

Summers Hall East Barn, Blackmore End, Essex.

North open range view into north-west corner. Shows cut return of what was original end to this building with timber frame infill. Plastered gable to the west. Beyond this point brickwork changes and is part of the western north-south range. Door in west wall appears to be C18 so could have been moved from the end wall of the north range. This corner a closed room after C19 build.

25

26

Junction of walls to the north showing later build on the left tending to fall away.

27

Same wall from the north showing later brickwork to the right.

28

View to west showing end truss of north range.

29

View to north showing how west range linked to north.

Summers Hall East Barn, Blackmore End, Essex.

View to north with east barn, late C18/early C19 stable beyond with open area at the north. Mid C19 shelter and storage to the west. C19 yard closure wall to the south-east.

Mid C19 shelter and storage sheds to the west of the yard. Good northern quoined brick pillar to sheds but infill wall uncoursed flint and random brickwork.

View to south in C19 shelter/storage sheds with minimal partitions removed but plastered area of gables left in place. Both windows are late insertions. Brickwork only fair faced to outside west.

Typical area of roof structure with re-cut reused timber and all reworked in twentieth century. Was closed brick end wall under gable against start of open area to the north.

1.

2.

3.

4.

1. South door typical mid C19 construction. Slightly wider than other doors. This store was north of the most southern store which had access from the south gable wall.
2. South intermediate door normal width construction similar to 1.
3. North C19 door very similar to 2 for access to the open fronted section.
4. North door. This is earlier construction and may have been moved when C19 range added. would have given access to the small corner room.
