SUMMARY

Project:	Rugby Sustainable Urban Extension (Key Phase 2), Warwickshire
NGR:	SP 5552 7406
Type:	Evaluation
Date:	20th June to 12th August 2016
Planning Reference:	Rugby Borough Council R11/0699
Location of Archive:	Warwickshire Museum
Site Code:	RUGS16

Between June and August 2016, Cotswold Archaeology carried out an archaeological evaluation of a block of land at the site of the former Rugby Radio Station that has been designated for Key Phase 2 of the Rugby Sustainable Urban Extension. The evaluation, which was commissioned by Urban & Civic through CgMs Consulting, their archaeological consultants, formed part of a programme of archaeological investigation of the site that had been required by a condition attached to planning consent for the development by Rugby Borough Council.

The remains of an Iron Age agricultural ditch system were identified on a spur of high ground in the central part of the site; pottery from one of the ditches suggest that it may have been established as early as the Middle Iron Age and continued in use until the Late Iron Age. Undated ditches in the vicinity predated the establishment of the medieval open field system so are likely to have formed part of this ditch system, although a Roman date for some of the features cannot be discounted. The ditch system would have been located in the agricultural hinterland of the Iron Age and Roman settlements to the south and east of the site and is likely to have been used to control the access of livestock to the meadows along Clifton Brook.

The remains of the medieval open field system were evident across much of the site in the form of generally well-preserved ridge and furrow earthworks. Other features included seven large, deep, vertically-sided pits of uncertain date and function, post-Enclosure field boundaries and the remains of a modern, brick-built farm building.

1. INTRODUCTION

Project introduction and background

- 1.1 Outline planning permission (Planning Ref. R11/0699) has been granted by Rugby Borough Council for a Sustainable Urban Extension (SUE) at a site c. 485 hectares in extent to the south-east of Rugby, between Crick Road (A428) and Watling Street (A5). The SUE will be developed in phases known as Key Phases. As a condition of planning consent (Condition 12), there is a requirement to carry out a programme of archaeological investigation for each Key Phase.
- 1.2 Cotswold Archaeology (CA) was commissioned by CgMs Consulting (CgMs) to undertake the archaeological evaluation of Key Phase 2 (site centred on NGR: SP 5552 7406; Fig. 1). The scope of the evaluation, which comprised three-hundred-and-eighty-eight 30m trial trenches (11,640 linear metres, representing a 4% sample of the total development area for Key Phase 2), was agreed following consultation between CgMs and Anna Stocks, Warwickshire County Council's Planning Archaeologist (WCCPA). The discussions were informed by a site-wide desk-based assessment prepared by CgMs (Dicks *et al.* 2009), the results of a LiDAR survey as part of the assessment of the ridge and furrow earthworks within the site of the former Rugby Radio Station (CA 2015) and a geophysical survey covering 8ha of the Key Phase 2 area (Butler 2009; NA 2013).
- 1.3 The evaluation was carried out in two stages that ran consecutively between 20th June and 12th August 2016. In the western half of the site (Stage 1) the intention had originally been to excavate one-hundred-and-seventy-three trenches (5190 linear metres), and two-hundred-and-fifteen trenches (6450 linear metres) in the eastern half (Stage 2). However, due to physical and ecological site constraints, nineteen trenches had to be omitted from the original trenching scheme.
- 1.4 The project was carried out in accordance with the *Written Scheme of Investigation* prepared by CA (2016) and abided by the Chartered Institute for Archaeologists' *Standard and Guidance for Archaeological Evaluation* (ClfA 2014), the Historic England (formerly English Heritage) procedural documents *Management of Archaeological Projects 2* (EH 1991) and *Management of Research Projects in the Historic Environment (MoRPHE): Project Manager's Guide* (HE 2015).

2. SITE BACKGROUND

Site location, topography and geology

- 2.1 The site (Key Phase 2), which covers an area of approximately 80ha, is located c. 5km to the east of Rugby town centre, in pasture fields to the north of Dollman Farm, off Crick Road (A428). The ground has an undulating nature, with land at a height of approximately 106m above Ordnance Datum. Ridge and furrow earthworks are evident across much of the site, although preservation is variable.
- 2.2 The geology of the site comprises Jurassic mudstone of the Charmouth Mudstone Formation, with diamicton (poorly sorted glacial sand and gravel) of the Oadby Member occurring in the eastern part of the site (BGS 2016).

Archaeological background

- 2.3 Research undertaken by CgMs for a desk-based assessment of the site indicated that parts of the study site have a potential for late prehistoric, Iron Age and Romano-British settlement and related activity, and a low potential for Saxon settlement (Dicks *et al.* 2009).
- 2.4 The development of DIRFT immediately to the east of the site, which started in the early to mid-1990s, has led to extensive archaeological investigation in the area that has revealed a rich and densely settled prehistoric landscape, largely dating to the Iron Age, on the higher ground that lies to the south and east of the current site (Masefield *et al.* 2015). The major sites are Long Dole, excavated by Northamptonshire Archaeology in 1994 (Chapman 1994), Covert Farm, excavated by the Birmingham University Field Archaeology Unit in 1997-8 (BUFAU 1998) and two sites at DIRFT II, Kilsby, excavated in 2006 and 2010 by CA (2011). Long Dole, an enclosed settlement of 30-35 roundhouses, lies to the east of the site.
- 2.5 During the medieval period, the study site comprised parts of the open fields of Clifton and Hillmorton and these survived until the 17th/18th century when each parish was enclosed and the current field pattern created.
- 2.6 The area was covered by a LiDAR survey as part of the assessment of the ridge and furrow earthworks within the site of the former Rugby Radio Station (CA 2015). Geophysical survey of part of the Key Phase 2 area, comprising eight 1ha grids,

confirmed the extent of the ridge and furrow, but did not show any other archaeological features (Butler 2009; NA 2013).

