2<sup>nd</sup> draft issued 25<sup>th</sup> February 2021

Final Version issued 13<sup>th</sup> December 2022

Work undertaken by SWARCH for the National Trust

### *Summary*

---

*This archaeological and historic landscape survey of the Killerton Estate was commissioned by Fiona Hailstone, Killerton Ranger Team, and Martin Papworth, National Trust Archaeologist (South West Region) to bring together the results of previous fieldwork at this National Trust property, combined with an investigation of documentary material. A range of sources including historic documents, maps, aerial photographs and LiDAR data was consulted.*

*This volume contains a select inventory of sites which are not currently recorded on the NTHBSMR utilising data drawn from the Devon County Council Historic Environment Record and analysis of remote sensing data.*

---

South West Archaeology Ltd. shall retain the copyright of any commissioned reports, tender documents or other project documents, under the Copyright, Designs and Patents Act 1988 with all rights reserved, excepting that it hereby provides an exclusive licence to the client for the use of such documents by the client in all matters directly relating to the project as described in the Project Design.

## HOW TO USE THIS VOLUME

---

**For full details of management recommendations and site descriptions:**

Refer to this Volume, Section 9: Site Inventory.

**To obtain a quick assessment of the importance of a site:**

Check Volume I, Section 3: Summary Table, to see if it is a Scheduled Monument (note that statutory responsibilities are outlined in Section 5).

**then:**

Note the National Trust grading, given against each entry in this volume (Site Inventory), as follows:

Grade	Examples
International Importance	World Heritage Sites
National Importance	Scheduled and major monuments
Regional Importance	Other important monuments
Local Importance	Sites important to a locality
Minimal Importance	A few transient features
Archaeological Potential	Site indicated by documentary sources
Unknown	Information unavailable at the time of writing

**To obtain a quick summary of management recommendations:**

Refer to Volume I, Section 2.

**To check an area for archaeological sensitivity, or to find a specific site:**

Look at Figure 13: HBSMR (Historic Buildings, Sites and Monuments Record) map. Note the reference numbers of any sites then refer to Section 9: Site Inventory.

**or**

Refer to Volume I, Section 3: Summary Table.

**To obtain an historical overview of the area of the property and its sites:**

Refer to Volume I, Section 7: Land Use History.

**Disclaimer:** Given the scope of this study, this report cannot be considered exhaustive and is intended as an outline of relevant archaeological features and standing structures known at the time of writing.

## 1. SITE INVENTORY

---

The location of the sites in this inventory are shown on the figures in Volume II.3 and a summary is provided in Volume I: Section 3. Note that for entries from the Devon HER, where the reference is to a migrated record (with no further detail), those references have been deleted.

**Platform in the Parish of Broadclyst**

Civil parish: Broadclyst

SX 9812 9735

106217

*Description*

A very substantial apparently artificial platform standing above the 'floodplain' of the River Clyst. C.50m north-south, 25m east-west, and up to 4m high. Scarp edge to west, eastern edge lies against wall of land now taken in as part of churchyard, and which is higher in general. Area is shown as orchard on the 1842 Broadclyst tithe map and the OS (1904) map. Across this land the undercroft of the earlier manor house survives. It is probable that this large building platform may also be associated with the manor house. East of the churchyard extension wall the ground level is some 1.2m higher than the platform to the west. From the north end of the platform the n side may have extended north-east just to the south of a north-east to south-west hedge line. Almost abutting the hedge a slight north facing scarp can be seen marking the limit of the churchyard extension but the hollow between this scarp and the hedge is being infilled with soil. May well be associated with the manor house (NMR citing Sainsbury).

**Garden at Newhall Farm, Broadclyst**

Civil parish: Broadclyst  
SX 9811 9917  
106209

*Description*

The blocks of parched ground are particularly enigmatic. Some of the camomile strips, which are too narrow to indicate walls, appear to almost spiral out from a central round feature, possibly an ornamental drainage feature of the garden. This whole area appears to be broadly defined by a pronounced, straight scart running roughly west south-west to north-east. It creates in effect a raised terrace area and does not look natural. The features show faintly on aerial photograph. The scarp is clearly visible with a linear drainage feature running at its base. Parch marks on the field to south of Newhall Farm garden showed as strips of camomile marking out roughly rectangular areas with curved corners situated on a raised platform above a stream and separated from the farm garden by a ha-ha and stone wall. The 1843 tithe map shows no indication of any structures on the plot, named 'Garden Plot'. The 1889 OS map shows trees planted in the south west corner below the stone wall, the platforms of which are still visible. The strips probably outline the planting beds of the old garden plot.

