Summary

During March 2010 ASC Ltd undertook an archaeological watching brief at 24 Brittens Lane, Salford, Bedfordshire, during groundworks for the construction of a new lounge. A modern cobbled area was uncovered at the south eastern edge of the development, and may represent the remains of a former garden path. No significant archaeological remains were observed during the watching brief and the archaeological impact of the development is likely to have been minimal.

1. Introduction

1.1 In March 2010 Archaeological Services and Consultancy Ltd (ASC) carried out a watching brief at 24 Brittens Lane, Salford, Bedfordshire. The project was commissioned by Mr Marcel Majoor, and was carried out according to a brief (CBCA 2009) prepared by the local planning authority (LPA), *Central Bedfordshire Council,* and a project design prepared by ASC (Zeepvat 2010). The relevant planning application reference is CB/2009/624/FUL.

1.2 Planning Background

This watching brief was required under the terms of *Planning Policy Guidance Note* 16 (PPG16), as a condition of planning permission for the development of the site.

1.3 Archaeological Services & Consultancy Ltd

ASC is an independent archaeological practice providing a full range of archaeological services including consultancy, field evaluation, mitigation and post-excavation studies, historic building recording and analysis. ASC is recognised as a *Registered Organisation* by the Institute for Archaeologists and is also accredited ISO 9001, in recognition of its high standards and working practices.

1.4 *The Site*

1.4.1 Location & Description

The site is located in the village of Salford, in the civil parish of Hulcote and Salford, in the district of Central Bedfordshire, centred on NGR SP 9338 3931 (Fig. 1). It occupies a plot of land on the eastern side of Brittens Lane, near its junction with Broughton Road. 24 Brittens Lane is a semi-detached house, with the adjoining house to the north, and open paddocks to the east and south. The area affected by the development covers c.33 sq m to the south of the house, and prior to the re-development was occupied largely by a single-storey garage. Access is from Brittens Lane (Fig 2).

1.4.2 *Geology & Topography*

The site lies on more or less level ground, at an elevation of c.75m AOD. Broughton Brook, the nearest watercourse, flows to the west, c.300m southwest of the site. Soils in the site area belong to the Oxpasture Association, described as 'fine loamy over clayey and clayey soils with slowly permeable subsoils and slight seasonal waterlogging. Some slowly permeable seasonally waterlogged clayey soils' (Soil Survey 1983, 572h). The underlying solid geology comprises Cornbrash limestone (BGS, Sheet 203).

1.4.3 Proposed Development

This comprises demolition of the aforementioned garage, and the construction of an extension to the existing house (Fig. 3).

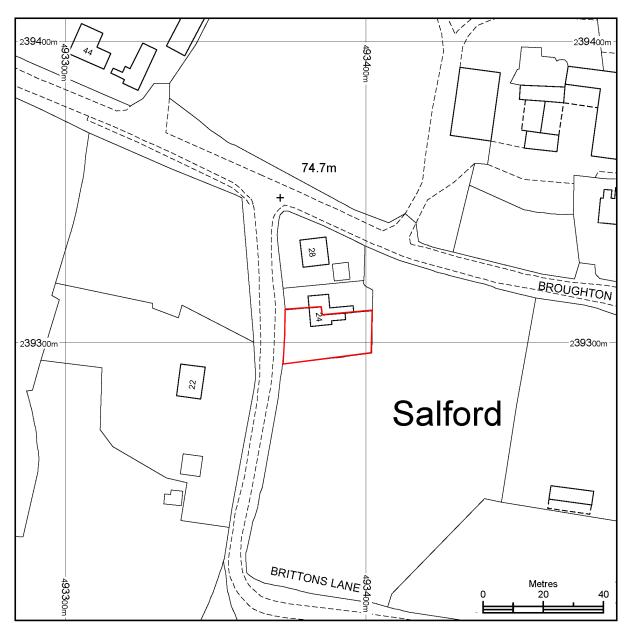

Figure 2: Site plan (scale 1:1250)

2. Aims & Methods

2.1 *Aims*

As described in the brief (Section 4.3), the aims of the watching brief were:

- To establish the date, nature and extent of activity or occupation on the development site
- To establish the relationship of any remains found to the surrounding contemporary landscapes
- To recover artefacts to assist in the development of type series within the region
- To recover palaeo-environmental remains to determine local environmental conditions

2.2 *Standards*

The work conformed to the project design, to the relevant sections of the Institute for Archaeologists' *Code of Conduct* (IFA 2000) and *Standard & Guidance Notes* (IFA 2001), and to the relevant sections of ASC's own *Operations Manual*.