3. AIMS AND OBJECTIVES

- 3.1 The objectives of the evaluation, as stated in the WSI (CA 2016), were to provide information about the archaeological resource within the site, including its presence/absence, character, extent, date, integrity, state of preservation and quality. In accordance with *Standard and Guidance for Archaeological Evaluation* (ClfA 2014), the evaluation was designed to be minimally intrusive and minimally destructive to archaeological remains. The information gathered will enable Rugby Borough Council, as advised by WCCPA, to identify and assess the particular significance of any heritage asset, consider the impact of the proposed development upon it, and to avoid or minimise conflict between the heritage asset's conservation and any aspect of the development proposal, in line with the *National Planning Policy Framework* (DCLG 2012).

4. METHODOLOGY

- 4.1 The evaluation was to have comprised the excavation of three-hundred-and-eighty-eight 30m trial trenches (11,640 linear metres), representing a 4% sample of the total development area. Due to physical and ecological site constraints, nineteen trenches could not be excavated, so in total three-hundred-and-sixty-nine trenches were opened (11,070 linear metres). The trenches were set out on OS National Grid (NGR) co-ordinates using Leica GPS and surveyed in accordance with *Technical Manual 4: Survey Manual* (CA 2014).
- 4.2 The trenches were excavated using 360-degree mechanical excavators equipped with a toothless ditching bucket. All machine excavation was undertaken under constant archaeological supervision to the top of the first significant archaeological horizon or the geological substrate, whichever was encountered first. Features and deposits were excavated by hand and recorded in accordance with *Technical Manual 1: Fieldwork Recording Manual* (CA 2007). With the agreement of WCCPA, a machine fitted with a toothless bucket was used to excavate a large pit in Trench 211.

- 4.3 Thirteen bulk soil samples were taken from a range of features in accordance with *Technical Manual 2: The Taking and Processing of Environmental and Other Samples from Archaeological Sites* (CA 2003). With the exception of Sample 9, taken from a large pit in Trench 211, these have not been processed to-date; however, samples taken during the evaluation may be processed as part of the post-excavation assessment programme. All finds were cleaned and processed for assessment and analysis, in accordance with *Technical Manual 3: Treatment of Finds Immediately after Excavation* (CA 1995).
- 4.4 The archive from the evaluation is currently held by CA at their offices in Milton Keynes and on completion of the project will be deposited with Warwickshire Museum.

5. EVALUATION RESULTS

Stage 1

- 5.1 The evaluation for Stage 1 was to have comprised the excavation of one-hundred-and-seventy-three trenches (Trenches 1–167, 172-174, 197, 198 and 302; 5,190 linear metres at 2.0m wide; Figs 2–9). Due to site constraints, ten trenches were not excavated: the locations for Trenches 36, 59-61 and 71 were under a large temporary bund and Trenches 41, 51, 52, 58 and 66 were in areas of boggy ground. The details of the features and deposits encountered by the evaluation are presented in Appendix A and are summarised in Table 1 below.
- 5.2 Aside from the remains of a medieval open field system, which was evident as generally well-preserved ridge and furrow earthworks across site, the evaluation identified an area of Iron Age/Romano-British activity on a low ridge near the centre of the Key Phase 2 Stage 1 area (centred on Trench 136), which was subsequently found to extend into the Stage 2 part of the site. The activity was agricultural in character and comprised parts of a regular ditch system, probably forming a pattern of fields or stock enclosures. A small number of undated features in the surrounding fields that do not correspond with mapped post-Enclosure field boundaries may be of a similar date. The remains of a 19th-century farm building were found at the northern edge of the area.

Table 1: Summary of archaeological remains by period

Description	Trench no.
Iron Age and Romano-British* (8)	1, 2, 97, 124, 134, 136, 137, 138
Undated (11)	44, 77, 78, 85, 98, 124, 125, 152, 174, 197, 198
Medieval furrows (50)	5, 6, 9, 18, 19-22, 23, 28, 29, 31, 37, 38, 40, 44-46, 48, 67, 74, 75, 77-82, 86, 114, 115, 117, 121, 132, 135, 141, 145, 151-153, 155, 157-164, 167
Modern (1)	302
No archaeology (96)	3, 4, 7, 8, 10-17, 20, 24-27, 30, 32-35, 39, 42, 43, 47, 49, 50, 53-57, 62-65, 68-70, 72, 73, 76, 83, 84, 87-96, 99-113, 116, 118-120, 122, 123, 126-131, 133, 139, 140, 142-144, 146-150, 154, 156, 165, 166
Unexcavated (10)	36, 41, 51, 52, 58-61, 66, 71

* Dated by pottery

Iron Age and Romano-British (700 BC to AD 410)

Trench 1

- 5.3 At the north-west end of the trench was a substantial ditch (103) on a north-east to south-west alignment. It measured 3.0m wide by at least 1.42m deep, had steeply sloping sides and was filled with three silty clay or clay deposits (Figs 3 and 12). A sherd of Iron Age pottery was recovered from the upper fill of the ditch. Due to the ingress of groundwater the base was not attained but an auger was used to determine the overall depth, which was estimated to be c. 1.8m.

