Camusvrachan Hydro-electric Scheme

Walk-over survey

John Lewis – Scotia Archaeology

NN 61797 47928 to NN 61917 48830, NN 62157 48514 and NN 61700 48620 On 10 June 2011, a walk-over survey was undertaken along the route of a proposed new hydro-electric scheme at Camusvrachan, Glen Lyon where two hitherto unrecorded structures were identified. On the N intake, at NN 61920 48797, are the scant remnants of a rectangular structure, perhaps a shieling hut, measuring some 11m by 4m. On the E intake, at NN 62268 48591, are the remains of what appears to be a triangular structure measuring approximately 3.5m by 3m with up to five courses of drystone masonry surviving. This building is interpreted tentatively as an illicit still.