*Description*

The track which now separates 'White Down' from 'Oakhams Copse' was the possibly the C18 coaching road from Clyst Hydon to Beare and Budlake. The banks on both sides of the 15-25m wide track were probably erected in the early C19 when the plantation was created. Part of the north side of the track forms the parish boundary with Cullompton. The south bank to the west was removed in the 1960's. Road dated between Early Medieval to Post Medieval - 1066 AD to 1750 AD.

*Description*

The possibly medieval holloway of 'Watery Lane' running west-east from NGR SX97969997 to SS98380010 was part of the network of roads which served the area before the A38 and M5 were cut through the Killerton Estate. The stream called 'Buddleleake' followed the lane supplying water to 'Lower Budlake', 'Francis Court' and 'Newhall Farm'. When the motorway truncated it, the west end became part of a garden and is filled with scrub and trees. Holloway dated between Medieval - 1066 AD to 1539 AD.

*Description*

A pit visible as an earthwork on digital images derived from LiDAR data under White Down Copse is probably the remains of a quarry of probable post-medieval date. However, there is some suggestion that the track might in part be formed of a medieval holloway and the pit might therefore be earlier in date.

*Description*

A small area of earthwork banks potentially of post-medieval to C19 date was visible as earthworks on aerial photographs of the 1960s, to the south and west of Woodhayes Copse, Broadclyst. It is possible the banks are former orchard tree planting banks made to facilitate drainage, although they do not correspond with any orchards depicted on the tithe map for Broadclyst or the OS first edition 25 inch map, and their location on a moderate slope overlooking the Culm valley might make the need for further drainage unlikely. Cannot be seen on aerial photographs taken in 2002 and have probably been levelled.

**Orchards East of Sprydton Cottages, Broadclyst**

Civil parish: Broadclyst  
SX9902699675  
106368

*Description*

Orchards of possible post-medieval origin were located on the west facing combe slopes to the east of Sprydton Cottages, Broadclyst. Distinctive remains of earthwork ridges or banks, made to provide increased soil depth and improved drainage for fruit tree planting were visible on aerial photographs of the 1940s and 1960s. The earthwork banks correspond with a large area symbolised as an orchard on the OS 25 inch first edition map of the 1880s-1890s. The underlying earthwork banks were visible on aerial photographs of 1946 under a light but sparse planting of trees. By 1967 all tree planting had been removed and the underlying earthwork banks were clearly visible in several parcels of land, the banks on different orientations with each plot. Digital images derived from LiDAR data of 2005 show that only two small areas of earthwork banks survive, in plots at SX989997 and SX990995, which remain planted as orchards.

Civil parish: Broadclyst

*Description*

An orchard of possible post-medieval origin was located on the north-facing slopes east of Little Burrow Farm, Broadclyst. Distinctive remains of ridges or banks, made to provide increased soil depth and improved drainage for fruit tree planting, were clearly visible as earthworks on aerial photographs of the 1940s onwards. The earthwork banks correspond with an area symbolised as an orchard on the OS 25 inch first edition map of the 1880s-1890s, and the orchard was therefore probably of post-medieval or C19 origin. The orchard had been cleared of trees by the mid- to late-1940s and therefore had probably passed out of use in the early-C20. The earthwork banks remained visible on digital images derived from LiDAR data of 2005 and therefore probably survive as low earthwork banks. All evidence of a second orchard, previously located immediately to the south-west has been completely levelled.

**Ditched Enclosure East of Horswell Cottage, Broadclyst**

Civil parish: Broadclyst

SX9828098950

*Description*

A possible rectangular ditched enclosure potentially of later Prehistoric to Roman date was visible on aerial photographs of 1984 as a cropmark on the gentle south-west facing slopes to the east of Horswell Cottage, Broadclyst. The cropmark was on average less than 2m wide and enclosed an area approximately 45×30m in size. The transcription might indicate a short break in the south-east facing edge of the enclosure, but this corresponds with an area of dark natural cropmark within which the cropmark of the linear feature cannot be defined and may continue. The north-west edge of the possible enclosure might correspond with an extant field boundary and the north-east edge with a boundary depicted on the tithe map for Broadclyst, but which had been removed by the 1880s-1890s and is not shown on the OS first edition 25 inch map. The enclosure might be of later Prehistoric to Roman date, but the correspondence with field boundaries of probable post-medieval origin might support a later date. Further investigation by geophysical survey and trial trenching might go some way to resolving this issue.