Trench 2

- 5.4 Ditch 203, which passed through the trench on a north-east to south-west alignment, measured 4.7m wide by at least 1.5m deep (Fig. 3). It had steep sides and was not bottomed; an auger was used to determine its depth but the results were inconclusive. Sherd of Roman pottery and fragments of animal bone were recovered from one of its fills (204). A small, shallow ditch (206), measuring 1.2m wide by 0.10m deep, ran parallel and to the south-east of ditch 203.

Trench 97

- 5.5 Beneath the topsoil near the centre of the trench was a compacted layer of angular and sub-angular pebbles and cobbles. The layer may be the metalled surface of an east to west aligned track, with a width of c. 3m (Fig. 5). A sherd of Romano-British pottery was recovered from the pebble surface.

Trench 124

- 5.6 Near the centre of the trench were two substantial ditches on a north-west to south-east alignment (12405 and 12407; Fig. 6); the ditches cut each other lengthwise, but the relationship between them could not be established. The northernmost ditch (12405) was approximately 4.3m wide and had a steep southern slope that appeared to be bottoming out at a depth of 0.52m. Ditch 12407 was of a similar width but had steeper sides and is likely to be deeper than ditch 12405. A sherd of Romano-British pottery was recovered from its fill (12408).

Trench 134

- 5.7 Passing through the southern end of the trench on an east to west alignment was ditch 13403 (Figs 6 and 16). It measured 2.0m wide by 0.59m deep and its upper fill (13405) contained a small assemblage of Iron Age pottery (29 sherds). It may be a continuation of ditch 13603 in Trench 136.

Trench 136

- 5.8 Probably a continuation of ditch 13403, ditch 13603 was aligned east to west, measured 2.5m wide by 0.95m deep and had a steep-sided, V-shaped profile with a broad concave base (Figs 6 and 17). Pieces of worked flint, including a retouched core, were recovered from its basal fill (13604) and a sherd of Iron Age pottery and fragments of animal bone were recovered from its upper fill (13605).
- 5.9 At the southern end of the trench was a large pit (13606), which was at least 2.7m long by 2.4m wide; its base was not attained at a depth of 1.0m (Fig. 18). Pottery recovered from the upper pit fill dates to the Roman period.

Trench 137

- 5.10 Ditch 13703 extended down the length of the trench for a distance of c. 20m on an approximate east to west alignment (Fig. 6). It had slightly sinuous edges and appeared to be veering to the north-west at its western end, suggesting that it may be a further continuation of ditches 13403 and 13603. It measured c. 1.5m wide by 0.72m deep and its fill contained sherds of pottery, broadly dating to the Iron Age but including Middle Iron Age material, and fragments of animal bone. The edge of a small pit (13708) was exposed at the southern edge of the trench.

Trench 138

- 5.11 Near the centre of the trench was a large pit (13803), which measured over 2.0m long by 2.8m wide by at least 1.0m deep (Figs 6 and 19). A sherd of Romano-British pottery was recovered from its upper fill (13805).

Medieval ridge and furrow (AD 410 to AD 1485)

- 5.12 Ridge and furrow earthworks were evident across much of the site and furrow bases were recorded in many of the trenches (see Table 1 above). In general the furrow bases corresponded with the alignment of the earthworks shown on the LiDAR survey of the site (CA 2015).

Modern (1815 to present)*Trench 302*

- 5.13 The remains of a 19th-century brick building were encountered in the south-eastern part of the trench (Fig. 5). Two parallel brick walls extended down the length of the trench for a distance of c. 17m on a north-west to south-east alignment and the space between them was infilled with concrete, gravel and modern demolition rubble, comprising brick and roofing slate.

Undated*Trench 44*

- 5.14 At the western end of the trench, ditch 4407 was aligned north-west to south-east and measured 1.4m wide by 0.58m deep (Fig. 4). A modern cable trench cut the south-west edge of the ditch.

Trench 77

- 5.15 Four shallow ditches (7705, 7711, 7713 and 7715) passed through the trench on a roughly north-west to south-east alignment (Figs 4, 13 and 14). They ranged between 0.85m and 2.0m wide and were up to 0.23m deep. Near the centre of the trench a fifth ditch (7703) was on a north-east to south-west alignment and measured 0.97m wide by 0.09m deep.

Trench 78

- 5.16 Ditch 7803, which was located towards the southern end of the trench, was aligned north-west to south-east and measured 0.56m wide by 0.06m deep (Fig. 4). It was cut by a furrow, suggesting that it may be Roman or prehistoric in date.
- 5.17 A second feature (7805) passed through the trench on an east to west alignment c. 4m to the south of ditch 7803. It was largely truncated by a furrow but had a surviving width of c. 0.8m and a depth of 0.27m. The edge was relatively straight, similar to a ditch, but its irregular profile and the nature of the fill suggests a natural origin for the feature.

Trench 85

- 5.18 Passing through the centre of the trench was ditch 8503, which measured 1.45m wide by 0.19m deep and had a shallow concave profile (Fig. 6). It was aligned east to west, although to the west it appeared to curve sharply to the north for a distance of c. 1.5m to form a possible terminal.

