

VOLUME 1

CONTENTS

CONTENTS	I
LIST OF TABLES	III
ACKNOWLEDGEMENTS	V
SUMMARY.....	VII
1 INTRODUCTION	1
1.1 Aggregate Extraction Background.....	1
1.2 Contract Background	2
1.3 The Ribble Valley study areas	2
1.4 Aims of the Project	4
1.5 Objectives.....	4
1.6 Structure of the Report	6
2 BACKGROUND	7
2.1 Ribble Topography – Countryside Character Areas	7
2.2 The Geology of the Ribble Basin.....	8
2.3 Prehistoric Archaeology and Palaeoenvironment	12
2.4 Romano-British Archaeology and Palaeoenvironment.....	21
2.5 Early medieval Archaeology and Palaeoenvironment	24
2.6 Medieval Archaeology	27
2.7 Post-medieval Archaeology of the Ribble Valley.....	30
3 METHODOLOGY.....	33
3.1 Introduction	33
3.2 Structural Overview of the GIS.....	33
3.3 Characterising the Geological and Geomorphological Resource	34
3.4 Interrogation of Remotely Sensed Data	35
3.5 Fieldwork: Mapping, Drilling, Sampling.....	39
3.6 Outline of Approach to the Geomorphic Analysis.....	40
3.7 Geochronology: Optically Stimulated Luminescence (OSL) and Radiocarbon Dating	41
3.8 Characterising the Natural Landscape as a Heritage Asset.....	52
3.9 Characterising the Archaeological Resource	53
3.10 Characterising the Palaeobotany of the Lower Ribble Valley	61
3.11 Assessing the Mineral Potential and Geomorphic Risk.....	64
3.12 Enhancing an Understanding of the Archaeological Resource.....	77
3.13 Modelling Archaeological Potential	81
4 ASSESSMENT OF METHODS	86
4.1 Introduction	86
4.2 Assessment of Archaeological Data Capture.....	86
4.3 Assessment of Statistical Methods.....	92

4.4	Assessment of Geological and Geomorphic Techniques	93
4.5	Recommendations for Future Methods Looking at Aggregate Research	95
5	THE LANDSCAPE: A HERITAGE RESOURCE.....	95
5.1	Glacial History of the Ribble Basin	96
5.2	Fluvial Geomorphology and Sedimentology	101
5.3	Vegetation History of the Ribble Basin and an Assessment of the Palaeobotanic Potential of the Valley	125
5.4	Evolution of the Landscape: Synthesis and Needs for Future Research	129
6	ARCHAEOLOGICAL RESOURCE: RESULTS.....	133
6.1	Introduction	133
6.2	The Distribution of Archaeological Sites within the Lower Ribble Valley	133
6.3	Examination of the Density of Sites	139
6.4	Monuments, Events, and the HLC	140
6.5	Analysis of the Lacunae	145
6.6	Statistical Analysis	146
6.7	HLC Enhancement	153
7	SAND AND GRAVEL RESERVES OF THE RIBBLE REGION.....	161
7.1	Existing Knowledge Base	161
7.2	Revised Sand and Gravel Mapping for the Ribble	163
8	DYNAMIC GEOMORPHOLOGICAL MODELLING STUDIES	175
8.1	Landscape Change under Present-Day Hydrological Conditions	175
8.2	Landscape Change under Future Hydrological Conditions	176
8.3	Flood Risk Dynamics	177
8.4	Summary	178
9	ANALYSIS AND DISCUSSION.....	179
9.1	The Superimposition of the Archaeological Resource on the Aggregate Terraces	179
9.2	The Impact of Geomorphological Change on the Archaeological Resource....	181
9.3	The Impact of Aggregate Extraction on the Archaeological Resource.....	187
10	RECOMMENDATIONS	190
10.1	Introduction	190
10.2	Further Work	190
10.3	Future environmental and geomorphological research	191
10.4	Archaeological Investigation	194
10.5	Management Recommendations	197

