## *Summary*

*South West Archaeology Ltd were instructed by Business Location Services Ltd to undertake a desk-based assessment and walkover survey on Land to rear of Bowling Green, St, Just in Roseland, Cornwall.*

*The walkover survey and the desk-based and cartographic research have highlighted that there is some archaeological potential within the proposed development area.*

*The field names and field pattern of the area in which the development is situated are suggestive of post-medieval enclosure, probably former upland common or waste. This relatively small area of late enclosure is surrounded by anciently enclosed land. In addition the early-medieval settlement of Trethewell, which has an associated Round is located c.250m to the east of the site. The largely post-medieval village of St. Just is located a similar distance to the west and south-west of the site, although the crossroads is probably historic and the road which is now St. Just Lane (the B3289) is likely to have been an important routeway from at least the medieval period.*

*The walkover survey indicated that there were no significant extant earthworks or evidence of archaeological deposits or remains. It is clear however that the site has not been extensively landscaped, with the level of the field similar to those surrounding, and the truncation of any archaeological deposits within the development area is therefore likely to be minimal.*

## 1.0 Introduction

---

**Location:** Land to the rear of Bowling Green  
**Parish:** St. Just in Roseland  
**County:** Cornwall

### 1.1 Project Background

South West Archaeology Ltd. (SWARCH) were commissioned by Russell Dodge, Business Location Services Ltd (the Client) to conduct an archaeological desk-based assessment and walkover survey on land to rear of Bowling Green, St. Just-in-Roseland, Cornwall, prior to potential development of the site.

### 1.2 Historical Background

The site lies on the eastern edge of the village of St Just (in Roseland), approximately 9.5km south of Truro and 4.5km north-east of Falmouth, and adjacent to late 20<sup>th</sup> century residential developments to the east and Trethewell; a farm of early medieval origin, to the west. St Just in Roseland is located in the Deanery and Hundred of Powder and sits largely surrounded by water with the Percuil River to the east and the deep tidal Carrick Roads to the west. The main settlement is located on the south coast at St. Mawes, although in the centre of the parish is the ‘village’ of St. Just, which is located c.0.5km to the east of the church (and churchtown) on a north-south running ridge at a major road junction. The village appears to have largely developed in the late medieval to post-medieval period, with further significant residential developments since 1945. The majority of the rest of this rural parish retains a typical medieval pattern of dispersed farmsteads.

### 1.3 Archaeological Background

The site lies within a small area recorded on the Cornwall and Scilly Historic Environment Record (HER) as ‘Post-medieval Enclosed Land’ although it is largely surrounded by Anciently Enclosed Land (AEL) and is located almost immediately adjacent to an early medieval placename ‘Trethewell’ (*Trethiwil*) which may suggest that it should be considered to have a similar level of archaeological potential as AEL categorised land, i.e. likely to include the remains of Bronze Age, Iron Age and Romano-British monuments, settlements and field systems.

However, very few archaeological investigations have taken place in the parish, with most of the recent investigative works carried out by English Heritage (e.g. Linzey 2000) as well as the Cornwall Archaeological Unit in relation to castle and defences at St. Mawes. Closer in proximity to the development area, part of the round at Carwarthen was excavated in 1939, a range of pottery and artefacts were recovered dating from the Bronze Age through the Iron Age and Romano-British period into the 5-6<sup>th</sup> Centuries AD (HER: 24371).

In the immediate vicinity of the development site are the extant remains of a range of post-medieval buildings and structures relating to the village (e.g. schools, chapels, wells, malthouse, etc.) located to the east and west of the site (see Appendix 2). There are also the remains of a number of Bronze Age Barrows (e.g. HER: 50794 and 50828) and possible prehistoric enclosures (e.g. HER: 22735) to the north, north-west and south of the site. (See Appendix 2 for a full list of relevant HER entries.

## 1.4 Topographical and Geological Background

The site is comprised of part of a single field and forms a roughly sub-rectangular shape with an associated access route approaching from the south (see Figure 1). It sits on a gentle east facing slope, perched overlooking Trethem Creek at between 55m and 45m (AOD), with a fall in slope of *c.*10m across the site from west to east, the fall is more pronounced in the eastern portion of the field, which falls outside of the proposed development.