Trench 98

- 5.19 At the western end of the trench was ditch 9803, which was aligned north to south and measured 1.05m wide by 0.25m deep (Fig. 5).

Trench 125

- 5.20 Apparently cutting the edge of a furrow at the western end of the trench was pit 12505 (Fig. 6). It was sub-square in plan, measured approximately 1.0m square and was excavated to a depth of 0.5m; the base of the pit was not attained due to flooding of the feature by groundwater.

Trench 152

- 5.21 Pit 15205, which was located c. 10m from the northern end of the trench, measured 1.9m long by at least 1.05m wide and was 0.40m deep (Figs 7 and 20).

Trench 174

- 5.22 The edge of a large pit (17403) was identified towards the north-western end of the trench. It measured approximately 3.9m long by over 1.5m wide and was hand-excavated to a depth of 0.6m. There was a suggestion that the pit was cut by a ditch on a north to south alignment, but this could not be confirmed within the narrow confines of the trench.

Trench 197

- 5.23 Passing through the centre of the trench on a north-west to south-east alignment was ditch 19703 (Figs 7 and 23). This measured 1.4m wide by 0.61m deep and had a moderately steep-sided U-shaped profile. A second ditch (19706) on a similar alignment was encountered at the western end of the trench; its full profile could not be determined but it was at least 1.1m wide and 0.58m deep.

Trench 198

- 5.24 Towards the southern end of the trench was ditch 19803 (Fig. 7). It was aligned roughly north-east to south-west and measured 0.56m wide by 0.20m deep.

Stage 2

- 5.25 The evaluation for Stage 2 was to have comprised the excavation of two-hundred-and-fifteen 30m trial trenches (Trenches 168-171, 175-196, 199-301 and 303-391; 6,450 linear metres at 2.0m wide; Figs 2-11). Due to site constraints nine trenches were not excavated: the locations of Trenches 229-231, 235, 236, 254 and 255 were in ecological protection zones and those of Trenches 279 and 291 were in materials storage areas. The context details of the features and deposits encountered by the evaluation are presented in Appendix A and are summarised in Table 2 below.
- 5.26 The band of Iron Age/Romano-British activity identified in the Stage 1 area on the ridge of higher ground in the centre of Key Phase 2 was found to continue to the east, into the Stage 2 area. The remains were located on the top of the ridge and on its east-facing slope, with some evidence for further remains of a similar date occurring to the south-east. The archaeology was characterised by the remains of parts of a regular ditch system. No evidence was recovered to suggest domestic activity associated with this ditch system in the immediate area, so they probably served an agricultural purpose. There was no artefactual dating evidence from any of these features, so they have been ascribed to the Iron Age/Romano-British period by association with the dated features to the west.

Table 2: Summary of archaeological remains

Description	Trench no.
Roman* (2)	242, 350
Undated (27)	180, 186, 190, 192, 196, 199, 203, 211, 213, 220, 223, 225–227, 233, 238, 240, 241, 243, 244, 247, 258, 276, 277, 355, 361, 379
Medieval furrows (57)	175, 177, 180, 182, 185, 191, 194, 200, 205, 210, 211, 217, 220, 226, 227, 239-244, 246, 249, 250, 259, 260, 263, 268, 269, 271, 295, 303, 305, 307-310, 312, 331, 332, 335, 346, 347, 352, 356, 357, 361, 368, 369, 373-375, 377, 379, 381-383
Post-medieval/ modern (9)	240, 250, 261, 266, 267, 268, 308, 310, 320
No archaeology (131)	168-171, 176, 178, 179, 181, 183, 184, 187–189, 193, 195, 200–204, 206–210, 212, 214–216, 218, 219, 221, 222, 224, 228, 232, 234, 237, 245, 248, 251-253, 256, 257, 262, 264, 265, 269, 270, 272–275, 278, 280–290, 292–294, 296,–301, 304, 306, 311, 313–319, 321–330, 333, 334, 336–345, 348, 349, 351, 353, 354, 358–360, 362–367, 370-372, 378, 380, 384-388
Unexcavated (9)	229–231, 235, 236, 254, 255, 279, 291

* Dated by pottery

- 5.27 The other main group of features identified within the Stage 2 area comprised at least eight large pits (13606, 13803, 17403, 19003, 21103, 22503, 22603 and 35004), which varied in plan from sub-rectangular to oval, with most having very steep, near vertical sides. Due to their large size only a small part of each pit was exposed in any one trench, although Trench 211 was extended to fully expose one of the pits and it was machine-excavated to reach its base, which revealed that it had a depth of 2.4m. A bulk soil sample taken from an organic deposit in the upper part of the fill sequence was processed and analysed but it was found to contain no recoverable or identifiable plant material. Artefactual dating evidence from these features was sparse, the only finds comprising two sherds of Roman pottery, recovered from the upper fills of pits 13606 and 13803. Their purpose remains uncertain, with interpretations ranging from watering holes, wells or fish ponds to clay extraction pits. The well-preserved earthworks associated with the medieval open field system, which appeared to post-date the afore-mentioned pits, were recorded across most of the Stage 2 area.

Undated (and probable Iron Age/Roman)

Trench 180

- 5.28 Passing through the western end of the trench on a north to south alignment was ditch 18005 (Fig. 8). It measured 1.07m wide by 0.26m deep and had a splayed, U-shaped profile.