2.3 *Methods*

The work was carried out according to the brief (Section 5), which required:

• Any groundworks likely to have an impact on archaeological deposits to be undertaken under archaeological supervision.

3. Archaeological & Historical Background

3.1 The following section provides a summary of the readily available archaeological and historical background to the development site and its environs. The site lies within an area of archaeological and historical interest, and has the potential to reveal evidence of a range of periods.

This section has been compiled principally with information from the Bedfordshire & Luton Historic Environment Record (HER), and ASC's library.

3.2 **Prehistoric - Roman** (before 600BC - c.450)

Little is known of prehistoric or Roman activity in the environs of Salford. The only significant evidence for these periods in the vicinity came from excavations at Salford Quarry in 1988-91 (Clark 1990; Dawson 2005). This site, located just over 1km north-west of the village, revealed Neolithic activity represented by a series of pits, a large assemblage of Peterborough-style pottery, and worked flint. Bronze Age evidence included a ring ditch, pits and Beaker pottery. Evidence for Iron Age occupation was attested by a number of round houses, hearths, four-post structures and associated pits, postholes and middle Iron Age pottery. A small cremation cemetery of late Iron Age date was also excavated. In the Roman period a new pattern of land boundaries was imposed, and an isolated building, probably a field barn, was constructed.

3.5 Saxon - Medieval (c.450-1500)

Mention of Salford first appears in the Domesday Survey (1086), when the manor was held be Hugh de Beauchamp (Page 1912). The overlordship of the manor was attached to the barony of Bedford. The tenants holding the manor in the 12th century were the de Salford family. In 1438 the manor of Salford formed part of Archbishop Chicheley's endowment of All Souls College, Oxford. The manor remained in the college's possession into the 20th century.

Brittens Lane lies within the core of the medieval village, 300m north-west of the parish church of St Mary, which dates largely to the 13th century (HER 1109). Medieval village earthworks have been recorded in a number of locations in and around the village (HER 1194, 8396), and areas of ridge and furrow ploughing have been identified at three locations adjacent to the settlement (HER 5215). Earthworks in the paddocks to the east and south of 24 Brittens Lane were subject to a programme of recording and investigation by trial trenching. The report (BCAS 1997) concluded:

The earthworks survey recorded a number of linear earthworks, areas of intentional ground levelling and the remains of possible quarrying. Trial trenching provided cross sections of the earthwork features and also uncovered limited evidence of medieval activity, principally in the form of field boundaries.

3.7 **Post-Medieval - Modern** (1500- present)

The earliest map to show the village in any detail is a map of Salford Manor dating to 1595 (Beds CRO XI/74/2). This shows an L-shaped building on the approximate site of 24 Brittens Lane, and the enclosure within which it sits is shown as belonging to 'Rev^d Harvey'. By 1883, when the Ordnance Survey First Edition 25" sheet was

published, a rectangular house was shown on the plot, at right angles to the present structure. Since that date it is apparent that there have been some revisions of the boundaries of the house plots in this area (<u>http://www.bedfordshire.gov.uk/Community</u> <u>AndLiving/ArchivesAndRecordOffice/CommunityArchives/Salford</u>).

Prior to the present proposed extension of the house, a brick-built, flat-roofed detached garage was constructed to the south of the present house before the mid 1990s, within the area of the proposed new extension. There is no record of any archaeological intervention in relation to the garage, and it is therefore uncertain as to what extent its construction may have truncated or removed any archaeological deposits present.

4. **Results**

4.1 Four visits were made to the site between 18th and 29th of March 2010, during which all groundworks related to the proposed development were subjected to continuous observation.

4.2 *Footings*

The development area was reduced by a maximum of c.0.3m prior to the excavation of the footings trenches. The trenches were 0.6m wide, and varied between 1.6m and 1.8m in depth (Plate 1). Undulations in the ground meant that the stratigraphy comprised between 0.6m and 0.3m of silty grey-brown subsoil, overlying between 0.8m and 1.5m of natural yellow grey clay (Plate 2). Occasional patches of sand were observed along the boundary between the subsoil and the natural clay. These may have been associated with the construction of the demolished garage.

A number of modern service runs were present within the northern and western arms of the excavation, cutting into the subsoil. Fragments of modern pottery and animal bone were also present within the subsoil, suggesting that the area had been disturbed in the recent past. No archaeological finds or features were observed within the footings trenches.

4.3 *Services*

The service trenches were excavated on the same alignment as the eastern and southern footings, with a further arm excavated north west into the driveway (Plate 3). The trenches were c.0.3m wide and c.0.6m deep. The stratigraphy was similar to that described above.