The underlying rocks fall within the Middle Devonian (Undifferentiated) mudstones, siltstones and sandstones (British Geological Survey 1975; BGS Viewer 2012). The soils of this area are predominantly the shallow well-drained loamy soils of the Powys Association and the well drained fine loamy soils of the Denbigh 2 Association (Soil Survey of England and Wales 1983).

## 1.5 Methodology

This report follows the recommendations set out by the Institute of Field Archaeologists in *Standards and Guidance for Archaeological Desk-Based Assessments* and utilises existing information in order to establish as far as possible the archaeological potential of the site. This information can then be used in an attempt to make informed decisions regarding the potential impact any proposed development may have on the archaeological resource. Mitigation strategies can then begin to be formulated which will reduce this impact.

It should be noted that this form of non-intrusive appraisal cannot be seen to be a definitive statement on the presence or absence of archaeological remains within any area but rather as an indicator of the area's potential based on existing information. Further intrusive investigations such as machine-excavated trial trenching are usually needed to conclusively define the presence/ absence, character and quality of any archaeological remains in a given area.

In drawing up this assessment report cartographic and documentary sources held by the Cornish Studies Library were consulted, as well as the Sites and Monuments Record maintained by Cornwall County Council. Relevant online sources were also utilised, and appropriate Internet databases investigated. These included; The English Heritage Listed Buildings online database, The Defence of Britain Project, and The English Heritage NMR Excavation Index and National Inventory.

The development site was visited for the walkover survey by Dr S. Walls on 4th December 2012.

