## Brockholes

Figure 76: Probability distributions of dates from Brockholes; each distribution represents the relative probability that an event occurs at a particular time. For each of the radiocarbon dates two distributions have been plotted, one in outline, which is the result of simple radiocarbon calibration, and a solid one, which is based on the chronological model used. A question mark (?) indicates that the result has been excluded from the model. The large square brackets on the left, along with the OxCal keywords, define the model exactly
