

## Stone Hall Barn, Matching, Essex.

01 shows aisle end at west with the inner principle bracing the structure before the main rafters are fitted.

09 shows the truss design in more detail. The arcade post, aisle tie and aisle corner post are stiffened by the inner principle or shore. Structurally the lower primary brace for the infill should not be needed. But this is possibly a rebuilt end.

10 shows top of arcade post detail.

52 shows detail at aisle tie at the northern end.