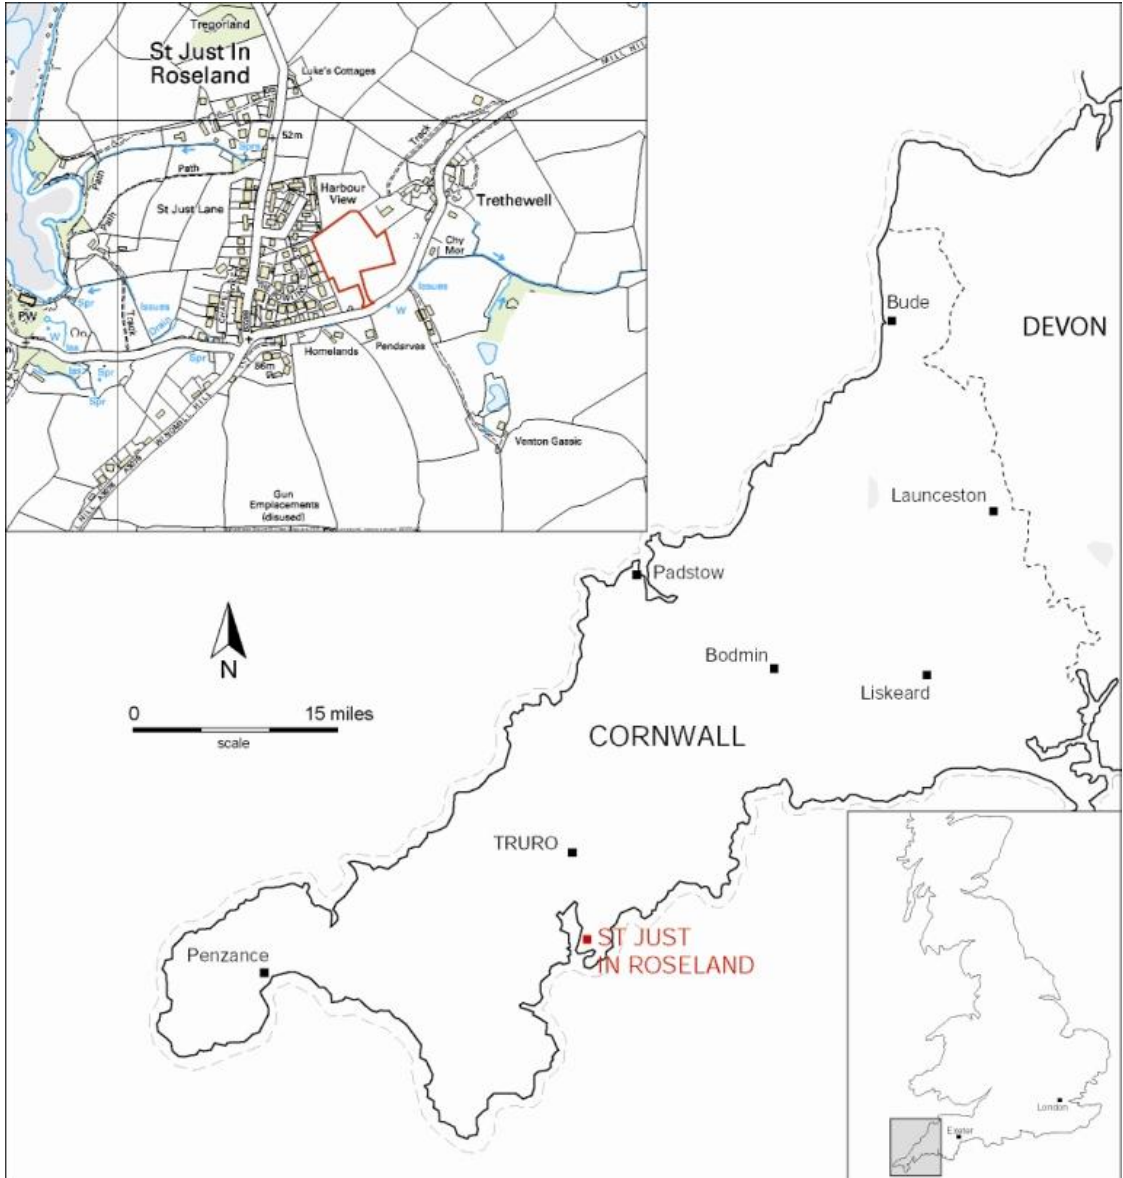

Figure 1: Site location. The site is bounded in red.

## 2.0 Results of the Desk-Based Assessment

---

The church of St. Just (c.0.6km west of the site) is probably of early medieval origin, as the former estate adjoining the church 'Lanzeage' includes the placename element *-Lann* meaning enclosed cemetery. The church is first recorded in 1046, passing to the priory of Plympton in 1140 (HER: 24374). The development of the village on the crossroads is likely to have largely been of post-medieval origin, as the only known medieval evidence is of a chapel and cemetery (dedicated to St. Nicholas or St. Margaret) located close to what is now Chapel Close. This chapel had a licence in 1391, was seemingly later converted into a residence and was still extant as a ruin in the 19<sup>th</sup> century (HER: 22712). However, evidence of further medieval buildings may have been lost beneath the post-medieval and modern expansion of the village.

To the east of the proposed development site, the small settlement of Trethewell is likely to have had early medieval origins, given the *-tre* placename element (Padel 1985).

### 2.1 The 1840 St. Just-in-Roseland Tithe Map

The earliest available detailed mapping evidence is the tithe map for St Just (in Roseland), produced in 1840. This clearly shows that by this time the development area was a larger field as its north-east portion had not been separated (see Figure 2). The area of the site and most of the surrounding lands were in the holding of Trethewell, which was at this time owned by James Borlase. The field was leased according to the 1841 apportionment to John Borlase (see Appendix 1).

The majority of the fields within the vicinity of the development area and including this field (No. 550) are described as arable. The field is known at this time as *Clipper Close*, which may suggest that it represents post-medieval enclosure of rough ground or common, that was 'cut out'. The tithe map certainly appears to suggest that the eastern part of the field and part of the field along the southern edge (both outside of the proposed development) are seemingly depicted as rough or wet ground. The field to the east of the development (No. 549) is named *Bowling Green*, which further supports this suggestion that this was formerly rough ground, perhaps common. *Bowling Green* is often a place name element which is used in an ironic way to indicate fields that are far from flat, e.g. *Devil's Bowling Green*, and this may indicate or suggest the presence of quarrying waste or perhaps other lumps and bumps associated with archaeological features such as Barrows, which were therefore seemingly extant into the post-medieval period.

The fields to the north of the development (numbers 564, 565 and 566), have straight boundaries as do fields 549 and 550 and all were listed in the tithe apportionment as *Park Lawry*, which suggests that they may have all formed a single larger enclosure at some point, particularly as they were all under the same ownership in 1841 (see Appendix 1). The element *-Lawry* (Lowran or Lowen) may be derived from a Brittonic personal name (Padel 1985).