Trench 186

- 5.29 Near the centre of the trench, ditch 18603 was aligned north to south, measured 0.64m wide by 0.23m deep and had a shallow, concave profile (Fig. 8).

Trench 190

- 5.30 At the northern end of the trench was a large feature, interpreted as a possible pit (19003), similar to several other large pits encountered in the vicinity (Figs 8 and 21). Its full extent was not established, but it had a width of 3.4m and was hand-excavated to a depth of 1.0m before groundwater seepage prevented further investigation. The sides of the feature were almost vertical, with a shallow splay near the surface. The lower fill (19004) comprised mottled bluish-brown clay and the upper fill (19005) was mid greyish-brown sandy clay.

Trench 192

- 5.31 Cutting across the corner of the trench at its western end was ditch 19203. It was aligned north-west to south-east and measured c. 1.3m wide by 0.20m deep (Fig. 8).

Trench 196

- 5.32 Two parallel ditches, spaced c. 7m apart, passed through the trench on a north-east to south-west alignment (Fig. 7). Ditch 19603 measured 0.95m wide by 0.30m deep and had short, very steep sides and a flat base (Fig. 22). Ditch 19605 was not excavated but was of a similar width. The ditches were on the same alignment as those encountered in Trench 199, suggesting that they may be agricultural trenches.

Trench 199

- 5.33 Two parallel ditches, spaced c. 7m apart, passed through the trench on a north-east to south-west alignment (Fig. 7). Ditch 19903 measured 0.55m wide by 0.20m deep and had short, steep sides and a flat base. Ditch 19906 was not excavated but was of a similar width. The ditches were on the same alignment as those encountered in Trench 196, suggesting that they may be agricultural trenches.

- 5.34 At the eastern end of the trench was the rounded corner of a large feature (19908), similar in appearance to a number of large pits investigated nearby.

Trench 211

- 5.35 This trench was opened out to fully investigate a large pit (21103), interpreted as a watering hole (Figs 7, 24 and 25). It was oval in plan and measured 6m long by 3.5m wide and was machine-excavated to its base, which was encountered at a depth of 2.4m. The upper fills were sterile silty clay but the basal fill was dark, organic clayey silt that had stained the underlying clay a greenish-grey colour. A sequence of soil samples was taken from the deposits in the pit; that taken from the organic basal fill was processed and analysed but it was found to contain no recoverable or identifiable plant remains.

Trench 213

- 5.36 Approximately 30m to the south of the pit encountered in Trench 211, another large pit was identified in Trench 213 (Figs 7 and 26). The pit (21303) was only partly exposed in the trench, but it appeared to be sub-rectangular plan and have a width of c. 3.5m. Hand-excavation of one corner of the pit demonstrated that it had a depth of over 0.6m and had steep, near vertical sides.

Trench 220

- 5.37 At the eastern end of the trench was ditch 22003, which was aligned north-west to south-east, measured 1.8m wide by 0.61m deep and had steep, near vertical sides and a flat base (Figs 7 and 27).

Trench 223

- 5.38 Near the centre of the trench was the western terminus of a small ditch (22303). It was aligned east to west and measured 0.54m wide by 0.14m deep (Fig. 7). To the south of the ditch was a large, sub-rectangular pit (22305) that appeared to be similar in size to several of the other large pits encountered in trenches nearby (e.g. Trenches 211 and 213). However, hand-excavation suggested that it may have a depth of only 0.6m and a flat base.

Trench 225

- 5.39 Partly revealed near the centre of the trench was a large, slightly elongated oval pit (22503), measuring 9.4m long by at least 1.6m wide. Hand excavated slots at either end of the pit showed that it had very steep sides and was over 0.4m deep (Fig. 7).

Trench 226

- 5.40 Partly exposed in the western half of the trench was the edge of a large pit (22603). Its full extent was not established but it had very steep sides and was over 0.5m deep (Fig. 9).

Trench 227

- 5.41 Passing through the trench on a north-east to south-west alignment was ditch 22703 (Fig. 7). It measured 0.74m wide by 0.18m deep, had short, steep sides and a flat base.

Trench 233

- 5.42 Near the centre of the trench was the edge of a large feature, tentatively interpreted as a watering hole (23303). Its full extent was not established, but it was at least 3m long by 2m wide (Fig. 10).

Trench 238

- 5.43 Partly revealed near the centre of the trench was a large pit (23803). It appeared to be sub-rectangular in plan and measured at least 3.75m long by 3.5m wide (Fig. 10).

Trench 240

- 5.44 In the southern half of the trench was the northern terminus of a large ditch (24003). It was aligned north-north-west to south-south-east, measured 1.8m wide by 0.76m deep and had a steep-sided, V-shaped profile with a broad, concave base (Figs 7 and 28).
- 5.45 In the northern half of the trench and cut by a furrow was ditch 24006, which was aligned roughly north to south and measured 0.5m wide by 0.25m deep. A similar-sized ditch on an east to west alignment was identified at the northern end of the trench.

Trench 241

- 5.46 Partly revealed at the southern end of the trench was the edge of a large pit or ditch (24103). It was at least 1.8m wide and hand excavation showed that it had steeply sloping sides and was at least 0.2m deep (Fig. 9).

Trench 242

- 5.47 At the north-western end of the trench was a large ditch or pit (24203). It was aligned north-west to south-east, had steep, near vertical sides (as excavated) and was over 0.6m deep (Fig. 9).