An area of cobbles was encountered in the eastern arm of the service trench c.0.6m below ground level (Plate 4). No dating evidence was recovered from the cobbled surface noted in the southeastern corner of the development, but it lay c.0.6m below the ground level of the back garden. Mr Majoor commented that the ground level in the garden, including the area where the cobbles were uncovered, had been raised by 0.6-0.8m within the last 10 years when it was renovated by the client. He also remembers garden features in the area, and it is possible that the cobbles represent a former garden path.

The corner of a brick built, filled in former manhole was encountered along the southern edge of the service trench that was extended into the driveway, c.3.5m from the southwest corner of the development (Plate 5). No further archaeological finds or features were observed with in the service trenches.

Plate 1: Western arm of footing trench, looking south (*scale= 2m*)

Plate 2: Sample section of footing trench, looking north (scale = 2m)

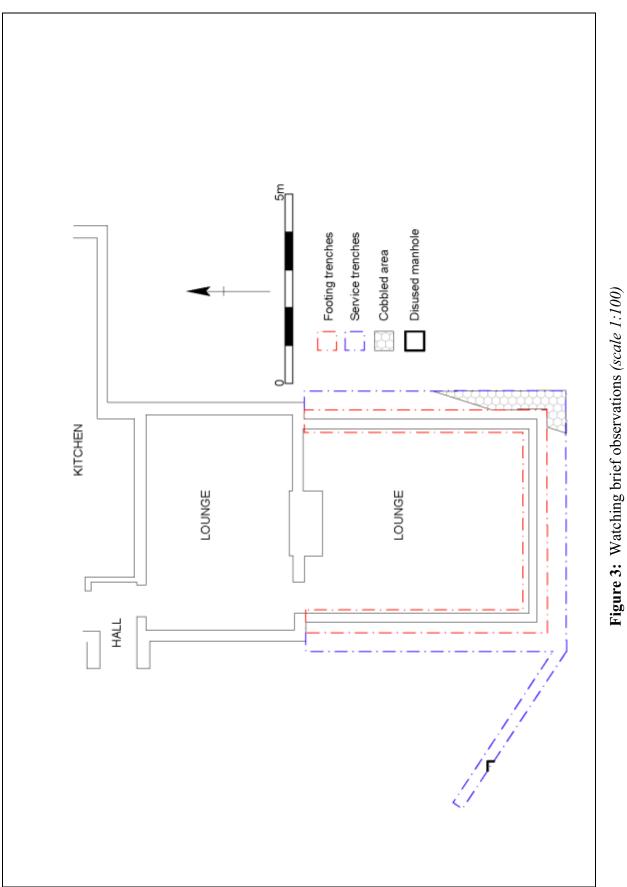

Plate 3: Service trench extending into driveway, looking south east (*scale= 1m*)

Plate 4: Cobbled area in eastern arm of service trench, looking east (scale= 1m)

Plate 5: Disused modern manhole, looking south west (*scale= 1m*)

5. Conclusions

5.1 No significant archaeological features were observed during the watching brief. It is worth noting that the current built up level of the back garden is similar to the level of ground in the surrounding fields. This suggests that the site had been levelled at an earlier date, potentially during the construction of the original dwelling. While the existence of individual isolated archaeological features away from the development cannot be specifically excluded, it is unlikely that large numbers of archaeological features are present on the site. It is unlikely that the development has had a significant impact on archaeological remains.

5.3 Confidence Rating

The watching brief was undertaken in fair to damp conditions, and full cooperation was received from all parties involved. Therefore a high confidence rating is attached to the results of the watching brief.

6. Acknowledgements

The project was commissioned by Mr Marcel Majoor, and the writer is grateful for his assistance. The project was monitored by Central Bedfordshire Council Archaeologists on behalf of the local planning authority. Thanks are also due to the groundworkers on site.

The project was managed for ASC by Karin Semmelmann MA MIFA. Fieldwork was carried out by Karin Semmelmann and Calli Rouse BA PIFA. The report was prepared by Calli Rouse and edited by David Fell MA MIFA.

7. Archive

- 7.1 The project archive will comprise: Brief
 - 1. Project Design
 - 2. Initial Report
 - 3. Clients site plans
 - 4. Site Monitoring Sheets
 - 5. Site record drawings
 - 6. List of photographs
 - 7. B/W prints & negatives
 - 8. CDROM with copies of all digital files.
- 7.2 The archive will be deposited with Bedford Museum.