Figure 2: Extract of the 1840 St. Just-in-Roseland tithe map. The proposed development area is highlighted in red.

## 2.2 The Ordnance Survey 1<sup>st</sup> Edition Map c.1880

The next available cartographic source for this study is the Ordnance Survey 1<sup>st</sup> Edition map of c.1880, which suggests that no significant changes had occurred within the development area (see Figure 3) by this time. However, within the same field a number of changes had occurred, most notably the construction of a building in the area now enclosed by a separate field. The two areas of rough ground also seem to have been 'improved' by this date, with that to the south along the road, seemingly becoming a small lay-by and that to the east having been drained with a second line shown following the course of the boundary.

In the wider landscape there are relatively few other changes in terms of the field pattern, although there are a limited number of buildings which are constructed or demolished within the hamlet of Trethewell during this phase. There are far fewer changes notable within the main village.

## 2.3 The Ordnance Survey 2<sup>nd</sup> Edition Map of 1908

The Ordnance Survey 2<sup>nd</sup> Edition map of 1908 also indicates some further slight changes in the wider landscape, but again not within the proposed development area (see Figure 4). The building which had been constructed between 1840 and 1880 had by 1908 been enclosed within a small field.

Few other changes are notable within the wider area, although a school had been constructed on the western edge of the field known as Bowling Green.

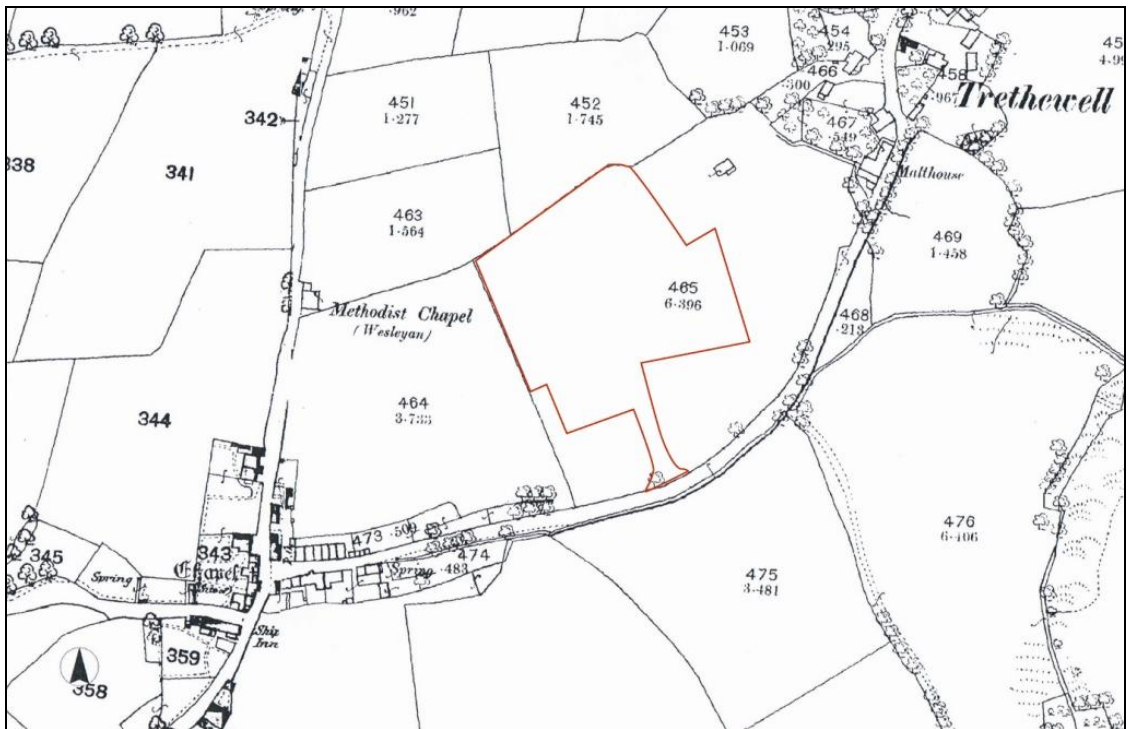

Figure 3: Extract of the Ordnance Survey 1<sup>st</sup> Edition Map of c.1880. The site is highlighted in red.