LIST OF TABLES

- 1: Datasets included in the Ribble ALSF project geodatabase
- 2: Data sources for geomorphic mapping and aggregate assessment
- 3: Samples collected for optical dating
- 4: LM OSL components
- 5: Results of dose recovery tests
- 6: SAR data for LV217 and LV218
- 7: Results of dose-recovery tests
- 8: Radioactivity concentrations
- 9: Previously published radiocarbon dating from the Bowland Fells
- 10: NMR broad class types found in the Lower Ribble Valley study area
- 11: New sites identified from OS first edition mapping
- 12: New sites identified from aerial photographs
- 13: New sites identified from combinations of aerial photography and LiDAR
- 14: New sites identified by LiDAR only
- 15: Additions made to the HER database for the Lower Ribble Valley
- 16: Attribute table for raster combining Roman presence or absence map and elevation
- 17: Example of KS test calculations on Roman monuments and elevation
- 18: Number of individual polygons in the Lower Ribble Valley study area by HLC broad type
- 19: Ranking for elevation raster reclassified according to the number of Roman sites at each level
- 20: Summary table of PAS records within the Lower Ribble Valley study area
- 21: Radiocarbon data from the Brockholes meander, Lower Ribble Valley
- 22: Radiocarbon data from Lower House Farm, Lower Ribble Valley
- 23: Radiocarbon dating from Osbaldeston Hall, Lower Ribble Valley
- 24: Radiocarbon dating from near Whalley, Lower Calder Valley
- 25: Radiocarbon dating from Settle, Upper Ribble floodbasin
- 26: Radiocarbon dating relating to gully/fan development, Bowland Fells, Lancashire
- 27: Radiocarbon dating from the Ribble/Wharfe watershed in the Pennines
- 28: Pollen assessment of peat deposits from Flashers Wood
- 29: HLC landscape types, showing the total and average number of monuments per polygon
- 30: Breakdown of HLC polygons by landscape type, showing number of polygons containing no monuments

- 31: HLC broad types, showing the total and average number of errors per polygon
- 32: Areas of ‘Ancient and Post-medieval Settlement’ and the breakdown of events and monuments
- 33: Number of monuments at given distances from events
- 34: HLC broad types showing disturbance classification
- 35: Results of KS test using NMR broad class
- 36: Results of running KS test on monuments by period compared to environment parameters
- 37: Distribution of monuments with distance from a Roman road
- 38: Medieval monuments within 250m of water
- 39: Breakdown of HLC broad types by suitability for aggregate extraction
- 40: Breakdown of present threat by HLC broad type
- 41: Breakdown of future threat by HLC broad type
- 42: Comparison between future threat and present threat by HLC broad type
- 43: Breakdown of HLC broad type by potential for prehistoric monuments
- 44: Breakdown of HLC broad type by potential for Roman monuments
- 45: Breakdown of HLC broad type by potential for medieval monuments
- 46: Mineral volumes expressed as total estimated sand and gravel for the workable Resource Blocks identified on Figure 145
- 47: Environmental constraints for the workable Resource Blocks identified on Figure 145
- 48: Mineral volumes expressed as total estimated sand and gravel for the workable Resource Blocks identified on Figure 146
- 49: Environmental constraints for the workable Resource Blocks identified on Figure 146
- 50: Mineral volumes expressed as total estimated sand and gravel for the workable Resource Blocks identified on Figure 152
- 51: Environmental constraints for the workable Resource Blocks identified on Figure 152
- 52: Prehistoric monuments found in Terrace T2
- 53: Prehistoric monuments found within Terrace T3
- 54: Currently known monuments at risk from geomorphological change
- 55: Breakdown of monuments at risk from future geomorphological change, by period
- 56: Monuments within river terraces, broken down by period
- 57: Monuments within Resource Blocks of considerable suitability for aggregate extraction between the M6 and the Calder Tributary
