, and comprises 95 hand-made sherds (372g) in a range of grog, sand, organic and shell tempered fabric types characteristic of the period (Table 4). Three strap handle fragments and a plain rounded rim are the only diagnostic vessel elements; the remainder of the assemblage comprises body sherds of varying thickness. Sixteen features yielded pottery, although only one (pit [27303], Trench 273) contained over 100g. Two undiagnostic sand tempered sherds (11g) recovered from tree-throw [29707], Trench 297 and ditch [30607], Trench 306 may be of early to middle Iron Age date, although their fragmentary nature precludes positive identification.

Four undiagnostic late Iron Age sherds (36g) in grog/sand and shell tempered fabric types derived from Trenches 307 (tree-throw [30707]), 318 (ditches [31804], [31810] and 327 (tree-throw [32704]).

### 6.1.2.2 Roman

Seven abraded sherds (71g) are datable to the Roman period and derive exclusively from features in Trenches 307 (tree-throw [30703]), 308 (tree-throw [30803]) and 318 (ditches [31804] and [31810]). Fabrics are predominantly of local manufacture and include pink grogged wares thought to derive from kilns at Caldecotte and reduced and oxidised sand tempered coarsewares. Imported finewares are represented by a single sherd of a samian *mortarium* (grinding or mixing bowl), likely to derive from central Gaul.

Fabric type	Common name	Sherd No.	Context/Sherd No.
<i>Mid to late Iron Age</i>			
Type F03	Grog and sand	61	(22105):28, (22304):2, (22305):1, (22306):2, (22318):4, (22504):2, (22512):1, (22514):1, (22534):2, (22564):1, (22567):3, (27305):6, (27607):1, (30706):1, (30708):4, (31507):2
Type F14	Fine mixed inclusions	2	(22306):2
Type F17	Grog	3	(22564):1, (22569):2
Type F19	Sand and organic	1	(22304):1
Type F22	Grog and organic	3	(27305):3
Type F27	Shell and grog	3	(22567):2, (32707):1
Type F28	Fine sand	6	(22304):1, (22306):1, (27305):1, (29708):1, (30609):1, (30706):1
<i>Late Iron Age</i>			
Type F07 (Fabric 1a)	Shell	1	(31805):1
Type F09 (Fabric group 46)	Sand and grog	2	(31811):1, (32707):1
Type F24 (Fabric 1a)	Buff shell	1	(30708):1
Type F	Non-specific Iron Age	22	(22317):1, (27305):17; (31004):4
<i>Roman</i>			
Type R01 (Fabric 20)	Samian	1	(31805):1
Type R05A (Fabric groups 17; 41)	Orange sandy	1	(31805):1

Type R06C (Fabric group 3)	Fine greyware	2	(31811):2
Type R09A (Fabric 2a)	Pink grogged	2	(30704):1, (30804):1
UNID	Undatable	3	(22575):1, (27604):2

**Table 4:** Pottery type series

### 6.1.3 Worked Flint

A secondary flint flake (7g) was recovered from tree-throw [22568], Trench 801. The flint is hard hammer struck, with cortex remaining on part of a lateral edge, and has suffered edge damage.

### 6.1.4 Animal Bone

The faunal assemblage comprises 45 fragments weighing 235g, and occurs in Iron Age, Roman and undated features, the majority deriving from undated ditch [31003], Trench 310. Fragments are small, with an average weight of 5g, and all are highly abraded. Diagnostic elements are long bone, skull and teeth fragments of indeterminate species.

## 6.2 Environmental Samples

Five soil samples, ranging in volume between 10-40 litres were targeted on deposits within Fields 75, 76 and 77, which either appeared to have potential for preserving environmental remains or were taken as 'control' samples. Following the processing of the samples in accordance with the *Procedures Manual* (Albion Archaeology 2001) the flots and residues were scanned to determine their potential.

The flots and residues of all samples contained varying amounts of charcoal, although there were no burnt seeds and only one sample contained a very small amount of charred grain. Moderate to abundant modern roots were observed in all the flots, as well as unburnt seeds which are likely to be the result of modern contamination. A small amount of indeterminate burnt bone was present in all the samples.