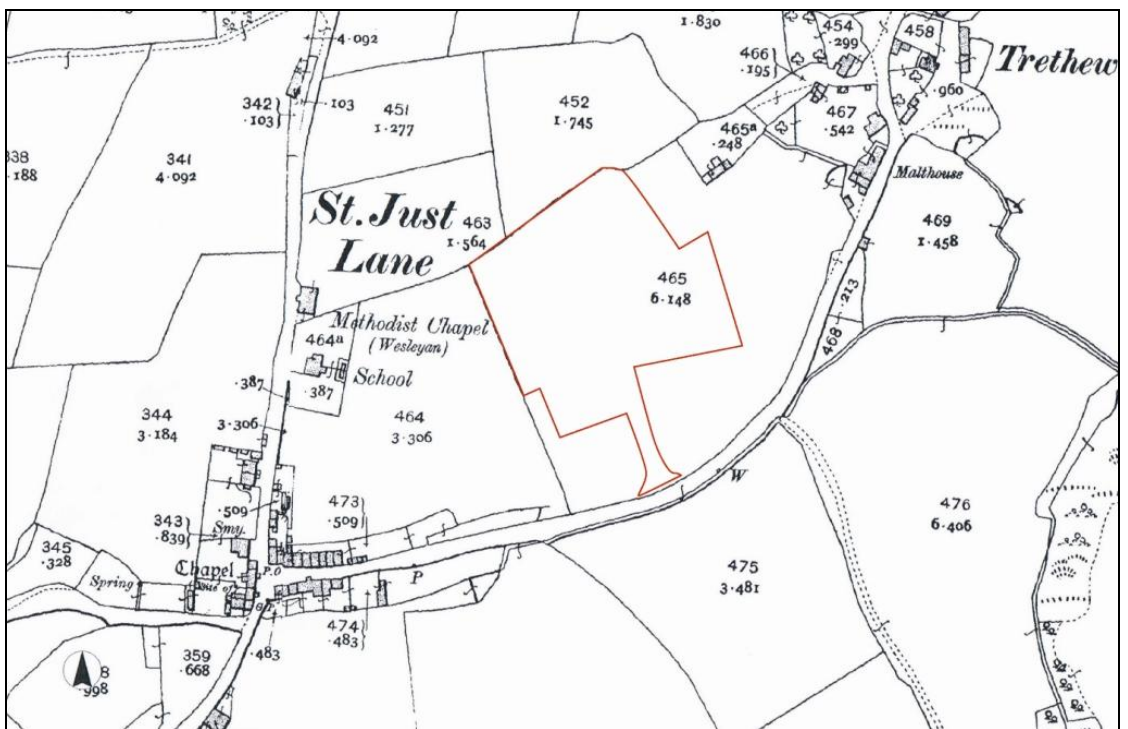

Figure 4: Extract of the Ordnance Survey 2<sup>nd</sup> Edition Map of 1908. The site is highlighted in red.

## 2.4 Later Changes

During the course of the 20<sup>th</sup> century the boundary of the house in the north-east corner of the field was removed and expanded to abut the proposed development area. In the south-west corner of the field an electricity substation has been constructed, with a tarmaced access road. In the wider landscape the remaining part of the field to the east (Bowling Green) has been infilled with housing, as have the two fields to the north of the Bowling Green. There have also been further residential developments to the west of St. Just's Lane.

### 3.0 The Results of the Walkover Survey

---

The site was visited during heavy rain and hail showers in December 2012. The field was largely under pasture, with the grass c.0.4m high but with considerable encroachment of brambles, gorse and nettles around the edges of the development area, particularly the western edge. The vegetation cover meant that any subtle earthworks would have been obscured during the survey. The only extant earthworks which were visible were probably erosion hollows in locations where water troughs and feed stations were placed. There was also a slight vehicular erosion track leading south from the obscured gateway in the northern hedge (see Figure 5).

Figure 5: The obscured gateway in the northern hedge, viewed from the south.