Trench 243

- 5.48 Passing through the centre of the trench on a north to south alignment was ditch 24303 (Figs 9 and 28, Section II). It measured 1.4m wide by 0.76m deep and had a steep-sided, V-shaped profile with a narrow, flat base.

Trench 244

- 5.49 Four parallel ditches on a north-east to south-west alignment were recorded in this trench (Figs 9 and 29). Ditch 24403 measured 0.93m wide by 0.37m deep and had a steep-sided concave profile. Ditches 24405 and 24407 were similar in size but had steeper sides and flat bases.

Trench 247

- 5.50 Passing through the western end of the trench on a north-west to south-east alignment was ditch 24703 (Figs 9 and 30). It measured 1.7m wide by 0.54m deep and had a steep-sided, concave profile.

Trench 258

- 5.51 Four parallel ditches on a north to south alignment were recorded in this trench (Figs 10 and 31). Ditch 25803 measured 0.82m wide by 0.26m deep and had a shallow concave profile. Ditches 25805 and 25809 were similar in size and the latter had more of a steep-sided profile with a flat base; ditch 25805 was narrower, measuring 0.68m wide.
- 5.52 At the north-western end of the trench, the corner of a large sub-rectangular pit (25811) was revealed. Its full extent was not determined, but a hand-excavated slot demonstrated that it had steeply sloping sides and was over 0.5m deep.

Trench 276

- 5.53 Passing through the north-western end of the trench on a north-east to south-west alignment was ditch 27603 (Fig. 11). It measured 0.9m wide by 0.17m deep and had a shallow concave profile. It continued to the south-west in Trench 277.

Trench 277

- 5.54 Passing through the centre of the trench on a north-east to south-west alignment was ditch 27703 (Fig. 11); it was a continuation of ditch 27603 in Trench 276.

Trench 350

- 5.55 The edge of a large pit (35004) was exposed at the south-western end of the trench (Fig. 10). It measured over 3m long by 2.0m wide and excavation of a hand-dug slot on its north-eastern edge demonstrated that it had near vertical sides and was over 0.84m deep.

Trench 355

- 5.56 Near the centre of the trench was the curving edge of large pit 35503 (Fig. 10). It measured 3.7m long by at least 1.1m wide and was excavated to a depth of 0.6m (base not attained).

Trench 361

- 5.57 Passing through the centre of the trench on a north-east to south-west alignment was ditch 36103, which measured 0.4m wide by 0.2m deep and was filled with dark brown silty clay.

Trench 376

- 5.58 At the northern end of the trench was an oval posthole (37603), which measured 0.50m long by 0.34m wide by 0.30m deep.

Trench 379

- 5.59 Passing through the western end of the trench was ditch 37903, which was aligned north-east to south-west and measured 0.60m wide by 0.20m deep.

Medieval ridge and furrow (AD 410 to AD 1485)

- 5.60 Ridge and furrow earthworks were evident across much of the site and furrow bases were recorded in many of the trenches (see Table 2 above). In general the furrow

bases corresponded with the alignment of the earthworks shown on the LiDAR survey of the site.

Post-medieval/modern (1485 to present)

Trench 240

- 5.61 Ditch 24006 was aligned north to south, measured 0.5m wide by 0.25m deep and had a steep-sided, V-shaped profile with a narrow, flat base (Fig. 7); a sherd of pottery dating to the 17th/18th century was recovered from its fill (24007). A similar-sized ditch (24008) on an east to west alignment was recorded at the northern end of the trench.

Trench 250

- 5.62 Running parallel with a furrow at the eastern end of the trench was a shallow, linear irregular feature (25003), measuring c. 0.4m wide (Fig. 10). It was interpreted as the remains of a hedgerow and was on the same alignment as an existing fragment of hedgerow c. 30m to the north of the trench.

Trench 261

- 5.63 At the southern end of the trench was ditch 26103, which was aligned north-east to south-west and measured 0.5m wide (Fig. 10). It was considered to be a modern feature and associated with the infrastructure of the former radio station.

Trench 266

- 5.64 Near the centre of the trench was ditch 26603, which was aligned north-west to south-east and measured 0.8m wide (Fig. 11). It was considered to be a modern feature and associated with the infrastructure of the former radio station.

Trench 267

- 5.65 Cut through the subsoil at the south-eastern end of the trench was the south-western terminus of ditch 26704 (Fig. 11). It was aligned north-east to south-west and was 0.6m wide; it is probably the remains of a modern field boundary, a continuation of the extant hedgerow to the south-west.

Trench 268

- 5.66 On a north-west to south-east alignment at the southern end of the trench was ditch 26805 (Fig. 11). It was over 2m wide and had been backfilled with topsoil mixed with brick and concrete rubble.

Trench 308

- 5.67 Passing through the southern end of the trench on a north-west to south-east alignment was ditch 30806 (Fig. 8), which was also investigated in Trench 310.

Trench 310

- 5.68 Cutting a furrow near the centre of the trench was ditch 31009, which was aligned north-west to south-east and was 0.5m wide (Fig. 8).

Trench 320

- 5.69 At the southern end of the trench was a rectangular pit (32003). The mixed nature of the fill and the sharp edges of the cut suggest that it is a backfilled geotechnical test pit (Fig. 8).

6. THE FINDS

- 6.1 Artefactual material recovered from the evaluation is listed in Appendix B, Table 1 and discussed further below.

