Section A	Section B	Section C	Section D	Section E	Section F
---------------------------	---------------------------	---------------------------	---------------------------	---------------------------	---------------------------

Section A#

Figure no.	Caption
1	The HER 'wheel' drives and is powered by an integrated approach to conservation and understanding of the historic environment
2	HERs and other records

[Back to the top](#)

Section B#

Figure no.	Caption
3	Information management cycle
4	Using three dimensional modelling in GIS to examine sites in their landscape setting
5	Representing the location of a heritage object within a 'virtual space'.
6	Representing the approximate location of a heritage object as a fuzzy boundary.
7	The logo for the Forum on Information Standards in Heritage
8	The logo of MIDAS, the national data standard for the content of historic environment records.
9	An overview of the structure of MIDAS Heritage themes and information groups.
10	The FISH web site www.fish-forum.info is the starting point for finding out about data standards for the historic environment

[Back to the top](#)

Section C#

Figure no.	Caption
11	The event-monument-source data model
12	Relationships between monument records.
13	The monument record for the chapter house at Waltham Abbey displayed in exeGesIS SDM Ltd HBSMR software.
14	report showing a monument record in the Essex Historic Environment Record. (© Essex County Council 2015).
15	Example of a project summary page from the OASIS form
16	How an event may be recorded in an HER database

17	A typical source recorded in exeGesIS SDM Ltd's HBSMR software
18	A collection level source recorded in Gloucestershire's HER software.
19	A GIS generated map showing Bronze Age barrows over Landscape Types and rivers in Hampshire
20	A GIS layer showing the use of polygons to show the extent of the early 19th-century defences at Chelmsford.
21	Great Chesterford scheduled area
22	Examples of layers in a GIS
23	A new GIS layer: archaeological sites on arable land
24	Consultation and conservation advice.
25	A typical consultation record from the North Yorkshire County Council HER showing the details tab.
26	A typical consultation record from the North Yorkshire County Council HER showing the consultation Stages tab and the link to the related event record.
27	A typical consultation record from the Tees Archaeology SMR showing the Main tab (Tees Archaeology 2015)
28	A typical consultation record from the Tees Archaeology SMR showing the Details tab
29	Monument management process.
30	Successive monument monitoring reports as recorded in the National Trust SMR

[Back to the top](#)

Section D

Figure no.	Caption
31	ADS web page ? Excavation Index
32	WoSAS Event Attribute: an example of polygon attributes for recording events
33	WoSAS Events 1: An example of an archaeological evaluation specified to trench level, derived from contractor supplied data.
34	WoSAS Events 2: The event record for the heart of medieval Glasgow showing numerous events as points and polygons.
35	Elmley Castle Tithe map displaying apportionment details for land use
36	3D historic reconstruction of Elmley Castle using the digital tithe map
37	Date ranges of Worcestershire's Quaternary geology

38	Type sites selected for the Worcestershire Palaeolithic HER
39	HER data overlain on terrace deposits displayed by period
40	Maes Mochnant Standing Stone, Powys.
41	NoSAS members surveying at Loch Hourn
42	Clyne Heritage Society members working at an eroding structure on the beach at Brora, Sutherland.
43	Unst Heritage Society surveying an eroding prehistoric mound in Shetland

[Back to the top](#)

Section E#

Figure no.	Caption
39	Using three dimensional modelling in GIS to examine sites in their landscape setting
40	Representing the location of a heritage object within a 'virtual space'.
41	Representing the approximate location of a heritage object as a fuzzy boundary.
42	A GIS generated map showing Bronze Age barrows over Landscape Types and rivers in Hampshire
43	Relationships between HER text databases and GIS in text
44	A GIS layer showing the use of polygons to show the extent of the early 19th-century defences at Chelmsford.
45	Great Chesterford scheduled area
46	Examples of layers in a GIS
47	A new GIS layer: archaeological sites on arable land
48	The first HLC in England ? carried out in Cornwall
49	A selected area of the HLC for Cornwall
50	HLAMAP ? HLA as applied in Scotland (from the RCAHMS website).
51	A screen capture from GIS - Illustrating the more detailed HLC study of field boundaries in an area just north of Harlow, which is one of the mineral study areas in Hertfordshire. The thick grey lines represent modern OS mapping of surviving boundaries, whereas the various superimposed coloured lines reflect different periods of historic mapping, such as Estate, Tithe and Enclosure maps. This illustrates the degree of boundary loss and change through the past two centuries. This will enable dating of surviving field boundaries or sections thereof for future land management.
52	Urban HLC as applied in St Austell Cornwall

53	A screen capture of the HBSMR Help manual ? this approach embeds the HLC within the HER.
54	Entry Level Scheme for CAP reforms
55	HLC Sensitivity Zones Map from the LCS-M11 Study
56	Illustrating some of the outputs from the MKSM study
57	HLA overlay showing a Designed Landscape.
58	SMR overlay showing same Designed Landscape as an archaeological site.

[Back to the top](#)

Section F

Figure no.	Caption
59	The distribution of certain categories of HER information is often more readily understood when seen in the context of ancient topography, such as this interpretative map of part of the Neolithic fenland environment.
60	Some of the publicity material produced for the HER outreach Programme.
61	Professor Mick Aston, Somerset's first County Archaeologist, launching the website at the County Museum, Taunton Castle on 30th September 2003.
62	An example of the map page of the website, showing Bronze Age barrows in the parish of Priddy, Somerset.
63	One of the one day drop in exhibition/ demonstrations of the online Historic Environment Record
64	Rachel Shaw, Education Consultant giving a talk on using the HER website to local school children, many of whom were far more adept at picking it up than most of the adults.
65	Taking a local school on an historic walk around their village based on HER information. This is the starting point of a planned local studies project for next term.
66	Sample NMRS record viewed through CANMORE
67	Site selection using a web-GIS browser: the RCAHMS CANMAP
68	Completed search on PASTMAP with map report on selected records.
69	Example Record Page from Somerset HER.

List of Panels#

Panel no.	Caption
Section A	
1	The national legislative and policy framework for HERs
2	Marine policy, plans and guidance
Section B	
3	A self assessment checklist of standards for HER services
4	Examples of the use of fields to record archaeological science data
5	Tools for indexing and retrieval: 1. Wordlists
6	Tools for Indexing and retrieval: 2. Thesauri
7	Elements of the Dublin Core
8	Disaster plan template
Section E	
10	Potential Modelling for HLC
Section F	
11	Model policy statement, access to buildings, facilities, services and information
12	Example of an assessment of disabled access (Buckinghamshire HER)
13	Example of a breakdown of reason for interest in HER Information
