

Plate 1 – View from development boundary north towards working quarry face.

Plate 2 – View facing southwest across strip field fossilized by 19<sup>th</sup> century enclosure. An isolated deciduous copse is visible at left.

Plate 3 – View from midpoint of deciduous plantation facing east

Plate 4 – View facing northeast, showing stone gateposts in the foreground and sycamore copse in the background.

Plate 5 – View facing south to fossilized former country lane between the hamlet of Meadow and villages of Tunstead and Wormhill.

Plate 6 – View facing south across fossilized strip fields. In the background is a modern earthen bank built to screen future quarrying operations.

Plate 7 – View facing west, showing improvised field opening with erosion hollows.

Plate 8 – Tractor pulled harrow of 20<sup>th</sup> century date discovered immediately outside the western boundary of the development area.

Plate 9 – View facing north, taken from the north boundary of the development. In the foreground is a shallow quarry (site 63) filled by stone from an enclosure wall. In the background is a blast shelter located inside Old Moor Quarry.

Plate 10 – View facing east from north-south track way, showing enclosed area with two shallow quarries.

Plate 11 – View facing north, showing quarried hollow (site 64).

Plate 12 – View facing east, showing quarried hollow (site 81).

Plate 13 – View facing south, showing quarried hollow filled with modern rubbish (site 77).

Plate 14 – View facing west: in the foreground is a shallow quarried hollow (site 73) which has been cut by a later enclosure wall. The enclosure parallels the former country lane north from Meadow to Tunstead and Wormhill.

Plate 15 – View facing west, showing limekiln (site 24) the foreground and limestone quarry in the background.

Plate 16 – View facing south, crescent-shaped bank of limekiln (site 24).

Plate 17 – View facing east, showing linear hollow associated with lead workings (site 76).

Plate 18 – View facing west, showing lead workings (site 76) filled with limestone boulders and stone blocks from former enclosure walls.

Plate 19 – View facing east showing turf covered spoil heaps associated with lead workings (site 76).

Plate 20 – View facing west showing area of lead workings (site 76) partially filled by stone blocks from former enclosure walls.

Plate 21 – View facing west, showing area of lead working (site 76) cut by parliamentary enclosure wall.

Plate 22 – View of fast limestone cobbles (possibly ginging), which may represent the filled entrance to a former lead shaft (site 79). A void was observed beneath the stones.

Plate 23 – View facing north, taken from the centre of a circular quarry (site 67) located within isolated sycamore copse.

Plate 24 – View facing east, taken from the centre of a circular quarry (site 67) located within isolated sycamore copse.

Plate 25 – View taken from the west side of enclosed sycamore copse showing a single rabbit smoot (site 66).

Plate 26 – View facing west, showing a dewpond in the foreground.

Plate 27 – Wooden post with carved graffiti (site 90) located in plantation along the southern development boundary.

Plate 28 – View facing south of the working faces ('lifts' A-D) of Old Moor Quarry.

Plate 29 – View facing southwest of lift 'A', Old Moor Quarry.

Plate 30 – View facing south of lift 'A', Old Moor Quarry.

Plate 31 – View facing east of lift 'B', Old Moor Quarry. At centre is a narrow sediment choked fault.

Plate 32 – View facing east of lift 'D', Old Moor Quarry. At centre are a number of sediment choked faults.