Pottery

Iron Age

- 6.2 A total of 38 sherds (231g) of pottery broadly dateable to the Iron Age period were recorded from five deposits. The majority occur as unfeatured bodysherds in handmade shell-tempered (33 sherds) and quartz-tempered (5 sherds) fabrics.

Roman

- 6.3 A total of ten sherds (59g) of pottery dateable to the Roman period were recorded from seven deposits. A range (five) of fabrics are represented, the majority coarsewares of probably local sourcing. The exception is a small featureless fragment of Gaulish samian ware, recorded from deposit 35003.

Post-medieval

- 6.4 Two sherds (50g) of black glazed earthenware, dateable from the 18th to early 19th century, were recorded from deposits 11704 and 24007.

Other finds

- 6.5 A single fragment of clay tobacco pipe stem was recorded from topsoil 8500, dateable between the late 16th and 19th centuries.
- 6.6 A total of 10 items (35g) of prehistoric worked flint, none closely dateable, were recorded from two deposits. The majority (seven) are flakes, with two retouched cores and one item of shatter recorded from ditch 13603 (fill 13604).

7. THE BIOLOGICAL EVIDENCE

Animal bone

- 7.1 Thirteen fragments of animal bone (102g) were recovered from deposits 13605 and 13704, the fills of Iron Age ditch features 13603 and 13703 (Appendix C, Table 1). The material was in a very poor state of preservation and highly fragmented, but it was possible to identify cattle (*Bos taurus*) from a partial ulna and a distal phalange, both bones of the lower leg. A further four fragments (490g) were recovered from deposits 204, the fill of ditch 203, and 13604, the fill of ditch 13603, which remain undated. As with the Iron Age material, the bone was highly fragmented and poorly preserved, but it was possible to identify the remains of horse (*Equus caballus*) from a fragmented mandible and isolated molar teeth. Unidentifiable fragments of animal bone were also recovered from ditch 24003 (fill 24004), ditch 24303 (fill 24305), ditch 24703 (fill 24705) and pit 25811 (fill 25813), all of which are undated.
- 7.2 Both of the species identified above have been exploited as domestic animals since the Bronze Age and as such their presence on site is to be expected (Baker and Worley 2014). However, neither was preserved well enough or recovered in high enough numbers to make a useful inference beyond species identification.

Palaeoenvironmental evidence

- 7.3 A soil sample (Sample 9) taken from an organic silty clay fill (21104) in pit 21103 was processed and assessed, primarily to recover plant material suitable for

radiocarbon dating. The organic remains noted in the fill were found to be highly degraded and no viable or identifiable material was obtained.

8. DISCUSSION

8.1 Topographically, the area of Key Phase 2 is situated on the north to north-east facing slope of a low ridge that extends from the vicinity of Normandy Farm in the north-west to a low hillock east of Dollman Farm to the south-east. The evaluation has demonstrated that this ridge, which offers clear views across the valley of Clifton Brook to the north and its tributary stream to the east, has attracted a degree of human activity, largely agricultural in nature, since at least the Iron Age.

8.2 Within this area, this activity appears to have been focused on a spur of high ground near the centre of the site, which projects northwards from the main axis of the ridge. In its wider setting, the area would have formed part of the agricultural hinterland of the centres of Iron Age and Roman settlement that have been investigated at the head of the tributary valley to the south and south-east (e.g. Long Dole (Chapman 1994); Covert Farm (BUFAU 1998); and two sites at Kilsby (CA 2011).

Iron Age (700 BC to AD 43)

8.3 The earliest evidence for human activity dates to the Iron Age and comprises a boundary ditch that appears to extend over the crest of the spur on an east to west alignment. The ditch would have effectively separated the tip of the spur to the north from the ridge of slightly higher ground to the south, its possible purpose being to control the access of livestock to the meadows along Clifton Brook. Sherds of pottery recovered from one of the excavated ditch sections suggest that it may date from as early as the Middle Iron Age (400 to 100 BC), with its use being maintained into the Late Iron Age period (100 BC to AD 43). The ditch may be associated with the enclosed Middle Iron Age settlement near Moors Lane, c. 1.1km to the south-west (CA 2013).

8.4 Few associated features were identified on the western slope of the spur, but on the crest of the spur and on its eastern flank further ditches were investigated that probably form part of an agricultural ditch system, possibly forming a series of livestock enclosures overlooking meadows to the north and east. Although arable

production cannot be discounted in this location during the Iron Age, the alluvial plain and its fringes are more likely to have been used for pasture and livestock management, with arable production more concentrated on the lighter gravel soils to the south (Masefield *et al.* 2015).

- 8.5 The ditch fills were relatively sterile and contained little evidence, such as sherds of pottery or charcoal, to suggest any centres of occupation in the vicinity. A small quantity of animal bone was recovered from the ditches, but this was generally in a poor condition, indicating that soil conditions within the site are not conducive to the preservation of bone.
- 8.6 With sparse finds, many of the features remain undated artefactually but given that the land was in agricultural use in the Iron Age and many of the features predate the establishment of the medieval open field system, it is probable that many of the features encountered by the evaluation are broadly contemporary and form part of a wider Iron Age agricultural landscape extending along the ridge to the south-east.