Field	Trench	Sample	Sample Volume	Volume. Processed	Sample type	Context	Seeds	Charcoal	Molluscs	Charred Grain
75	594	2	10	10	Control	59904	1 (F)	5 (F) 4 (R)		
76	273	1	20	20	Charred plant remains/bone	27305	1 (F)	5 (F) 2 (R)	1 (F)	
77	31004	3	40	10	Control	31004	1 (F)	1 (R)		
	30708	4	20	10	Control	30708	1 (F)	1 (F) 3 (F)	1 (F)	
	31205	5	40	10	Charred plant remains	31205	1 (F)	3 (F) 3 (R)	1 (F)	1 (F)

1 = very sparse; 5 = very frequent; (F) – Flot; (R) – Residue

**Table 5:** Summary of environmental samples

## **7. APPENDIX 2: TRIAL TRENCH SUMMARY**

61204	Fill	Mid brown silty clay	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 613**

**Max Dimensions:** Length: 31.22 m. Width: 2.10 m. Depth to Archaeology Min: 0.29 m. Max: 0.32 m.

**Co-ordinates:** OS Grid Ref.: SP 81663 37451 (Easting: 481663: Northing: 237451)

OS Grid Ref.: SP 81663 37421 (Easting: 481663: Northing: 237421)

**Reason:** Evaluate archaeological potential of area

Context:	Type:	Description:	Excavated:	Finds Present:
61300	Topsoil	Firm dark grey brown clay silt occasional small stones 0.32m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61301	Natural	Firm light orange grey silty clay occasional small stones Colluvium?	<input type="checkbox"/>	<input type="checkbox"/>
61302	Furrow	Linear NE-SW dimensions: max breadth 2.4m General no. for 2 furrows visible in the base of the trench.	<input type="checkbox"/>	<input type="checkbox"/>
61303	Fill	Mid brown clay silt	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 614**

**Max Dimensions:** Length: 30.00 m. Width: 2.10 m. Depth to Archaeology Min: 0.34 m. Max: 0.44 m.

**Co-ordinates:** OS Grid Ref.: SP 81732 37416 (Easting: 481732: Northing: 237416)

OS Grid Ref.: SP 81702 37416 (Easting: 481702: Northing: 237416)

**Reason:** Evaluate archaeological potential of area

Context:	Type:	Description:	Excavated:	Finds Present:
61400	Topsoil	Firm dark grey brown clay silt occasional small stones 0.29m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61401	Subsoil	Firm mid orange brown clay silt 0.15m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61402	Natural	Firm light orange grey silty clay occasional small stones Colluvium?	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 615**

**Max Dimensions:** Length: 30.99 m. Width: 2.10 m. Depth to Archaeology Min: 0.24 m. Max: 0.38 m.

**Co-ordinates:** OS Grid Ref.: SP 81738 37451 (Easting: 481738: Northing: 237451)

OS Grid Ref.: SP 81708 37451 (Easting: 481708: Northing: 237451)

**Reason:** Evaluate archaeological potential of area

Context:	Type:	Description:	Excavated:	Finds Present:
61500	Topsoil	Firm dark grey brown clay silt occasional small stones 0.24m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61501	Subsoil	Hard mid orange brown clay silt 0.14m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61502	Natural	Firm light orange grey silty clay	<input type="checkbox"/>	<input type="checkbox"/>
61503	Furrow	Linear NE-SW dimensions: max breadth 1.m	<input type="checkbox"/>	<input type="checkbox"/>
61504	Fill	Mid brown clay silt	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 616**

**Max Dimensions:** Length: 30.00 m. Width: 2.10 m. Depth to Archaeology Min: 0.33 m. Max: 0.48 m.

**Co-ordinates:** OS Grid Ref.: SP 81736 37497 (Easting: 481736: Northing: 237497)

OS Grid Ref.: SP 81736 37466 (Easting: 481736: Northing: 237466)

**Reason:** Evaluate archaeological potential of area

Context:	Type:	Description:	Excavated:	Finds Present:
61600	Topsoil	Firm dark grey brown clay silt occasional small stones 0.28m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61601	Subsoil	Firm mid orange brown clay silt 0.20m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61602	Natural	Firm light orange grey silty clay occasional small stones	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 617**

**Max Dimensions:** Length: 30.00 m. Width: 2.10 m. Depth to Archaeology Min: 0.3 m. Max: 0.48 m.

**Co-ordinates:** OS Grid Ref.: SP 81781 37521 (Easting: 481781: Northing: 37521)

OS Grid Ref.: SP 81759 37501 (Easting: 481759: Northing: 237501)

**Reason:** Evaluate archaeological potential of area

Context:	Type:	Description:	Excavated:	Finds Present:
61700	Topsoil	Firm dark grey brown clay silt occasional small stones 0.30m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61701	Subsoil	Firm mid orange brown clay silt 0.18m thick	<input checked="" type="checkbox"/>	<input type="checkbox"/>
61702	Natural	Firm light orange grey silty clay occasional small stones	<input type="checkbox"/>	<input type="checkbox"/>

**Trench: 756**

**Max Dimensions:** Length: 30.87 m. Width: 2.10 m. Depth to Archaeology Min: 0.35 m. Max: 0.44 m.

**Co-ordinates:** OS Grid Ref.: SP 81924 37839 (Easting: 481924: Northing: 237839)