**Quarry and Field Boundary west of Beaumont House, Broadclyst**

Civil parish: Broadclyst  
SX9799598403

*Description*

Earthwork hollows, possibly evidence of former quarries and field boundaries of post-medieval to C19 date, were visible on aerial photographs and digital images derived from LiDAR data of 2005 on the south-east slopes west of Beaumont House. A roughly L-shaped earthwork hollow, possibly evidence of a former quarry and field boundary of post-medieval to C19 date, was visible on aerial photographs and digital images derived from LiDAR data of 2005 on the south-east slopes west of Beaumont House, Broadclyst. A pond in the south-west corner of the hollow was depicted on historic maps available to the survey from the tithe map for Broadclyst onwards. This might support the interpretation that the earthwork hollow is, in part, evidence of a former quarry or extractive pit which had passed out of use prior to the 1840s and which was subsequently used as a pond. The linear 'leg' of the hollow that extends to the east corresponds roughly with an extent field boundary similarly depicted on the available maps, but which seems to have changed orientation several times. This might indicate several episodes of boundary removal and reinstatement. This remains visible on digital images derived from LiDAR data of 2005.

**Ring Ditch South West of Cutton Farm, Poltimore**

Civil parish: Poltimore

SX9678098427

106410

*Description*

A small ring ditch of probable Bronze Age to Roman date was visible on aerial photographs of 1992 as a cropmark on the south-east facing slopes to the south-west of Cutton Farm, Poltimore. It is most likely that the cropmark had formed over the buried remains of an enclosure ditch of a barrow of Bronze Age date. This interpretation might be supported by a very slight mound visible in this location on digital images derived from LiDAR data captured in 2005.

*Description*

A circular ring ditch of probable Prehistoric date is visible on aerial photographs as a cropmark on the gentle west-facing slopes overlooking the River Culm, c.400m north-east of Columbjohn. The cropmark of the ditch is on average roughly 3m wide, enclosing an area c.27m in diameter. The cropmark is somewhat diffuse in character but no evidence of a break or possible entrance is visible. The ring ditch is probable evidence of a round barrow of Bronze Age date but could also be interpreted as evidence of an unenclosed round house of Iron Age to Roman date. A similar sized ring ditch is visible c.20m to the north, and a smaller incomplete ring ditch is location immediately to the north-west. Previously recorded in a single record with MDV108814 and MDV108815.

*Description*

11 and 12 beare cottages were originally built in C17 as one house and used as an inn. Built of cob and stone under a clay tiled roof. Later alterations included a C17 rear wing and a C19 extension.

Two houses, formerly an inn. Late C17. Cob and stone mix, plastered, under gabled- end double Roman clay patent tiled roof. A long main elevation including an early C19 extension to the left; and a C17 rear wing. 2 storeys throughout. Front: 5 window range, but of 2 builds: porch (almost central) slated and boarded; one window above, and 2 to the right, all at same level, lintels well below eaves level; 2 ground-floor windows to right of porch. To left, 2 upper windows at a higher level than the others, and 2 below. All embrasures are of identical size and all contain C19 timber, mostly horned sashes, 8 panes above 8 panes per sash window. The rear wing: has a massive external end stack with a squared oven projection, with one 2-light window to either side. Slated lean-to and a rear internal stack to main range. Interior: room to right of entrance with 2 beams, chamfered with hollow step stops. Rear wing with axial beam, chamfered with scroll stops (to one room), and a chamfered beam with run-out stops in adjoining room (dairy). Old fireplace concealed. Remains of C17 staircase, 5 turned balusters and newel. Roof not inspected; interior inspection of no. 11 only.

**Flint Scatter in fields between Silverton Mill and Silverton**

Civil parish: Broadclyst

SS9693201899

106456

*Description*

A total of 156 worked flints were recovered from top soil during the insertion of a new sewage main across fields between Silverton Mill and Silverton Sewage Treatment Works. Twenty-two flints were found in Field 1, mostly from the eastern side of the field. Seven flints came from Field 2 and two from Field 3. Field 4 produced 99 worked flints. Also found in Field 4 was a rim from a Late Roman flanged greyware bowl and a sherd of C17/C18 South Somerset coarseware. Fields 5, 6 and 7 produced eleven, six and seven flints respectively. Another sherd of South Somerset coarseware was also found in Field 6. The majority of the worked lithics were of flint but also included a number of pieces of chert. They included two thumbnail scrapers of Neolithic/Early Bronze Age date (Field 4) and also a Bronze Age tanged and barged arrowhead from Field 1. Two small blade cores may represent earlier Neolithic or even Mesolithic activity in the area. The high number of flints from Field 4 corresponds with the presence of a Prehistoric enclosure in the same field. Map object based on this Source.