Roman (AD 43 to AD 410)

- 8.7 Evidence for Roman activity was enigmatic and was largely confined to the recovery of occasional sherds of Roman pottery in the upper fills of Iron Age ditches, which suggests that the land was still farmed in the Roman period and that some of the undated ditches may be Roman in date. A possible surface formed by a random spread of pebbles and cobbles, from which was recovered a sherd of Roman pottery, was interpreted as a possible metalled track, although the likelihood of the pottery being residual is considered to be high.

Undated

- 8.8 Located almost exclusively on the higher ground in the central part of the site were at least seven large, sub-rectangular or oval pits with vertical or near vertical sides. Due to their large size and depth it was not possible to fully investigate them within the narrow confines of the trial trenches, so it was agreed with WCCPA that the pit in Trench 211 should be fully exposed and a machine used to excavate a section down to its base. This demonstrated that the pit in this trench measured 7.6m long by 3.5m wide by 2.4m deep and that it had vertical sides and a flat base. The nature of the lower fills suggests that the pit may have been largely backfilled shortly after it was originally dug, although a hollow remained that probably formed a shallow pond. This hollow filled with organic detritus and silt and was then finally backfilled to level

the surface, probably when the open field system was established in the medieval period.

- 8.9 The purpose of the pits is uncertain and no parallels have been identified to-date. Their steep-sided profile and depth makes it unlikely that they were watering holes for livestock and although they hold water, due to the clay substrate, they do not fill with groundwater to any degree so are unlikely to have been used as wells. The most likely explanation is that they were clay extraction pits, although there was no evidence for any associated industry or settlement in the vicinity, so what purpose the extracted clay may have been put to remains unclear. A soil sample taken from the pit in Trench 211 was processed but this provided no evidence to cast light on the purpose of the pits.
- 8.10 Stratigraphically the pits seemingly post-date the Iron Age features on the spur and pre-date the ridge and furrow. With the exception of two sherds of Roman pottery from the upper fills of the pits, there was no artefactual dating evidence in the lower fills to indicate when the pits may have been dug.

Medieval (AD 410 to AD 1485)

- 8.11 The remains of the medieval open field system belonging to the townships of Clifton and Hillmorton were evident across almost the entire site as the generally well-preserved earthworks of ridge and furrow ploughing. Where the trial trenches cut across the line of the ridges, the furrow bases were generally recorded in the trenches as a series of shallow, linear hollows, spaced c. 6-8m apart. In general the furrow bases corresponded with the alignment of the earthworks shown on the LiDAR survey of the site (CA 2015) and there was no evidence to suggest that the layout of the medieval open field system was in any way influenced by the remains of the earlier Iron Age (or possible Roman) field system.

Post-medieval and modern (1485 to present)

- 8.12 The medieval open fields of Clifton and Hillmorton were enclosed in the mid-18th century (CA 2015) following an Act of Parliament and it is from around this date that the modern pattern of hedgerows and fields originates. The remains of former hedgerows and field boundary ditches that formed part of the post-Enclosure field system were identified in three trenches; in two trenches they clearly formed a continuation of a still extant boundary to the north-east and in the third case,

remnants of the hedgerow, comprising isolated small trees and denuded fragments of hedgerow, were still to be seen near the trench.

- 8.13 Within the post-Enclosure landscape several new farms emerged, most likely including Dollman Farm and Normandy Farm, both of which probably date to the second half of the 19th century. The remains of a brick-built farm building of a similar date were identified in a trench at the northern edge of the site.
- 8.14 Redundant buried cables associated with the former radio station, including the copper cables of the earthing mat, were encountered in a number of trenches across the site.

9. CA PROJECT TEAM

- 9.1 The fieldwork was directed by Julian Newman, assisted by Dan Riley, Anna Moosbauer, Kim Devereux-West, Matthew Ferron, Mark Davies, Rebecca Pritchard and Ralph Brown. The report was written by Simon Carlyle, with contributions from Andy Clarke (animal bone) and Katie Marsden (finds), and the illustrations were prepared by Sam O'Leary. The archive has been compiled by Emily Evans and prepared for deposition by Jessica Cook. The project was managed for CA by Simon Carlyle.

APPENDIX D: OASIS REPORT FORM

PROJECT DETAILS		
Project name	Rugby SUE Key Phase 2, Rugby, Warwickshire	
Short description	The remains of an Iron Age agricultural ditch system were identified on a spur of high ground in the central part of the site; pottery from one of the ditches suggest that it may have been established as early as the Middle Iron Age and continued in use until the Late Iron Age. Undated ditches in the vicinity predated the establishment of the medieval open field system so are likely to have formed part of this ditch system, although a Roman date for some of the features cannot be discounted. The ditch system would have been located in the agricultural hinterland of the Iron Age and Roman settlements to the south and east of the site and is likely to have been used to control the access of livestock to the meadows along Clifton Brook. The remains of the medieval open field system were evident across much of the site in the form of generally well-preserved ridge and furrow earthworks. Other features included seven large, deep, vertically-sided pits of uncertain date and function, post-Enclosure field boundaries and the remains of a modern, brick-built farm building.	
Project dates	20th June to 12th August 2016	
Project type	Field evaluation	
Previous work	DBA (Dicks <i>et al.</i> 2009); geophysical survey (Butler 2009; NA 2013)	
Future work	SMS excavations	
Monument type	Iron Age ditch system, large undated pits	
Significant finds	Iron Age pottery	
PROJECT LOCATION		
Site location	Hillmorton, Rugby, Warwickshire	
Study area	c. 485ha	
Site co-ordinates	45552 27406