The northern and western boundaries of the proposed development area are both 0.6-0.8m high and c.1m wide earth and are stone banks of similar construction, with only some roughly coursed stone facing along their base. The western boundary is topped by a modern wooden fence, and the northern bank is topped by a range of deciduous scrub and primarily young trees (see Figure 5). The other boundaries are all modern fences and of no historical merit.

There were a number of mole hills in the southern part of the site which were examined for artefacts, although none were noted. The soil was a very dark-brown silt loam with occasional small sub-angular shillet fragments.

## 4.0 Conclusions

---

### 4.1 Summary

The walkover survey and the desk-based and cartographic research have highlighted that there is some archaeological potential within the proposed development area.

The field names and field pattern of the area in which the development is situated are suggestive of post-medieval enclosure, most likely of former upland common or waste. This relatively small area of late enclosure (7 or 8 fields) is however surrounded by anciently enclosed land. In addition the early-medieval settlement of Trethewell, which has an associated Round (HER: 22735), is located c.250m to the east. The largely post-medieval village of St. Just is located a similar distance to the west and south-west of the site, although the crossroads is probably historic and the road which is now St. Just Lane (the B3289) is likely to have been an important routeway from at least the medieval period.

In addition to the archaeologically significant sites located in close proximity to the development area, there are also a number of other prehistoric sites within the wider landscape, most notably a series of barrow cemeteries (HER: 50825; 50828; 50794).

The walkover survey indicated that there were no significant extant earthworks or evidence of archaeological deposits or remains. It is clear however that the site has not been extensively landscaped, with the level of the field similar to those surrounding it, and an average depth of topsoil can be expected. Some ploughing does appear to have occurred in recent history, although given the relatively poor quality of the land this is unlikely to have been common practice. The truncation of any archaeological deposits within the development area is therefore likely to be minimal.

The two hedgebanks are of little note, but they appear to represent later enclosure as they are largely of earthen construction and are quite diminutive in size. No archaeological artefacts were recovered from the large number of mole hills on the site. It is also noteworthy that a large amount of rubbish and the remains of several bonfires were located on the site, which would most likely render any geophysical survey of the area of negligible value.

Name: TRETHERWELL - Iron Age enclosure, Romano British enclosure  
Summary: A complex series of two thin cropmark ditches visible on air photos.  
Grid Reference: SW 8549 3599  
Parish: St Just in Roseland, Carrick, Cornwall  
Protected Status: None recorded  
Other Statuses/Codes: none recorded  
Monument Types: ENCLOSURE (Iron Age - 800 BC to 42 AD) (Romano British - 43 AD to 409 AD)  
Full description: A complex series of two thin cropmark ditches appears on RAF aerial photographs of 1946 above Trethewell east of St Just (p1, p2) and was plotted as part of the NMP. It appears to consist of two roughly circular overlapping enclosures in adjacent fields. The larger enclosure measures 66m across while the smaller enclosure is only approx 40m in diameter. Though it has been suggested that the site is a banjo enclosure (h1), close inspection of the air photos indicates that this is an unlikely interpretation.

Summary: The remains of a possible Bronze Age round barrow is visible on an aerial photograph.

Grid Reference: SW 8582 3531  
Parish: St Just in Roseland, Carrick, Cornwall  
Protected Status: None recorded  
Other Statuses/Codes: none recorded  
Monument Types: BARROW? (Bronze Age - 2500 BC to 801 BC)  
Full description: The remains of a circular earth mound approx 12m in diameter is visible on an aerial photograph (p1) and was plotted as part of the NMP. The feature lies within an area classed as Anciently Enclosed Land and may possibly be a Bronze Age round barrow, similar to another located 100m to the NW (50825.2).

Name: ST JUST LANE - Prehistoric enclosure  
Summary: The remains of a rectangular enclosure 30m by 30m, visible on aerial photographs.  
Grid Reference: SW 8550 3534  
Parish: St Just in Roseland, Carrick, Cornwall  
Protected Status: None recorded  
Other Statuses/Codes: none recorded  
Monument Types: ENCLOSURE (Prehistoric - 500000 BC to 42 AD)  
Full description: The remains of a rectangular enclosure 30m by 30m is visible on aerial photographs (p1) and was plotted as part of the NMP. The date and function of the feature is unknown but it is sited within an area classed as Anciently Enclosed Land. The medieval field boundary kinks slightly to the east of the enclosure which indicates it was at least in existence before this and may possibly have a prehistoric origin.

