## 1. INTRODUCTION

### 1.1 General

1.1.1 This report presents the results of an archaeological evaluation undertaken by CFA Archaeology Ltd (CFA) in September 2007 at the proposed location of Gleneagles West, Blackford, Perthshire (NGR: NN 89961046 centred; Fig. 1). The work was commissioned by Ochil Developments (UK) Ltd.
1.1.2 A Written Scheme of Investigation (WSI) for the evaluation was produced by CFA on behalf of Ochil Developments (UK) Ltd. The WSI was agreed in advance by Perth and Kinross Heritage Trust (PKHT).

### 1.2 Background

1.2.1 The evaluation was carried out over two phases. Phase 1 (Curtis \& Mckinney 2006) was conducted between September and October 2006 and covered an area of $25,929 \mathrm{~m}^{2}$ (c.5\% of a total area of $502,000 \mathrm{~m}^{2}$ ). Phase 2 was conducted during September 2007 and covered an area of $41,107 \mathrm{~m}^{2}$ (c.5\% of a total area of $828,305 \mathrm{~m}^{2}$ ). This report presents the results of the Phase 2 evaluation.

### 1.3 Objectives

1.3.1 The aims of the archaeological evaluation were to determine the location, character, extent and quality of any features or objects of archaeological importance that may survive within the application area, and which may be damaged or destroyed by this development.

## 2. WORKING METHODS

2.1 CFA Archaeology Ltd follows the Institute of Field Archaeologists' Code of Conduct, Standards and Guidance for Archaeological Evaluations.
2.2380 trenches were excavated so as to provide good overall coverage of the development area. Where archaeological remains were discovered during the evaluation, trenches were extended in order to further characterise and quantify the remains
2.3 The removal of soil deposits was carried out using two $360^{\circ}$ tracked excavators, which were equipped with smooth-bladed ditching buckets. This programme of works was carried out under constant archaeological supervision. Trenches were not backfilled on completion.
2.4 Sample excavations of archaeological features were undertaken in order to establish their likely date, nature, extent and condition. All such sample excavation was conducted by hand. The samples were limited to remove only such deposits as necessary to achieve the evaluation objectives. All excavation and on-site recording was carried out according to standard CFA procedures, principally by drawing, by photography and by completing standard CFA
record forms. Trench locations were surveyed using industry standard electronic surveying equipment.

## 3. ARCHAEOLOGICAL RESULTS

### 3.1 General

3.1.1 Numbers in bold and parentheses refer to contexts, a full list of which is contained in Appendix 2.
3.1.2 A total of 380 trenches were excavated amounting to $41,107 \mathrm{~m}^{2}$. For a full trench description see Appendix 1. This evaluation revealed five areas with a significant concentration of prehistoric archaeological features (A-D and H); three other areas with prehistoric remains ( $\mathrm{E}, \mathrm{F}$ and G ) had already been identified during the Phase 1 evaluation (Curtis and McKinney 2006) (See Fig. $2)$.
3.1.3 A summary description of Areas A-H is given below in Table 1; more detailed information can be found in a series of Data Structure Reports (O’Connell \& Gray 2007a, 2007b, 2007c, 2007d, 2007e, 20007f, 2007g, and 2007h).
3.1.4 Isolated features were found in 11 other evaluation trenches and these are described in the text below.

Table 1. Summary of areas of prehistoric archaeology identified during evaluations

| Area | CFA <br> Report <br> No./ref. | Trenches | Features |
| :--- | :--- | :--- | :--- |
| A | 1508 | $56,64-66,69$ | Two large roundhouses, two possible grain silos, and a <br> suite of archaeological pits and post holes |
| B | 1509 | $68,107-110$ | The remains of at least four roundhouses and several other <br> associated features |
| C | 1509 | $115-116$ | One roundhouse with the partial remains of a palisade, <br> another possibly heavily truncated house, and an array of <br> associated features |
| D | 1510 | $198-200$ | Remains of one roundhouse, associated pits and post <br> holes, and a linear feature |
| E | 1256 <br> 1511 | $74,76,78,84,86$, <br> 87,114 <br> $(2006)$ | One roundhouse enclosed by at least one palisade, two <br> possible other structures, and a possible burnt mound |
| F | 1256 <br> 1512 | $34,28,33,220$ <br> $(2006)$ | Remains of one roundhouse |
| G | 1256 <br> 1513 | 71,112 <br> $(2006)$ | One roundhouse |
| H | 1514 | $249-251$ | At least three roundhouses, numerous pits, a linear feature <br> and possible cremation urn |

### 3.2 Trenches containing isolated features:

3.2.1 Trench 32 contained five small pits (32004, 32006, 32008, 32012, 32014). These pits did not form any recognisable structure and appear to be isolated features.
3.2.2 Trench 74 contained an oval pit (74003).
3.2.3 Trench 88 contained 2 small pits $(\mathbf{8 8 0 0 3}, \mathbf{8 8 0 0 5})$, the former containing a modern resin bead.
3.2.4 Trench 95 contained the truncated remains of a flagstone floor laid directly onto the subsoil (95002) and underlying a silty deposit (95004) within which post-medieval artefacts were recovered. Deposit (95004) was sealed by topsoil (95001).
3.2.5 Trenches $148,150-154$ and 156 contained a linear feature. It was evaluated in two trenches, 154 and 156. In Trench 154 it was recorded as having a cut ( $\mathbf{1 5 4 0 0 3 ) ~ c . 2 . 8 m}$ wide, with a single fill (154004) 0.45 m deep. The feature was orientated E-W across the field and could possibly continue outwith the application area.
3.3 The Finds, Melanie Johnson
3.3.1 A small number of finds were recovered during the evaluation and these are listed in full in Appendix 6.
3.3.2 A bead was found in context $\mathbf{8 8 0 0 4}$ in Trench 88, the fill of pit 88003. This bead appears to be made of polished cannel coal or similar jet-like substance and has an irregular facetted shape. It may be later prehistoric in date.
3.3.3 Modern finds of glass, ceramics and a horseshoe were found in features within Trenches 95 and 115.

## 4. CONCLUSIONS

4.1 The archaeological evaluation amounted to $41,107 \mathrm{~m}^{2}$ and identified five areas (A-D and H ) of extensive prehistoric archaeological remains as well as a suite of isolated features in 11 other trenches (Trenches 32, 74, 88, 95, 148, 150-154 and 156). Within the identified areas, at least 10 roundhouse structures, two possible grain silos, a large elliptical palisaded enclosure, and a possible cremation urn were uncovered, as well as an array of associated features including pits, post holes, and linear features (possible small palisades). Areas A-H were subsequently subject to full excavation, and are reported on elsewhere (see Table 1 and below for references).
4.2 The project archive, comprising all CFA record sheets, maps and reports, will be deposited with the National Monuments Record of Scotland (NMRS) and copies of reports will be lodged with Perth and Kinross Heritage Trust.