Monument Types: WINDMILL (Medieval - 1066 AD to 1539 AD) (Post Medieval - 1540 AD to 1900 AD)  
Full description: A mill on the hill just n of trevennal was shown as a tripod on an early c16 map of falmouth haven, and was probably a postmill at that time. It may have been the subject of a lawsuit in 1560. P post mill was marked on a map of 1580 and by 1695 two mills were extant on the site. Presumably the postmill was demolished shortly after the completion of the new one, which is shown on the OS map 1813 map (b1), was in use in 1824, was advertised for lease in 1834 and probably went out of use shortly after. The OS card has a copy of an attractive illustration of the mill in 1840 (b2).

 Summary: The site of a chapel and cemetery is recorded in 1391.  
 Grid Reference: SW 8521 3563  
 Parish: St Just in Roseland, Carrick, Cornwall  
 Protected Status: None recorded  
 Other Statuses/Codes: none recorded  
 Monument Types: CHAPEL (Medieval - 1066 AD to 1539 AD)  
 Full description:

A chapel & cemetery were sited in St Just Lane in medieval times. It was dedicated to St Nicholas or St Margaret, for which the rector (of St Just?) had a licence in 1391. In 1820, Gilbert recorded that at Chapel Close, a lane in St Just in Roseland, were the remains of a chapel and burying ground (b1). Henderson says that the chapel had been converted into a dwelling house, but had been burnt down. It was still remembered in his day (before 1920) as the 'church house' which stood between two (extinct) public houses near the corner of the road to Trethewell on the Trevennal side. It was probably either the chapel of St Nicholas or of St Margaret for which the rector had license in 1391 (b4). According to Lake, human bones had been found on the site (b2), indicating the site of a cemetery. Chapel (site of) marked on the 1st Edition OS map.

**HER Number:** 24374  
**Name:** ST JUST IN ROSELAND - Medieval church  
**Summary:** St Just in Roseland parish church.  
**Grid Reference:** SW 8484 3569  
**Parish:** St Just in Roseland, Carrick, Cornwall  
**Protected Status:** Listed Building (II) 63072: CHEST TOMB AT 5 METRES SOUTH OF WEST END OF CHURCH OF SAINT JUST  
**Other Statuses/Codes:** none recorded  
**Monument Types:** CHURCH (Medieval - 1066 AD to 1539 AD)  
**Full description:** The placename "Lanzeage" suggests that St Just-in-Roseland church is of Early Medieval origin. St Just, one of the four Roseland parishes, lay within the Episcopal fief of Tregear in Gerrans, and is first recorded in 1046 when it is spelt "Ecciae Sci Juste" (b1). The church was given to the priory of Plympton c1140 but the grant was disputed and retained by the Le Sor family of Tolverne. No remains exist of the Norman structure. The church was dedicated by bishop Bronescombe in 1261 (b2). The chancel with its double piscina and the north transept both contain windows belonging to the C13 church. In the south aisle they are all Perpendicular, as is the arcade which rests on Cornish standard granite piers with four plain capitals, and which has nearly semicircular arches (b3). The chancel aisle and nave are of C15 date, as is the south porch which contains panelled jambs and old woodwork in its roof (b4). The doorway once had openwork tracery on top of the arch, which is now broken off (b3). The west tower is of slate in two stages with diagonal buttresses and a stair-turret of three-eighths plan rising above the pinnacles. The top windows, which are preserved, are C14, two lights, cusped (b3). The font is C15, octagonal with quatrefoil panels (b3) and there is a brass of a vested priest c1520 (b4). The present building contains a C17 font cover and creed and Lord's prayer panels dated 1693. The tower contains three bells - the tenor dated 1784 bears the names of two churchwardens, a small three-quarter figure of Charles II and two actual copper coins, cast on (b2). The church was heavily restored in 1872 (b3) when most of the ancient woodwork was discarded. The pulpit and pews, installed by the rector, Thomas Carlyon, are of a coarse, vigorous carving and date from 1840-50, as does the religious text running around the base of the roof (b5). When work was being carried out in the early C20, a Roman coin was found beneath floorboards, and during more recent repairs a brass crucifix was found hidden in the roof.
